VITAL STATISTICS.

134712

REPORT OF THE REGISTRAR-GENERAL OF CEYLON FOR 1903.

I.—POPULATION.

THE population of Ceylon, as enumerated at the Census of March 1, 1901, was 3,565,954 persons, exclusive of the military and shipping population and the South African prisoners of war, and was distributed over 28 towns, 12,870 villages, 598,076 occupied houses, and 664,371 families, giving a density of 141 persons and 23·6 houses per square mile, 5·2 persons per house, 4·7 persons per family. The estimated increase since the date of the Census and to the end of 1903 amounted to 174,608, being the excess of births over deaths registered, plus the excess of arrivals over departures of Indian coolies. This number being added, the estimated population on December 31, 1903, would be 3,740,562.

2. *Indian Immigration.*—The total number of Indian coolies who arrived in the Island in 1903 was 63,446, and of those who departed 47,715.

Table A below shows the arrivals and departures of Indian coolies in the period 1871–1903. The largest number of arrivals recorded in any year previous to 1900 was in 1876 and 1877, when a famine in South India compelled a large number of coolies there to seek employment in Ceylon. From 1879 to 1886 the number of coolies going back to India exceeded the number of those arriving in Ceylon, owing to the depression in the coffee planting industry due to leaf disease. The success of tea cultivation renewed the demand for coolies, and from 1887 the excess of arrivals has continued to be large, except in 1899, when there was a deficit of 13,236, which, as stated in previous reports, was attributed to good harvests in Southern India and to the closing of the northern immigration route. To the following year (1900) was credited the largest number of arrivals of coolies (207,994), and the largest excess of arrivals over departures (95,058) as yet recorded in any year.

3. The number of arrivals and departures in 1903 would appear to be very low, as compared with the previous years. This is partly due to the numbers being restricted to actual coolies, whereas in previous years other deck passengers travelling between South India and Ceylon had been included.

Table A.—Arrivals and Departures of Indian Coolies, 1871–1903.

Year.	Arrivals.	Departures.	Excess or Deficit.	Year.	Arrivals.	Departures.	Excess or Deficit.
1871	88,529	58,610	29,919	1889	61,735	52,619	9,116
1872	80,121	74,035	6,086	1890	84,106	45,756	38,350
1873	89,012	80,629	8,383	1891	103,149	60,042	43,107
1874	125,156	89,727	35,429	1892	116,472	67,616	48,856
1875	86,712	95,519	—8,807	1893	91,676	73,181	18,495
1876	164,797	91,960	72,837	1894	85,256	66,292	18,964
1877	167,196	88,609	78,587	1895	123,611	80,673	42,938
1878	101,093	91,188	9,905	1896	128,350	93,281	35,069
1879	76,897	80,750	—3,853	1897	153,075	109,213	43,862
1880	45,600	73,683	—28,083	1898	136,864	105,706	31,158
1881	53,887	63,240	—9,353	1899	68,393	81,629	—13,236
1882	50,907	57,820	—6,913	1900	207,994	112,936	95,058
1883	39,204	52,962	—13,758	1901	120,603	118,343	2,260
1884	45,777	50,085	—4,308	1902	87,763	63,917	23,846
1885	47,794	48,863	—1,069	1903	63,446	47,715	15,731
1886	39,907	45,250	—5,343				
1887	72,660	55,121	17,539	Total	3,090,329	2,432,775	657,554
1888	82,587	55,805	26,782				

4. *Population and Registration in 1871–1903.*—Tables I. and II. in the Appendix show the population estimated to the middle of each year from 1867 (when the registration laws first came into operation in the Island), the number of births, marriages, and deaths registered in each year, and their proportion to 1,000 persons living, and the difference between registered births and deaths and between immigrants and emigrants.

5. Since the bringing into operation of the consolidated Ordinances Nos. 1 and 2 of 1895 from July 1, 1897, registration of marriages, births, and deaths showed a marked improvement. The improvement in the registration of deaths is chiefly noticeable among children under five years of age. From the middle of 1897 to the end of 1903 we have a period of six and a half years of improved registration, during which there were registered in the Island a total of 110,449 general marriages, 891,614 births, and 269,017 deaths of children under five years of age. On the other hand, from the beginning of 1892 to the middle of 1897, the period of six and a half years immediately preceding,

there were registered only a total of 81,549 general marriages, 654,599 births, and 207,748 deaths of children under five years of age. Making allowance for the increase of population and excluding the abnormal increase in the number of general marriages registered in the Matara District in 1902 (which is explained in the report for that year), and presuming that the conditions were similar in both periods, it appears from the above-quoted figures that for every 100 general marriages, births, and deaths of children under five years registered under the new law there were registered under the old law a proportion of only 88 general marriages, 83 births, and 87 deaths of children under five years, showing that under the old law 12 marriages, 17 births, and 13 deaths out of every 100 escaped registration. The number of Kandyan marriages is left out of consideration, as they fluctuate greatly according to the pressure applied by the different Government Agents.

6. In giving average statistics for comparison, I have, therefore, confined myself to the period of five years 1898–1902. This period will afford more reliable figures for comparison than a period comprising some years under the old and some under the new law. In Table F (paragraph 32) the birth-rates for five years preceding the introduction of the new scheme are shown for each district, from which the extent of the improvement in registration of births in each district may be seen.

7. The population increased in the thirty-three years 1871–1903 from 2,417,000 to 3,703,000 in round numbers, that is, by 1,286,000, or 53 per cent. About half of this increase was due to immigration. The annual increase of population in the period 1871–1881 was 13·2 per 1,000, 8 per 1,000 in 1881–1891, and 17·3 per 1,000 in 1891–1901. In 1903 the rate of increase was 18·4 per 1,000 at which rate the population should double itself in thirty-eight years.

8. *Race Distribution.*—Table III. shows the estimated population of each race in the Island, the number of persons of each race registered as married, born or dead, with their rates per 1,000 persons living in the years 1902 and 1903, as well as the averages for the period 1898–1902. Tables IV. and V. give the number of marriages, births, and deaths with their rates for each Province and District.

9. The numbers of the various races and the proportion of each to a thousand of the total population at the Census of 1901 and at the middle of 1903 are shown in the following Table B :—

Table B.—Race Distribution of the Population.

Race.	At the Census of 1901.	At the Middle of 1903.	Proportion to 1,000: At the Census of 1901.	At the Middle of 1903.
Europeans ...	6,300	6,396	1·8	1·7
Burghers ...	23,482	23,889	6·6	6·5
Sinhalese ...	2,330,807	2,426,922	653·7	655·3
Tamils ...	951,740	988,553	266·9	266·9
Moors ...	228,034	232,521	63·9	62·8
Malays ...	11,902	12,001	3·3	3·2
Others ...	13,689	13,333	3·8	3·6
All Races ...	3,565,954	3,703,615	1000·0	1000·0

10. It will be seen that since the Census of 1901 the proportion of the various races has decreased, except the Sinhalese, who show an increase of 1·6 per 1,000, and the Tamils, who have maintained the same proportion as at the Census.

II.—MARRIAGES.

11. The marriages registered in 1903 numbered 23,534, of which 15,844 were "general" (*i.e.*, other than Kandyan or Mohammedan) marriages and 7,690 Kandyan marriages. The marriage rate (*i.e.*, the proportion of persons whose marriages were registered in 1903 to 1,000 persons living) is 13·7, which is lower than the rate for the preceding year and the mean rate for the decade 1898–1902 by 2·7 and 2·9 per 1,000 respectively.

12. The proportion of the number of persons (other than Mohammedans) whose marriages were registered to 1,000 persons living is given in the following Table C for the years 1902 and 1903, with the average for the decade 1898–1902. The figures are based solely on the registered marriages, and take no account of the marriages legally contracted among non-Kandyan Sinhalese Buddhists and among Hindus according to customary and religious rites, but not registered. This accounts for the low rate among the Tamils, who are mostly Hindus :—

Table C.—Marriage Rates among the different Races in 1903, 1902, and the Average in 1898–1902.

	1903.	1902.	Average, 1898–1902.
All Races (excluding Mohammedans) ...	13·7	16·4	16·6
Europeans	20·5	23·9	21·7
Burghers	16·8	17·1	15·2
Sinhalese	16·5	20·6	20·7
Tamils	6·4	6·2	6·9
Others	2·7	1·9	2·1

13. Table D below shows the Kandyan marriages, general marriages, their total, and the proportion of the number of persons married to 1,000 persons living in each of the years 1871–1903.

14. The Kandyans are, as a rule, indifferent to registration, though the law makes the issue of their unregistered unions bastards. The number of marriages registered among them varies with the pressure applied to them by the Government Agents, who, under instructions from Government, made special efforts in 1894, 1895, 1899, and 1900 and secured the registration of the marriages of a large number of couples who had been living together as husband and wife according to Kandyan custom. Thus, as many as 16,801 Kandyan marriages were registered in 1895, and nearly 16,000 in 1899 ; since that year apparently the pressure has been relaxed, and there has been a continuous decline in the number of Kandyan marriages.

15. In the year under report the number of Kandyan marriages registered was only 7,690 and of "general marriages" 15,844, which is lower than the number recorded in any year since 1897.

Table D.—Kandyan and General Marriages, their Total, and the Rates of the Number of Persons married to 1,000 Persons living, 1871–1903.

Year.	Kandyan Marriages.	General Marriages.	Total.	Rate per 1,000.	Year.	Kandyan Marriages.	General Marriages.	Total.	Rate per 1,000.
1871	20,836	11,178	32,014	28·5	1888	4,516	10,122	14,638	10·9
1872	8,083	9,605	17,688	15·5	1889	3,494	9,297	12,791	9·4
1873	12,377	9,731	22,108	19·3	1890	4,156	10,952	15,108	10·9
1874	14,241	9,007	23,248	19·9	1891	4,015	10,722	14,737	10·5

1882	3,317	9,897	13,214	10·3	1899	15,959	16,535	32,494	20·1
1883	5,660	10,230	15,890	12·3	1900	11,274	16,918	28,192	17·2
1884	3,986	9,784	13,770	10·6	1901	7,509	16,227	23,736	14·2
1885	3,144	7,579	10,723	8·2	1902	6,452	21,364	27,816	16·4
1886	12,157	8,057	20,214	15·4	1903	7,690	15,844	23,534	13·7
1887	7,930	9,241	17,171	13·0					

16. *Mohammedan Marriages.*—The Ordinances Nos. 8 of 1886 and 2 of 1888 regarding the registration of Mohammedan marriages were in 1900 in force in the Western, Central, Southern, North-Western, North-Central, Uva, and Sabaragamuwa Provinces, and in the Batticaloa District of the Eastern Province. In August, 1901, the Northern Province, including the Districts of Jaffna, Mannar, and Mullaittivu, was also brought under the operation of the Mohammedan Marriage Registration Ordinances. It will be seen from the following Table E that, except in the Puttalam, Jaffna, Galle, and Mullaittivu Districts, the Mohammedans have availed themselves but little of the opportunity of registering their marriages. In the Districts of Puttalam and Galle the rates of persons married to 1,000 persons living per annum were 24·1 and 15·9 respectively. In the Jaffna District, which has little more than 3,000 Mohammedans, the rate was as high as 21·3. But Batticaloa, the chief Mohammedan district in the Island, shows only ·2 per 1,000 and Colombo 6·4 :—

Table E.—Mohammedan Marriages in 1898–1902 and 1903.

Province and District.	Mohammedan Population at the Census of 1901.	Number of Marriages.			Persons married to 1,000 living.

17. *First Marriages; Re-Marriages.*—Of each 1,000 men married in the general community, 905 were bachelors and 95 widowers; of each 1,000 women married, 965 were spinsters and 35 widows. Among the Kandyans, of each 1,000 men married, 847 were bachelors and 153 widowers; of each 1,000 women married, 913 were spinsters and 87 widows.

18. In the general community, of the 14,341 bachelors who married during the year, 13,988 or 98 per cent. married spinsters and 353 or 2 per cent. married widows; of the 1,503 widowers who re-married, 1,294 or 86 per cent. married spinsters and 209 or 14 per cent. married widows; of the 15,282 spinsters who married during the year, 13,988 or 92 per cent. married bachelors and 1,294 or 8 per cent. married widowers; of the widows who re-married, 353 or 63 per cent. married bachelors and 209 or 37 per cent. married widowers (Table VII. in Appendix).

19. Among the Kandyans, of the 6,514 bachelors who married during the year, 6,165 or 95 per cent. married spinsters and 349 or 5 per cent. married widows; of the widowers who re-married, 853 or 73 per cent. married spinsters and 323 or 27 per cent. married widows; of the 6,514 spinsters who married, 6,165 or 88 per cent. married bachelors and 853 or 12 per cent. married widowers; of the 672 widows who re-married, 349 or 52 per cent. married bachelors and 323 or 48 per cent. married widowers (Table IX.) For the purposes of calculation in this and the two preceding paragraphs, 228 divorced men and 236 divorced women have been treated as bachelors and spinsters respectively.

20. *Divorces.*—Divorces among the general community are granted by the District Courts; among the Kandyans by the Government Agents and their Assistants. There were 601 divorces among the Kandyans this year (Table XIII.), making the proportion to the marriages in the year 7·8 per cent. a rate fifty-four times as large as in the general community (·15 per cent.), the total number of divorces pronounced in the several District Courts of the Island in 1903 being 23 against 15,844 general marriages registered in the year.

21. It would thus appear that the Kandyan are more anxious to escape from the bonds of matrimony than other sections of our population, except the Mohammedans, of whose divorces we have no statistics. This may perhaps be explained by the greater facilities afforded by the Kandyan Marriage Ordinance than by the General Marriage Ordinance for obtaining divorces. Divorces among the Kandyans are obtainable, among other reasons, by mutual consent or on the ground of inability to live happily together, and need leave no stain on the character of the divorced women.

22. *Re-marriages of divorced Persons.*—Among the general community 15 divorced men and 16 divorced women re-married in the year; among the Kandyans 213 divorced men and 220 divorced women, against 192 divorced men and 212 divorced women in 1902.

23. *Minors.*—The number of males under 21 years of age who married in the year 1903 was 744 among the general community and 1,052 among the Kandyans, and the number of females under that age was 8,326 in the general community and 5,237 among the Kandyans.

24. The number of mixed marriages registered was as follows (see also Table XI., in the Appendix):—

	1903.	1902.	Average, 1898-1902.
Between Europeans and Burghers	13	10	10·2
Between Europeans and Sinhalese	2	2	2·2
Between Europeans and Tamils	2	—	—
Between Burghers and Sinhalese	36	31	31·8
Between Burghers and Tamils	9	3	6·0
Between Sinhalese and Tamils	66	85	69·8
Other Mixed Marriages ...	4	8	9·6

25. *Signature in the Marriage Register.*—Of the men in the general community who married in the year 1903, 24 per cent. (as against 32 per cent. in 1902) and of the women 72 per cent. (as against 79 per cent. in 1902) were unable to sign their names in the register with letters (Table VIII); and among the Kandyans, who usually show a higher proportion of illiterates, 37 per cent. of the men (the same percentage as in 1902) and 96 per cent. of the women (the same percentage as in 1902) were unable to sign their names (Table IX).

26. *Age at Marriage.*—Among the general community this year the mean male age at marriage was 27·0 as against 30·9 in the preceding year and 27·3 in 1901, for females 20·1 as against 23·9 last year and 20·9 in 1901. Among the Kandyans the mean age at marriage for males was 27·0 (as against 27·5 last year) and for females 20·6 (as against 20·7 last year). The highest age at marriage in 1903 was, in the general community, for males 80 years, for females 60 years, and among the Kandyans for males 76 years and for females 66 years. The lowest age at marriage was 16 for males, both among the general community and among the Kandyans, and 12 for females among the general community and 13 among the Kandyans.

27. The mean and maximum ages are probably misleading, for in many cases the parties would appear to have contracted marriages according to their religious customs, and lived together as husband and wife for years before registering their marriage.

28. *Buildings registered for the Solemnization of Marriages* (Table XII).—The number of buildings registered for the solemnization of Christian marriages, and registration of which had not been cancelled at the end of 1903, was 776, of which 488 were Roman Catholic, 113 Church of England, 81 Wesleyan, 20 Salvation Army, 19 Baptist, 19 Congregationalist, 19 Independent Catholic, 8 Dutch Presbyterian, 6 Portuguese Roman Catholic, 2 Scotch Presbyterian, and 1 registered by the Society of Friends.

III.—BIRTHS.

29. The births registered during the year 1903 numbered 148,027, and were equal to a rate of 40·0 per 1,000 persons living. This rate is 1·5 per 1,000 higher than the rate for the preceding year and 1·6 than the average for the years 1898–1902 (38·4), the period of improved registration of births. Compared with the quinquennium 1892–1896, the rate for the year under report shows an increase of 8·3 per 1,000.

30. The number of births registered and the rates in each of the years 1867–1903 are shown in Tables I. and II. in the Appendix. The number of births and their rates are shown for each of the years 1903 and 1902, with the average rate for the decade 1898–1902 in Table III. according to races; in Tables IV. and V. according to Provinces and districts; Tables VI. and VII. (*a*) and (*b*) show separately the Sinhalese, Tamil, and Moor births and deaths for 1903 and 1902 and their rates for the various subdivisions of the Island in 1898–1902 and 1903.

31. The registration of births in the early years of the department was very imperfect, and improved gradually after 1887, when under a provision in the Penal Code prosecutions began to be entered against those who neglected to register, and other steps taken to ensure registration. The improvement has become marked since 1897, in July of which year Ordinance No. 1 of 1895 came into operation.

32. The subjoined Table F, in which birth-rates in the several districts for 1903 are arranged in descending order, shows also the amount of increase or decrease in 1903, compared with the

averages in the quinquennia 1898–1902 and 1892–1896, the former representing the period of improved registration under the consolidated Ordinance No. 1 of 1895 :—

Table F.—Comparative Statement of the Mean Annual Birth-rates in the Periods 1892–1896, 1898–1902, and 1903.

District.	1903.	Average for Five Years, 1898–1902.	Average for Five Years, 1892–1896.	Increase of 1903 compared with 1898–1902.	Increase of 1903 compared with 1892–1896.	Increase of 1898–1902 compared with 1892–1896.
CEYLON ...	40·0	38·4	31·7	1·6	8·3	6·7
Batticaloa	48·4	45·1	43·9	3·3	4·5	1·2
Kurunegala	47·6	42·9	31·5	4·7	16·1	11·4

Kandy	38·5	36·1	27·4	2·4	11·1	8·7
Anuradhapura	38·5	41·9	36·9	—3·4	1·6	5·0
Jaffna	38·3	38·3	33·6	—	4·7	4·7
Chilaw	38·3	36·0	24·8	2·3	13·5	11·2
Mannar	36·8	39·4	29·8	—2·6	7·0	9·6
Puttalam	35·5	35·1	31·5	·4	4·0	3·6
Colombo	33·4	32·2	25·8	1·2	7·6	6·4
Nuwara Eliya	31·1	26·4	29·1	4·7	2·0	—2·7

33. The birth-rate for the Island during the year (40·0) is the highest yet recorded. With the exception of Anuradhapura, Jaffna, Mannar, and Mullaittivu, every district shows an increased birth-rate for the year as compared with the average for the period of improved registration 1898–1902. Nuwara Eliya is the only district in which the average for the later period is lower than that for the former period.

34. As compared with the period 1892–1896, however, every district without exception shows improved rates, varying from 17·7 per 1,000 in Kegalla to 1·6 in Anuradhapura. The district of Batticaloa shows the highest birth-rate (48·4) both in the year under review and in the periods 1898–1902 (45·1) and 1892–1896 (43·9). Matara, which in its average for 1898–1902 (43·2) occupies second place, was third in 1903 (45·5), while Kurunegala (47·6 in 1903 and 42·9 in 1898–1902) comes second. The lowest birth-rate was in Nuwara Eliya (31·1), which, however, shows an increase of 4·7 per 1,000 over the average for 1898–1902 and of ·2 per 1,000 over that for 1892–1896.

35. Birth-rates according to race are shown in Table III. in the Appendix. The Sinhalese show the highest birth-rate (44·0) in the year as well as in the average (42·4). Excluding the miscellaneous class "Others" out of consideration, the lowest birth-rate was among the Malays (26·8), being a fall of 2·2 as compared with the average. The next lowest, the European birth-rate (27·7), also shows a slight reduction of ·3 as compared with the average. Except the two races last mentioned, the others show in the year increased rates as compared with the average.

36. *Sex.*—Of the 148,027 births registered in the year, the births of males numbered 76,046 and the births of females 71,981, the former being to the latter in the proportion of 1,056 to 1,000 (Tables XIV. and XV.).

IV.—DEATHS.

37. The deaths registered in 1903 numbered 96,084, and were in the proportion of 25·9 to 1,000 persons living, as against 99,680 deaths and a rate of 27·5 in the previous year.

38. The number of deaths registered and the rates in each of the years 1867–1903 are given in Tables I. and II. in the Appendix. Registration of deaths (as well as births and marriages) having been defective in the early years of civil registration, the comparatively low death-rates then recorded should not be taken as an indication that the Island was healthier then than now. The highest death-rate as yet recorded was 31·7 in 1877. This was due to cholera and heavy mortality among the large number of Indian coolies who sought relief in Ceylon from the South Indian famine of that year. These causes contributed to raise the rate of the following year also. The next highest was 30·6 in 1899, due to epidemics of fever and pneumonia in the Northern and adjoining Provinces, and to general unhealthiness which was felt in every Province, except the Southern. Other years when high death-rates were recorded were 1881 (27·2), 1885 (29·1), 1889 (28·5), 1891 (28·7), 1893 (29·6). These high rates were due principally to epidemics of fever. From 1899 the death-rate has continued to fall yearly, until in the year under report it fell to 25·9, the lowest since the commencement of improved registration. This may be taken as a result of improved sanitary conditions and medical aid.

39. *Race.*—The number of deaths and their rates for each of the years 1902 and 1903 and the average for 1898–1902 are given for the various races in Table III. in the Appendix. Their rates are compared in Table G below :—

Table G.—Birth- and Death-rates among the different Races.

Nationalities.	Birth-rate. Average. 1898–1902.	Birth-rate. 1902.	Birth-rate. 1903.	Death-rate. Average. 1898–1902.	Death-rate. 1902.	Death-rate. 1903.
All Races	38·4	38·5	40·0	28·2	27·5	25·9
Europeans	28·0	29·7	27·7	21·4	20·2	21·7
Burghers	29·0	29·8	30·8	21·6	21·3	23·9
Sinhalese	42·4	43·2	44·0	26·6	26·1	24·4
Tamils ...	29·4	29·9	30·9	32·2	30·5	29·1
Moors ...	38·1	38·6	39·9	29·7	29·6	28·8
Malays ...	29·0	30·3	26·8	27·8	26·0	25·9
Others ...	11·6	13·9	16·3	20·3	24·5	26·5

40. Compared with the average for 1898–1902, the Sinhalese, Tamils, Moors, and Malays all show lower death-rates; while Europeans, Burghers, and "Others" show higher rates. The reduction in the rate of Tamils is about three per 1,000, of Sinhalese and of Malays about two, and of Moors about one. The Europeans show the lowest death-rate (21·7), the Burghers the next (23·9), and the Sinhalese the third (24·4). The Tamils have the highest death-rate (29·1), due chiefly to high mortality among the poor immigrants.

41. *Sex.*—Of the 96,084 deaths registered during the year, 48,915 were of males and 47,169 of females. The death-rate per 1,000 persons living was 24·8 for males and 27·2 for females, being 2·3 per 1,000 less in each case than the average 27·1 for males and 29·5 for females. The proportion of male deaths to female deaths was as 1,037 to 1,000, the average in the period 1898–1902 being 1,039 to 1,000. But the number of males in the population is much larger than that of the females. For equal numbers of males and females living the proportion of male deaths to female deaths would be as 913 to 1,000 in 1903 and 915 to 1,000 in 1898–1902.

42. *Age at Death.*—Tables XVI., XVII., and XVIII. in the Appendix give the population, deaths, and their rates for the Island for each sex at different age periods in 1903 and 1902 and the average in 1898–1902, and Table XIX. gives the infant mortality in the various Provinces and districts in those periods.

Table H.—Annual Rate of Mortality per 1,000 Living for groups of Ages.

AGES.	Average, 1898–1902.			1902.			1903.			Increase or Decrease (—) in 1903 compared with the Average of 1898–1902.

43. From the above table it will appear that the improved health in 1903 as compared with the average was shared by both sexes at each age period without exception. The healthiest age period for both sexes is 15 to 20. The female death-rate is higher at nearly all the age periods, especially 20–25, 25–35, and 35–45, the child-bearing ages, the exceptions being 15–20 and 45–55, when female mortality is lower than the male mortality.

V.—PUBLIC HEALTH.

44. The general health of the population during the year was satisfactory, the death-rate (25·9) showing a reduction of 2·3 from the average rate for the period 1898–1902 (28·2). Six of the nine Provinces show lower death-rates than the average, the exceptions being the Western, the Northern, and the North-Central. In the Western Province, however, the mortality has been normal, and the only Provinces showing enhanced death-rates are the Northern and the North-Central. Fifteen of the twenty-one districts show diminished death-rates, and the remaining six enhanced rates as compared with the average.

45. There has been a marked diminution in the mortality from zymotic diseases, which class includes malarial, miasmatic, diarrhœal, and other diseases, which, being due to bad air, food, and water, are most amenable to sanitary measures. The mortality from these causes was at the rate of 10,973 per million persons living, as against an average of 12,947 for the period 1898–1902.

46. The six deaths from cholera registered during the year having, as stated in paragraph 91 below, occurred in the previous year, there was an entire absence of cholera during the year under report, a result which attests the efficiency of the stringent precautionary measures adopted by the Government against the introduction of infectious disease from India. There were only six deaths from smallpox during the year, as against an average of 53.

47. The healthiest Province in the Island for the year is, as usual, the Western. Among the districts the lowest death-rate was in Negombo and in Chilaw (17·5), and among the subdivisions in Pitigal Korale South (13·9).

48. Tables VI., VII. (*a*) and (*b*), and XXII. in the Appendix give the births and deaths and their rates in the several subdivisions of the Island. The figures are given for the Sinhalese only in the Sinhalese districts, and for the Tamils only in the Tamil districts. These separate figures furnish more trustworthy data for comparing the relative sanitary condition of these subdivisions than if the rates included other nationalities temporarily resident in them. The infantile mortality is also included—a most valuable index to health. In the Puttalam District, where the Sinhalese, Moors, and Tamils are found in almost equal numbers, and in the Batticaloa District, where the Tamils and Moors are in almost equal numbers, the figures are given for these sections separately.

Health of the Sinhalese.

49. The subjoined Table I. gives the estimated population at the middle of 1903, the births and deaths, and their rates for the years 1902 and 1903, with the averages for the years 1898–1902 :—

Table I.—Sinhalese Population, Births and Deaths, and their Rates in Provinces.

50. *Western Province.*—The Western Province, which is the smallest in size and contains the largest population among the Provinces of the Island, of whom the Sinhalese form the majority, showed a Sinhalese death-rate of 20·0 and a Sinhalese birth-rate of 38·3 during the year. The death-rate, which is almost identical with the average (19·9), was slightly better than in the previous year (20·3), and was the lowest but one among the Provinces, the lowest being in the Province of Sabaragamuwa. The infant mortality recorded during the year (110) was the lowest, and showed an improvement on the rate for last year (117). The birth-rate, too, was an improvement on the average as well as the rate for the preceding year (37·4).

51. The Colombo District, which among the districts of the Western Province ranks next to Negombo in point of health, showed a death-rate of 20·6 during the year, a deterioration from the average (19·8). The division of Colombo Municipality, which is separately dealt with in chapter VIII. of this report, was chiefly responsible for the deterioration in the death-rate of the district. Omitting the Colombo Municipality division out of consideration, all the divisions of the district, except the Salpiti korale, showed improved health. In Salpiti korale the death-rate rose to 20·0 from an average of 18·7. The healthiest division in the district was the Siyane Korale West (14·7), followed by the Siyane Korale East (16·0) and Hewagam Korale (16·1). The birth-rate of the district (36·6) showed an improvement on the average (35·4). Among the subdivisions the birth-rates ranged between 41·6 in Siyane Korale East and 27·9 in the Colombo Municipality. The divisions of Siyane Korale East and Siyane Korale West record the lowest infantile mortality in the Island, 61 and 67 respectively per 1,000 registered births, and thereby afford reliable proof as to their being the healthiest divisions in the Island.

52. The Negombo District, which is still the healthiest district in the Province this year, shares with Chilaw the position it held last year as the healthiest district in the Island for the general population. The Sinhalese death-rate for the year (16·2) showed a decline of 2·6 per 1,000 from the average 18·8. Each of its three subdivisions, of which the healthiest was Alutkuru Korale North (15·2), showed diminished rates of mortality. Next to Alutkuru Korale North in point of health ranks the Hapitigam korale, with a death-rate of 15·4 (average 18·8). The death-rate in the Negombo Local Board (24·6) showed a considerable improvement on the average (33·4). The birth-rate in the district was 41·8, as against an average of 41·6. Among the subdivisions the highest birth-rate was in Hapitigam korale (45·8), an improvement on the average (42·3).

53. The death-rate in the Kalutara District (21·2) was much the same as the average (21·1), and the birth-rate (39·5) showed a slight advancement on the average (38·9). Excluding the Kalutara Local Board, where, as is usual in the case of towns, the death-rate is exaggerated by the number of deaths in hospital, the healthiest division in the district was, as usual, Pasdun Korale East (17·2), and the unhealthiest Kalutara totamune (23·1). The other two divisions of the district, viz., Pasdun Korale West and Rayigam korale, recorded death-rates of 20·6 and 19·3 respectively, as against their averages 22·0 and 19·7. The highest birth-rate in the district was in Pasdun Korale West (41·5), followed by Rayigam korale (41·2).

54. *Central Province.*—The Sinhalese inhabitants of the Central Province enjoyed better health than usual, their death-rate during the year under report falling to 26·9 from an average of 30·9. Each of its three districts, Kandy, Matale, and Nuwara Eliya, shared in the improvement. The birth-rate of the Province (49·2) showed a slight improvement on the average (48·6).

55. In the Kandy District the rate of mortality (26·1) showed a decrease of 3·3 per 1,000 on the average 29·4, and was the lowest in the Province. Nine of its ten subdivisions showed diminished death-rates during the year, the exception being Uda Bulatgama, the healthiest division, where the rate rose to 23·3 from an average of 20·2. The unhealthiest division in the district was Uda Dumbara (29·9), followed by the Kandy Municipality (27·9), and Harispattu (27·3). The rate in the Kandy Municipality, however, cannot be admitted to comparison, as it includes the deaths in hospital of persons really belonging to other divisions. The rate of mortality of the division, exclusive of hospital deaths, appears from Table T to be 20·0 per 1,000 for all races, which gives the Municipality division the foremost place in point of health in the district. The birth-rate in the district was 48·8, as against an average of 48·4 for the period 1898 to 1902. The highest birth-rate among the subdivisions was in Tumpane (56·4), followed by Harispattu (53·7), Pata Hewaheta (52·6), Udu Nuwara (51·7), and Yatinuwara (51·5). The infantile mortality of the district (163) showed an improvement on the rate for the preceding year (174).

56. In the Matale District there has been a considerable improvement in health, the death-rate for the year (29·6) being nine per 1,000 less than the average 38·5. The healthiest subdivision

was Matale South (27·3), and the unhealthiest Matale East (33·1). The Sinhalese death-rate of Matale Local Board, which is reckoned at 34·2, is left out of consideration, as the rate is greatly enhanced by the number of deaths in hospital of persons who do not really belong to the division. In Matale North the death-rate for the year (29·7) showed a marked improvement on the average (42·9). The birth-rate in the district was 52·1 as against 51·9.

57. The death-rate in the Nuwara Eliya District (26·6) showed a decline of about 1 per 1,000 on the average 27·5, and the birth-rate (47·5) an increase of 3·1 per 1,000 on the average (44·4). The healthiest division in the district was the Nuwara Eliya Local Board (18·4), and the unhealthiest the Walapane division (33·9). The other two divisions, Kotmale and Uda Hewaheta, recorded death-rates of 26·2 and 22·8, as against their averages 24·7 and 27·9 respectively. The highest birth-rate was as usual in Walapane (56·0).

58. *Southern Province.*—This Province, which, next to the Western, contains the largest number of Sinhalese, showed a Sinhalese death-rate of 23·8 during the year, against an average of 24·1 for the period 1898-1902, and maintained almost normal health. The birth-rate for the Province (44·9) showed an increase of nearly two per 1,000 on the average (43·0).

59. In the Galle District the health of the Sinhalese was normal, their death-rate being 25·1 against the average, 25·0. Four of its seven subdivisions showed diminished death-rates, while the remaining three, viz., the Galle Municipality, Walallawiti korale, and Hinidum pattuwa, showed increased death-rates. Exclusive of the Galle Municipality, the healthiest subdivision was Four Gravets beyond Municipal limits and Akmimana (20·1), followed by Gangaboda pattuwa (21·5), and the unhealthiest Hinidum pattuwa (27·9), followed by Walallawiti korale (27·1). The birth-rate recorded in the district was 43·8, as against the average 42·7. The highest birth-rate was in Hinidum pattuwa (49·2), and the lowest in the Galle Municipality (37·5). The infantile mortality of the district was 131, as against 130 for the previous year.

60. In the Matara District the death-rate for the year (22·1) showed a slight improvement on the average (22·7). All its subdivisions, except Wellaboda pattuwa and Weligam korale, shared in the improvement. In Wellaboda pattuwa the death-rate rose to 20·7 from its average 19·8, and in Weligam korale the death-rate 22·1 was in excess of the average 21·6 by ·5 per 1,000. The healthiest division in the district was Four Gravets beyond Local Board limits (19·0), and the unhealthiest Morowak korale (26·9), which however records a better rate than the average (28·5). The birth-rate in the district (46·1) showed a rise of two per 1,000 on the average (44·1). The rise in the birth-rate was contributed by all the divisions of the district, except Gangaboda pattuwa, where the rate for the year (44·0) is slightly lower than the average 44·8.

61. The District of Hambantota presented a death-rate of 24·0 for the year as against the average 24·4, and a birth-rate of 45·1 as against an average of 41·6. The highest rate of mortality among the subdivisions was in Magam pattuwa 42·3 for all persons and 349 for infants. The infantile mortality in the Hambantota Four Gravets division (383) is striking. The healthiest division during the year was Giruwa Pattu West (21·3), followed by Giruwa Pattu East (30·9). This division showed the highest birth-rate in the district (48·7).

62. *North-Western Province.*—The Sinhalese inhabitants of the North-Western Province, who number about a third of a million, enjoyed during the year much better health than usual, their death-rate (23·4) being lower than the average (31·9) and the rate in the preceding year (29·5) by 7·5 and 6·1 respectively. All three of its districts, viz., Kurunegala, Puttalam, and Chilaw, shared in the improvement in health. The Sinhalese birth-rate of the Province rose to 46·5 in the year from an average of 42·8 during the period 1898-1902. The rate of infant mortality, 156 per 1,000 births registered, was also a considerable improvement on the rate for the preceding year 203.

63. The Kurunegala District, which contains over 75 per cent. of the provincial Sinhalese population, shows a marked improvement in health, its death-rate for the year (19·8) being fifteen per 1,000 less than the average (35·5). The infant mortality (164), too, shows a great improvement on the rate for the preceding year (217). The birth-rate for the district (48·9) showed an excess of 4·6 per 1,000 on the average 44·3. The mortality in the subdivisions ranged between 54·4 in the Kurunegala Local Board and 16·9 in Katugampola hatpattu. Exclusive of the Kurunegala Local Board, the highest death-rate was in Wanni hatpattu (30·0). This division also recorded the high infant mortality rate of 220 per 1,000 registered births, and seems to be the unhealthiest division in the district. The birth-rates in the subdivisions ranged between 56·2 in Weudawili hatpattu and 41·1 in Wanni hatpattu.

64. The Puttalam District, which is estimated to contain about 12,000 Sinhalese, 10,000 Moors, and 7,000 Tamils, recorded death-rates of 30·5, 40·6, and 39·5 for the Sinhalese, the Moors, and the Tamils respectively. The Sinhalese and the Tamils in the district enjoyed better health than usual, while the Moors fared slightly worse. For the Sinhalese the healthest subdivision was Kalpitiya division (21·2), for the Tamils Puttalam division (23·9), and for the Moors the Puttalam Local Board (37·9). The births recorded in the district were at the rate of 34·2 among the Sinhalese, 30·6 among the Tamils, and 41·0 among the Moors.

65. Next to Negombo District the Chilaw District shows the lowest death-rate in the Island for the Sinhalese. During the year under report their rate of mortality was 16·8, and showed a decline of two per thousand on the average (18·8). All the subdivisions of the district, except the Chilaw town (29·5), showed reduced mortality during the year. Exclusive of the Chilaw town, the healthiest subdivision of the district and in fact in the Island was Pitigal Korale South (13·9), and the unhealthiest in the district Pitigal Korale North (24·1).

66. *North-Central Province.*— The North-Central Province constituting the district of Anuradhapura, which is the largest of the Provinces in size and contains the smallest population, showed a death-rate of 44·6, an increase of four per thousand on the average (40·5). Three of its five subdivisions, viz., the Anuradhapura town (61·4), Nuwaragam palata (44·8), and Hurulu palata (48·1), showed enhanced death-rates during the year, while the remaining two divisions, Kelagam palata (37·4) and Tamankaduwa (48·7), showed diminished rates. The healthiest subdivision in the district was Kelagam palata (37·4), and the unhealthiest Tamankaduwa (48·7), not taking into consideration the division of Anuradhapura town, whose mortality is exaggerated by the number of deaths in hospital. The birth-rate of the Province (38·8) showed a decline of 5·4 per thousand from the average (44·2). Among the subdivisions, the highest birth-rate was in Tamankaduwa (46·7), and the lowest

in the Anuradhapura town (32·5). The infant mortality of the district (295) is a deterioration from the rate for last year (272).

67. *Province of Uva.*—In the Province of Uva, which constitutes the Badulla District, the Sinhalese, who number about 126,000, presented a death-rate of 37·0 during the year, an improvement on the rate for the previous year (40·0) and the average for the period 1898–1902 (41·9). The improvement in the death-rate was spread over all its subdivisions, except Bintenna and Wellassa. The greatest improvement was felt in Buttala division, where the rate fell to 42·3 from an average of 55·7. The healthiest and the most populous division in the district was Udukinda (28·2), followed by Yatikinda (30·0), and the unhealthiest Wellassa (51·6). The birth-rate in the Province (51·0) showed an increase of two per thousand on the average (49·0). The increase was confined to the five divisions, Bintenna, Wellawaya, Udukinda, Wellassa, and Wiyaluwa, the remaining three divisions, viz., Badulla Local Board, Yatikinda, and Buttala, showing lower rates than the average.

68. *Province of Sabaragamuwa.*—The Province of Sabaragamuwa, which includes the Districts of Ratnapura and Kegalla, and contains a Sinhalese population of over a quarter of a million, shows a great improvement in health, its death-rate for the year (17·2) being a decline of twelve per thousand on the average (29·2). The improvement was shared by both its districts.

69. The death-rate in the Ratnapura District declined to 28·9 from an average of 31·1, and the birth-rate (46·8) showed a rise of one per thousand on the average (45·8). Seven of its eight subdivisions showed improved health during the year, the exception being Kolonna korale, where the rate of mortality (28·7) was slightly in excess of the average (28·1). Among the subdivisions the highest birth-rate was in Kadawat korale (57·1), and the lowest in the Ratnapura Local Board (31·1).

70. Kegalla District, which within an area of half that of its sister district Ratnapura contains a much larger population, showed a death-rate of 23·5 for the year, a reduction of four per thousand from the average (27·6). The healthiest division in the district was Panawal korale (19·1), closely followed by Atulugam korale (19·2), and the unhealthiest, leaving the Local Board out of consideration, was Galboda korale (27·6), followed by the Paranakuru korale (25·5). The birth-rate in the district (49·4) was an improvement on the average (45·7). All the subdivisions, except Galboda korale, showed enhanced birth-rates during the year. This division showed the lowest birth-rate (22·2), and Kinigoda korale (54·6) among the subdivisions of the district. The infantile mortality of the district, 149 per thousand registered births, was an improvement on the rate for last year 160.

Health of the Tamils.

71. Of the estimated Tamil population of the Island, which at the middle of 1903 numbered 988,553, more than a third (334,928) were in the Northern Province and 99,792 in the Eastern Province. Of the rest, the majority are the coolies on the "estates," who numbered 406,821 at the Census of 1901.

72. The death-rate for the Tamils in the Island in 1903 was 29·1, 3·1 per thousand less than their average in 1898–1902 (32·2).

73. Table L below gives the population, the births and deaths and their rates in 1903 and 1902, and the average in 1898–1902 for the Tamil Provinces:—

Table L.—Tamil Population, Births and Deaths, and their Rates in the Provinces.

Province.	Estimated Population at the middle of 1903.	Births.			Deaths.			Rate per 1,000. Births.			Deaths.		
		Average, 1898-1902.	1902.	1903.	Average, 1898-1902.	1902.	1903.	Average, 1898-1902.	1902.	1903.	Average, 1898-1902.	1902.	1903.

Other Provinces, inclusive of Estates ...	553,833	10,351	11,812	13,169	16,779	17,429	14,343	20·8	22·2	23·8	33·7	32·7	25·9
Total ...	988,553	27,088	28,759	30,552	29,515	29,352	28,728	29·1	29·9	30·9	32·2	30·5	29·1

74. *Northern Province.*—The rate of mortality among the Tamils in the Northern Province was 34·4, a rise of 4·7 per 1,000 over the average 29·7. The infantile deaths were equal to a rate of 216 per thousand registered births. The heavier mortality in 1903 as compared with the average indicated by the death-rate was due to epidemic fever in the Jaffna District as well as in Mannar District. In the Mullaittivu District, too, the death-rate was higher than usual.

75. The Jaffna District contains more than nine-tenths of the population of the Province. Its death-rate rose 4·4 per thousand from an average of 28·5 to 32·9 in 1903. This was due chiefly to an epidemic of fever, from which 4,149 deaths were registered in 1903, as against 2,503 in 1902 and 2,274 in 1901. Of the divisions of the district, the population of Vadamaradchi East, Pachchilaippalli, Karachchi, Punakari, Delft, and Tunukkai is too small to yield rates reliable for comparison. Excluding these out of consideration, the healthiest division was Vadamaradchi West with a death-rate of 26·1, superseding the three divisions of Valikamam, *i.e.*, West, North, and East, which, as may be seen from their average death-rates 24·0, 24·1, and 24·3 respectively, used to occupy first, second, and third places in point of health. The highest death-rate was in Tenmaradchi (50·1), showing a rise of over 15 per thousand compared with the average (34·6). All the divisions showed enhanced death-rates as compared with the average, with the only exception of Vadamaradchi West, the healthiest division of the district this year, where the rate underwent a reduction of 1·2 per thousand.

76. The District of Mannar was much unhealthier than usual, its death-rate for the year having risen to 53·9 from an average of 42·4. The unhealthiness extended to all the three divisions, of which Nanaddan division fared worst, with a death-rate of 67·3 in 1903, a rise of 18·8 per thousand over the average 48·5. This division appears to have been the unhealthiest in the whole Island in

1903. The infant death-rate was higher than 400 in all the divisions of the district. The unhealthiness of the Mannar District in 1903 is attributed to fever following the pearl fishery and the heavy rain (in May) of that year.

77. In Mullaittivu District the death-rate rose to 45·8 from an average of 40·4. This was due entirely to the excessive mortality in Vavuniya South division, where the death-rate rose to 60·8 from the average 39·5. The Maritime pattus division, containing nearly half the population of the district, showed a fall in its death-rate of about three per thousand below the average to 37·4 in the year. In the other division, Vavuniya North, the death-rate was normal.

78. *Eastern Province.*—The Tamil population of this Province was at the middle of 1903 estimated to have been a little less than 100,000. Their rate for the year was 28·7, being 3·5 lower than the average 32·2. The improvement was shared by both its districts.

79. In the Batticaloa District the Tamils form about 55 per cent. of the total population, the Moors 38 per cent., and the Sinhalese only 5 per cent. The Sinhalese number more than a thousand in only three of its eleven divisions. Rates have been calculated only for these three divisions, viz., Bintenna, Akkarai pattu, and Panawa pattu. The Sinhalese death-rate of the district was 44·0, a rise of 5·8 per thousand over the average 38·2. The Tamil death-rate was 27·8, showing a fall of 2·3 per thousand. The death-rate for Moors, of whom there is a larger number in the district than in any other in the Island, was 25·3, which is 3 per thousand below the average. In Batticaloa District the Moors thus appear to be healthier than the Tamils. For Tamils the healthiest division was Eruvil and Porativu pattus (death-rate 21·7 in 1903 and the average 27·0). For Moors the healthiest division was Akkarai pattu (death-rate 19·0 in 1903, against its average 29·1). As seen from the average death-rates, the healthiest divisions for Moors have been Koralai pattu (23·1), Eravur and Rukam pattus (25·1), and Karawaku and Nintavur pattus (25·8). It is curious that while Koralai pattu is usually the healthiest division for Moors (average death-rate 23·1), it is usually the unhealthiest for Tamils (average death-rate 41·6). In the Batticaloa District the birth-rate in 1903 for Moors was 50·9, for Tamils 47·8, and for Sinhalese 50·8.

80. The Tamil death-rate for Trincomalee District was 33·0, against the average 40·6. The improvement in health in 1903 thus indicated was shared by all its four subdivisions, the healthiest of which was Tampalakamam pattu (death-rate 25·3, against the average 39·5). The Trincomalee town, which contains more than half the population of the district, was the unhealthiest division in the year, with a death-rate of 37·0.

81. *Health of the Districts in each Quarter of the Year.*—Table M below gives the death-rate of each district for each quarter in 1903, in 1902, and the average in 1898–1902. The districts are arranged according to the moist and dry zones, that is, the region having 60 inches of rainfall and more and the region with less than 60 inches:—

Table M.—Mortality of each Quarter in each District of the Island.

Districts.	Average, 1898–1902.				1902.				1903.			
	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.

82. Reference is requested to the quarterly reports on Vital Statistics published in the *Government Gazette* for more detailed information.

83. The first quarter, as a rule, has the highest death-rate. As seen from the average rates, the only exception among the dry zone districts to the above rule is Batticaloa District, while in the wet zone also half of the districts in the quarter show the highest mortality, the exceptions being the hilly districts of Kandy, Matale, Nuwara Eliya, Badulla, and Matara, where the fourth quarter appears to be the unhealthiest, and also Kegalla, where however the unhealthiest is the third quarter

84. In only Kegalla in the wet zone and Batticaloa in the dry is the second quarter seen to be the unhealthiest. The unhealthiness of the first quarter generally is to be attributed to the varying temperature felt in that quarter in a majority of the districts.

85. The healthiest quarter of the year, on the other hand, is the third for all the districts in the dry zone without exception, and five of the districts in the wet zone also show lowest death-rates in this quarter. In this quarter the temperature is more equable in most of the districts than in any other quarter. Malaria is also less prevalent in this season than in any other, as it is, in a majority of the districts, the most free from rain.

86. The highest death-rate in the districts for any quarter of the year 1903 was 80·7 in Mannar District in the first quarter. The next highest was 75·4 in the same district in the second quarter, and the third highest 71·5 in Mullaittivu District in the first quarter. The only other district which had a higher rate than fifty per thousand was Anuradhapura in the first quarter (59·5). The lowest rate was recorded in Chilaw in the second quarter (14·2), followed by Negombo District in the second quarter (15·7), third quarter (16·8), first quarter (17·7), Chilaw District again in the first quarter (18·2) and fourth quarter (18·4).

VI.—CAUSES OF DEATH.

87. The registered causes of deaths are given in Table XXIII. in the Appendix, and are summarized in Table N below. Their distribution among the different Provinces and districts is shown in Table XXIV:—

Table N.—Mortality from various Causes of Deaths in 1903, 1902, and 1898–1902.

Cause of Death.	Total Number of Deaths.			Proportion of Deaths per Million Persons living.		
	1903.	1902.	Average, 1898–1902.	1903.	1902.	Average, 1898–1902.
Zymotic Diseases	40,641	43,771	45,424	10,973	12,058	12,947
Parasitic Diseases	3,840	3,699	3.842	1,037	1,019	1,095
Dietetic Diseases	202	201	283	55	55	81
Constitutional Diseases	7,721	7,646	7,409	2,085	2,106	2,108
Developmental Diseases	3,100	3,018	2,735	837	832	778
Local Diseases	30,512	31,316	29,950	8,238	8,627	8,527
Violence	1,924	1,916	1,858	519	528	529
Ill-defined and not Specified Causes ...	8,144	8,113	7,420	2,199	2,235	2,112
Total ...	96,084	99,680	98,921	25,943	27,460	28,177

88. *Zymotic or Specific Febrile Diseases.*—This class consists of the diseases most amenable to public control, and most capable of being reduced by sanitary measures. The mortality under this head therefore deserves special attention. Zymotic diseases caused 42 per cent. of the registered deaths in 1903, or 2 per cent. less than in the previous year. The deaths attributed to this class numbered 40,641, and were in the proportion of 10,973 deaths to a million persons living, as against 12,058 in the previous year and 12,947 the average in the period 1898–1902.

89. The fever death-rate decreased to 5,090 per million of population from the average of 6,112 in 1898–1902 and 5,481 in 1902. Anuradhapura District heads the list with the highest mortality (15,475 per million) from this cause, followed by Jaffna (13,379 per million), Mannar (12,782 per million), Mullaittivu (11,654 per million), Hambantota (10,957 per million), Puttalam (10,641 per million), Batticaloa (9,367 per million), Trincomalee (7,227 per million), Matale (6,205 per million), Kurunegala (4,792 per million), Badulla (4,631 per million), Negombo (3,884 per million), Ratnapura (3,596 per million), Colombo (3,538 per million), Galle (3,416 per million), Kalutara (3,350 per million), Chilaw (3,265 per million), Matara (2,867 per million), Kegalla (2,590 per million), Kandy (2,177 per million), and Nuwara Eliya (1,302 per million).

90. The mortality from dysentery and diarrhœa was equal to a rate of 5,369 per million of the population, as against the annual average of 6,152 in the period 1890–1902. The district showing the highest death-rate from dysentry and diarrhœa was Mannar (12,495 per million), followed by Badulla (11,432 per million), Ratnapura (9,714 per million), Matara (7,427 per million), Nuwara Eliya (7,401 per million), Mullaittivu (7,193 per million), Kandy (6,971 per million), Trincomalee (6,470 per million), Galle (6,032 per million), Kegalla (5,835 per million), and Anuradhapura (5,661 per million). The lowest death-rate from this cause, as in the four previous years, was in Chilaw (1,342 per million), the next lowest being Negombo and Kurunegala with 2,250 and 2,809 respectively.

91. *Cholera.*—Six deaths (five in Kandy District and one in Colombo District) which occurred last year in continuation of the epidemics of cholera at Pallekelle estate and the Ragama Camp referred to in my last report were registered this year.

92. *Parasitic Diseases.*—Parasitic diseases caused 3,840 deaths, and were in the proportion of 1,037 per million, as against the average 1,095 for the period 1898–1902.

93. Under this head was registered dochmius duodenalis or anchylostomiasis as having caused the deaths of 291 persons (against 301 in 1902), of which 90 were in Kandy, 53 in Colombo, 33 in Kegalla, 31 in Ratnapura, 25 in Kalutara, 19 in Badulla, 15 in Galle, 10 in Nuwara Eliya, 7 in Matale, 3 each in Matara and Hambantota, and 2 in Kurunegala.

94. *Dietetic Diseases.*—The deaths from these causes numbered 202 (against 201 last year). Of these, 184 (189 in 1902) were attributed to want of breast milk, nine to chronic alcoholism, eight to delirium tremens, and one to scurvy.

95. Of the 184 deaths attributed to want of breast milk, 100 were of Tamils, 69 Sinhalese, 12 Moors, and 3 Burghers. Of the total number, 52 occurred in Batticaloa, 29 in Badulla, 18 in Kandy, 14 each in Nuwara Eliya and Puttalam, 11 each in Negombo and Kegalla, 8 each in Colombo and Hambantota, 6 in Jaffna, 3 each in Ratnapura and Matara, 2 each in Trincomalee, Kurunegala, and Anuradhapura, and 1 in Manpar.

96. *Constitutional Diseases.*—Constitutional diseases caused 7,721 deaths, and were in the proportion of 2,085 per million, a lower proportion than the average for the period 1898–1902 (2,108). Of the deaths in this class, the most fatal were phthisis 3,383, and anæmia 2,896, rheumatism caused 535 deaths, scrofula 261, cancer 212, leprosy 115, diabetes 104, parangi 92, rickets 59, tabes mesenterica 26, tubercular meningitis 21, purpura 6, and elephantiasis 1.

97. *Local Diseases.*—The deaths under this head numbered 30,512, and accounted for about 32 per cent. of the total number of deaths. They were in the proportion of 8,238 per million, as against the average 8,527 for the period 1898–1902.

98. Of the total number of deaths from local diseases, 11,189 (36 per cent.) were assigned to diseases of the nervous system, including 9,465 from infantile convulsions, 565 from tetanus, 440 from paralysis, 200 from convulsious, 152 from epilepsy, 148 from apoplexy, 104 from inflammation of brain, and 49 from mania; 6,827 deaths were caused by diseases of the respiratory system,

including 2,937 from pneumonia, 699 from bronchitis, 235 from asthma, 53 from laryngitis, 28 from pleurisy, and 14 from croup. Diseases of the digestive system caused 1,273 deaths, of which 252 were diseases of the liver, including 64 from cirrhosis of liver, 156 from ascites, 92 from sore throat, 83 from peritonitis, 78 from enteritis, 65 from diseases of stomach, 50 from obstruction of intestine, 49 from dyspepsia, 49 from hæmatemesis, and 41 from stomatitis; 745 deaths resulted from diseases of the circulatory system, including 211 from varicose veins, 65 from angina pectoris, and 45 from valve disease of heart; 329 deaths resulted from diseases of the urinary system, including 107 from Bright's disease, 58 from nephritis, 28 from suppression of urine, 10 from uræmia, 9 from diseases of bladder, and 5 from hæmatura, and 7,804 (or 26 per cent.) from diseases of the integumentary system.

99. *Diseases of Women at Parturition.*—2,152 deaths were attributed to diseases of parturition, including 1,109 from puerperal convulsions, 31 from abortion and miscarriage, 16 from flooding, 3 from puerperal mania, 2 from phlegmasia dolens, and 991 from other and undefined accidents of childbirth. The total number of children registered during the year as born alive was 148,027, so that the mortality of mothers to a thousand children born was 14·5. In other words, one mother died to every 68 children born alive.

Table O.—Deaths of Women at Parturition.

Nationality.	Deaths of Women at Parturition.			Births.			Deaths of Women at Parturition to 1,000 Births.		
	Average, 1898–1902.	1902.	1903.	Average, 1898–1902.	1902.	1903.	Average, 1898-1902	1902.	1903.
All Races ...	2,218·8	2,309	2,152	135,201	141,893	148,027	16·4	16·3	14·5
Europeans ...	—	—	—	172	188	177	—	—	—
Burghers	6·6	8	10	675	708	735	9·6	11·3	13·6
Sinhalese ...	1,758·4	1,859	1,705	98,179	102,797	106,747	17·9	18·1	16·0

Others	2·0	2	4	152	187	217	14·4	10·7	18·4

100. *Suicide.*—157 deaths were attributed to suicide, equal to a rate of 42 per million persons living, which is considerably lower than in England, where in 1902 it was 99 to a million. The favourite mode by which suicide is accomplished in Ceylon is by hanging, which accounts for more than half the deaths (97), poison accounts for 20, drowning for 17, and gun-shot wounds for 11.

101. *Homicide.*—As many as 135 deaths were attributed to homicide, corresponding to a rate of 36 per million persons living, a rate which is identical with the average during the period 1898–1902.

102. *Executions.*—There were twenty-one judicial executions registered during the year. This number is ten less than last year, and corresponds to a rate of six per million persons living.

103. *Accidents.*—During the year 1,611 deaths resulted from accident or negligence, giving a mortality rate of 435 per million persons living, or 11 per million less than the mean rate for 1898–1902 (446). Drowning accounts for 391, or 24 per cent of these deaths. 385 deaths were attributed to falls from trees, 217 to snake bite, 111 to burns and scalds, 79 to falls of heavy substances, 67 to injury at birth, 57 to gun-shot wounds, 36 to suffocation, 31 to falls from heights other than trees, 18 to being run over by cart, 17 to falls, 17 to being run over by train, 14 to explosions, 12 to injuries caused by crocodiles, 9 to injuries caused by bulls, 9 to being caught in machinery, 8 to injuries caused by hornets, 7 to injuries caused by elephants, 6 to cutting or stabbing, 5 to foreign body in air passage, 5 to injuries caused by leopards, 4 to falls into pits, 3 to injuries caused by buffaloes, 2 to injuries caused by Brahmin lizards, 2 to rat-bites. Two persons lost their lives by lightning, and two by blows. One death was caused by a horse, one by a dog, one by cattle, one by leeches, one by wasps, one by a fish, and one by bees. One death was due to explosion of dynamite, one to wire shoot snapping, one to explosion of firearms, one to a railway accident, one to an overdose of arrack, and one to being run over by tram car.

VII.—Births and Deaths on Estates.

104. The total number of births reported for registration in 1903 from the estates in the Central, Uva, and Sabaragamuwa Provinces, and the Colombo and Kalutara Districts of the Western Province, was 10,829 (of which 29 were Europeans, 29 Burghers, 303 Sinhalese, 10,337 Tamils, 107 Moors, 17 Malays, and 7 "Others"); and the total number of deaths was 9,554 (9 Europeans, 13 Burghers, 212 Sinhalese, 9,239 Tamils, 62 Moors, 9 Malays, and 10 "Others").

105. The term "estate" means any land having ten or more acres in cultivation and situated in a district appointed under The Medical Wants Ordinance, No. 17 of 1880. The Ordinance has been brought into operation only in the districts containing tea, coffee, and other plantations mainly under European management, viz., in the districts named above.

106. The subjoined Table P gives the birth- and death-rates among the estate labourers. The Colombo District means here the estates in the Avisawella division :—

Table P.—Birth- and Death-rates among the Estate Population.

District.	Population at the Census of 1901. 420,340.	Proportion per 1,000 of the Population.											
		Births.						Deaths.

107. *Kandy District.*—The total number of births reported for registration from the estates in the Kandy District numbered 4,095 (13 Europeans, 14 Burghers, 103 Sinhalese, 3,904 Tamils, 54 Moors, 5 Malays, and 2 "Others"); and the deaths numbered 3,403 (6 Europeans, 4 Burghers, 64 Sinhalese, 3,287 Tamils, 36 Moors, 1 Malay, and 2 "Others." The birth-rate for the year (26·3) was 4·4 per thousand more than the annual average for the period 1898–1902 (21·9), while the death-rate 21·9 showed a decrease of 8·0 per thousand from the average 29·9.

108. Of the 3,403 deaths, 1,037 or 30 per cent. were due to diarrhœal diseases, as against 40 per cent. in the preceding five years 1898–1902. The other most fatal causes were debility 841, mostly of infants from inability to suck, as against 788 the annual average for 1898–1902, followed by pneumonia and bronchitis 249 (average 264), general dropsy 190 (average 214), infantile convulsions 184 (average 173), fevers 125 (average 206), old age 116 (average 121), malarial cachexia 92 (average 184), dochmius duodenalis 56 (average 50), premature birth 39, anæmia 33, epilepsy 33, worms 30, and phthisis 26.

109. *Matale District.*—The total number of births reported for registration from the estates in the Matale District numbered 584 (2 Europeans, 3 Burghers, 13 Sinhalese, 560 Tamils, 2 Moors, and 4 Malays,); and the deaths numbered 680 (1 Burgher, 17 Sinhalese, 655 Tamils, 3 Moors, 3 Malays, and 1 "Other"). The birth-rate for the year (22·3) was 1·9 per thousand in excess of the average 20·4 for the period 1898–1902, while the death-rate 26·0 showed a decrease of 9·5 per thousand from the average 35·5.

110. Of the 680 deaths in 1903, 166 or nearly 25 per cent. were due to diarrhœal diseases, as against 32 per cent., the average for the period 1898–1902). Debility (mostly of infants from inability to suck) caused 97 deaths (95 the annual average for 1898–1902), pneumonia and bronchitis 77 (average 74), fever 77 (average 106), general dropsy 56 (average 44), malarial cachexia 50 (average 96), old age 37, infantile convulsions 29, and anæmia 9.

111. *Nuwara Eliya District.*—The total number of births reported for registration from the estates in the Nuwara Eliya District was 2,506 (6 Europeans, 9 Burghers, 51 Sinhalese, 2,414 Tamils, 22 Moors, 1 Malay, and 3 "Others"); and the deaths numbered 1,901 (2 Europeans, 6 Burghers, 38 Sinhalese, 1,842 Tamils, 8 Moors, 1 Malay, and 4 "Others"). The birth-rate for the year (24·3) showed an increase of 5·8 per thousand on the average 18·5 for the period 1898–1902, while the death-rate was 18·4 as against the average 18·8.

112. Of the 1,901 deaths in 1903, as many as 661 or nearly 35 per cent., were due to diarrhœal diseases. The other most fatal causes were debility (mostly of infants from inability to suck) 434, (370 annual average for 1898–1902), pneumonia and bronchitis 192 (average 158), infantile convulsions 89 (average 59), general dropsy 84 (average 86), fevers 62 (average 67), old age 50 (average 73), epilepsy 20, phthisis 18, and anæmia 14.

113. *Badulla District.*—The total number of births reported for registration from the estates in the Badulla District numbered 1,556 (1 European, 2 Burghers, 22 Sinhalese, 1,522 Tamils, 6 Moors, and 3 Malays); and the deaths nuumbered 1,216 (1 European, 10 Sinhalese, 1,200 Tamils, 3 Moors, and 2 Malays). The birth-rate for the year (30·0) showed an increase of 7·7 per 1,000 on the annual average 22·3 for the period 1898-1902, while the death-rate was 23·5 as against the average 20·8.

114. Of the 1,216 deaths, 412, or nearly 34 per cent., were due to diarrhœal diseases. The other most fatal causes were debility (mostly of infants from inability to suck) 305 (216 average for 1898-1902), pneumonia and bronchitis 124 (average 124), fevers 76 (average 90), infantile convulsions 56 (average 39), general dropsy 32 (average 35), old age 30 (average 24), malarial cachexia 20 (average 27), and phthisis 12.

115. *Ratnapura District.*—The total number of births reported for registration from the estates in the Ratnapura District was 377 (2 Europeans, 22 Sinhalese, 347 Tamils, 5 Moors, and 1 Malay); and the deaths numbered 516 (1 Burgher, 11 Sinhalese, 500 Tamils, 3 Moors, and 1 Malay). The birth-rate during the year (22·7) showed a decrease of 1·8 per 1,000 from the average 24·5 for the period 1898–1902, while the death-rate 31·0 showed an improvement on the average 40·0.

116. Of the 516 deaths in 1902, as many as 214, or over 41 per cent., were due to diarrhœal diseases. The other most fatal causes were debility (mostly of infants from inability to suck) 78 (65 annual average for 1898-1902), pneumonia and bronchitis 31 (average 17), malarial cachexia 25 (average 27), dochmius duodenalis 21 (average 16), infantile convulsions 21 (average 30), old age 18, and phthisis 18.

117. *Kegalla District.*—The total number of births reported for registration from the estates in the Kegalla District amounted to 1,099 (3 Europeans, 1 Burgher, 66 Sinhalese, 1,012 Tamils, 14 Moors, and 3 Malays); and the deaths numbered 1,128 (1 Burgher, 44 Sinhalese, 1,076 Tamils, 6 Moors, and 1 Malay). The birth-rate during the year (26·5) was 1·8 per 1,000 in excess of the average (24·7) for the period 1898–1902, and the death-rate 27·2 showed a decrease of 11·5 per thousand from the average (38·7).

118. Of the 1,128 deaths, diarrhœal diseases caused 415, or over 36 per cent. The other most fatal causes were debility (mostly of infants from inability to suck) 143 (153 the annual average for 1898–1902), malarial cachexia 118 (average 103), infantile convulsions 63 (average 82), pneumonia and bronchitis 55 (average 50), fevers 54 (average 103), general dropsy 45 (average 44), old age 27, phthisis 27, dochmius duodenalis 26, and anæmia 16.

119. *Colombo District.*—The number of births reported for registration from the estates in this district was 171 (10 Sinhalese, 158 Tamils, 1 Moor, and 2 "Others"); and the deaths numbered 221 (9 Sinhalese, 208 Tamils, 2 Moors, and 2 "Others"). In the year under review the birth-rate increased to 20·6 from the average (16·7) for the period 1898–1902, and the death-rate 26·6 showed a marked improvement when compared with the average 46·3.

120. Of the 221 deaths, as many as 81 or over 36 per cent. of the total number were due to diarrhœal diseases. The other chief natural causes were fevers 36, ascites 18, debility 16 (mostly of infants from inability to suck), anæmia 16, malarial cachexia 8, and phthisis 8.

121. *Kalutara District.*—The number of births reported for registration from the estates in Kalutara District amounted to 441 (2 Europeans, 16 Sinhalese, 420 Tamils, and 3 Moors); and the deaths numbered 489 (16 Sinhalese, 471 Tamils, 1 Moor, and 1 "Other"). The birth-rate during the year was 26·0, as against the average (16·2) for the period 1898–1902, and the death-rate was 28·8 as against 40·7 the average.

122. Of the 489 deaths, as many as 168 or over 34 per cent. of the total number were due to diarrhœal diseases. The other most fatal causes were debility (mostly of infants from inability to suck) 93 (67 the average for the period 1898–1902), malarial cachexia 36 (average 42), fevers 30, infantile convulsions 21, pneumonia and bronchitis 20, and general dropsy 20.

VIII.—HEALTH OF THE TOWN OF COLOMBO.

123. The number of births registered in the town of Colombo during the year 1903 was 3,552, and corresponded to a rate of 21·8, which was a falling off from the rate for the previous year (23·0) as well as from the average rate for the period 1898 to 1902 (22·2). The number of deaths registered in the town in 1903 was 5,684. To this should be added the deaths of two town patients who died at the Infectious Diseases Hospital at Kanatta (outside the town), and whose deaths were registered by an extra-urban registrar, and the total would then be 5,686, giving a rate of 34·8 per thousand persons living. The death-rate was in excess of the average for the period 1898–1902 by 1·9 per thousand, and of the rate for the preceding year by 1·3. The number of deaths registered during the year was the largest ever recorded in the town, and was 322 more than in the preceding year, and 623 in excess of the annual average for the preceding five years 1898–1902 (5,063).

124. The vital statistics of the town were for the first time separately collected in 1887, and at the end of 1892 important changes in the system of death registration were introduced by the Ordinance No. 20 of 1891, which came into operation on the 1st January, 1893. The machinery of registration was improved at the beginning of 1895 by the appointment of stipendiary medical officers as registrars, and still further in May, 1897, by increasing their number and making the inspection of dead bodies by the registrar compulsory where a certificate as to the cause of death is not produced from a qualified medical attendant on the deceased. The period subsequent to 1892 accordingly shows a marked increase in the number of registered events, especially deaths, compared with the period prior to it.

125. During the period 1898–1902 the average number of deaths registered yearly was 5,063, and in 1887–1892 2,628. The population is estimated to have increased to 153,823 at the middle of the former period from 125,871 at the middle of the latter period. Making allowance for this increase, and assuming that the mortality at the two periods was equal, there should have been registered an average of 4,143 deaths in the period 1887–1892 instead of 2,628. This would show that 37 per cent. of the deaths during this period escaped registration. In 1887–1892 the mean annual mortality of the town was 20·8 per thousand; in 1893, upon the introduction of the new system of registration of deaths, the death-rate rose to 31·4. The rate rose still higher (33·6) in 1894, and remained about the same in the three succeeding years 1895, 1896, and 1897. In 1898 it fell to 32·1, and still further in 1899 (29·8), from which it rose to 34·2 in 1900 and to 34·7 in 1901, falling again to 33·5 in 1902. In the year under report the rate rose to 34·8.

126. As usual, the death-rate exceeds the birth-rate, owing mainly to the preponderance of males over females, chiefly among the Europeans and among the Indian Tamils and Mohammedans, to the presence of hospitals and jails, which add to the normal mortality of the town, and to registration of births being less efficient than that of deaths. The birth-rate this year fell short of the death-rate by 38 per cent.

127. *Births and Deaths and their Rates.*—The subjoined Table Q gives the births and deaths and their rates of each race living in the Colombo Municipality for the years 1902 and 1903, with the averages for the period 1898–1902:—

Table Q.—Births, Deaths, and their Rates for each Race living in the Town of Colombo for 1902 and 1903, and the Averages for 1898–1902.

Race.	Population (inclusive of the Military) at the Census of 1901.	Births.			Deaths.			Birth-rate per Mille*			Death-rate per Mille*		
		Average, 1898-1902.	1902.	1903.	Average, 1898-1902.	1902.	1903.	Average, 1898-1902.	1902.	1903.	Average, 1898-1902.	1902.	1903.

Europeans ...	2,657	77	90	85	77	73	93	29·2	33·1	30·7	29·3	26·9	33·6
Burghers ...	11,861	362	389	364	300	313	340	30·7	32·3	29·9	25·5	26·0	28·0
Sinhalese ...	68,772	1,808	1,976	1,980	2,263	2,384	2,712	26·5	28·2	27·9	33·0	34·0	38·2
Tamils ...	34,640	394	440	418	1,221	1,360	1,286	11·6	12·1	11·1	35·9	37·5	34·2
Moors ...	28,898	623	599	558	920	936	936	21·8	20·3	18·6	32·2	31·7	31·1
Malays	4,493	115	131	91	152	145	150	26·0	28·1	19·0	34·4	31·1	31·4
Others ...	4,548	46	56	56	130	153	169	10·4	11·5	10·9	29·2	31·4	33·0

* These rates have been calculated on population estimated to the middle of the year according to the rate of increase in the last intercensal period.

128. The increase in the death-rate, compared with the preceding year, is shared by all the races, except the Tamils and the Moors. Excluding the above, all the other nationalities show a higher death-rate than the average rates, with the exception of the Malays (31·4), who show an improvement on the average (34·4). The Burghers, as usual, show the lowest death-rate (28·0). The highest death-rate is that of the Sinhalese (38·2), and the next highest of the Tamils (34·2). During the year under report there was a falling off in the birth-rates for each of the races from those for the previous year. The number of births and deaths of the different races in the different wards of the town and their rates per thousand, the principal zymotic causes of death, &c., are shown in the following Table R:—

Table R.—Births and Deaths and their Rates in the different Wards of the Colombo Municipality, with the Principal Zymotic Causes of Death, in the Year 1903.

Name of Ward.	Population (inclusive of the Military) at the Census of 1901.	BIRTHS.										DEATHS.																		Deaths of Children under One Year.	Deaths of Children under One Year to 1,000 registered Births.	Birth-rate.			Death-rate.

129. Omitting the Fort and Galle Face Wards, of which the population is mainly a male adult floating one, and the Pettah Ward, of which the conditions are similar, the healthiest division during the year was, as usual, the Kollupitiya Ward, with a death-rate of 19·4, as against an average of 18·5 in the period 1898–1902, and 18·9, the rate for the previous year. The highest death-rate was in the Kotahena Ward (31·1, average 27·1). In three of the wards, viz., Fort and Galle Face, St. Sebastian, and St. Paul's, the death-rates diminished from the average, while all the other wards show an increase.

130. Full particulars as to the health of the town in the four quarters and for each week of the year 1903 appear in my quarterly reports published periodically in the *Government Gazette* and in the weekly reports published in the local newspapers.

131. *Causes of Death.*—In the following table the causes of death in the year, which are given in detail in Table XXVII., are summarized and compared with those of the year 1902 and the average for the period 1898-1902 :—

Table S.—Mortality in the Town of Colombo from Groups of Diseases in 1902 and 1903 and the Average in 1898–1902.

Causes of Death.	Total Deaths.			Mortality per 1,000 Living.		
	Average, 1898–1902.	1902.	1903.	Average, 1898–1902.	1902.	1903.
ALL CAUSES ...	5,063	5,364	5,686	32·87	33·52	34·83
Zymotic Diseases	1,585	1,672	1,739	10·29	10·45	10·65
Parasitic Diseases	165	137	119	1·07	·86	·73
Dietetic Diseases	9	12	6	·06	·08	·04
Constitutional Diseases	596	627	687	3·87	3·92	4·21
Developmental Diseases	369	328	367	2·41	2·05	2·25
Local Diseases	1,846	2,100	2,192	11·97	13·12	13·43
Violence	79	95	95	·51	·59	·58
Ill-defined and not Specified Causes ...	414	393	481	2·69	2·45	2·94

132. The deaths attributed to zymotic causes in 1903 numbered 1,739, and corresponded to a rate of 10·65 per mille, a slight increase on the rate for the preceding year (10·45) and the average rate (10·29) for the period 1898–1902. Of these 1,739 deaths, fevers caused 497 (including 98 deaths from enteric fever), against 442 in 1902, diarrhœa and dysentery 1,081 (against 1,042 in 1902), malarial cachexia 28 (against 30 in 1902).

133. Parasitic diseases caused 119 deaths, proportion of ·73 per mille, as against ·86 last year and an average of 1·07 in 1898–1902. Of these deaths, 53 were attributed to dochmius duodenalis (against 61 last year), 23 of the victims being Sinhalese, 20 Tamils, 3 Moors, 2 Burghers, and 5 "Others." Constitutional diseases caused 687 deaths, a proportion of 4·21 per mille, against 3·92 last year and an average of 3·87 for the period 1898–1902. Under this head phithisis caused 526 deaths (against 481 in the last year), anæmia 47, cancer 36, diabetes 17, rheumatism 14, tabes mesenterica 12, tubercular meningitis 9, and leprosy 7.

134. The deaths from local diseases numbered 2,192, being in the proportion of 13·43 per mille, a little higher than last year (13·12) and the average (11·97). Of these, diseases of the nervous system caused 948 deaths (including 469 deaths from infantile convulsions), and those of the respiratory system caused 738 deaths, including 490 from pneumonia and 209 from bronchitis.

135. Violence accounted for 95 deaths, of which 72 were due to accidents. Of these, 15 were attributed to drowning, 12 to burns and scalds, 10 to the fall of heavy substances, 8 to falls from heights ; 9 deaths were caused by carts, 2 by railway trains, 1 by a tram car ; 4 met their deaths by machinery, 3 by explosion, 2 by being gored by bulls, and 1 by cutting or stabbing.

136. Thirteen deaths resulted from homicide. Ten deaths were due to suicide. In three of these cases the deceased ended their existence by hanging, two by cutting or stabbing, two by poison, and one by shooting.

IX.—HEALTH OF THE PRINCIPAL TOWNS.

137. The death-rate of the towns was 35·3 in 1903, as against 36·8 in the previous year and 36·1 the average for the period 1898–1902. The birth-rate was 35·5 in 1903, as against 34·9 in 1902 and 32·4 the average for the period 1898–1902.

138. The following Table T shows the births and deaths and their rates in each of the towns of the Island into which has been introduced the special system of registration of deaths provided in the Ordinance No. 1 of 1895 (sections 31 to 36) for the years 1902 and 1903, with the average for the years 1898–1902. The death-rates for 1903 have been calculated for deaths inclusive, as well as exclusive, of deaths in hospitals and jails. These rates are for all races, and may differ from the rates given in Tables VI. and VII. (*a*) and (*b*), which are for the indigenous races :—

Table T.—Births and Deaths and their Rates for the Towns.

Towns.	Population (inclusive of the Military) at the Census of 1901.	1902.			Birth-rate.			Death-rate.			
		Total Births.	Total Deaths.	Deaths in Hospitals and in Jails.	Average, 1898–1902.	1902.	1903.	Average, 1898–1902.	1902.	1903. Inclusive of Hospital and Jail Deaths.	1903. Exclusive of Hospital and Jail Deaths.

Kegalla ...	2,340	81	128	92	33·3	34·6	33·6	60·5	60·9	53·1	14·9

139. Of the twenty-six towns (exclusive of Colombo) included in this table, as many as eighteen have a population of less than 10,000, and twelve of them even less than 5,000, but they are all district headquarters, except Gampola and Nawalapitiya, which are centres of tea districts and important railway stations, and Moratuwa and Panadure, centres of several populous villages. In some of these towns more than half the number of deaths, and in others nearly half, occurred in hospitals, which are chiefly resorted to by estate coolies and the destitute poor not resident in the towns. Excluding the hospital and jail deaths, the lowest death-rate was in Tangalla (12·4), followed by Nuwara Eliya (13·6), and Kegalla (14·9). The highest death-rate was in Vavuniya (45·2), followed by Puttalam (37·1), and Jaffna (35·6).

X.—ADMINISTRATION.

140. Having assumed duties as Registrar-General on the 23rd November, 1903, I was in charge of the Department for only a very short period of the year—a little more than one month. Messrs. P. Arunachalam and H. White administered the Department for three months and eight months of the year respectively.

141. The only legislative enactment relative to the Department passed during the year is the Ordinance No. 12 of 1903 relating to foreign marriages. It was introduced in December last in pursuance of an Order of His Majesty in Council, and makes provision for notice to be given of marriages intended to be solemnized under the provisions of "The Foreign Marriage Act, 1892," where one of the parties is resident in Ceylon.

142. A new feature was introduced during the year by my predecessor, Mr. H. White, in the weekly health report hitherto confined to the Colombo town by appending thereto the number of births and deaths occurring every week in the Provincial and Local Board towns of the Island. The particulars of nineteen such towns for each week are furnished to the Head Office by telegraph on the following Monday morning by the Medical Registrars of the stations, and are usually published in the local papers by the middle of the following week.

143. Four Notifications and three Proclamations by the Governor in Executive Council under Ordinances Nos. 1 and 2 of 1895 and No. 3 of 1870 amending some of the registration divisions in Kandy, Nuwara Eliya, Jaffna, Matara, Kurunegala, Chilaw, and Anuradhapura districts were published in the *Government Gazette* during the year.

144. At the instance of my predecessor, Mr. P. Arunachalam, Government has sanctioned an expenditure of Rs. 450 in order to obtain a life table for Ceylon. Steps are being taken to have it

prepared by an expert in England. The only two life tables hitherto prepared in Ceylon were prepared by persons without any actuarial experience, and it is expected that the proposed life table will be very useful.

145. *Records.*—During the year under review about 550,000 duplicate registers of marriages, births, and deaths were verified, arranged, and bound into volumes of convenient size. The yearly number of records received at the Head Office for preservation under the Births and Deaths and Marriage Ordinances amounts to about 300,000, and the additional space required for these has made it essential for the recordroom to be enlarged from time to time by utilizing every available space, and it has necessarily reduced the accommodation for my staff, who now work under very great difficulties, which are aggravated by the fact that the building does not admit sufficient light and fresh air. This question of increased accommodation for the staff and records is very urgent, and should be taken up seriously at an early date.

146. The Chief Clerkship of the Department having fallen vacant during the early part of the year by the well-merited promotion of Mr. J. A. Gunaratna to the Chief Clerkship of the Forest Department, a post in the First Class of the Clerical Service, the vacancy was filled by the appointment of Mr. M. S. Fernando, who previously acted in that capacity during the employment of Mr. Gunaratna on Census duties.

Registrar-General's Office,
Colombo, April 30, 1904.

E. F. HOPKINS,
Registrar-General.

APPENDIX.

I.—Estimated Population and Number of Marriages, Births, and Deaths registered in the Island in each of the Years 1867–1903.

Year.	Estimated Population in the Middle of the Year.	Marriages registered.	Persons married.	Births registered.	Deaths registered. §	Excess of registered Births over Deaths.*	Excess of Immigrants over Emigrants.

* The sign minus (—) signifies that deaths exceeded births.

† The births and deaths here shown for 1867 were registered in the ten months commencing March 1, on which date the Ordinance No. 13 of 1862 came into operation.

‡ The number of births and deaths for 1868 includes those registered in the first half-year under the Ordinance No. 13 of 1862, and those in the second half under Ordinance No. 18 of 1867, which repealed the former Ordinance and came into operation on July 1, 1868.

§ The registration of deaths up to 1887 was imperfect, and the figures given cannot safely be compared with those of subsequent years, in which deaths have been registered with increasing efficiency every year.

Table III.—Estimated Population, the Marriages, Births, and Deaths, registered in the Island, with their Rates per 1,000 Persons Living, according to Races, in the Years 1902 and 1903, and the Yearly Average in 1898–1902.

* This estimate of population is based on the Census of March, 1901, and the returns of births and deaths registered.

† The rates for this division are calculated on the population estimated at the intercensal rate of increase (1891–1901). See also Table Q in the report.

‡ Statistics for this division being separately available from 1901 only, the average birth- and death-rates are for 1901–1902.

§ For Tamil statistics see Table VII (*a*). For Moor statistics see Table VII (*b*).

¶ Rates are omitted as the population is too small to yield reliable rates.

VI.—Sinhalese Population, &c.—*continued.*

Province, District, and Division.	Area in Square Miles.	Sinhalese. Estimated Population on July 1, 1903.	Births. 1902.	Births. 1903.	Deaths. 1902.	Deaths. 1903.	Proportion per 1,000 of Population. Births. Average, 1898 to 1902.	Births. 1903.	Deaths. Average, 1898 to 1902.	Deaths. 1903.	Deaths of Infants under 1 Year to 1,000 Births in 1903.

Diseases of Organs of Special Sense.			
Conjunctivitis and other diseases of eye	11	9	12
Otitis and other diseases of ear	5	4	5
Epistaxis and other diseases of nose	18	15	13
Diseases of Circulatory System.			
Pericarditis	8	9	5
Valve disease of heart	12	11	45
Hypertrophy of heart	1	1	2
Angina pectoris, syncope	25	30	65
Aneurism	2	3	6
Embolism, thrombosis	6	—	7
Phlebitis	1	1	1
Varicose veins	256	238	211
Other and undefined Diseases of Heart or Circulatory System	207	297	403
Diseases of Respiratory System.			
Laryngitis	28	26	53
Croup	11	11	14
Bronchitis	612	664	699
Asthma	262	208	235
Pneumonia	2,525	2,939	2,937
Pleurisy	31	31	28
Other and udefined Diseases of Respiratory System	2,999	3,133	2,861
Diseases of Digestive System.			
Stomatitis	14	18	41
Dentition	3	1	9
Quinsy	6	8	13
Sore throat	32	30	92
Dyspepsia	64	70	49
Hæmatemesis	62	46	49

Table XXIII.—Causes of Deaths, 1902 and 1903, &c.—*continued.*

	Number of Deaths.		
	Average, 1898–1902.	1902.	1903.
Melæna	2	1	3
Diseases of stomach	119	95	65
Enteritis	37	37	78
Ulceration of intestines	10	5	1
Ileus, obstruction of intestines	64	72	50
Debility of intestines	—	—	—
Stricture or strangulation of intestine	5	5	16
Intussusception of intestine	1	2	3
Hernia	20	22	19
Fistula	10	11	7
Peritonitis	82	90	83
Ascites	117	109	156
Gallstones	1	1	2
Cirrhosis of liver	48	56	64
Other diseases of liver	226	198	188
Other and undefined Diseases of Digestive System	310	308	285
Diseases of Lymphatic System and Ductless Glands.			
Diseases of the lymphatic system	3	1	4
Diseases of spleen	39	25	32
Diseases of Urinary System.			
Nephritis	38	51	58
Bright's disease	87	102	107
Uræmia	5	11	10
Suppression of urine	34	29	28
Calculus (stone)	2	—	—
Hæmatura	—	—	5
Diseases of bladder	9	11	9
Other and undefined Diseases of Urinary System	122	130	112
Diseases of Organs of Generation.			
Ovarian diseases	8	10	4
Diseases of uterus and vagina	25	20	22
Disorders of menstruation	29	28	18
Pelvic abscess	1	1	1
Perineal abscess	1	2	1
Diseases of testes, penis, scrotum, &c.	65	54	58
Diseases of Parturition.			
Abortion, miscarriage	36	26	31
Puerperal mania	1	—	3
Puerperal convulsions	1,117	1,179	1,109
Placenta prævia, flooding	10	14	16
Phlegmasia dolens	2	1	2
Other and undefined accidents of childbirth	1,053	1,089	991
Diseases of Organs of Locomotion.			
Caries, necrosis	4	8	15
Arthritis, ostitis, periostitis	8	12	7
Other and undefined Diseases of Organs of Locomotion	2	5	1
Diseases of Integumentary System.			
Carbuncle	38	32	25
Phlegmon, cellulitis	18	12	25
Lupus	—	—	1
Ulcer, bed sore	85	81	100
Eczema	4	9	5
Pemphigus	1	—	1
Other and undefined Diseases of Integumentary System	7,807	7,957	7,647
Accident or Negligence.			
Fractures, contusions	605	585	603
Gunshot wounds	69	67	57
Cut, stab	7	6	6
Burn, scald	117	134	111
Poison	40	45	34
Drowning	359	385	391
Suffocation	8	12	36
Snakebite	198	209	217
Otherwise	163	161	156
Homicide.			
Murder, manslaughter	128	135	135
Suicide.			
Gunshot wounds	9	10	11
Cut, stab	6	8	3
Poison	14	15	20
Drowning	20	16	17
Hanging	77	86	97
Otherwise	11	11	9
Execution.			
Hanging	27	31	21
Ill-defined and not specified Causes.			
General dropsy	2,731	2,791	2,720
Debility	4,387	4,899	4,915
Sudden deaths (causes unascertained)	20	21	8
Abscess	59	135	330
Tumour	9	15	22
Hæmorrhage	18	30	17
Other ill-defined and not specified causes	196	222	132

* "Estate" means any land having ten or more acres in cultivation, and situated in a district appointed under the Medical Wants Ordinance, No. 17 of 1880. The Ordinance has been brought into operation only in the districts under tea, cacao, and coffee cultivation.

† The Avisawella division of the Colombo District.

CEYLON

ADMINISTRATION REPORTS.

1902.

PART I.—REVENUE.

CUSTOMS AND SHIPPING.

MEMORANDUM ON THE RETURNS FOR THE YEAR 1902.

Staff.—Mr. Macleod succeeded Mr. Moor as Deputy Collector, and the writer assumed duties as Principal Collector on the departure of the Hon. Mr. Jackson on sick leave.

Improvements to Customs Premises.—(*a*) The electric cranes referred to in last year's Administration Report have arrived, and three have been erected on the Prince of Wales's jetty. There was some delay in obtaining the necessary current, but this want has now been supplied. A great saving in time will result from the use of these cranes.

(*b*) Commissariat street has been thrown open to cart traffic, and goods are now loaded from the back of B and C warehouses. This was one of the improvements suggested by the Wharf Commission in May, 1901. There have been difficulties in the completion of the roadway behind the wharfage premises, by which goods will similarly be taken out from the back of the sheds, thus largely reducing the number of carts, which at present must work from the front of the warehouses into which goods are being landed. The original scheme caused inconvenience to the Military by preventing easy access to the Battenberg battery, and the plan in consequence had to be slightly modified. Work is being continued on the quay wall, and considerable progress has been made. The necessary dredging has, however, been delayed, as it appears to be difficult to carry on this work without greatly interfering with landing operations.

(*c*) Additions have been made to the export sheds in the Fort premises.

(*d*) Seashore street has been widened.

(*e*) A new searcher's office has been built for the Leyden Bastion Gate.

Another shed is required at the new export jetty, where oil and plumbago are shipped.

Amendment of Customs Ordinance.—The changes effected by the Ordinance recently passed were not of financial importance, but were made with the object of simplifying the tariff. The principal amendments were contained not in the schedule, but in the body of the Bill, by which the Governor in Executive Council is empowered to reduce or abolish existing Customs duties, whilst by resolution of the Legislative Council new duties may be imposed and existing ones raised. Previously it was necessary to pass a new Ordinance whenever any alteration, however slight, in the tariff was required, and desirable modifications had to be postponed. The analogy of the Toll Ordinance was followed. At one time a separate Ordinance was necessary whenever a new toll was to be established. Now a resolution of the Legislature suffices, whilst the Governor in Executive Council may abolish or move an existing toll. As regards the tariff itself, liquid fuel having a flashing point of 150 degrees is now admitted free, and the concession already granted to persons registering guns and watches at the Customs of their re-admission without payment of duty has been extended to other articles which, in the opinion of the Principal Collector of Customs, are similarly capable of identification. The other alterations in the tariff are as follows :—

Imports.

Fowling-pieces, guns, and rifles, single-barrelled, each Rs. 5.	The word "carbines" to be inserted in place of "guns."
Fowling-pieces, guns, and rifles, double-barrelled, each Rs. 10.	The word "carbines" to be inserted in place of "guns."
Pistols, single-barrelled, each Rs. 2·25.	To be added "but not magazine" after the word "single-barrelled."
Pistols, double-barrelled, and revolvers, each Rs. 4·50.	The words "or magazine, or revolvers" to be inserted in place of "and revolvers."
Arrowroot, free.	Pays duty at 35 cents per cwt.
Brassware, Rs. 5 per cwt.	"Except blocks, bars, tubes, and wire" to be inserted. These to pay Rs. 3 per cwt.
Copperware, Rs. 5 per cwt.	Add "except bars, bolts, plates, nails, tacks, wire, and tubes." These to pay Rs. 3 per cwt.
Brass wire and nails.	Omit "nails," add "blocks, bars, and tubes."

Copper sheathing, bars, bolts, ingots, plates, nails, and tacks, Rs. 3 per cwt.	Omit "sheathing" and add "wire and tubes."
Iron, galvanized, viz., guttering, nails, piping, ridging, rivets, sheets, and sheets corrugated, spouting, strapping, screws, tiles, washers, wire.	The clause now reads: "Iron and steel, galvanized goods of all description, including tin tacks."
Iron nails and tacks of sorts, and rivets.	The present wording is "Iron and steel, not galvanized; rails, chains, wire, rivets, screws, nails, tacks, washers, bolts, and nuts."
	New item: "Perfumery or spirits imported as perfumery, Rs. 7 per gallon."
	Eau de Cologne will be affected by this alteration in the tariff. It was found that eau de Cologne was drunk by coolies as it was cheaper (but more pernicious) than other forms of alcohol.
Rice, wheat, gram, peas, beans, and other grain, except barley for brewing, and paddy, 50 cents per cwt.	The words "dried in bulk" are added after "peas."
	New item: "Tapioca, 35 cents per cwt." Formerly *ad valorem*.
	New item: "Advertising matter, including printed almanacs, pocket books, diaries, ash trays, calendars, show cards, show plates, and frames, call bells, paper knives, and blotting pads—free of duty."
Free Goods.	
Animals, viz., horses, mules, asses, neat cattle, and all other live stock.	The word "neat" is deleted.
Books and maps, printed.	Add "and book covers."
Coffee.	Add "pure, in bean or ground, in tins."
Drawing and drawing materials.	The clause now reads "Artists' materials for drawing and painting."
Drums, iron, for oil.	The word "iron" is omitted.
	New item: "Cloth for filters."
Machinery, viz.:	
Prime movers and component parts thereof, including boilers and component parts thereof; also including locomotive and portable engines, steam rollers, fire engines, and other machines in which the prime mover is not separable from the operative parts.	The words "but not including motor cars not used for traction" are added in continuation.
Machinery (and component parts thereof), meaning machines or sets of machines to be worked by electric, steam, water, fire, or other power not being manual or animal labour, or which before being brought into use require to be fixed with reference to other moving parts, and which are intended for:	The words "not being manual or animal labour" are deleted.
(*e*) The drying and rolling of tea.	(*e*) Now read "The preparation, manufacture, and packing of tea, coffee, and cacao."
(*f*) The preparing of coffee.	
Machinery for—	
The crushing of bones and bricks.	Clause reads "The crushing of bones and manufacture of bricks."
Potteries.	Add "and brick and tile works."
Sawmills.	Read also "and wood-working."
	New addition: "Electric traction and electric light."
	Also new: "The manufacture of ice and for refrigerating and cold storage purposes."
	New item: "Memorial tablets of whatever material."
All unwrought metals.	To be followed up by the words "including any unwrought alloy or amalgam."
Brass sheets.	The new clause reads "Brass, copper, and yellow metal sheets and ingots."
Iron, angle, and Swedish bar.	New clause: "Iron or steel, not galvanized; sheets, plates, joists, girders, bars, angles, tees, channels, hoops, bulbs, and pigs."
Iron, bar, flat, square, bolt, or round, rod, and nail rod.	
Iron, pig.	
Iron plates and sheets (not galvanized).	
Lead, sheet, pipe and pig.	Also read "and lead wire."
Paper and envelopes, ruled and unruled, with or without printed heading.	Read instead "Paper for writing, printing, or accounting purposes, headed or plain, ruled and unruled, and envelopes."
Prints and pictures, printed almanacs, and show cards, and plates, with their frames.	Delete "with their frames" and insert "and picture frames."
Screws for tea boxes.	Add "and nails" after screws.
Stones, grinding.	Add "and sharpening."
Stones of sorts.	Omit "of sorts" and add "unworked."
HARBOUR DUES.	
Imports.	
	New item: "Empty drums, 2 cents for a term of 5 days." These formerly paid 4 cents.
Petroleum liquid fuel in bulk, Rs. 2·50 per 1,000 gallons for a term of five days.	Deleted.
Exports.	
For every 50 lb. 3 cents for five days.	New rates:
For every additional 50 lb. or fraction thereof 3 cents.	For 50 lb. 3 cents.
Package or box of less weight 2 cents for five days.	From 50 lb. to 100 lb. 6 cents.
	For every additional 20 lb. or fraction thereof 1 cent.

Merchandise Marks Act.—A consignment of brandy with colourable imitation of Hennessey's labels was stopped at the Customs. The labels were precisely similar to those of Hennessey, but the name on them was Hemansey. By a coincidence Mr. Hennessey happened to be passing through Colombo just at the time when the goods were detained, and came to an arrangement with the consignees to destroy the labels.

RETURNS FOR THE YEAR.

The returns for the year 1902 show a decrease in imports, but the total trade of the Colony rose by 4 million rupees, owing to an increase of 10 million rupees in exports. The estimated value of imports, including specie to the value of Rs. 11,585,002·55, amounted to Rs. 109,468,266·05, and the estimated value of exports, including specie to the value of Rs. 1,168,500, amounted to Rs. 111,900,170, showing a balance in favour of exports of Rs. 2,431,903·95, or, if specie be omitted, also a balance in favour of exports of Rs. 12,848,406·50.

The decrease in imports, which amounts to Rs. 6,166,772·62 as compared with 1901, is due mainly to a decrease in the value of Government stores and coal imported, and to the omission of the value of military stores, the War Office having discontinued the entry of values on the bills of lading.

The value of exports, omitting specie and value of coal, exceeded the value in 1900 by Rs. 6,191,910, and in 1901 by Rs. 10,983,280.

The following table shows the value of the trade of the Colony, omitting specie, since 1891 :—

	Rs.		Rs.
1891	117,342,259	1897	168,959,460
1892	123,857,835	1898	181,326,925
1893	139,237,891	1899	213,007,870
1894	147,021,610	1900	220,550,716
1895	161,040,346	1901	204,232,206
1896	162,436,016	1902	208,614,933

The following table shows the annual value of the trade of the Colony for the last five years, the totals of which are given above :—

	Imports. Rs. c.	Exports. Rs. c.
1898	87,525,034 97	93,801,890 13
1899	101,542,220 61	111,405,649 99
1900	114,544,256 41	106,006,460 55
1901	104,050,036 12	100,182,170 0
1902	97,883,263 50	110,731,670 0

The following statement shows the value of imports and specie imported into each Province during 1902 :—

	Rs. c.	Rs. c.
Value of Imports.		
Western Province	88,595,590 72	
Northern Province	3,340,816 8	
Southern Province	4,646,133 91	
Eastern Province	1,300,722 79	
		97,883,263 50
Value of Specie.		
Western Province	—	11,585,002 55
Total Value of Imports for 1902, including Specie ...		109,468,266 5

The revenue derived from Customs Dues shows an increase in 1902, as compared with 1901, of Rs. 183,368·36, and as compared with 1900 of Rs. 9,743·33.

The following table shows the income from this source for the twelve years beginning with 1891 :—

Gross Customs Revenue for the Twelve Years ended 1902.

	Rs. c.		Rs. c.
1891	4,302,320 19	1897	6,278,787 49
1892	4,663,562 47	1898	6,714,625 82
1893	4,498,912 10	1899	7,101,851 73
1894	4,931,967 42	1900	7,620,432 29
1895	5,770,241 2	1901	7,446,807 26
1896	5,550,971 65	1902	7,630,175 62

The increase in 1902 is mainly due to larger imports of cotton, spirits, and cordials, sugar, kerosine oil, and other goods.

Up to 1893 the Customs revenue included recoveries under the head of "Port Dues," which are now shown under a distinct head.

The following table shows the recoveries in each of the Maritime Provinces of the Island :—

Revenue of each Province.

Western Province.	Rs. c.	Rs. c.
Colombo	6,879,103 64

Net Increase ...	183 22		

In Colombo the decrease in 1902, as compared with 1901, amounts to Rs. 11,455·49, due principally to a decrease in tonnage dues. Between 1883 and 1902 the increase amounted to Rs. 732,954·66, or nearly 193½ per cent.

The duty collected on estate products (tea, coffee, cacao, and cinchona) under the "Medical Wants Ordinance" amounted in 1902 to Rs. 142,013·59, as compared with Rs. 134,800·97 in 1901, there being an increase in the recoveries of Rs. 7,212·62, due principally to larger exports of tea.

The duty imposed on tea "in order that the proceeds of such duty may be devoted to increasing the consumption of Ceylon tea in foreign lands" amounted to Rs. 386,269·16.

IMPORTS.

Arms and Ammunition (including dynamite, detonators, fuse, and blasting powder).—The duty collected shows a decrease of Rs. 17,500·15 :—

Cement (exclusive of the quantity imported as Government stores, valued at Rs. 637,595).—A decrease in value of Rs. 35,300·94 and in quantity of 444$\frac{13}{20}$ tons.

Coal, Coke, and Patent Fuel.—The quantity imported was 532,159 tons, against 627,728 tons in 1901, a decrease in quantity of 95,569 tons. The landings at the two principal ports were as follows :—

	Tons.
Colombo	507,897
Galle	18,431
Total	526,328

Decrease 93,483 tons:—

			Tons.	Tons.
Colombo ...	1902 ...	... ...	507,897	
	1901 ...	... ...	599,588	
		Decrease ...	———	91,691

	1901 ...	... ...	20,223	
		Decrease ...	———	1,792
		Total Decrease	—	93,483

Though there has been a falling off in the import as compared with the last two years, the increase over 1898 and 1899 is considerable. In 1896 the import was only 354,059 tons.

Kerosine Oil.—The following statement gives the results of a comparison of the quantities imported, quantities entered for home consumption, value and duty recovered on kerosine oil in 1902, with the immediately preceding four years. It will be seen that the amount imported and the duty recovered was higher than in any preceding year:—

	1902.	Compared with 1898.		Compared with 1899.		Compared with 1900.		Compared with 1901.	
		+ or —	Quantity.	+ or —	Quantity.	+ or —	Quantity.	+ or —	Quantity.

Grain.—The following is a statement of rice cleared for home consumption for seven years:—

	Bushels.
1896 ...	7,594,413
1897 ...	8,723,750
1898 ...	9,018,320
1899 ...	9,178,405
1900 ...	9,592,323¾
1901 ...	8,951,650⅕
1902 ... 5,150,014 cwt. 2 qr. 9 lb. =	8,873,871¼
Total for Seven Years ...	61,932,733⅕

The falling off in the last two years is attributable to depression in the tea trade.

The duty collected on rice amounted to Rs. 2,575,168·64, and on other grain of all sorts to Rs. 297,982·36, making in all Rs. 2,873,151, particulars of which are annexed:—

	Rs. c.
Barley ...	774 56
Beans ...	26,303 90
Gram ...	47,516 87
Oats ...	3,998 40
Paddy ...	191,070 39
Peas ...	24,471 39
Wheat ...	457 18
Other ...	3,389 67
	297,982 36
Rice ...	2,575,168 64
Total ...	2,873,151 0

Live Stock.—The decrease in the value of live stock imported is Rs. 170,951·04 compared with 1901. The number of cattle rose from 29,093 to 29,232, sheep and goats fell from 111,733 to 103,806. The number of horses imported rose from 453 to 469. The value set upon live stock is arbitrary. For instance, the 453 horses imported in 1901 were valued at Rs. 154,850, while the 469 brought in 1902 were only entered at Rs. 116,660, the average value thus falling from Rs. 342 a head in 1901 to Rs. 249 in 1902.

Metals and Metalware.—An increase in value of Rs. 177,296·53 is shown by the following statement :—

	1901.	1902.	Increase.	Decrease.

Lubricating oil has increased largely since 1899, when the value was Rs. 6,427 only. In 1900 it rose to Rs. 57,619, and since then has more than doubled.

Opium.—An increase in quantity of 273 lb. In 1901 there was a decrease of 2,748 lb. as compared with 1900.

Poonac.—An increase in quantity of 15,030 cwt. 2 qr. 19 lb.

Spices.—An increase in value of Rs. 40,616·31 and in duty of Rs. 1,425·58, as under :—

	1901. Value. Rs. c.	1901. Duty. Rs. c.	1902. Value. Rs. c.	1902. Duty. Rs. c.

Spirits of all kinds show a decrease in value of Rs. 22,860·31, the quantity imported being 183,600 gallons, against 182,142 gallons in the previous year. The increase in the quantity entered for home consumption is attributable to large clearings from the stock in bond, while the decrease in the value of imports is due to a falling off of over Rs. 40,000 in the value of whisky and of nearly Rs. 7,000 in that of gin, in spite of the rise in quantity of the latter by two thousand and odd gallons.

Omitting the Harbour and Port Dues and the amounts collected under the Medical Aid Ordinance and on account of the Tea Fund, the collections are distributed as follows:—

	Per cent.
Collected in Western Province	90·67
Do. Southern Province	4·66
Do. Northern Province	3·65
Do. Eastern Province	1·02

The following statement shows the total receipts of the Department:—

	Rs. c.
Customs	7,630,175 62
Harbour Dues	1,111,972 89
Port Dues	41,515 64
Medical Aid	142,013 59
Tea Fund	386,269 16
Total ...	9,311,946 90

The cost of collection was 1·49 per cent. upon the total collections.

EXPORTS.

The value of exports in 1902 amounted to Rs. 111,900,170, distributed under the following heads:—

	Rs.
Ceylon Produce	96,771,467
Imports re-exported	1,462,923
Specie	1,168,500
Coal for use of Steamers	12,497,280
Total ...	111,900,170

The value of **Ceylon Produce** exported shows an increase over the figures of 1900 of Rs. 5,902,935 and over 1901 of Rs. 10,794,057. This increase is mainly attributable to the larger shipments of tea, the valuation of which has also risen from 33 cents a pound in 1901 to 36 cents in the year under review.

Imports re-exported also show an increase of Rs. 189,223 as compared with 1901, and of Rs. 288,975 as compared with 1900.

The value of coal exported for use of steamers fell from Rs. 12,931,060 in 1901 to Rs 12,497,280 in 1902, the quantities imported having been 627,728 tons in 1901 and 532,159 tons in 1902.

The exports of specie show a decrease from Rs. 2,658,178 in 1901 to Rs. 1,168,500 in 1902.

The value of exports to the United Kingdom has risen from Rs. 50,158,739 in 1901 to Rs. 53,643,256 in 1902, and to foreign countries from Rs. 20,755,749 in 1901 to Rs. 28,440,868 in 1902, while that of the British Colonies shows a fall from Rs. 18,994,800 in 1901 to Rs. 17,318,766 in 1902.

The export of tea to Russia (Asiatic and European) shows an increase from 9,597,459 lb. in 1901 to 11,403,975 lb. in 1902, and to the United States of America an increase from 1,528,293 lb. in 1901 to 3,729,806 lb. in 1902. The exports of Ceylon produce to Russia (Asiatic and European) were valued at Rs. 4,502,897 in 1902, as against Rs. 4,069,415 in 1901. The rise in the value of exports of Ceylon produce to the United States of America in 1902 as compared with 1901 was from Rs. 5,458,167 to Rs. 9,980,737, and this rise is due principally to larger exports of tea, plumbago, and cocoanut oil.

In the staple articles of export, cacao, coffee, and cardamoms show an increase of 14,005 cwt., 1,311 cwt., and 1,026 cwt. respectively over the figures of 1901; whereas cinnamon has fallen from 39,810 cwt. in 1901 to 38,981 cwt. in 1902.

Coir yarn, fibre, and rope exported from the two principal ports (Colombo and Galle) show an increase of 2,140 cwt. as compared with 1900, and of 1,056 cwt. as compared with 1901.

Copperah exported from Colombo and Galle shows a decrease of 22,571 cwt. as compared with 1900, and of 74,590 cwt. as compared with 1901.

The exports of citronella oil have increased by 1,354,831 ounces. Of the total value of Ceylon produce exported, the products of the cocoanut palm represent nearly 21·56 per cent.

Medical Aid Ordinance.—Coffee, cacao, cinchona, and tea are liable to duty under the Medical Aid Ordinance.

Table A shows the quantity and value of these products as compared with exportation of the preceding year :—

Table A.

		Quantity. Cwt.	Value. Rs.			
Coffee	1901	9,090	537,482	Increase	cwt.	1,311
	1902	10,401	639,795	Increase	Rs.	102,313
Cacao	1901	47,471	2,321,331	Increase	cwt.	14,005
	1902	61,476	2,537,764	Increase	Rs.	216,433
		lb.				
Cinchona	1901	499,985	49,998	Decrease	lb.	192,922
	1902	307,063	27,635	Decrease	Rs.	22,363
Tea	1901	144,275,608	47,610,950	Increase	lb.	6,554,099
	1902	150,829,707	54,298,694	Increase	Rs.	6,687,744

The duty collected on the foregoing was—

	Medical Aid. Rs. c.	Tea Fund. Rs. c.
At Colombo	141,918 0	386,015 23
At Galle	95 59	253 93
Total	142,013 59	386,269 16

The quantity of tea exported to different countries will appear in the Return D appended.

Plumbago.—The royalty recovered on plumbago amounted to Rs. 125,946·54, as against Rs. 111,742·23 in 1901, showing an increase of Rs. 14,204·31, and in quantity of 56,818 cwt.:—

	Quantity. Cwt.	Value. Rs. c.	Royalty. Rs. c.
1901	446,960	9,609,642 0	111,742 23
1902	503,778	10,516,366 0	125,946 54

The shipments from Colombo and Galle in 1902 were :—

	Quantity. Cwt.	Royalty. Rs. c.
Colombo	485,348	121,338 88
Galle	18,430	4,607 66
Total	503,778	125,946 54

Table B.

SHIPPING.

The arrivals at the Port of Colombo in the year 1902 numbered 1,887 steamers aggregating 4,524,032 tons, and 546 sailing vessels aggregating 50,239 tons, showing an increase in steamers of 83 aggregating 412,515 tons, and in sailing vessels an increase of 3 aggregating 2,631 tons, as compared with the preceding year.

The arrivals at the Port of Galle in 1902 numbered 162 steamers aggregating 301,295 tons, and 15 sailing vessels aggregating 1,231 tons, showing a decrease in steamers of 4, but an increase in tonnage aggregating 1,627 tons, and in sailing vessels an increase of 1 aggregating 249 tons.

The number of vessels which called to coal at Colombo and Galle during the year 1902 was :—

	No.	Tons.
Colombo	610 ...	1,339,945
Galle	81 ...	171,925

Compared with the preceding year, this shows a decrease in Colombo of 20 vessels, aggregating 51,015 tons, but an increase in Galle of 13 vessels, aggregating 40,792 tons.

The dues paid by vessels entering the Colombo Harbour for coaling during 1902 amounted to Rs. 65,713·50, a decrease from the preceding year of Rs. 684.

The total collection of Harbour Dues at Colombo during the year 1902 amounted to Rs. 1,104,013·26, a decrease of Rs. 19,415·12 from the preceding year, and Rs. 42,756·07 from the year 1900, the collections of which were abnormally large owing to heavy importation of rice, but a satisfactory increase over the collections of all previous years.

Compared with the collection of the first year (1883), viz., Rs. 379,018·23, the receipts in 1902 show an increase of Rs. 724,995·03.

The total collections up to last year since the Harbour Revenue was established in 1883 amounted to Rs. 14,091,597·60.

The total number of vessels and tonnage which entered at and cleared from ports in the Island during the year 1902 are as follows :—

Inwards.		*Outwards.*	
No.	Tons.	No.	Tons.
3,418 ...	4,981,584	3,429 ...	4,973,672

Classified as regards the several ports for each Province, the numbers and tonnage are—

	Inwards.		*Outwards.*	
	No.	Tons.	No.	Tons.
Western Province ...	2,509 ...	4,579,301	2,529 ...	4,610,706
Southern Province ...	177 ...	302,526	168 ...	294,743
Northern Province ...	600 ...	50,051	642 ...	54,782
Eastern Province ...	132 ...	49,706	90 ...	13,441

The number and tonnage of vessels for the past three years are :—

	Inwards.		*Outwards.*	
Year.	No.	Tons.	No.	Tons.
1900 ...	3,147 ...	4,250,066	3,203 ...	4,237,874
1901 ...	3,367 ...	4,557,607	3,436 ...	4,470,963
1902 ...	3,418 ...	4,981,584	3,429 ...	4,973,672

The nationality of vessels inwards and outwards during 1902 for the Island is thus made up :—

	Entered Inwards.		*Cleared Outwards.*	
	No.	Tons.	No.	Tons.
British ...	1,608 ...	3,372,284	1,636 ...	3,366,823
Colonial ...	1,259 ...	105,621	1,242 ...	103,170
Austrian ...	56 ...	176,791	56 ...	176,791
French ...	123 ...	297,692	123 ...	297,692
German ...	165 ...	647,691	165 ...	647,691
Japanese ...	62 ...	220,136	62 ...	220,136
Maldivian ...	86 ...	8,342	86 ...	8,342
Russian ...	32 ...	77,902	32 ...	77,902
Danish ...	2 ...	3,285	2 ...	3,285
Spanish ...	23 ...	69,685	23 ...	69,685
Norwegian ...	1 ...	571	1 ...	571
Dutch ...	1 ...	1,584	1 ...	1,584

Compared with the years 1898, 1899, 1900, and 1901, the result inwards and outwards is as follows :—

Inwards.

1898.—A decrease of 133 vessels, but an increase of 1,375,878 tons.
1899.—A decrease of 427 vessels, but an increase of 1,259,802 tons.
1900.—An increase of 271 vessels, and an increase of 731,518 tons.
1901.—An increase of 51 vessels, and an increase of 423,977 tons.

Outwards.

1898.—A decrease of 117 vessels, but an increase of 1,496,737 tons.
1899.—A decrease of 411 vessels, but an increase of 1,256,249 tons.
1900.—An increase of 226 vessels, and an increase of 735,798 tons.
1901.—A decrease of 7 vessels, but an increase of 502,709 tons.

The total Harbour Dues collected at the Port of Colombo during the year ended December 31, 1902, are shown under the different headings :—

	Rs. c.
Entering Dues	258,727 50
Tonnage Dues	343,111 75
Over-hour Dues	16,342 50
Wharfage Dues	430,635 16
	1,048,816 91
Dues collected on Live Stock	55,196 35
Total ...	1,104,013 26
Total Collection for the year 1901	1,123,428 38
Decrease ...	19,415 12

The number and tonnage of steamers and sailing vessels entered inwards and cleared outwards during the year 1902, exclusive of those calling to coal and for orders at Colombo and Galle, are shown :—

		Steamers.		Sailing Vessels.		Total.	
		No.	Tons.	No.	Tons.	No.	Tons.
Colombo ...	Inwards ...	1,887	4,524,032	546	50,239	2,433	4,574,271
	Outwards ...	1,895	4,559,122	540	46,251	2,435	4,605,373
	Total ...	3,782	9,083,154	1,086	96,490	4,868	9,179,644
Galle ...	Inwards ...	162	301,295	15	1,231	177	302,526
	Outwards ...	158	294,044	10	699	168	294,743
	Total ...	320	595,339	25	1,930	345	597,269

The number and tonnage of vessels calling to coal during the past four years at Colombo and Galle respectively are as follows :—

Year.	*Colombo.* No.	*Colombo.* Tons.	*Galle.* No.	*Galle.* Tons.
1899 ...	498 ...	1,020,393 ...	24 ...	39,589
1900 ...	607 ...	1,309,760 ...	58 ...	106,613
1901 ...	630 ...	1,390,960 ...	68 ...	131,133
1902 ...	610 ...	1,339,945 ...	81 ...	171,925

The number and tonnage of vessels calling to coal at Colombo, and the entering dues paid since 1883, the date of the commencement of the levy on account of the Breakwater, were—

Year.	No.	Tons.	Entering Dues. Rs. c.

His Majesty's Customs,
Colombo, April 11, 1903

H. L. CRAWFORD,
Acting Principal Collector.

WESTERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE HON. THE GOVERNMENT AGENT, WESTERN PROVINCE, FOR 1902.

REVENUE.

ALTHOUGH the revenue of the Western Province for the year 1901 bore out the prophecy contained in the late Government Agent's report for 1900, the returns for the past year show that he took too gloomy a view of the situation. The sum of Rs. 2,284,038·99 recovered in 1902 is the highest revenue on record, as will be seen on reference to Table A in Appendix III. showing the revenue of the Province for the last thirty years. The revenue for 1900, hitherto the highest, has been exceeded by over Rs. 69,000.

The items which differ by more than Rs. 3,000 from the corresponding items of last year are Customs, Arrack, Opium, Land Sales, and Survey Fees.

Nearly all the minor heads show some increase, while the only decrease of any importance is under the heads of Plumbago and Tolls. The plumbago industry has not yet recovered from the recent undue inflation of the market, and the competition for tolls was affected by anticipations of the reduction in road traffic which would ensue on the opening of the Kelani Valley Railway.

The increase in the revenue appears to correctly indicate a corresponding increase in the general prosperity of the inhabitants of the Province.

The detailed comparative statement is annexed.

I.—FOOD SUPPLY.

The supply of rice was ample, and it was obtainable at reasonable prices; but the proportion of home-grown to imported rice does not increase in this Province. Vegetables and fruit were plentiful, but fruit growers devote too little attention to quality, and it is to be hoped that the recently resuscitated Agri-Horticultural Society may be able to effect improvement in this respect. The fish markets were well supplied, and large quantities of fish were sent inland.

Early in the year an outcry was raised by the Colombo fishermen against the introduction of trawling by an enterprising Parsee gentleman, and in April complaints were made of attempts to injure the trawl and to intimidate those employed in working it. After inspection of the scene of the dispute, which is known as the bait ground, off the mouth of the Kelani river, and after considerable negotiation, a boundary was fixed, within which the trawl should not be used.

The question is one of much difficulty, as the facts are obscure. The trawler contends, and rightly, that a class of fish is captured by the trawl which rarely appears in the markets, but he also maintains that no more injury is done by the trawl to spawn and fry than is done by the nets of the native fishermen. The fishermen allege that the trawl not only destroys spawn and fry, but also frightens away the larger fish, which are not disturbed by their own stationary nets. As a rule, the spawn of sea fish floats on the surface, but it seems probable that trawling in shallow water close to shore would do harm to the small fry, and it is certainly desirable on all accounts that trawling operations should be carried on at as great a distance from the shore as is compatible with successful working. This distance can only be ascertained by experience. There can be no possible objections to fair competition in the market, but the native fisherman must be protected against injury to his industry, and the existing law provides full powers to impose any restrictions that may eventually be found necessary.

II.—IRRIGATION.

The irrigation works in this Province are unimportant, though flood outlets and drainage, which may be considered under the same head, are questions of great importance, to which considerable attention has recently been drawn.

The proposed Kelani flood bank, referred to by my predecessor in his report of 1901, cannot be treated as an irrigation work to be constructed in terms of section 35 of Ordinance No. 23 of 1889. I have ascertained that the land which the work is supposed to be likely to benefit consists of gardens, grass land, and paddy fields in the proportion, roughly, of 50, 24, and 26 per cent. respectively, and there is no prospect of the proprietors consenting to contribute towards the cost of the work. Some of the land, as my predecessor has pointed out, actually benefits by the periodical inundations and it is even possible that compensation might be demanded by the owners if the water were excluded from their land.

The work, moreover, is not, in my opinion, which is based on some personal knowledge of the locality and on inquiry, likely to succeed in its immediate object. It may be presumptuous to question engineering authority on such a subject, but an object lesson exists in the Southern Province, where a similiar flood bank was erected many years ago to exclude the flood water of the Gin-ganga from the fields, with the result that the flood was excluded, but the inland water rose to very nearly the same height on the inner side of the dam. It is noteworthy that this result was anticipated by the unscientific villagers. I am convinced that the damage done by the Kelani inundations is greatly

over-estimated. The report of the Commission which was appointed in 1872 appears to have been overlooked by some of the advocates of large expenditure on the prevention of floods. A large public subscription was raised to relieve the sufferers by the abnormal flood of that year, but a small proportion of the amount subscribed proved sufficient for the purpose, and the interest on the balance is paid to the Friend-in-Need Society.

I may here note the result of an experiment made by Mr. Ellis with a view to ascertain whether pure water would be sufficiently appreciated by the villagers of Hanwella to induce them to pay a nominal sum for a supply.

The fever epidemic, which usually breaks out at Hanwella every year, has been attributed to the use of water drawn from the highly polluted Kelani river, or from wells which are supplied by filtration from the river.

The main pipe which supplies water to the town of Colombo from the Labugama reservoir was tapped at Hanwella, and a standpipe erected there at a small cost. The rent of the standpipe was, as an experimental measure, sold on the 16th July for Rs. 3 for a period of three months, the purchaser being required to pay the metre charges. As the purchaser had to pay the purchase amount, irrespective of the quantity of water sold, it was obviously to his interest to sell at as low a rate as possible; but on the 7th August the Mudaliyar of Hewagam korale reported that, as the villagers refused to buy water, the renter had been obliged to close the tap. I think that possibly a more satisfactory result might have been obtained if the people had been allowed water free for some months before attempting to sell the water for even a nominal amount.

III.—LEGISLATION.

The Village Committees should, in my opinion, be empowered to levy a rate payable in money for the execution of works which require skilled labour. The existing law is a dead letter in this respect, as it is useless to call out unskilled labour for the construction of schools, court-houses, bridges, &c.

Ordinance No. 24 of 1889 is a most useful law, and I have done my best to induce the people to take more interest in its working. I personally held the elections of new members of Committee, and was glad to find that there was competition in some few cases for the post. It is most desirable to secure the services on the Committee of villagers of position, whose occupations prevent them from undertaking the more onerous duties of a headman.

Owing to the increased value of land in populous localities, disputes over rights of way are common, and not unfrequently lead to serious crime. It is probable that legislation will be necessary to protect, define, and create such rights. The law on the subject appears to have been variously interpreted, and it is difficult to settle disputes without reference to court.

The use of dynamite for the destruction of fish and the practice of setting spring guns should be subject to far more severe penalties than those at present provided by law.

IV.—WORKS MOST REQUIRED.

The increasing wealth of the population demands increased facilities for rapid communication, new post offices, telegraph offices, and railway stations; these wants have been duly represented, and will doubtless receive consideration as opportunity offers.

The improvement of all roads which serve as feeders to the Kelani Valley Railway has already been taken in hand, and the future success of the line is secured.

A railway to Negombo appears now to be the most pressing want, the passenger traffic alone being sufficient to ensure a good return on the cost. The railway need not cross the Kelani; a branch line from a station at Victoria bridge to Kelani would serve goods traffic and the small number of passengers for up-country. It is probable that the cost of a railway on the Colombo side of the Kelani would be prohibitive.

A house for the Assistant Agent of Kalutara has appeared in the list of works required in the Western Province for a great many years, but the Assistant Agent is still liable to be at any time left houseless, and I strongly recommend the purchase of his present residence. He is the only district revenue officer in the Island who is unprovided with an official dwelling. The necessity for a cattle quarantine station has been referred to elsewhere.

V.—PLANS FOR THE IMPROVEMENT OF THE PROVINCE.

Steady progress in the settlement of titles to land on the lines already laid down is the most important work. Next comes the improvement of the condition of the village by means of the Village Communities' Ordinance. Hitherto little interest has been taken by the people of this Province in the working of the Ordinance, and many of the districts have suffered from its neglect and from the consequent non-observance of ancient rules and customs. Such excellent results have been obtained by means of the Ordinance wherever the people have understood it, and have co-operated readily with the Committees, that it is difficult to understand the reason for the opposition, or more generally passive obstruction, met with on the part of those who should be the first to interest themselves in the work. The amount of labour required is very trifling, and Government aid has been promised to those who help themselves wherever a necessary work proves to be beyond their means. It is true that the machinery of the Ordinance is unfitted for populous localities where the village has grown into a town, but wherever rural conditions exist the operation of the Ordinance cannot fail to be beneficial.

The Local Board of Minuwangoda, which has so far proved to be a thoroughly successful experiment, is only a Village Committee under another name with additional sources of revenue, and as each village grows in wealth and population the Committee may be similarly replaced by a Local Board.

Moratuwa and Panadure are still unable to decide what they really want, and though the work of the local associations must not be under-valued, it is obvious that much more might be done with the funds that a Local Board would have at its disposal. The insanitary condition of Moratuwa has been exaggerated; but it would be idle to deny that there is room for improvement, and this can only be effected by a body which has authority to enforce its resolutions.

VI.—HOSPITALS, DISPENSARIES, AND SANITATION.

Statement M in Appendix III. shows the number of persons treated in the civil hospitals and dispensaries of the Western Province. In the General Hospital, Colombo, 16,035 patients were treated, and in the Female Dispensary, Colombo, 15,678. These are the highest totals for hospitals and dispensaries respectively, the next being Avisawella hospital with 1,330 patients, and Hanwella dispensary with 11,996.

There has been no epidemic disease of a serious nature in any part of the Province, and the sanitary condition of the towns and villages has been satisfactory. The headmen have been fully instructed as to the action to be taken by them on the occurrence of a case of cholera, plague, or other serious disease, and portable hospitals are kept in readiness in central positions throughout the Province.

VII.—HOMICIDES.

The number of homicides committed in the Province during the year was forty-seven, seventeen less than in the previous year, and the same number as in 1900. Of the thirty-six homicides in the Colombo District, particulars of which will be found in the Appendix, three were cases of justifiable homicide in self-defence. No less than ten were due, directly or indirectly, to land disputes, seven to jealousy and quarrels about women, four to revenge for real or supposed injury, three were committed with intent to rob, two were the result of ordinary quarrels, and one was a case of infanticide. In five cases the motive is unknown, and no one has been accused; in three of these cases firearms were used, and the murder was committed at night. Firearms were used in eleven cases in all. Twenty cases were brought to trial, and ten of the accused were convicted, seven of whom were sentenced to death. Ten cases were still pending at the close of the year.

The usual crime statistics are appended. The village crime return shows little variation from that of 1901. The greatest obstacle in the way of successful prosecution is the natural unwillingness of witnesses to come forward. Magistrates do not remand accused until a strong *primâ facie* case is made out, and witnesses are afraid to give evidence while the accused is at large. The payment of the actual expenses of witnesses is desirable. There are many obvious objections to this course, but it is impossible to make much progress with the suppression of crime when impartial witnesses will not give evidence.

The sense of duty to the public is not sufficiently developed in the ordinary native to induce him to travel long distances and spend whole days in attending court at his own expense, with the probable result of incurring ill-will in his village. It not unfrequently happens that evidence is obtained which is disbelieved because it was not tendered earlier, the only excuse for the delay being that the witness was either afraid of the accused and of his friends, or that he would not voluntarily incur the expense of giving evidence. The excuse is perfectly genuine, but the evidence is discredited and the criminal escapes. I consider that every witness whom the Crown Counsel finds it necessary to summon at the final hearing should receive his actual expenses in the Police Court as well as in the District or Supreme Court. The additional cost would undoubtedly be considerable, but I believe that it would be money well spent.

The case described below should be of interest to planters, as it is probable that this was only one of a series of more successful frauds. The Superintendent, Dewalakanda estate, forwarded a letter and a tundu received by him from "Batalanda" estate and informed me that, although his cheque had been cashed, no coolies had been sent by the superintendent who granted the tundu. This at first sight appeared to be a matter for civil action, but certain peculiarities in the letter roused suspicion, and it was soon ascertained that no estate named "Batalanda" was known, and it is certain that no force of Tamil coolies such as that described could be found on an unknown estate. The Assistant Superintendent of Police, Mr. Armstrong, at my request, took up the case, and eventually succeeded in obtaining a conviction. The *modus operandi* adopted by the rascals was ingenious. A kangany who was sent by the Superintendent of Dewalakanda to inspect the coolies was taken to an estate near Ragama at night, and was shown some coolies in their lines.

On various pretexts delivery of the coolies was delayed until the parties who personated the superintendent and conductor of the mythical estate had cashed the cheque. The kangany was then taken to Ragama station, whence a number of coolies are daily forwarded up-country from the camp, and was told that the coolies were in the train, the ticket and certificate being handed to him. On arrival at Veyangoda the kangany found that there were no coolies for his estate, and telegraphed to his master to stop payment of the cheque. This was of course too late. In the majority of such cases it is probable that the amount of the tundu would have been added to the kangany's debt, and there the matter would have ended. Fortunately, the Superintendent of Dewalakanda gave information, and Mr. Armstrong deserves much credit for the persevering manner in which he followed up the evidence and eventually succeeded in securing the conviction of Rafiel Silva, "superintendent," Elaris Fernando Jayawardene, "conductor," and Vellasamy, "kangany," of the non-existent "Batalanda estate." The first and second were sentenced to two years', and the third to one year's, rigorous imprisonment.

VIII.—HEADMEN.

The headmen of all grades, with few exceptions, did their duty well, and co-operated vigorously in the suppression and detection of crime. Among such a large number there must necessarily be some corrupt, untrustworthy, and negligent individuals, but careful inquiry is made into all complaints against headmen, and the result shows that as a body they deserve confidence, in spite of the reckless abuse which is often heaped upon them by anonymous writers in the public press. Those who have specially distinguished themselves during the year have received rewards, a list of which will be found in the Appendix.

IX.—POLICE.

The report of the Assistant Superintendent is annexed.

X.—CATTLE STEALING.

Cattle stealing still prevails, but the rules for sale and transfer introduced by Mr. Ellis are steadily enforced, and the cattle thief finds it daily more difficult to dispose of his booty.

The system of requiring passes for cattle removed from one district to another leads to the detention by headmen of a great many stolen cattle. Although it is difficult to prove actual theft, the offender is punished for a breach of the rules, and the cattle, if unclaimed, are forfeited. In many instances the owner has been found, and his property restored to him.

Increased facilities for giving notice of the detention of cattle supposed to have been stolen are required. Few cattle owners see the "Hue and Cry." In many cases stolen cattle are slaughtered at once, the meat being divided among the thieves. Cases of this kind will always occur so long as cattle are allowed to stray where they please. Many owners of cattle do not own an acre of land, and allow their cattle to roam about the roads and over their neighbours' property, and it is not surprising that the temptation to steal such cattle is too much for bad characters to resist.

None of the ingenious branding systems that have been devised are proof against the custom of the country, according to which an animal is frequently branded in the name of a child. A certificate for every animal, whether born in the owner's pinfold or not, should be required for a legitimate sale. If a man wants to sell one of his pinfold cattle, he should be compelled first to obtain a certificate of ownership, which may be attached to the sale voucher, and the sale of such an animal without a certificate of ownership should be equally punishable with a sale without a voucher. The rules have otherwise worked well, and the headmen have done much good work in enforcing them.

XI.—CATTLE DISEASE.

There were outbreaks of cattle disease in Siyane and Hewagam korales, particulars of which will be found in the Appendix. All cases were promptly reported and carefully attended to by the headmen, under the supervision of the Government Veterinary Surgeon and his staff.

When Acting Government Agent of the Western Province in 1899, I suggested the desirability of imposing quarantine on imported cattle, as inquiries had shown that in nearly every case in that year the outbreak of disease was due to the introduction of imported cattle from Colombo. The matter has since then been fully considered, and a scheme elaborated, but nothing has been done owing to the difficulty of obtaining a suitable site, and of providing for the initial cost of the necessary buildings. A very small charge per head would give a fair return on the cost of buildings and establishment, but the Municipal Council appears to be unwilling or unable to undertake the work. Although the interests of the whole Province, and even of the whole Island, are affected, the vast majority of imported cattle is slaughtered for the Colombo market, and the quarantine establishment should be in the neighbourhood of the slaughter-house and under the control of the Municipality. But if the Municipality will not carry out the scheme, I consider that it should be undertaken by Government, and its management entrusted to the Government Veterinary Surgeon.

XII. & XIII.—NEW AREAS OF CULTIVATION AND LAND SALES AND SETTLEMENTS.

The number of lots disposed of in the Colombo District during 1902 greatly exceeds the total of any previous year, viz., 5,317 lots, in extent 10,774A. 1R. 34·96P. During the last five years 15,972 lots, in extent 34,227A. 2R. 20·11P., have been disposed of, as compared with 3,490 lots, in extent 7,651A. 0R. 25·17P., during the eight years preceding 1898.

Statement F for the Province and Statement E for the Colombo District show the work done and the revenue realized. Statement H shows the number of lots purchased by natives and Europeans respectively. The largest lot sold during the year was 110A. 3R. 0P. in extent, and was purchased by a native.

Return I includes the preliminary plans received from the Surveyor-General since 1888, and shows steady progress during the three years to which the return refers. The number of plans in which all lots have been disposed of has risen from 819 to 1,472. A large number of plans was received from the Surveyor-General during the latter part of the year, and the majority of these will be dealt with during 1903.

Four villages, in extent 1,402A. 0R. 12P., situated in Siyane korale east, were finally settled during the latter part of the year, and steps will be taken in 1903 to proclaim the Crown reserves under the Waste Lands Ordinances. Three other villages in Siyane korale east have been partially settled with a view to Proclamation, and in Salpiti korale three villages have been finally settled, in which no Crown reserves exist, and Proclamation is therefore unnecessary.

Successful attempts have been made to recover survey fees for lots to which the title is undisputed, and out of 4,622 lots for which certificates of quiet possession were granted, fees have been paid on 2,456, realizing Rs. 13,443, the highest amount ever recovered under this head during one year. No effort has been spared to convince the people of the desirability of obtaining certified plans of their lands. A much larger sum might be recovered if each shareholder in a lot were allowed to obtain a copy of the plan and certificate, and I regret that it is considered undesirable to issue such copies. It would, in my opinion, tend greatly to reduce land disputes, while it would add appreciably to the revenue.

The office work of the Land Department has been very heavy, and Mr. Jansz, the Head Clerk of the Department, whose excellent work has received recognition in previous reports, deserves, with his assistants Mr. Pieris and Mr. Wiraman, the greatest credit for the results obtained. The land sales have been, as a rule, held by Mr. Drieberg, whose judicious treatment of claims tends greatly to expedite their settlement.

XIV.—CHENA CULTIVATION.

Chena cultivation is not practised in the Colombo District of the Western Province. A few cases of encroachment on Crown forest have occurred in Pasdun korale, which were brought to my attention when on circuit in the Kalutara District. These will be dealt with by the Assistant Agent after personal inspection.

XV.—SALE OF LAND BY VILLAGERS.

The usual transfers of landed property between villagers have taken place, but there have been none which call for special remark. There is no reason to suppose that land has been sold to which the vendors had insufficient title.

XVI.—THE NATURE OF WORK OTHER THAN MERE ROUTINE.

Under this head may be included the valuation of property required for Government purposes, to which reference is more specially made elsewhere. It is work of which the burden would be materially lightened by the amendment suggested.

The working of the tin ticket system for immigrant coolies, and the correspondence with Government Departments and with planters on the subject, have occupied much time. Mr. Galbraith, Extra Office Assistant, has rendered valuable assistance in this matter, and I am indebted to many members of the planting community for useful suggestions and criticisms.

Work other than routine was done in Sub-Committee of the Legislative Council, on the Harbour Board, the Plague Committee, Cremation Committee, Arrack Board, Coronation Committee, Agri-Horticultural Society, and as a Visitor of the Lunatic Asylum and of the Welikada Jail.

XVII.—LAND ACQUISITION.

Twenty-four mandates to acquire land for public purposes were received during the year, as shown in the following list :—

(1) Approach to Hanwella ferry.
(2) Road to Henaratgoda resthouse.
(3) Quarries at Mutwal.
(4) Quarry at Avisawella.
(5) Quarry on Kandy road.
(6) Road to Niwandana quarry.
(7) Quarters for Superintendent, Cooly Camp.
(8) Do. (second mandate).
(9) Kelani Valley Railway.
(10) Do.
(11) Do.
(12) Do.
(13) Do.
(14) Do.
(15) Slave Island station.
(16) Quarters for Engine Drivers and Guards.
(17) Well at Mount Lavinia.
(18) Improvement of Maradana Junction station.
(19) Graving Dock Works.
(20) New service reservoir, Mutwal.

Kalutara.

(21) Well for Neboda hospital.
(22) Gatehouse at Kalutara North.
(23) Quarry, Nagoda-Neboda road.
(24) Quarry at Palatota.

In Colombo District the acquisitions cover an extent of about 44 acres, divided into 119 lots, classified as follows :—

Compensation accepted	65
Compensation refused	11
Disputed ownership	1
Crown lands	8
Acquisition abandoned	7
Pending	27
Total ...	119

The average cost of the land acquired was over Rs. 17,500 per acre, but most of the lots were situated in thickly populated localities, and many very valuable residential properties were included in them. Among the latter, Elie House, Mutwal, was acquired for a service reservoir at a cost of Rs. 150,000. I am indebted to Mr. J. S. Drieberg for the following interesting notes on the subject :—

> This is the largest amount that has yet been paid for the acquisition of a single property. With its demolition will pass away a building of historical interest, and one of the handsomest in the Island. It was built by Mr. Philip Anstruther, a former Colonial Secretary, but it is best known as the residence of that eminent Ceylonese, the late Charles Ambrose Lorenz. The annexure gives the title of the property in chronological order, and is of interest, as showing the rise in the value of land. There is a slab in the floor of one of the entrances to the house with the inscription—
>
> STADS WAGT
>
> Ao. 1702.

Mr. R. G. Anthonisz, the Government Archivist, has reported on it as follows :—

> "'Stads Wagt' ('wacht" in modern Dutch) means city guard. The stone had evidently been placed over some gateway of the guard-room. It had no connection with the present building, which was put up about 1830-40 as a private residence by Mr. Philip Anstruther, then Colonial Secretary. The name 'Elie House' was derived no doubt from the old family seat of the Anstruthers, Mr. Philip Anstruther having been a grandson of the Third Baronet of Elie House in County Fife. At a subsequent period Elie House at Mutwal was the residence of Mr. C. A. Lorenz, the unofficial leader of the Burgher Community and Member of Council. The stone has some historical value, as it no doubt marks the site of the old Dutch guard-house put up by Governor Gerrit de Heire. It formed the northern limit of the city, which was composed at that time of the Kasteel or Castle and the Oude and Nieuwe Steden (old and new city). The Town or City Council (Stads Road) had its jurisdiction within these Municipal limits, while the rural districts, extending as far as Chilaw and Puttalam, were under the authority of the Dessawa of Colombo. It would seem that at the time of the building of Elie House some old structure bearing the stone slab had to be demolished, and the builder, not to destroy an interesting landmark, had the stone placed on the floor of the new building to mark the spot."

Another distinguished occupant of Elie House, not mentioned by Mr. Drieberg, was Sir Emerson Tennent, Colonial Secretary, and author of the well-known work on Ceylon.

The work of assessing the value of properties required for Government purposes has been carried out as far as possible on the system adopted by the late Government Agent in acquiring land for the Kelani Valley Railway.

References to court have been unavoidable, but the court has affirmed the valuation. The Government Agent is, however, at a great disadvantage when a reference is made to court. I believe that the existing form of reference is wrong, and that it is not the procedure contemplated by the Ordinance. At present the Government Agent has to appear as plaintiff, and prove a negative, viz., that the land is not worth more than a certain sum. He is, on the other hand, bound to admit that he has offered its full value. Where a valuable property is concerned, it is obvious that the owner has everything to gain and nothing to lose by refusing to accept the offer made.

The more reasonable and certainly the more expeditious course would be to call on the dissatisfied owner to prove that his property is worth more than has been offered, and the wording of the Ordinance appears to indicate that this is the course which was originally intended. All that is required is to alter the printed form of reference, the authority for which I have been unable to ascertain.

XVIII.—THE FIREARMS ORDINANCES.

Ordinances Nos. 6 and 17 of 1901 relating to the possession and use of firearms were brought into operation from 1st April, 1902. There is always considerable difficulty in making the provisions of a new Ordinance generally known, and special steps were taken by means of advertisements and by the distribution of leaflets (see Appendix) to give publicity to the requirements of the new law.

The Ordinances provide for annual licenses expiring on 31st December, and for the annual renewal of such licenses. Arrangements have been made enabling the Korale Mudaliyars to issue and renew licenses for guns owned by persons living within their respective korales. Returns are furnished of the purchasers of guns by licensed vendors, and the Colombo Customs sends returns of guns imported. I am thus able to take steps against those who fail to take out licenses, and also to give information to other Government Agents, which enables them to enforce the provisions of the Ordinance in their respective Provinces. Care has been taken not to issue licenses to sell firearms without due inquiry, and the books required by the Ordinance are periodically inspected by the police.

An attempt has been made to obtain a census of guns in the Western Province by distributing, with the householders' lists, forms for the purpose (see Appendix). The result may be interesting, but there is no legal provision compelling householders to fill up and return the form.

The Superintendent of Police and the Assistant Superintendent, Rural Police, have rendered valuable assistance in securing the issue and renewal of licenses for 1902. Between 1st April and 31st December 1,550 licenses were renewed and 3,728 licenses issued. Far better results will be obtained in 1903, and much benefit will result from the full operation of the Ordinance throughout the Island.

XIX.—CAMP OF OBSERVATION, RAGAMA.

The camp has been considerably improved during the year by the addition of a new set of sheds and the construction of an office for the Superintendent and his clerk. The working of the camp was thoroughly satisfactory throughout the year, and, as will be seen from the annexed extracts from the Superintendent's report, several outbreaks of cholera up-country were averted by the detention of the infected gangs.

The tin ticket system, devised by Mr. Ellis, of forwarding coolies from the coast of India to Ragama and thence to the estates at the expense of Government, was introduced early in the year. Various modifications of the original scheme have been found necessary, and a new set of rules, drawn up after consultation with the General Manager of the Railway and with the Chairman of the Planters Association, was published towards the end of the year. The principal alteration is that all estates which derive their labour supply from the Coast must be registered at the District Kachcheri before they can obtain certificates to enable coolies to travel at the reduced rate. Out of 33,788 coolies who passed through the camp at Ragama during the year, 13,943, or 41·26 per cent., travelled on the tin ticket system.

Superintendent's Report on the Working of the Ragama Camp of Observation for the Year ending 31st December, 1902.

There has been a large falling off in coolies arriving from the Coast this year, when compared with the two previous ones. The very large number of immigrants, 134,134, which arrived during 1900 is the cause. Planters must have found it very difficult to give steady work to this large force during 1901, and, I have no doubt, encouraged emigration rather than immigration during this year. Since August last complaints of the dearth of labour in the planting districts have been general, and the probability is efforts will be made to recruit coolies between March and September, 1903.

Cooly Traffic.—33,788 coolies passed through the camps from 1st January to 31st December, against 45,823 for the same period last year. The largest number of coolies in camp at one time was 797 on the 19th July. The largest number in quarantine was 657 on the 19th July.

Health.—Up to the 30th June the health in the camps was excellent. On the 5th July a gang of 188 coolies arrived with a clean bill of health; on the following morning a case of cholera occurred, and the gang was quarantined. Again, on the 11th a gang of 238 arrived. I met the cooly special train and took particular precautions, as I suspected that the gang was infected. On the morning of the 12th a case was reported, which proved fatal.

Outbreak of Cholera.—Between July and October there were six outbreaks, nineteen coolies were attacked, and thirteen of the cases proved fatal.

Camp Accommodation.—Immigration was carried on successfully and without any inconvenience in camps Nos. 1 and 5 during the first half-year. Very few coolies, however, had to be accommodated, and the absence of illness made the work in the camps comparatively easy. In June a new camp adjoining No. 5, and called No. 6, was completed. This camp is very well situated, and almost perfect from a sanitary point of view. Five large sheds, with kitchens, latrines, and water service to each, are in line, a distance of 60 feet apart,

and running along the ridge of a hill. A bath has been constructed for the use of coolies in all five sheds. Coolies from any one shed can have access to the bath without mixing with the others. Each shed is enclosed by a barbed wire fence, and I estimate that 250 coolies can be easily accommodated in any one portion. It was originally intended to use this camp for tin ticket coolies only. I found, however, it was better adapted for quarantine purposes, and No. 5 camp has been used for daily arrivals and tin ticket coolies. No. 5 camp is also divided into five sections, and has accommodation for from 1,200 to 1,500 coolies. No. 1 camp, which is in a semi-abandoned condition, is only used for receiving and registering coolies. Coolies receive an evening meal on the day of arrival in this camp, and are then moved on to No. 5 for the period of detention.

Water Supply.—During the year a water service has been completed for the supply of tank water for Nos. 1 and 6 camps. The use of the old hand pumps, which were continually getting out of order, has been discontinued. There has been no lack of water, and the new service, though a little more costly in fuel, as the steam engine has to be kept continually running, is very satisfactory.

Complaints.—No serious complaints have been made by either superintendents of estates or coolies during the year. On one or two occasions watchers have exceeded their duty in getting coolies to carry out camp orders, and I found a reprimand in such cases sufficient. The camp staff has strict orders under no circumstances to molest or strike a cooly.

Buildings and Grounds.—The system of keeping the camp grounds in order by quarantined coolies continues to work satisfactorily. Tin ticket coolies willingly turn out to work, too. This system obviates the necessity of keeping a large staff of latrine coolies and sweepers, the present staff being only sufficient to cope with the sanitary work of the camp. The buildings have been all kept in good repair by the Public Works Department. Only two of the temporary sheds in No. 1 camp have been kept in order; the other three have been abandoned and must be taken down, as they are in a dangerous condition. During the year a dhoby's house was erected in No. 1 camp at the request of the Principal Civil Medical Officer, all washing being now done on the premises. A Superintendent's Office, with a dispensary and store attached, has just been completed.

A comparative statement of coolies passing through the camp is annexed :—

	1899.	1900.	1901.	1902.
Number of coolies passing through the camp for the year ending Dec. 31 ...	20,905	134,134	45,823	33,788
Number of outbreaks of cholera ...	—	11	3	6
Number of deaths ...	—	16	5	13
Average monthly arrivals ...	1,742	11,177	3,818	2,815

XX.—MISCELLANEOUS.

The Coronation of His Majesty King Edward VII. was celebrated with great rejoicing throughout the Province, and His Excellency the Governor on his return from England, where he represented the Eastern Colonies at the ceremony, met with an enthusiastic reception.

A serious outbreak took place at Mahara jail, where a gang of 66 prisoners employed in the quarry overpowered their guards and made their escape into the jungle. Twenty-five were recaptured immediately, and others at intervals up to the close of the year, when six were still at large.

Steamboat traffic was established between Kalutara and Anguruwatota by the Kelani Steam Navigation Company.

A very fine collection of seed paddy was sent to British Guiana at the request of Government. The paddy was selected by Mr. Solomon Seneviratne, Atapattu Mudaliyar, who kindly added to it a sample of el-wi, or hill paddy, with full description of the local modes of cultivation.

Further steps have been taken towards the establishment of Zoological Gardens in Colombo, and the matter was brought forward in the Legislative Council.

The Superintendent of Minor Roads, Mr. Daniel, retired owing to ill-health after thirty-six years' valuable service to the District Road Committee.

A sum of Rs. 7,000 was collected by the Mudaliyars and headmen of the Province for the Victoria Memorial Eye Hospital Fund.

The Hon. Mr. F. R. Ellis, C.M.G., left the Kachcheri for the Audit Office after five years' energetic and successful administration of the Province, and was succeeded by the writer.

XXI.—VILLAGE COMMITTEES.

Statement U in Appendix III. shows the amount of labour called out and funds expended for village works, and Statement P. shows the work done by the different Village Tribunals in the district during 1902.

In this district there are eleven Village Tribunals presided over by four Presidents, whose work is summarized in appendices above referred to. The Village Committees have called out communal labour under the provisions of the Ordinance for the purpose of constructing important village roads and school buildings. Throughout the district about 40 miles of village roads have been repaired; for which 9,145 men were called out for labour. The cost of construction of culverts and bridges along these roads was met from the Village Committee Funds. Sixteen village schools were repaired or enlarged, and three new buildings were constructed. A burial ground was acquired at Galkissa and fenced, and other burial grounds throughout the district were cleared of weeds.

XXII.—SCHOOLS.

Statement V. in Appendix III. shows the average attendance at Government schools in the Colombo District during 1902.

The report of the Assistant Government Agent, Kalutara, with appendices, is annexed.

G. M. FOWLER,
Government Agent.

April, 1903.

APPENDIX I.

REPORT OF THE ASSISTANT SUPERINTENDENT OF POLICE, WESTERN PROVINCE, FOR 1902.

Stations.—Owing to the breaking up of the Boer prisoners of war camp at Ragama, the three police forces established in connection therewith were withdrawn at the end of the year, the sergeants and men being sent back to the Colombo Division, thus bringing the number of stations down to eight, the original number as in previous years, and distributed as under :—

Colombo District.	*Negombo District.*	*Kalutara District.*
Colombo Kachcheri	Negombo	Kalutara
Peliyagoda		Kalutara North
Welikada		Panadure
Avisawella		

Drill.—The drilling of the men has received my personal attention during the year, especially at Negombo and Kalutara, where the force is considerably larger than at the other stations in the Province. The new Army Drill Book (1902) was obtained for the use of the stations, but what is really wanted is a Police Drill Book, which it will not be necessary to alter and change every time a new Army Drill Book comes out. This, I understand, is now being prepared by the Inspector-General of Police, and will be issued shortly.

The Force.—There have been no changes as regards the *personnel* of the staff since my last report, and the strength consists, as hitherto, of 2 Inspectors, 1 Sergeant-Major, 8 Sergeants, and 58 men, distributed as follows:—

	Inspectors.	Sergeant-Majors.	Sergeants.	Police Constables
Colombo Kachcheri ...	1	—	2	9
Negombo ...	1	—	2	15
Kalutara ...	—	—	1	11
Kalutara North* ...	—	—	—	5
Panadure ...	—	1	—	6
Avisawella ...	—	—	1	4
Welikada ...	—	—	1	4
Peliyagoda ...	—	—	1	4
Total ...	2	1	8	58

* This is really a sub-station of Kalutara, and is in charge of a senior constable, who is under the direct supervision of the sergeant at Kalutara.

Dismissals and Reductions.—During the year one constable was dismissed for leaving his station without leave and refusing to return to it on being ordered to do so. He was also charged under the Police Ordinance for refusing to perform his duties, and fined Rs. 10. One constable was reduced from 2nd to 3rd class for making a contradictory statement before the Police Court of Colombo.

Habitual Criminals' Ordinance, No. 7 of 1899.—The identification system has been effectually carried out during the year. The following table gives full particulars of the number of habitual criminals under police supervision, or at large on license, who reported themselves, who failed to report themselves, and who were prosecuted :—

Total number of habituals under supervision proper ...	31
Total number of habituals who failed to report and were prosecuted ...	1
Total number of habituals who failed to report and evaded arrest ...	2
Total number of license-holders who are at large on license	22
Total number of license-holders who failed to report and were prosecuted ...	3
Total number of license-holders and those under supervision	53
Total number prosecuted	4
Total number evading arrest	2

Knife Ordinance, No. 3 of 1898.—The prohibition of carrying knives under sections 21 and 25 of the above Ordinance was ordered by the courts in twenty-two cases, as against forty-eight in the previous year. Out of the twenty-two orders made, there was not a single application made to the Government Agent for a license under section 26. There was one prosecution for the violation of an order, and the accused was fined Rs. 10. This case was instituted by the regular police.

Crime.—As the Hon. Mr. Fowler is reporting on this important subject, the statistics and returns of which have been compiled in this office under my direct supervision, I do not consider it necessary for me to make any special remarks. The working of the regular and rural police in important cases has been on the whole satisfactory, and the Mudaliyars and Muhandirams have on the whole done good work in their respective korales.

Punitive Police Ordinance, No. 3 of 1902.—It was not found necessary to quarter punitive police in any town or village in the Province during the year.

Reward Fund.—Eight sergeants and fifty-eight constables were rewarded during the year for special intelligence, zeal, or courage in the performance of their duties. In all the sum of Rs. 230 was awarded and paid.

Recreation Fund.—The total sum allowed by Government is only Rs. 75. This amount has been spent in subscriptions to local newspapers and the purchasing of suitable periodicals and books for the Police Library.

Office Work.—The office work during the year has been unusually heavy owing to many causes, the principal of which was the work in connection with the Boer prisoners of war camp at Ragama and Mount Lavinia, special police being quartered at Ragama and Kelaniya in connection therewith. The office staff have worked well, especially the Head Clerk, Mr. J. R. de Silva, on whose shoulders the brunt of the work in connection with the Boer prisoners of war devolved.

Buildings.—All in fair order. The wire fence which was to have been put up round the Negombo Police Station has been somewhat delayed owing to one of the kitchens of the quarters having been partly built outside the boundary of the site acquired by Government. This difficulty has been now got over by an arrangement with the landlord of the piece of land encroached upon.

Smallpox.—Only a few cases reported during the year. In all the cases the police were employed in guarding the premises of infected houses and keeping isolation. The disease was in each case stamped out, and did not spread.

Vaccination.—The police have assisted the vaccinators at the different stations from time to time. At Negombo a special constable is told off for this duty on the orders of Government. He is not, however, always so employed, and reverts back to ordinary police duties when not required for vaccine duty.

Miscellaneous Services of Police.—Police have been lent on several occasions to protect persons and property, special applications having been made for such protection. When it is possible to do so, this special protection is given, and paid for by the applicants according to the scale laid down for police lent, the proceeds being credited to revenue. It is only, however, in special cases that police can be lent, as they have to be taken away from their ordinary duties when this is done.

J. P. ARMSTRONG,
Assistant Superintendent of Police,
Western Province.

March 20, 1903

APPENDIX II.

REPORT OF THE ASSISTANT CONSERVATOR OF FORESTS.

THE total value of timber, fuel, and other forest produce credited during the year 1902 in the Colombo and Kalutara Kachcheries amounted to Rs. 33,119·89, detailed as follows :—

	Rs. c.
Timber of all sorts	20,216 58
Firewood and charcoal	12,757 59
Bamboos and canes	145 72
Total ...	33,119 89

These figures take no credit for value of standing timber sold at land sales, of which no account is seemingly kept, neither does it include value of free grants, amounting to Rs. 1,008·52 more.

Compared with 1901, there is only a trifling falling off of Rs. 274·10. That is more than compensated for by the lessened expenditure of 1902. The decline is distinctly due to lessened activity in the plumbago enterprise, which brought about a corresponding falling off in that class of food used as mine props, &c.

There was also here a decrease in the demand for wood suitable for tea box manufacture. This is to be expected, as the local method of supplying the tea box market is so distinctly prejudicial to its interests that large dealers prefer to use the imported article to the local product. This is much to be deplored, when it is considered the enormous mass of soft woods that might be, under proper management, used for this form of timber.

The following table indicates the fluctuation of timber supply, and at the same time points to the enormous increase of fuel supply of the Departments :—

Heads of Province.	Public Departments, 1902.	Public Departments, 1901.	Difference + or —	Private Purchasers 1902.	Private Purchasers 1901.	Difference + or —	Total, 1902.	Total, 1901.	Difference + or —
	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Timber of all sorts	8,501 95	7,659 82	+ 842 13	11,714 63	16,384 51	—4,669 88	20,216 58	24,044 33	—3,827 75
Fuel and charcoal	9,304 60	3,355 37	+5,949 23	3,452 99	5,680 59	—2,227 60	12,757 59	9,035 96	+3,721 63
Bamboos and canes	—	—	—	145 72	307 70	— 161 98	145 72	307 70	— 161 98
Other produce ...	—	—	—	—	6 0	— 6 0	—	6 0	— 6 0
Total ...	17,806 55	11,015 19	+6,791 36	15,313 34	22,378 80	—7,065 46	33,119 89	33,393 99	— 274 10

It will be observed that in both timber as well as fuel supplied to Public Departments in 1902 there has been a marked increase over 1901, especially in fuel, when 1902 exceeded the previous year by Rs. 5,949·23 under this sub-head. This increase was consequent on the Forest Department supplying fuel to the Railway, not only to firewood special, but to running engines at Mirigama, Kalutara South, and at Alutgama, the firewood delivery for these being no less than 35,129 cubic yards during the year. It is perhaps worthy of note that ten years ago, when the fuel supply was under a separate staff of the Forest Department, the total delivery to the Railway from Crown forests amounted to only 15,943½ yards altogether, of which 4,720½ yards were delivered in this Province alone, or considerably less than one-seventh of the quantity sold and paid for by the Ceylon Government Railway in 1902, and this result was brought about with no addition to the staff of the Department other than the services of a Fuel Overseer on 50 cents a day.

The progress of fuel supply to the Railway is thus expressed in cubic yards:—

	Cubic Yards.	
1900	8,196	without special staff
1901	12,571½	do.
1902	35,129	do.
1892	4,720½	with special staff

The decline in fuel supply to private purchasers is not likely to be lasting, and it may be confidently anticipated that 1903 will show an improvement in this respect, especially now that estates are making green teas, requiring increased fuel supply.

Up to the close of 1902 the demand of hora for boat building was considerably below anticipations, consequent on a private "corn line" that was worked by a few influential timber traders, who traded on what could be obtained from private sources. These reservoirs of supply quickly ran dry, and the chief customers of the "corn line" have now approached this Department with a view to purchasing their requirements direct, and by the close of the year large indents were under negotiation.

In expenditure there are no particular items calling for comment, except that Rs. 68·65 was expended in rendering the late resthouse at Matugama a suitable residence for the Forest Ranger, who before had to depend on local hospitality for his housing.

Rs. 126·75 was expended in surveys of blocks marked out specially for fuel supply to estates and for mines, in addition to the special enumeration survey of 82 acres of land at Wellikanna in the Hewagam korale.

The jak plantation at Kalutara was kept in good order throughout the year, and cost Rs. 165·49 for that period. The latest enumeration of plants in this particular plantation gave 2,479 trees, all of which have been measured for purposes of discovering the rate of stem growth.

The increase of timber theft, particularly in the Kalutara District, is a distressing feature of the year, but it is hoped that by proclaiming all those portions of the Province where the Crown has large forest interests, this form of crime may be better dealt with. The value of drift, waif, and confiscated wood sold in 1902 amounted to Rs. 1,742·80, against Rs. 1,665·46 in the previous year, while in fines and compositions there was a marked falling off, pointing to the petty nature of the offences.

The following table of revenue and expenditure illustrates in detail the financial working of the Department in my control during the year under review:—

REVENUE.	Amount credited. Rs. c.	EXPENDITURE.		Disbursed. Rs. c.
Sold by Government Agency :—		Cost of cutting and delivering of timber ...		6,862 19
Timber of all sorts	11,326 22	Cost of cutting and delivering of firewood ...		231 3
Fuel	9,304 60	Salvage of drift and confiscated wood ...		60 25
Sold to applicants and purchasers :—		Cost of plantation upkeep		165 49
Timber of all sorts	7,147 56	Cost of repairs to buildings ...		68 65
Firewood and charcoal	3,452 99	Cost of road improvements... ...		18 54
Bamboos and canes	145 72	Cost of surveys		126 75
Drift and confiscated wood ...	1,742 80	Cost of stationery and postage ...		112 5
Sundry heads :—		Cost of sundries and tools		45 67
Fines and compositions	669 11	Salaries of staff ...	Rs. 4,416 64	
Permit fees and property ...	98 8	Salaries of subordinates ...	Rs. 4,094 92	
Refunds	1 50			8,511 56
Total	33,888 58	Transport of staff ...	Rs. 929 98	
Deduct Expenditure ...	18,138 24	Transport of subordinates ...	Rs. 1,006 8	
				1,936 6
Surplus of 1902 ...	15,750 34	Total ...		18,138 24

The surplus is behind that of 1901, but the result of this year's work cannot be regarded as altogether unsatisfactory in consideration of the decline in certain hitherto fixed sources of demand.

A comparative table of receipts and charges since 1890 is appended, showing the working of the Department for thirteen years, but it should not be lost sight of that the charges include the Assistant Conservator of Forests' whole salary, as no part of it is charged to Sabaragamuwa, though that Province is also in his charge:—

Year.	Revenue. Rs. c.	Expenditure. Rs. c.	Surplus. Rs. c.	Percentage on Outlay.	Deficit. Rs. c.	Percentage on Outlay.
1890	49,877 87	38,299 48	11,578 39	30	—	—
1891	19,129 73	39,450 10	—	—	20,320 37	51
1892	11,280 32	22,834 45	—	—	11,554 13	50
1893	17,758 5	35,846 49	—	—	18,089 44	50
1894	37,389 95	62,433 57	—	—	25,043 62	40
1895	34,136 0	44,871 37	—	—	10,735 37	23
1896	87,701 19	62,284 64	25,416 55	40	—	—
1897	60,314 89	56,193 28	4,121 61	7	—	—
1898	73,974 25	56,974 52	16,999 73	29	—	—
1899	59,588 34	34,381 21	25,177 13	73	—	—
1900	44,859 13	23,432 19	21,426 94	91	—	—
1901	34,734 1	17,214 20	17,519 81	101	—	—
1902	33,888 58	18,138 24	15,750 34	86	—	—

Colombo, February, 24, 1903.

FREDERIC A. LEWIS,
Assistant Conservator of Forests.

APPENDIX III.

A.—Revenue of the Western Province from 1872 to 1902.

Year.	Rs. c.	Year.	Rs. c.
1872	1,707,824 72	1888	1,729,858 18
1873	1,663,246 69	1889	1,379,494 28*
1874	1,719,664 79	1890	1,491,968 32
1875	1,749,382 41	1891	1,560,941 10
1876	2,012,672 98	1892	1,622,243 53
1877	2,206,085 80	1893	1,592,339 39
1878	2,204,497 2	1894	1,656,452 44

S.—Short Report on Homicides.

1. *Koswatta, 64.*—On the 27th January, 1902, Heenkendamudalige Bastian Perera shot the deceased Uswatteleanage Elaris Perera with a pistol whilst he was assaulting accused's father and certain others, motive being anger due to land disputes. Accused was convicted and sentenced to ten years' rigorous imprisonment.

2. *Malabe, 476.*—On the 9th February, 1902, the corpse of an infant child was found in a well. The mother was charged with having caused its death, but was discharged.

3. *Kukulnape, 32.*—The deceased Gasperalage Selang Appu was stabbed by the accused Gasperalage Harmanis Appu on the 17th February, 1902, motive being anger due to land disputes. Accused was tried and acquitted.

4. *Ragama, 181.*—On the 26th February, 1902, the accused Etige Agostinu Silva murdered his wife by cutting her throat with a knife, and attempted to commit suicide by cutting his throat and jumping into a well. Accused was convicted and was sentenced to be hanged.

5. *Mellawagedara, 80.*—The accused Ratabalage Davith Appu, who was on his way to the village to settle a debt due for purchasing cocoanuts, stabbed the deceased Manan Charles Silva, who with some others attempted to rob him. Accused was tried and discharged.

6. *Dandugama, 194.*—The accused Polwattege Philippu Costa on the 18th March, 1902, went to the house of one Costa and shot him dead. He also cut and injured four women, a man, and a child. The child died on the spot. Of the five other injured persons, one woman died at the Negombo hospital. The motive was anger due to various disputes. Accused was convicted and was sentenced to be hanged.

7. *Talawatuhenpita, 267.*—On the night of the 30th March, 1902, one Abilinu Perera went to the house of the deceased named Madilis Perera and awoke him and took him over to one Manuel Appu's house, where they were joined by three others, and deceased, Madilis Perera, was stabbed in the course of a drunken quarrel. Accused was tried and acquitted.

8. *Tihariya, 318.*—On the 13th April, 1902, the accused Makevitage Bellinis Perera lay in wait and struck the deceased with a rice pounder. The deceased was removed to the hospital, and died there on the following day. Earlier in the day both the deceased and the accused had an altercation. Accused was tried and sentenced to ten years' rigorous imprisonment.

9. *Kottala, 338.*—On the night of the 5th May, 1902, the deceased B. Sanchi Nona, hearing a noise made by her fowls outside her house, went out with her son to see what was the matter, when she was shot dead by the accused Kottalage Peris. The motive was anger due to rejection of improper proposals made by accused to the deceased. Accused was acquitted.

10. *Radawana, 390.*—The deceased Udagamage Sanchihami and others claimed a right to a share of the land on which the accused Udagamage Suwaris *alias* Bin Appu and Maddumage Pablis *alias* Kora Podiya *alias* Podiya lived. The accused refused to give a share, but the deceased took forcible possession of the land along with the others. On the night of the 9th May, 1902, the deceased, hearing the noise of the removal of a cadjan tat which served as a door to her hut, awoke asking who it was, when the accused persons seized her by the hand and stabbed her. Accused were convicted and sentenced to be hanged.

11. *Borlesgomuwa, 533.*—On the 14th May, 1902, the accused Podiya, a boy of 16 years of age, stabbed the deceased Kiriwattuduwage Podi Sinno, motive being anger due to abusive language. The deceased died in about half an hour. Accused was convicted and was sentenced to five years' rigorous imprisonment.

12. *Madelgomuwa, 137.*—The deceased Disanayakage Marthenis Appu and the accused Kandamulla-arachchige Romanis Appu were on bad terms owing to the refusal of deceased to give the dowry demanded by the accused to marry his sister. On the 13th July, 1902, the deceased, under the influence of liquor, went to the house of the accused and assaulted him. The accused stabbed deceased to death. Accused was acquitted on the ground that he stabbed the deceased in self-defence.

13. *Rilaulla, 186.*—The accused, who was evading arrest on a warrant issued against him on another charge, returned to his village to visit the deceased, his mistress. On finding that she paid him no attention he shot her dead on the 16th May, 1902. Accused was convicted and was sentenced to be hanged.

14. *Ellalamulla, 356.*—On the night of the 23rd May, 1902, the accused, a boutique-keeper, came out of his boutique, when he observed that a few persons were standing opposite his uncle's boutique, which was on the opposite side of the road. He also discovered that they had broken into his uncle's boutique. Fearing to go alone, the accused armed himself with a loaded gun and challenged the men, who then advanced towards him. He then fired the gun in the air to frighten the men, who immediately ran away. The accused gave chase with the gun in hand, when the deceased turned round and stabbed the accused. The accused dealt blows with his gun and struck the deceased dead. Accused was discharged.

15. *Bollate, 209.*—The deceased Karunanayaka Rajapatirage Don James Appu was shot dead on the night of the 25th May, 1902. One Jusey was accused and was tried and acquitted, the evidence against him being insufficient.

16. *Pilapitiya, 264.*—The deceased Saipathge John de Silva Saipath was employed as a watcher at the ferry at Kohilawatta. On the night of the 27th June, 1902, he left his house to take his turn to watching, and had to cross a river to get to his post. He called across the river for the ferry boat to come over and fetch him across. While waiting for the boat he was struck with a club, which caused his instantaneous death. Accused unknown.

17. *Nilanmahara, 298.*—The deceased Dehiwattage Brampy Appu and the two accused Dehiwattege Davith Appu and Dehiwattege Carthelis Appu were brothers. They possessed a land in common. On the 8th July, 1902, a dispute arose between them regarding the plucking of the nuts of that garden, when the deceased was assaulted with a rice pounder and a katty and sustained injuries, from the effects of which he died. Case pending.

18. *Nedagomuwa, 139.*—On the 10th July, 1902, the accused, under the influence of liquor, went to the house of the deceased, who was taking his meals at the time, seized and brought him out, and assaulted him with their hands and clubs. Four of the accused were arrested. Case pending.

19. *Dehiwala, 540.*—The deceased Vithanege Cecelia Dias was stabbed by her husband Migalla-arachchige Siman Perera on the 15th July, 1902, on the approach road to the railway station at Dehiwala, probable motive being jealousy. Accused was convicted and was sentenced to be hanged.

20. *Bollegala, 278.*—On the night of the 21st July, 1902, the deceased Madurapperuma-arachchige Don Thelenis died of injuries inflicted on his head by some burglars. Accused unknown.

21. *Kosgama, 427.*—On the night of the 29th July, 1902, the deceased Maduruge Brampy was stabbed to death by the accused Lianege Julian Sausa, motive being anger, the deceased having refused to consent to a proposal of marriage made by the accused to deceased's niece. The accused was sentenced to be hanged.

22. *Delgoda, 273.*—At about 3 A.M. on the 9th August, 1902, the accused Edirisingha-arachchige Kornelis Appu stabbed the deceased Kumarapeliarachchige Sarnelis *alias* Sardiyel Appu, who was sleeping in a shed, owing to disputes about the cultivation of a land at Delgoda. The deceased was removed to the hospital, where he died. Accused was tried and acquitted.

23. *Borakadawatta, 124.*—On the 2nd November, 1902, the deceased Walgamage Romanis is said to have been stabbed by the accused Galgomukoralalage Punchi Sinno, who ran away immediately after the deed, motive being anger due to land and other disputes. Case pending.

24. *Mottunna, 339.*—On the morning of the 22nd August, 1902, the body of the deceased Ranaweera Appuhamillage Siadoris was found floating in the Dehindera-ela tied to the carcase of a heifer. The finding of the Judicial Medical Officer was that the deceased was shot. Accused unknown.

25. *Aturugiriya, 490.*—On the 5th September, 1902, the accused Kuruppuachchige Juse Appu stabbed his wife and a brother-in-law, motive being anger owing to the wife of the accused refusing to live with him. Accused was convicted and was sentenced to be hanged.

26. *Kehelella, 82.*—On the night of the 19th September, 1902, the accused is said to have shot the deceased dead while on his way home, motive being anger. An altercation had taken place between the deceased and the accused at noon on the same day. Case pending.

27. *Kochchikada, 78.*—The deceased Karunanayakaleanege Alaris Perera is said to have been waylaid on the 6th October, 1902, and throttled by the accused Leanege Don Agostinu, who was angry with the son of the deceased. Accused was acquitted.

28. *Bopagama, 376.*—On the night of the 2nd October, 1902, the accused is said to have entered the house of the deceased Kariawasangamage Brampy, who was sleeping at the time, cut his throat, and also stabbed him. The accused was on terms of intimacy with the wife of the deceased. Case pending. Evidence strong.

29. *Kinawinna, 90.*—On the 20th October, 1902, the deceased is said to have been struck on the head with a club by Charles Kulatilaka and kicked by the second accused Dolawattege Sulanchy and sustained serious injuries. He was removed to the hospital, where he died. The motive which is supposed to have led to the deed was anger due to land disputes. Case pending.

30. *Makpanigoda, 25.*—On the night of the 29th October, 1902, deceased Lewdenipatirennehelage Karanis Appu was shot dead at his house through a window. Accused unknown.

31. *Attidiya, 543.*—On the night of the 10th November, 1902, the accused Galpottege Manuel is said to have stabbed to death his stepmother, stepsister, and a niece, motive being anger due to land disputes. The accused was arrested two days later. He was produced before the court and admitted the charge against him. Case pending.

32. *Hunupola, 352.*—A Buddhist priest was shot dead on the night of the 17th November, 1902. Three persons suspected of having committed the offence have been taken into custody, and proceedings are being taken against them. The evidence is strong. Motive: gain in connection with temple lands.

33. *Galgomuwa, 338.*—On the 27th November, 1902, at 5.30 A.M., the accused Mutuwadige James Naide is said to have shot the deceased Meddepolage Manuel Naide dead, motive being anger owing to land disputes. Case pending.

34. *Udugoda, 351.*—The deceased Isbu Lebbe Mohamadu Lebbe was shot dead on the evening of the 20th December, 1902. Accused unknown.

35. *Parangoda, 401.*—The deceased was stabbed to death on the 19th December, 1902. The accused Dimunge Migel Appu ran away immediately after the deed, but has been since arrested.

36. *Hiripitiya, 499.*—At about 2 A.M. on the 27th November, 1902, the accused (1) Dewagamage Davith Sinno, (2) Dewagamage Julis Appu, (3) Arangalage Cathenis, went to the house of the deceased G. Juwanis Perera and asked him for some medicine. On the door being opened four persons rushed into the house, dragged out the deceased, and cut his neck with a sword. The deceased died from the effects of the injury on the 25th December, 1902. Three persons were identified, two of whom are in custody. Case pending.

Korale.	Period of Registration.	Nature of Registration. Total Number of Renewal Licenses issued.	Total Number of New Gun Licenses issued.
Hapitigam Korale	1st April to 31st December, 1902	9	533
Alutkuru Korale North	Do.	366	614
Alutkuru Korale South	Do.	16	394
Siyane Korale West	Do.	538	539
Siyane Korale East	Do.	284	380
Hewagam Korale	Do.	89	533
Colombo Mudaliyar's Division	Do.	74	722
Salpiti Korale	Do.	174	13
	Total	1,550	3,728

Firearms Ordinances, Nos. 6 and 17 of 1901.

1. The Ordinances come into operation in the Western Province from April 1, 1902.
2. Licenses are annual, and expire on December 31.
3. "Gun" includes every gun, rifle, revolver, and pistol; and every part of a gun, rifle, revolver, or pistol. It also includes every air-gun or other kind of gun from which any shot, bullet, or missile can be discharged, and every part of such air-gun or other kind of gun, but does not include any long gun or pistol from which any shot, bullet, or missile is discharged by force of a spring alone.
4. Application for license to possess a gun by a person for the time being residing in the Western Province may be made to the Government Agent, Colombo, Assistant Government Agent, Kalutara, and the Korale Mudaliyars, verbally or in writing, stating name and place of residence of applicant and number and description of gun. Guns need not be produced if marked with name or figure, or in such manner as to be readily identified. Otherwise they must be produced to be marked for identification. Licenses may be renewed by forwarding the license with required stamps.

	Rs. c.
Stamp duty for every single-barrelled gun, not being a magazine gun, revolver, or pistol	1 0
Renewal of such license	0 25
For every gun of any other description	2 0
Renewal of such license	0 50

5. Persons having obtained a license on or before April 1 may obtain fresh license on payment of stamp duty levied for renewal, if application be made within ninety days of April 1.

6. Transfer of guns by sale or gift must be notified, stating names and addresses of transferer and transferee, description of gun, and date and place of issue of license within one month of transfer.

7. License to make or keep or expose for sale, by way of auction or otherwise, any gun shall be annual, and shall be liable to stamp duty of Rs. 50, and expire on December 31. Existing licenses expire on March 31. Such licenses are issuable only by the Government Agent, Colombo, and Assistant Government Agent, Kalutara. The licensee shall keep a book in the prescribed form, in which shall be entered a correct description of all guns made or received or disposed of by him, and shall at the end of every month verify the guns in his possession, and enter such number in such book. Books and guns are liable to police inspection.

Colombo Kachcheri,
March 27, 1902.

J. S. DRIEBERG,
for Goverment Agent, W. P.

REPORT ON THE KALUTARA DISTRICT FOR 1902.

Area, 623 square miles; Population by Census of 1901, 201,455.

I.—REVENUE.

A DETAILED statement of revenue collected and credited at the Kachcheri during the years 1901 and 1902 is annexed below:—

Heads of Service.	1901.	1902.	Increase	Decrease.	Remarks.
CUSTOMS.					
Imports.	Rs. c.	Rs. c.	Rs. c.	Rs. c.	
Grain	27,586 71	36,518 72	8,932 1	—	Larger imports
Cotton Manufacture ...	31 47	17 14	—	14 33	
Other Goods ...	252 41	268 64	16 23	—	
PORT DUES, &c.					
Port Dues and Outports ...	371 52	381 28	9 76	—	
LICENSES, &c.					
Arrack, Rum, &c. ...	138,007 9	160,692 75	22,685 66	—	More prompt payment of instalments
Opium	1,870 0	3,600 0	1,730 0	—	Larger revenue from opium licenses
Rents Exclusive of Lands.					
Road Tolls... ...	28,604 45	30,705 0	2,100 85	—	More prompt payment of instalments
Bridge Tolls ..	3,450 0	2,355 0	—	1,095 0	
Ferry Tolls	2,135 0	1,975 0	—	160 0	
Canal Tolls ...	6,500 0	6,000 0	—	500 0	
Stamps.					
Revenue (various Services)	50,274 25	51,054 85	780 60	—	More stamps sold
Fines and Forfeitures.					
District Court ...	1,185 50	738 50	—	447 0	
Court of Requests ..	4 0	—	—	4 0	
Police Courts ...	11,009 81	7,534 63	—	3,475 18	
Government Agents ...	105 54	180 31	74 77	—	
Other Departments ..	870 76	90 0	—	780 76	
Forest Offiences ...	782 2	2,024 96	1,242 94	—	Fines imposed departmentally on account of forest offences classified in 1901 under Sale of Government Property are now classified under this head
FEES OF COURT OR OFFICE, PAYMENTS FOR SPECIFIC SERVICES, AND REIMBURSEMENTS IN AID.					
Judicial Stamps ...	18,250 10	21,802 58	3,552 48	—	More stamps sold
Survey Fees ...	5,701 70	7,528 10	1,826 40	—	More lands sold and settled
Recoveries on Irrigation Works	848 48	848 48	0 1	—	
Hospital Stoppages ...	45 80	14 65	—	31 15	
Collections at Dispensaries...	2,562 4	2,518 89	—	43 15	
Medical Aid Dues ...	4,639 7	5,885 40	1,246 33	—	
Cost of Drugs ..	516 39	421 23	—	95 16	
Cemetery Fees ...	1 50	136 0	134 50	—	
Police Rates in Towns and Rural Districts ...	5,370 88	5,608 81	237 93	—	
School Fees	700 56	561 1	—	139 55	
School Books and Stationery	529 0	466 90	—	62 10	
Value of Tools lost ...	12 94	1 36	—	11 58	
Warehouse Rent ...	1,534 95	1,948 88	413 93	—	More imports
Fees for Title Deeds ...	1,546 38	1,592 21	45 83	—	
Sundries	148 0	107 25	—	40 75	
RENTS OF GOVERNMENT PROPERTY.					
Rent of Government Buildings, &c.... ...	52 80	141 90	89 10	—	
Rent of Lands ...	830 63	1,124 31	293 68	—	

Heads of Service.	1901.	1902.	Increase.	Decrease.	Remarks.
INTEREST.	Rs. c.	Rs. c.	Rs. c.	Rs. c.	
On Arrears of Revenue ...	330 77	823 70	492 93	—	Interest on arrears of instalments on account of arrack farm, Panadure
MISCELLANEOUS RECEIPTS.					
Unclaimed Deposits ...	1,926 95	580 71	—	1,346 24	
Sundries	28 51	6 24	—	22 27	
SALE OF GOVERNMENT PROPERTY.					
Timber	11,853 23	8,147 39	—	3,705 84	Less timber sold
Crops on Crown Lands ...	288 12	429 45	141 33	—	
Sundries	29 41	6 27	—	23 14	
LAND SALES.					
Crown Lands Sold ...	49,652 87	42,311 93	—	7,340 94	Balance purchase amount of lands sold in December, 1902, was not paid during the year
Premia on Leases ...	—	7,841 96	7,841 96	—	Premia on leases held in deposit credited during the year
GRAND TOTAL ...	380,441 61	414,992 40	53,888 93	19,338 14	
Deduct decrease ...	—	—	19,338 14	—	
Nett Increase ...	—	—	34,550 79	—	

It will be seen that the total revenue exceeded that for 1901 by over Rs. 34,500, but the mere existence of such an excess does not necessarily mean that the revenue of the year showed an advance on the one preceding. It is not easy always to adjust the figures so as to afford a true comparison, but in the present case some approach may be made to it. I have eliminated from the total revenue of 1901 the following figures, being recoveries of 1900 not credited till after the end of the year, viz.:—

	Rs. c.
Rents exclusive of Land	1,836 66
Balance 9-10ths of 1900 Land Sales credited in 1901	3,931 42
	5,768 8

while I have added the following items really belonging to the revenue of 1901, but credited in 1902, viz.:—

	Rs. c.
Licenses	11,342 91
Balance 9-10ths of 1901 Land Sales	2,276 48
	13,619 39

The true revenue of the year 1901 was therefore approximately Rs. 388,292·92.

Following the same course with the figures for last year, viz.:—

	Rs. c.
Land Sales of 1902 credited in 1903	13,020 46

and eliminating also a sum of Rs. 7,165 Premia on Leases, which should have been credited in 1900, the revenue works out at Rs. 407,228·47, as compared with Rs. 388,292·92 in 1901, an increase of Rs. 18,935·55. To this might be added some small items, but they are not material. The main fact is that there was a distinct increase in the revenue of the year in spite of a falling off under some heads. Of these, the most noticeable were Fines, against which, however, must be placed the increase in fines imposed departmentally not previously separately classified, and Unclaimed Deposits, due to a smaller amount being available under this head.

Timber sold also shows a considerable falling off. As the Assistant Conservator is reporting on the transactions of his Department, he will no doubt refer to this.

Land Sales I have touched on before. The sales at the end of the year were very heavy, but much of the proceeds only appears as credited in 1903.

II.—EXPENDITURE.

The following comparative statement shows a nett decrease in expenditure of Rs. 1,221·11 :—

	1901. Rs. c.	1902. Rs. c.
Personal Emoluments	12,553 30	13,387 99
Pensions	7,244 49	5,722 5
Other Charges :—		
Petty expenses	82 2	74 83
Cart and cooly hire ...	60 0	44 11
Furniture	39 95	123 94
Binding records	23 30	32 67
Hire of tom-tom beaters ...	14 0	20 0
Commission to collectors of assessment tax	207 82	207 26
Remuneration to police tax assessors ...	135 0	135 0

	1901. Rs. c.		1902. Rs. c.
Stationery	295 70	...	318 44
Allowance to Friend-in-Need Society ...	300 0	...	300 0
Allowance to paupers	855 0	...	809 0
Burying dead bodies	54 77	...	77 15
For removing sick and destitute to hospital ...	28 50	...	39 98
Travelling allowance to Assistant Government Agent	1,000 0	...	741 50
Travelling allowance to clerks	750 0	...	517 12
Conveying and guarding treasure ...	11 0	...	40 70
Compensation for local rates on Government buildings at Kalutara	194 0	...	194 0
Special Expenditure :—			
Pay of watchers on plumbago lands ...	158 0	...	—
	24,006 85		22,785 74

Personal Emoluments show an increase of Rs. 834·69, partly due to the incremental system and partly to the opening of the Panadure cemetery in 1901 and the employment of a fixed staff there. The other increases are casual.

The decrease in Pensions is due to the death of two pensioners and the lapsing of a temporary pension to a third.

Owing to the very wet weather travelling during the last half of the year was interfered with, and in the case of Mudaliyars one officer sent in his claims so late that they could not be charged.

No provision was necessary for watching Crown lands.

III.—LAND SALES.

I have shown below the area of land granted and sold in 1900, 1901, and 1902:—

	1900.					1901.					1902.				
	No. of Lots.	Extent.			Amount.	Average Price per Acre.	No. of Lots.	Extent.			Amount.	Average Price per Acre.	No. of Lots.	Extent.			Amount.	Average Price per Acre.
		A.	R.	P.	Rs. c.	Rs. c.		A.	R.	P.	Rs. c.	Rs. c.		A.	R.	P.	Rs. c.	Rs. c.
Sales ...	455	1766	0	8	80468 3	45 56	492	1194	2	24	49484 64	41 42	730	1987	2	33	56120 70	28 23
Half-improved value	47	40	0	9	1170 7	29 21	76	50	2	30	1413 21	27 88	64	42	3	33	1134 48	26 41
Certificates against the Crown ...	260	466	3	3	—	—	545	1102	1	7	—	—	690	1170	1	12	—	—
Under the Minute of August 8, 1844, including lots portions of which have been granted at half-improved value ...	4	23	2	17	714 6	30 25	11	31	1	0	326 71	10 45	3	19	2	11	210 12	10 73
	766	2296	1	37	82352 16	—	1124	2378	3	21	51224 56	—	1487	3220	2	9	57465 30	—

The number of lots disposed of was 1,487, a considerable increase on the figures for previous years, and involving a considerable additional amount of work on all concerned. Of the above total, 730 lots were sold, an increase of 50 per cent. in the number of lots, and of rather more in acreage; but the average price per acre fell from Rs. 41·42 to Rs. 28·33. The average extent of the lots was 2A. 2R. 35P., and nearly all small lots were bought by local residents.

The valuation for half-improved lots remains almost the same, but might of course vary largely according to the situation of the land.

The settlements of 690 lots covering 1,170 acres on certificates of no claim is a satisfactory feature. The average extent was under 2 acres, so that many smaller holders have got not only a definite survey of their land, but an assurance of non-interference by the Crown in future. This is of great importance to those villagers who have been holding on a precarious title of improvement of Crown land.

Applications for survey of land still continue to come in steadily. The total for 1902 was 218. In all cases of private application the fees are deposited at the time of application, which is in itself some guarantee of the land finding a purchaser when sold. No lot over 100 acres was sold.

In spite of the work done during the year there is a very large extent of surveyed land to be disposed of, but a true estimate of what is available for sale or settlement is not easily arrived at. An examination of all plans would have to be made and the contents broken up into three classes:—

(*a*) Not available for sale, being reserves, &c.
(*b*) Available for sale.
(*c*) Available for settlement.

But a difficulty would at once arise in dealing with old plans. Boundaries have been altered or cannot be identified, and an appraisement by the Mudaliyar or inspection to trace the owners becomes very difficult. I have recently had a plan before me in which there are a large number of lots. The land was entirely private when surveyed twenty years ago, and identification of many of the lots is impossible, as it is chiefly cocoanut land on the coast with no fence or boundary marks. I do not know why this survey was made, but to attempt a settlement now and receive fees for certificates of quiet possession would be waste of time.

Statement of Preliminary Plans received from the Surveyor-General since 1888.

Date.	Plans in which all Lots have been disposed of.	Plans in which no Lots have been disposed of.	Plans in which some Lots have been disposed of and some not.
On January 1, 1902 :—			
Plans ...	422	268	172
Lots ...	1,188	4,428	2,324
On January 1, 1903 :—			
Plans ...	561	352	199
Lots ...	1,737	4,696	2,530

IV.—Redemption of Crown Fields.

A statement is annexed :—

Korale.	No. of Fields.	Extent. A. R. P.	Redemption Value. Rs. c.	No.	Extent ¼. B. P. Q.	No.	Extent ½. B. P. Q.
Kalutara and Panadure totamunes ...	2	6 0 0	54 0	0	—	2	6 0 0
Pasdun Korale East ...	49	141 0 1	724 17	12	50 0 0	37	91 0 1
	51	147 0 1	778 17	12	50 0 0	39	97 0 1

V.—Land Acquisition.

The following acquisitions were pending at the beginning of 1902 :—

(1) Land for extension of the Panadure resthouse premises. The extent of the piece of land required was 8 perches, and the amount of compensation tendered Rs. 296·59. It became necessary to deposit this amount in court, as some of the heirs were minors and guardians have to be appointed for them. The case has not yet been decided.

(2) Site for a latrine for Panadure courts. The latrine has been built, but the mandate for acquisition has not yet been received.

During the year 1902 mandates were received for the acquisition of the following lands, and were duly executed :—

(1) A piece of land 3·75 perches in extent on Culloden estate for a well for the use of the Neboda hospital and the approach to it. The land cost Rs. 17·59.

(2) A piece of land in extent 36 perches on Arapolakanda estate for a metal quarry on the Nagoda-Neboda road. The land was acquired at the end of the year for a sum of Rs. 172, but it was formally taken possession of only in January, 1903.

(3) A mandate was received for the acquisition of a piece of land 1·25 perches in extent for a gate-house at Kalutara north. Action was commenced by the publication of the usual *Gazette* notice, but it was subsequently discovered that the land had already been acquired in 1877 on account of the Railway. The alleged claims were then withdrawn, and the gate-house has been built.

(4) In December, 1902, order for the acquisition of a piece of land 2 roods and 34 perches in extent for a metal quarry at Palatota was received and proceedings were commenced.

During the year a portion of land acquired near Panadure for an infectious diseases hospital was on the advice of the Principal Civil Medical Officer restored to the owner for the original cost.

VI.—The Waste Lands Ordinances.

No work was done during the year under the above Ordinances, but circumstances rendered it necessary to consider the desirability of applying them to three villages in the Pasdun korale east on the same lines as those on which the village of Badureliya was settled in 1899. Wet weather rendered work impracticable during the latter part of the year, but it will be taken up in 1903.

VII.—Chena Cultivation.

No licenses for chenas are issued in this district. The number of illicit chena clearings reported during the year was 286, an increase of 50 on 1901. Of these, 120 were reported to court and resulted in 110 convictions and 4 acquittals, and 6 were pending on 31st December. The balance 166 cases were dealt with departmentally by consent of parties.

The cases were distributed among the korales as follows :—

Totamunes ...	7
Rayigam Korale ...	37
Pasdun Korale West ...	5
Pasdun Korale East ...	237

As usual, the majority of these cases came from the Pasdun korale east, where there is a scarcity of paddy land in some villages, but when an attempt was made some years ago to block off certain portions of land for legitimate chenaing on license the villagers rejected the blocks selected and wanted good forest.

In connection with chenas at Welgama, a number of cases had to be entered for clearing under colour of an extract. The first case tried was lost in the lower court on the ground that accused acted *bonâ fide*, and in appeal owing to the omission of some technical proof on the part of the Crown, but the absence of title in the claimant was commented on in the judgment. A second case resulted in a conviction in both courts, and pleas of guilty were subsequently tendered in all the others (eighteen in number) which were connected with the claim.

VIII.—SALE OF LAND BY VILLAGERS.

The ordinary legitimate transactions went on during the year. I have only heard of one case in which fraud is alleged, and as the case is a serious one I annex particulars.

An old Sinhalese woman and one of her sons possessed a fractional share in common with other owners of a small piece of land at Waskaduwa. The entire land containing a few cocoanut trees was actually about a rood in extent, and was possibly not worth more than Rs. 100. A relative of the old woman induced her and her son to give him a transfer of their share, for which, it is alleged, the woman got only Rs. 100; but in the deed executed by a notary of Panadure the amount of consideration is given as Rs. 30,000, and the land is described as a defined extent of 33 acres, for which a survey made by a licensed surveyor was produced. The buyer shortly afterwards transferred the land alleged to contain 33 acres to another for the alleged sum of Rs. 30,000 which was entirely a bogus transaction. The last transferee then mortgaged the property to a Chetty as security for a sum of Rs. 20,000. The Chetty, on discovering the fraud, has instituted legal proceedings, which are now pending in the Police Court of Kalutara. The second deed of transfer and the mortgage were executed by a notary in Colombo.

The accused were arrested after some trouble, and after a reward for their arrest was offered by the Chetty, and the case is pending.

IX.—AGRICULTURE.

Paddy.—The crops were free from attacks of weevil, but, as mentioned elsewhere, suffered from continuous floods in some parts. The extent cultivated and yield was estimated at 39,600 acres and 491,000 bushels, as compared with 39,700 acres and 516,000 bushels in 1901.

Other Grains.—Fine grain is only grown to a limited extent, and is confined chiefly to Rayigam korale and Pasdun korale east. The estimate was 5,000 bushels, against 3,240 bushels in 1901.

Cocoanuts.—The probable extent of new land opened in the district is 100 acres, but here and there trees are always being planted in small holdings, while trees are dying out in other places. The yield was a good one, but would no doubt be considerably increased were more care exercised in cultivation and manuring. The trees on Perth estate have responded to the care bestowed on them in recent years in a very satisfactory manner. Prices ranged from Rs. 35 to Rs. 40 per 1,000 according to locality.

Cinnamon.—This is being steadily put in on native holdings as an investment which costs little to keep going, but which even with low prices yields a return.

Fruit and Vegetables.—Neither fruit nor vegetables are regularly grown for market purposes, and such as find their way into the large towns for sale are of poor quality.

Betel.—The disease which attacked this plant has been the subject of inquiry by Mr. E. Green, but I have not heard of the result of his investigations. There has been no special complaint about loss of plants during the year.

Tea.—The estimated crop for 1902 was 6,970,743 lb., but the actual outturn fell short of this by 298,224 lb., and was only about 15,000 lb. over the crop of 1900. The manufacture of green tea only has been taken up on several estates, the quantity manufactured being 1,149,500 lb. 139 acres of tea were abandoned during the year, and no extensions are taking place.

Para Rubber.—There are now about 360 acres planted with rubber only, besides some 300,000 plants growing through tea. The output was 7 tons, against 3½ in 1900, and the excellent quality was well maintained. The London prices continue to be considerably higher than the average paid for rubber from any other part of the world.

It is probable that some 450 acres more will be opened next year. Castilloa is being tried in some places. Rubber seed has been a valuable source of income to estates with old trees; and though the high prices formerly paid for it are no longer obtainable, a considerable business is done both in it and in plants, 1,300,000 of the former and 460,500 of the latter being disposed of during the year.

The possible need for protective legislation has already been considered by the local association. At present I do not think that any instance of theft of latex has occurred.

The damage done by cattle to young plants has been the cause of considerable loss and much annoyance to those trying to get their plants safely over the earlier stages. In many cases wire fencing has become necessary, but even this is not always successful in keeping out buffaloes.

X.—WEATHER.

The annexed statement shows the rainfall since 1893. It will be seen that in 1902 the total for Kalutara is nearly 17 inches in excess of the previous highest rainfall recorded during the period under review, and as much as 66 inches over the lowest record :—

	1893. Inches.	1894. Inches.	1895. Inches.	1896. Inches.	1897. Inches.	1898. Inches.	1899. Inches.	1900. Inches.	1901. Inches.	1902. Inches.

The increase in the rainfall at every one of these stations will be noticed. Gikiyanakanda received the largest increase, but the records of all show what an unusual year 1902 was. The figures for September and October are particularly noticeable and uniform, except in the case of Culloden, which in 1901 had a wet October and dry November, instead of the reverse.

XI.—OTHER INDUSTRIES.

Plumbago.—The market price of the article was low during the early part of the year, but rose slightly towards the end, when a slight revival of activity in mining occurred. The number of pits working at the end of the year were :—

In Pasdun Korale East	41
In Pasdun Korale West	3
Rayigam Korale	5
The Totamunes	5
	54

The number of declarations received was 71, against 45 in 1901.

Messrs. Skrine & Co. continued working the pits at Moragala on behalf of Messrs. Reckitt & Sons. Through their courtesy their Manager, Mr. Gill, has been enabled to place the following observations in my hands :—

> The work on the above mines during the year under review has consisted mainly of opening up the Kokkumbura and Humbuluwa mines at the deeper levels, and considerable improvements and additions have been made to the plant.
>
> The two shafts at Kokkumbura have been deepened and connected at a lower level. No. 1 shaft has been fitted with a powerful pumping plant capable of dealing with all the water of the mine, while No. 2 shaft has been fitted with a girded iron kibble for the raising of plumbago and rock and retained as a winding shaft. From this shaft the main vein of plumbago has been opened up to a depth of over 200 feet.
>
> At Humbuluwa mine a new inclined shaft has been sunk down through the old native workings and continued to a depth of over 200 feet.
>
> A steel head gear and winding engine have been erected on the surface and a steam pumping plant installed in the mine. An iron skip for the raising of plumbago and rubbish runs on rails from the surface to the bottom of the shafts. The shafts of both mines are fitted with ladderways in a separate compartment, and tramways are used both in the underground tunnels and on the surface for the removal of mineral and *débris*. European methods of sinking and timbering are used throughout, and the system of boring by hand is retained. Concrete dams for the retention of water from the upper levels have been adopted at both mines with very satisfactory results. The twelve hours working shift is adhered to and continues to work very well, the day and night shifts being changed each week.
>
> All plumbago raised is roughly cleaned and sized at the mines and casked for transport to Colombo. The barrels are conveyed to Alutgama station in carts (each cart taking two casks), and all mining requisites and stores are brought up in the same way.
>
> Firewood for the boilers is cut near the mines, and coal is occasionally used in wet weather. Mining timber is obtained locally, selected kinds of wood only being used.
>
> The labour force consists of about 150 men, who live in lines on the property, and are fairly stationary. No accidents of a serious nature have occurred, and the health of the workmen is good.

In May a prospecting license was issued to Mr. T. A. Noorbhai of Colombo, who commenced operations at Ellakanda in Pasdun korale west and at Iriyakotunna and Beddewila at Pelawatta in Pasdun korale east. He has so far only raised about 5 tons.

A prospecting license was also granted to two natives to mine on a land which they had bought "without mining rights," but nothing has resulted from this work.

The pit belonging to the Vogan Plumbago Company has now been sunk to a depth of 120 feet, a number of veins struck, and about 50 tons of plumbago of medium quality raised.

The work is still in a prospecting stage, but prospects are good if developments continue.

All the work is carried out on European principles, and the Government Inspector has reported very favourably on it. Labour has been a difficulty, but as the Sinhalese are getting accustomed to new ideas, this will no doubt disappear. In Rayigam korale Mr. H. J. Pieris has a very valuable pit at Pelpitigoda.

With prices at their present point illicit digging has almost ceased. There were four convictions during the year..

Applications were made for several other prospecting licenses, but I recommended that they should not be granted, as in every case the land applied for was known to contain plumbago, and had been specially surveyed for sale. The question of leasing portions of these lands is under consideration.

I annex a statement of the plumbago removed by rail. This may include some brought from the Kukulu korale *viâ* Badureliya and by water from Ratnapura. Some of that loaded at Alutgama is, no doubt, the produce of the Southern Province. Accurate figures as to the output of the district cannot be obtained. There is a falling off of nearly 130 tons :—

1901. Plumbago 3rd Class.		1901. Plumbago 6th Class.		Stations.	1902. Plumbago 3rd Class.		1902. Plumbago 6th Class.

Arrack.—The number of distilleries working was 161, of which 29 were held on account of renters. The quantity distilled was 786,214 gallons, as against 908,955½ gallons in 1901.

The price varied from Rs. 120 to Rs. 200 per leaguer of 150 gallons. The quantity removed for export was 65,872¾ gallons, as against 42,566½ gallons in 1901.

XII.—FOREST ADMINISTRATION.

The following statement shows the revenue credited at the Kalutara Kachcheri and derived directly or indirectly from Crown forest, but it does not include compensation for illegal cultivation of Crown mud lands. It is not very easy, unless some definite rule is laid down, to decide what should be included as either direct or indirect forest revenues, but the figures now given are made up on the same lines as in 1901 ;—

	1901. Rs. c.		1902. Rs. c.
Fines in Police Courts for offences, including theft of Crown timber	719 25	...	1,372 51
Fines imposed departmentally for forest offences ...	782 2	...	652 45
Compensation recovered without prosecution ...	582 45	...	578 54
Sale of confiscated produce	2 60	...	—
Sale of drift wood	—	...	—
Sale of right to collect timber in rivers ...	27 0	...	—
Timber sold by Assistant Conservator of Forests ...	9,979 15	...	6,540 58
Timber sold by Assistant Government Agent ...	1,262 3	...	1,028 27
Total ...	13,354 50	...	10,172 35

I insert also a statement of prosecutions instituted for forest offences and of the cases compounded out of court :—

Police Court.	Cases pending from 1901.	New Cases during 1902.			Total Cases.	Disposed of during the Year.						Cases pending at the close of the Year.

Digging plumbago	4
Setting fire to Crown land	2
Chena cultivation	117
Total ...	140

Note.—I have excluded from the court figures two cases of discharging dynamite in streams, and a case compounded after institution.

Including pending cases of 1901, the total number of cases was 182 against 137, in which the large proportion of 156 resulted in convictions. This speaks highly for the care taken before institution to see that there was evidence. 222 cases were compounded, against 237 in 1901.

The Assistant Conservator of Forests has furnished the following report on the operations of his Department. I am unable to explain how his figures are arranged, and to bring them into accord with those shown in my books, owing to recoveries being partly credited in Colombo and partly in Kalutara. The Assistant Conservator of Forests has, however, shown the revenue derived from this district :—

The gross revenue collected by sale of timber and other produce in the Kalutara District and recovered by the Assistant Conservator of Forests amounted to Rs. 19,926·36 (exclusive of confiscated wood sold by him). Fines and compositions recovered by his Department amounted further to Rs. 534·35, making on both heads a total sum of Rs. 20,460·71.

In addition to the above, the sum of Rs. 1,544·53 was credited at Kalutara direct by recoveries made from sales of seized timber sold by Mudaliyars, fines and compositions, and registration fees for property marks.

The following table explains in detail both revenue and expenditure, showing a total surplus on Forest Administration of Rs. 7,539·39 :—

Revenue.

Heads.	Collected by Assistant Conservator of Forests.	Assistant Government Agent.	Total.

Surplus ...	7,539 39
	22,005 24

This is a decline of Rs. 1,559·85 on the previous year's working, due entirely to the diminution in the plumbago industry, as compared with 1900, when there was the utmost activity in this direction.

It should not be lost sight of, however, that the whole of these earnings are not credited at Kalutara Kachcheri, owing to the method of working ; as, for example, the Railway pays the Government Agent of the Province for all firewood bought, and in turn the Government pays the contractors who deliver the fuel. The surplus is credited at Colombo.

In like manner transactions in sawn timber are disposed of in the same way, making an apparent discrepancy between what is shown in the Kalutara Kachcheri returns under the head of Sale of Government Property and the actual sums recovered.

The chief increase during the year has been in Railway fuel, as will be seen by the following comparative statement :—

	1900. Rs. c.	1901. Rs. c.	1902. Rs. c.
Firewood to Railway ...	4,503 46	7,861 94	11,206 87
Do. consumers ...	1,731 51	3,959 37	2,899 97
Total ...	6,234 97	11,821 31	14,006 84
Deduct cost ...	3,822 92	6,473 42	9,133 22
Result ...	2,412 5	5,347 89	4,873 62

but this gain has been somewhat upset by the falling off in fuel to private consumers.

The amounts recovered by sale of drift, waif, and confiscated wood, almost entirely the last, added to recoveries under fines and compositions for forest offences, is very large, Rs. 2,056·88 having been credited in this way. This points to a very much increased illicit trade in timber, which by additional activity on the part of the Forest Department and the District Mudaliyars is being fought against.

In detection of illicit felling and removal the Forest Ranger and river watcher have rendered considerable service, but I am of opinion that the surest method of putting down petty theft of forest produce is by proclaiming the greater part of the district, thereby rendering it an offence to remove timber without a permit issued by a responsible officer.

The course indicated above will be brought into force in 1903, all the preliminaries having been duly considered and sanctioned.

The increase in forest offences is further indicated by the returns from the Kalutara and Panadure courts, as illustrated by the following detail :—

	1901. Cases.	1902. Cases.
Kalutara	130	177
Panadure	7	5
Total ...	137	182

In disposal of these cases we have court convictions of—

	1901. Persons.	1902. Persons.
Kalutara	112	217
Panadure	14	7
Total ...	126	224

or an increase of 98 persons charged with forest offences.

Passing to acquittals we have the following results :—

	Acquittals of 1901. Persons.	Acquittals of 1902. Persons.
Kalutara	89	36
Panadure	2	1
Total ...	91	37

indicating a marked improvement in the handling of the cases themselves, notwithstanding the very large increase in forest crime.

The jak plantation at Palatota is very healthy, and forms an almost perfect cover. A few trees have shown signs of fruiting this year, and it may be confidently expected that when all are in bearing the plantation will be self-supporting as regards cost of upkeep and supervision.

XIII.—EDUCATION.

I annex a list of schools of importance in the district, some of which are not registered as grant in aid, showing the management :—

Management.	Boys.	Girls.	Mixed.	Total.	Daily Attendance.
Government ...	38	22	6	66	4,902
Roman Catholic ...	8	6	7	21	1,840
Wesleyan ...	4	8	12	24	1,068
Church of England ...	—	—	5	5	305
Church Missionary ...	—	—	1	1	7
Buddhist Theosophical Society ...	4	2	16	22	1,939
Private	1	1	—	2	342
Total ...	55	39	47	141	10,403

These figures show that the average daily attendance per school is in round numbers

Government	74	Church Missionary	7
Roman Catholic	87	Buddhist	88
Wesleyan	44	Private	171
Church of England	69		

There has been an increase of two Government schools, but a decrease of two Roman Catholic, three Church of England, and four Church Missionary. Buddhist schools appear to have been omitted from last year's return. A very flourishing school, St. John's, Panadure, under the principalship of Mr. Jansz, is now included above.

It is very obvious that the educational facilities offered are far behind the wants of the district, but so far as Government schools are concerned this will be understood when it is remembered that the schools must be provided by the people. With no machinery to secure this being done, it is no great wonder that progress has been slow. I have included the Buddhist Theosophical Society's schools, as they are numerous and have a large attendance. The two private schools are those managed by Mr. Jansz at Panadure.

The schools are distributed through the district as under :—

Korale.	Schools.	Population (excluding Estates) by last Census.	Population to Schools.
Totamunes	88	115,719	1,315
Rayigam Korale	27	49,894	1,847
Pusdun Korale West ...	16	23,330	1,458
Pasdun Korale East... ...	10	24,062	2,406

The important work being done at the Maggona Orphanage and Reformatory should not be left unnoticed. The institution is now in charge of the Rev. Father Bell, assisted by another priest, 4 European lay brothers, and 10 native brothers.

Originally started as an orphanage, and worked quietly and unostentatiously, the school came into official importance, when it was decided to transfer to it the juvenile offenders previously sent to Haputale. This was about 1897. Since then, though chiefly in the last two years, it has developed at a remarkable pace, and now contains over 300 boys, of whom, roughly, 150 are orphans and scholars and 150 in the reformatory. Since I left the district in 1900 several new buildings have been erected and others in course of completion. In the reformatory provision is being made for 250 boys, and all the arrangements are compact and complete in themselves. The wards are airy and large, and the number occupying them quite moderate. The sanitary arrangements are well looked after. There are sick wards for ordinary cases, and a special isolation hospital is just being completed for infectious diseases.

In the course of the year mumps and chickenpox attacked the school, and there were some cases of enteric, but no deaths occurred, and the disease was effectually stamped out. The institution is visited three times a week by the Government Medical Officer.

The boys, in addition to their ordinary education, are trained in printing, bookbinding, carpentering, and tailoring. All the furniture for the buildings is made by the boys, as well as all the clothing for themselves.

A visit to the school well repays the slight trouble involved, and is greatly appreciated by the Fathers in charge, who are delighted to explain everything about the institution in which they are so deeply interested.

XIV.—VILLAGE COMMUNITIES' ORDINANCE.

This Ordinance has not been worked in this district for some years. The district divisions were altered, the subdivisions varied, and the old rules were not re-adopted. During the year the vacancies in the old Committees were filled up and Committees elected for all the subdivisions except Panadurebadda, where the introduction of the Ordinance was again rejected, as happened when it was first proposed to bring it into force. Why Panadure, with its intelligent and well-to-do residents, should not have made their subdivision a model one I do not understand. The residents could have elected good men, who would have seen that the Ordinance was made of real use.

No one who has not had experience in the matter can know how difficult it is to get on with purely village work without some such Ordinance being at work. To take one instance only, the erection and maintenance of village schools. These are of all kinds; some well built requiring little or no annual repairs, others old and requiring to be totally or partially rebuilt, others requiring annually recurring repairs, still others requiring extension.

At present nothing but the utmost efforts of the Mudaliyar and local headmen can raise the funds for these works. Village labour is useless. Materials and skilled labour are absolutely necessary, and must be paid for in cash. Where is the money to come from? Sometimes a few wealthy persons come to the front and show their public spirit by doing the work. But often the residents are poor, and the amount necessary, though not very great, cannot be levied. One gives something, another nothing. I may instance one case, Potuwila, where the building of a new school has dragged on over three years.

With a portion of the residents commuting there would ordinarily always be funds to carry out work of this kind at once, while those who elect to labour can be employed on village public works, for which their labour is suited.

Draft rules have been prepared and submitted for approval to the Government Agent, and now only await their formal confirmation by the Committee, to be laid before Government. When this is done the Committees can begin their work effectively.

XV.—FOOD SUPPLY.

Rice is the staple article of diet in the district, but in addition fish, meat, and vegetables are largely used. Fish is plentiful along the coast, but much of it is sent to Colombo and further. There is, however, plenty for local wants wherever the nets are worked or a fishing population resides, but at other points it is of inferior quality and dear. Kalutara town suffers in this respect. Cattle are slaughtered for use in the towns and for the estates, but, except by Moors, meat is not largely used elsewhere. These latter consume a good deal during certain festivals. Within the Local Board licensed butchers killed 848 head exclusive of so-called sheep, other licensed butchers 406, and special licenses were taken for 257, a total of 1,511. Vegetables, though a very necessary part of the food of the district, are not grown largely for sale, and the quality of those offered is indifferent.

The season was a good one for certain fruits and fair for all. There was no scarcity anywhere.

The consumption of rice imported, as compared with that locally grown, was normal. There is so little land in the district suitable for paddy cultivation, which is not already contributing to the supply, that no increase of the local supply from an extended area can be looked for. There was a promise in parts of the totamune of a very heavy crop in August-September, but continuous floods reduced the outturn to a normal one, and destroyed the straw totally. In September the people from Bolgoda to the coast were trying to dry for use what was only fit for a manure heap.

XVI.—IRRIGATION.

The irrigation works in the district consist of the following:—

(1) Bolobotuwewewa.
(2) Rayigam *alias* Uyanwewa.
(3) Kemunewewa.
(4) Medagamawewa.
(5) Maha and Kudawewa.
(6) Kompe-ela.
(7) Nikatu-ela.
(8) Thoragala-ela.
(9) Hinatiyangala-ela.
(10) Modarawila-ela.

Of these, Nos. (1), (2), (3), (4), (5), (6), (8), (9), and 10 were constructed or repaired on terms with the villagers, no rate being charged and no maintenance undertaken. In the case of No. (7),

Nikatu-ela, the cost is being recovered in ten annual instalments, after which a maintenance rate will be paid. The only expenditure incurred was for the Guardian's pay (Rs. 90) and for clearing weeds which drifted on to the gate (Rs. 14·50). Three lots were sold during the year for default of water-rate.

In connection with irrigation, I may touch here on the Talpitiya flood outlet. This work was executed to give relief in flood time to the large area of low land lying between the Kalu-ganga and the Colombo District, in which the Bolgoda lake is included. The canal is excavated to the sea about 4 miles south of Panadure. Just between the railway bridge and the sea are the so-called flood gates—in my opinion a greater hindrance than use. The sluices are far too small to let any body of water through, the piers are large, and the whole erected so close to the sea that the large sandbank formed by the sea has by settlement almost covered up the sluices. By no possibility can any head of water get out unless it rises over the piers. Were the gates erected east of the road bridge in deep water and the channel again cleared, there would be, whenever the sandbank was cut, a proper flow down it to scour and keep it deep. As for brackish water getting up the channel, I cannot see that the sluices stop it any more where they are than if a mile inland. When a flood subsides the sea at once forms a fresh sandbank, and most of such salt water as goes over it during this short period can pass into the canal now. On the other hand, the whole low-country may be flooded and trying to get relief at Panadure and Kalutara, and not a drop be getting away through this so-called flood outlet.

XVII.—LEGISLATION.

I have no suggestion to offer.

XVIII.—WORKS MOST REQUIRED IN THE DISTRICT.

1. It will be necessary for Government to take over some of the minor roads in the Western Province and Kalutara District as feeders for the Kelani Valley Railway. At present the only section which requires to be dealt with in the district is that from Yahalakele estate to the border at Kotigangoda, about 2 miles from Padukka. I believe this is already under consideration.

2. The mouth of the Kalu-ganga is steadily shifting southward, and it is a question whether an attempt should not be made to re-open it nearly opposite the railway station. The coast line has shifted more than once within the last century as old surveys show, so that this work requires careful examination if it is to be made a permanent one. There is also the practical question to be considered whether any result would be obtained as regards relief from floods by the alteration of the mouth to a point about half a mile north.

3. At Bentota the river is taking a reverse course, and a sandbank is being formed parallel to the coast and extending northwards from the point on which the Bentota resthouse stands. Considerable erosion is taking place along the coast behind this, and people are complaining of the damage to their gardens. Some work to prevent this is required.

4. Talpitiya flood outlet. I have referred to this matter under the head of Irrigation.

5. The provision of another dispensary for Pasdun korale east is advisable and necessary. The people in the outlying district have to go long distances to Matugama or Moragala. A dispensary at Badureliya would be a great benefit.

It will be noticed that I make no reference to a house for the Assistant Government Agent or a bridge at Galpata. The former had so long hung fire in actual execution, though money had been voted, that I omitted it from the works for 1903. As regards Galpata bridge, the expense appears to me too great, compared with the prospective benefits to justify pressing for this work. Again, as regards the Nagoda-Matugama road, I think the matter must stand over at present.

The new Post and Telegraph Office at Neboda was completed during the year, and all arrangements for erecting the wires are complete.

XIX.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

Roads.—The Public Works Department, who took over the Horawela-Moragala road in 1901, began work last year, and have completed 1½ mile of excellent road. I am glad to say that the whole of the balance on the vote has been sanctioned for expenditure in 1903, so that the end of the year should see the work finished.

The Nagoda-Matugama road must in time also become a principal road, but with the taking over by Government of a feeder section to the Kelani Valley Railway in the Rayigam korale more cannot be expected at present.

The District Road Committee began work on the Bellana-Moragala Village Committee road this year by voting Rs. 500 for culverts. Five were completed, and the balance, with another Rs. 500 added, will be spent next year. The District Road Committee must take this road later, but at present it is necessary to bring the condition of their existing roads into better order.

The clearing of overhanging branches and trees on the Magura-ganga should be extended to Badureliya.

Schools.—Progress has been made in some parts, but much remains to be done. The revival of the Village Communities will, however, render the construction and repair easier in future. Bulatsinhala is now being provided with a school, a much-needed want, and others will come within the scope of the Committees' consideration. How difficult it is to arrange these matters may be judged from a case which arose during the year. A very large and flourishing school at Beruwala required extension to receive the numbers attending it. It stood on private land, and as there was a partition case (with numerous claimants) pending in the District Court, no arrangements could be made for extension on the existing site. No Crown land was available, so private parties offered a site, which the Director approved of. Before he did so an opposition faction offered another unsuitable one. On learning his decision this faction started to build a school on the latter site, moved their children from the existing school, and have threatened the existence of an excellent school to gratify personal feeling.

The bazaars of Tebuwana, Neboda, and Horana require to be provided with good cement drains.

I propose to introduce the new Ordinance regarding dogs into the villages of Tebuwana and Horana and to Panadure town, in all of which there are a large number of stray dogs.

XX.—Sanitation and Health of the People.

The year was on the whole a healthy one. There was considerable decrease in the number of deaths among the estate population from 854 to 685, while the total among the general population was just under that of 1901. I annex figures for each month in the year :—

Month.	1901.			1902.		
	Deaths of General Population.	Deaths of Estate Population.	Total.	Deaths of General Population.	Deaths of Estate Population.	Total.
January ...	568	57	625	527	89	616
February ...	471	84	555	418	79	497
March ...	386	79	465	378	61	439
April ...	371	72	443	380	59	439
May ...	361	79	440	365	55	420
June ...	351	76	427	373	41	414
July ...	357	64	421	406	43	449
August ...	385	52	437	357	56	413
September ...	371	59	430	391	43	434
October ...	381	54	435	382	45	427
November ...	314	81	495	455	65	520
December ...	462	97	559	429	49	478
Total ...	4,878	854	5,732	4,861	685	5,546

The number of patients treated in the Government hospitals and dispensaries and the total collections are also given :—

Situation.	Patients. Indoor.	Outdoor First Visits.	Collections. Rs. c.	Prescriptions. Rs. c.	Total. Rs c.
Kalutara ...	887	8,228	279 29	170 18	449 47
Panadure ...	587	9,512	326 7	356 52	682 59
Neboda ...	997	4,220	19 95	67 90	87 85
Beruwala ...	—	3,688	130 52	17 88	148 40
Horawala ...	—	3,120	110 34	11 92	122 26
Moragala ...	—	1,913	161 65	11 32	172 97
Matugama ...	—	2,700	152 95	0 40	153 35
Horana ...	—	7,084	371 92	89 94	461 86
Bandaragama ...	—	5,022	442 52	7 46	449 98
	2,471	45,487	1,995 21	733 52	2,728 73

In comparing these figures with those of last year I find an increase in first visits (outdoor) at Kalutara and Panadure hospitals, but a decrease at Neboda. As regards dispensaries, there was an increase in first visits at Horawala, Moragala, Matugama, and Horana, but a decrease at Beruwala and Bandaragama. On the whole district there was an increase of about 1,400 first visits. (I find that in 1901 Panadure reported the "total" visits 19,856, and not the "first" 8,802.) Gikiyanakanda and Halwatura have their own hospitals; Rayigama, Vogan, and Pantiya their own dispensaries.

Of the towns and bazaars, Kalutara is looked after by the Local Board, and sweepers are provided by the boutique-keepers for the bazaars of Horana and Beruwala.

During the year 143 cases of dysentery, 26 cases of measles, and 206 of chickenpox were reported by the headmen, but I suspect that there were more cases of the last-named disease. It is thought very little of by the villagers, and consequently nothing is heard of some cases. Smallpox or dysentery attracts attention more readily.

The reported cases were distributed through the district as under :—

	Cholera.		Smallpox.		Chickenpox.		Measles.		Dysentery.	
	Attacked.	Died.	Attacked.	Died.	Attacked.	Died.	Attacked.	Died.	Attacked.	Died.
Totamunes ...	7	6	—	—	166	—	22	—	100	3
Rayigam Korale ...	—	—	—	—	27	—	4	—	12	—
Pasdun Korale West ...	—	—	—	—	—	—	—	—	7	5
Pasdun Korale East ...	—	—	—	—	13	—	—	—	24	5
Total ...	7	6	—	—	206	—	26	—	143	13

Cholera broke out at Wadduwa in January; 7 cases occurred, of which 6 proved fatal. The outbreak was traced to Nattandiya in Pitigal korale. Another case occurred almost simultaneously at Maha Waskaduwa, 3 miles distant, and proved fatal. The patient was a fresh arrival from

Negombo. Lastly, a case occurred at Kalutara north, and also proved fatal. This patient also appeared to have brought the contagion from Negombo. At Wadduwa it was considered advisable to burn down the house after the outbreak.

The expenditure incurred was—

	Rs.	c.
Compensation for a house burnt down	97	0
Rent of a house for attendant	5	0
Provisions	16	2
Hire of coolies to bury corpses	10	0
Expenditure at Kalutara	34	21
Reward to headmen	20	0

A man who forcibly entered the lines of watchers round the infected house at Maha Waskaduwa was prosecuted and fined. There was no case of smallpox reported during the year. The provision for dealing with the outbreak of any infectious disease is as under. An infectious hospital of three huts, with attendants' quarters, kitchen, and the other necessary sanitary arrangements, is kept by the Local Board at Kalutara. In addition, there is a segregation camp capable of dealing with about twenty people, with the necessary offices.

At Panadure, Horana, Tebuwana, and Matugama there are portable hospitals, which can be moved and set up where necessary, but when suitable accommodation is available, an ordinary village house can be taken possession of and utilized.

The sanitary condition of the district is good. Most of the illnesses treated are of a minor character, and do not require any special provision, beyond arranging to bring medical aid within easy reach of as large a portion of the district as possible. In the more thickly populated parts, *e.g.*, along the sea coast, private dispensaries have been established at Alutgama, Beruwala, Maggona, Kalamulla, Kalutara, and Panadure, in addition to some native dispensaries.

In addition, there are those mentioned earlier under this head. From several of these the dispenser visits fixed points once a week, and so saves patients travelling unnecessarily. Several estates have private dispensaries, while at least two maintain their own hospitals.

The number of births and marriages was as under :—

	1901.	1902.
Births	8,688	8,817
Marriages	1,769	1,603

XXI.—CATTLE DISEASE.

Hoof-and-mouth disease prevailed in the totamunes and Pasdun korale east in February and March. In Pasdun korale west there was an outbreak of murrain in April in the village of Pannila. The cases were inspected by an officer of the Veterinary Department, and precautionary measures were taken to prevent the disease, which was of local origin, from spreading. There were no other cases of cattle disease reported in the district, in which the health of cattle was better than in 1901.

Korale.	Year.	Number affected.					Deaths.				Recoveries.			
		Hoof-and-mouth Disease.		Murrain.		Total.	Hoof-and-mouth Disease.		Murrain.		Hoof-and-mouth Disease.		Murrain.	
		Buffaloes.	Neat Cattle.	Buffaloes.	Neat Cattle.		Buffaloes.	Neat Cattle.	Buffaloes.	Neat Cattle.	Buffaloes.	Neat Cattle.	Buffaloes.	Neat Cattle.

XXII.—REGULAR POLICE.

There has been no alteration in the strength of the regular police force, which is distributed as under :—

	Sergeant-Major.	Sergeant.	Constables.
Panadure	1	—	6
Kalutara South	—	1	11
Kalutara North	—	—	5

The force is under the orders of the Assistant Government Agent, and is inspected periodically from Colombo by the Assistant Superintendent of Police. The Sergeant-Major also visits by surprise, both day and night, the two stations at Kalutara. The system is the best that can be arranged at present, but much depends on the Sergeant-Major. Fortunately the district has had a very efficient officer for some years in Sergeant-Major Jayan; who received special promotion for his services.

The patrol system in Kalutara is still continued. So far as I can judge, it has led to the detection of no crime, nor arrest of any offender, and the crime reports for night offences for Kalutara remain much as in 1901. Of burglaries, which it was specially hoped to check, 17 cases held to be true were reported in 1901 and 17 in 1902.

In December one constable was charged with goat stealing when on duty on the shore during target practice, and has since been convicted and dismissed.

The following rewards were given :—

Police Sergeant W 40 A. Samsadin received Rs. 20 for special courage in arresting the accused in case No. 427, Police Court, Kalutara.

Police constable W 51 M. Ahamadu received Rs. 20 for special courage in arresting the accused in case No. 427, Police Court, Kalutara.

The services of the regular police are practically confined to the police limits.

XXIII.—RURAL POLICE.

This force takes up a great deal of the Assistant Agent's time, and, maligned though it is in many quarters, works efficiently and cheaply in bringing to justice a large number of offenders. I do not claim that the individual headmen are all of unblemished character, but I am quite certain that no salary which it is possible (financially) to offer would produce so respectable or useful a force. Every effort is made to fill up vacancies with trustworthy men, of good character, and with a position and holding in the village which gives them influence and commands respect. There are cases where the Assistant Agent is however at his wit's end, *i.e.*, in villages of low caste, where the reputation of the inhabitants is so bad that not only is there no really decent candidate for a vacancy, but no man of respectable caste will come into the village to take the appointment. Naturally enough complaints come in from the neighbourhood of such centres, and constant personal efforts are required to get at offenders.

The arrangement of the rural police force in the Western Province has been fully described in previous reports. I need only therefore shortly recapitulate that the villages are numbered singly or in groups according to their arrangement under headmen and their proximity to each other. In Kalutara the numbers run from 604 to 850. For all official police purposes the village is known only by its number. The police headmen are supervised by the Vidane Arachchies and by the Mudaliyar of the korale, while the Assistant Agent inspects their books on circuit, inquires as to the nature of offences, the arrest of offenders, and recovery of stolen property. Much is learnt about cases in this way which does not appear in the court records, *e.g.*, that the case was entirely false, or, though quite true, that the parties had settled it before trial ; or, not being a compoundable offence, that the complainant and his witnesses broke down the case for the prosecution by evasive or false evidence. Absconders are also inquired after, and arrangements made to follow them up if there is a clue. On the 31st December, 1901, there were in all 22 absconders wanted from the Kalutara District, some being old cases ; of these, 8 were secured, 52 more were proclaimed during 1902, of whom 3 were struck off as not wanted, 7 surrendered, and 26 were arrested, leaving 30 names on the list on 30th December, 1902. One or two of these will probably never be arrested as they have left the island, but the others will all come to hand in time.

The following rewards were given at the end of the year :—

For Good Service during the Year.

No.		Name.		Rs.	c.

The following special rewards were also given during the year :—

For Good Crime Work.

The Police Vidanes Nos. 615, 745, 750, 896, and 809 received a sum of Rs. 42·50.

For arresting Accused.

The Muhandiram of Rayigam korale, the Vidane Arachchies of Ittapana, Welgama, and Bellapitiya, and the Police Vidanes Nos. 605, 613, 615, 616, 618, 656, 662, 667, 684, 686, 687, 714, 747, 770, 777, 780, 787, 788, 791, 794, 845, and 846 received a sum of Rs. 395.

For Service in connection with Cases.

The Vidane Arachchies of Welgama, Warakagoda, Panadure, Dodangada, and Talpitiya, and the Police Vidanes Nos. 606, 634, 678, 695, 726, 728, 844, 749, 799, and 822 received a sum of Rs. 220.

For arresting Offenders proclaimed in the "Hue and Cry."

The Police Vidanes Nos. 687, 717, and 833 received a sum of Rs. 130.

The payment was also sanctioned in 1902 of a reward of Rs. 50 to the Police Vidane No. 813, who made a plucky attempt to arrest an accused, who escaped after inflicting severe injuries on the Police Vidane with a knife. The reward was paid in 1903. The offender, a bad character who had been evading arrest in several cases, was shortly afterwards arrested in the district.

The following Police Vidanes died in office :—

Police Vidane No. 818, Ibrahim Lebbe Segu Ismail Lebbé.
Police Vidane No. 622, Patirage Don Brampy.

The following headmen retired from office:—The Vidane Arachchies of Welipenna, Kalupahana, Rayigama, and Yalagala, and Police Vidanes Nos. 627, 672, 675, 716, 734, 763, and 822.

The following headmen were dismissed from office :—

Police Vidane 824, Welgama, for misappropriating road tax collections.
Police Vidane 785, Yagirala, for conniving at theft of calamander in his division.
Police Vidane 774, Kurudippita, for not arresting an accused related to him.
Police Vidane 837, Midilana, for attempting to conceal an offence in his division.
Police Vidane 726, Remunagoda, in connection with a case of illicit felling in his division.
Police Vidane, Etagama, for abetting resistance to the Vidane Arachchi in the performance of his duties.
Vidane Arachchi, Haltota, for having stolen cattle in his possession.

The system of Inquirers still continues in force, but I am unable to say that I think it has in any specific cases directly led to the detection of crime. Their work has assisted the Magistrates in classifying offences, but I cannot learn that it has gone further. The following is the list of Inquirers :—

George Perera Gunaratna, Rayigam korale.	E. W. Gunasekara, Kalutara totamune.
James Kuruppu, Panadure totamune.	D. H. Munsinghe, Pasdun korale west.
D. F. Jayawardana, Kalutara totamune.	G. Wijesundara, Pasdun korale east.

The expenditure incurred during the year in payment of expenses to the rural police for attending court was—

Korale.	No. of Headmen paid.	Amount paid.	Average.
		Rs. c.	Rs. c.
Rayigam Korale	79	315 68	3 99
Pasdun Korale West	46	364 42	8 92
Kalutara and Panadure Totamunes ...	109	711 32	6 52
Pasdun Korale East	46	1,038 17	22 57
	280	2,429 59	8 67

The Rayigam korale headmen sent in fewer claims than the others. The high rate paid to Pasdun korale east is due to the number of cases of theft of timber and other offences from that korale and to the distance which the Vidane Arachchies who prosecuted had to travel.

XXIV.—SERIOUS CRIME.

The condition of any district as regards serious crime is a matter which requires careful investigation, and as the present system of reports enables an accurate record of every case to be kept, it is important that the subject should be fully dealt with. Of necessity a good deal of the information must be given in figures, but where these are capable of careful examination and comparison with the conditions in other years they are very useful.

Under the head Serious Crime are grouped cases of homicide, hurt with a dangerous weapon, robbery, house trespass, arson, rape, abduction, cattle stealing, riot, unlawful assembly, serious assault, and theft of property exceeding Rs. 20. This list covers the chief offences against person and property, and though other offences fall under the category of cognizable offences, they do not usually prevail to any extent so as to be a feature of the criminal characteristics of any district and are not "reported" by the headmen, though they appear in the Magistrate's returns of cognizable offences.

As the A B C classification forms the basis of all the returns, I repeat the meanings of the various letters under which all serious crime reported is grouped after inquiry :—

A.—Cases of a civil nature or in which it was not proved that any offence had been committed.
B.—False.
C.—Offences not within the jurisdiction of the court.
D.—Case committed to the District Court.
E.—Case committed to the Supreme Court.
F*a*.—Accused dead or insane.
F*b*.—Accused absconded and cannot be arrested.
F*c*.—Compounded under section 355.
F*d*.—Evidence insufficient to convict any one.
F*e*.—Offender unknown.
F*f*.—Convicted in the Police Court.

To these may be added "N" cases, which, though reported as serious, were found not to be so, and "P" cases pending at the end of the year.

Naturally the first figures to be looked at are those which show the amount of serious crime reported. This appears in the following table :—

1902.	Tax-paying Population.	Reported.	N.	Balance.	A.	B.	C.	D.	E.	Balance.	Fa.	Fb.	Fc.	Fd.	Fe.	Ff.	P.	Total.
Kalutara Totamune...	31,132	283	49	234	22	86	—	20	3	103	2	5	—	14	58	17	7	103
Panadure do. ...		221	18	203	21	24	—	16	4	138	1	—	—	29	66	24	18	138
Rayigam Korale ...	12,275	340	26	314	31	32	1	17	7	226	1	2	—	58	97	36	32	226
Pasdun Korale East ...	5,931	127	29	98	16	37	—	11	—	34	—	1	—	4	22	6	1	34
Pasdun Korale West...	5,799	215	51	164	21	73	—	15	2	53	—	—	—	13	19	18	3	53
Total 1902 ...	56,135	1,186	173	1,013	111	252	1	79	16	554	4	8	—	118	262	101	61	554
Total 1901 ...	50,541	1,353	182	1,171	190	267	—	85	32	597	2	7	1	133	211	135	108	597

In the cases referred to the higher courts we find that the following were the results:—

District Court.

	A.	B.	Fa.	Fb.	Fc.	Fd.	Fe.	Ff.	P.	Total.
1902 ...	—	3	—	1	—	8	—	57	10	79
1901 ...	9	27	—	—	—	7	—	36	6	85

Supreme Court.

	Fa.	Fb.	Fc.	Fd.	Fe.	Ff.	P.	Total.
1902 ...	—	—	—	1	—	6	9	16
1901 ...	—	—	—	—	—	24	8	32

Omitting all cases marked by any court A B C, the serious cases disposed of resulted as follows :—

	Fa.	Fb.	Fc.	Fd.	Fe.	Ff.	Total.
1902 ...	4	9	—	127	262	164	566
1901 ...	2	7	1	140	211	195	556

This means that out of the offences disposed of 164 were punished and 402 were not. Comparing these results with those obtained in 1901, viz., 195 punished and 361 unpunished, it appears that the year's work resulted in 31 fewer offences being punished and 41 more remaining unpunished.

It will be noticed that a very large number of cases fall under the head Fe, "Offender unknown." This class of cases is largely made up of cattle stealing cases and burglaries. As regards the former, it often happens that the theft is not detected for some time. Cattle are allowed to wander about, and it is often only by chance probably that an owner notices that he has not seen one of his animals for some days. After some search, or perhaps without any, he reports the animal stolen; but from the circumstances it will be understood that detection is very improbable. Burglaries are committed under conditions which render detection very difficult. As a rule, the report is that the owner has found his house robbed when he awoke in the morning. Sometimes the report is true, but I am satisfied that the so-called burglary is often a "job" arranged by the owner to get rid of property to his own advantage. Excluding the 262 cases marked Fe, and 4 in which the accused were dead or insane, 164 convictions were secured, against 136 cases where the evidence was insufficient to convict any one or accused have absconded.

Cattle Stealing.—The prevalence of cattle stealing is still very marked. 237 reports were received during the year, of which 70 were classified as A or B. This left 167 cases in which the courts considered that there were grounds for believing that an offence had been committed. The District Judge held one of these cases tried by him to be false, so that 166 cases only remained to be dealt with. In only 36 was a conviction secured. Rayigam korale again heads the list, in spite of the fact that the Korale Muhandiram was transferred from the Totamunes to strengthen the administration.

Statement showing the distribution of alleged Cattle Thefts reported to the Magistrate during the Year 1902.

Division.	A.	B.	D + B.	E + Ff.	F. b	F. d	F. e	F. f	Pending.	Total.
Rayigam Korale ...	6	7	—	—	1	23	30	15	18	100
Kalutara and Panadure Totamunes ...	6	13	1	—	1	12	25	6	6	70
Pasdun Korale West ...	3	20	—	1	—	5	5	3	—	37
Pasdun Korale East ...	3	12	—	—	1	2	10	1	1	30
Total ...	18	52	1	1	3	42	70	25	25	237

In 1901 the true reports for Rayigam korale were 97, so that this year shows a slight improvement with only 87, and one more conviction was obtained. The figures for the totamunes have risen from 47 true reports to 50, but the convictions have risen from 5 to 6. Pasdun korale west also shows an improvement from 21 to 14 true reports and 1 to 4 convictions, but Pasdun korale east has 17 cases against 11, and only 1 conviction against 2.

Burglaries.—The number of burglaries reported is again very high, 195 (excluding A and B cases, and one which the District Judge viewed as false). Out of this total, only 11 cases resulted in convictions. In no less than 143 the offenders were unknown. If the figures for cattle stealing be added, viz., 166 + 195, we find that 361 out of 649 serious offences fall under these two heads.

Division.	A.	B.	D.			E.				Pending.	Total.
			B.	F*d*	F*f*	*b*	*d*	*e*	*f*		
Rayigam Korale	—	1	—	—	—	—	13	55	1	6	76
Panadure Totamune	—	—	—	2	4	—	11	44	1	3	65
Kalutara Totamune	1	12	1	—	2	1	3	33	1	1	55
Pasdun Korale West	—	2	—	—	1	—	1	5	—	—	9
Pasdun Korale East	1	4	—	—	1	—	—	6	—	—	12
Total ...	2	19	1	2	8	1	28	143	3	10	217

In Kalutara town the burglaries reported were 17 in each year, only one of which resulted in a conviction, but the total serious offences reported fell from 110 to 56.

So far I have dealt with the most prominent of the offences against property. Turning to those against person, offences in which the knife or some similar weapon has been used claim chief attention. The figures here as arranged under the A B C classification merit attention :—

Division.	A.	B.	D + F*f*.	E + F*f*.	F.					Pending.	Total.
					a	*b*	*d*	*e*	*f*		
Rayigam Korale	4	5	2	—	1	—	6	—	9	4	31
Kalutara and Panadure Totamunes ...	8	37	4	—	1	1	5	3	17	10	86
Pasdun Korale West	4	13	6	1	—	—	1	—	8	—	33
Pasdun Korale East	3	7	7	—	—	—	1	—	3	—	21
Total ...	19	62	19	1	2	1	13	3	37	14	171

It will be noticed first of all that out of 171 reports laid before court 19 are classified A, *i.e.*, that no offence had been committed, while 62 are held to be distinctly false. Omitting the pending cases, this left only 76 true charges. In these 57 convictions were obtained, a very satisfactory proportion, and only in 19 did the offenders escape punishment, of which 2 are F*a* cases, *i.e.*, accused dead or insane.

But a more satisfactory feature still is the very great decrease in offences of this nature from 141 true cases with 89 convictions in 1901 to 76 and 57. This is a very marked improvement, and will, I trust, be maintained. It is especially marked in the totamunes, while the only division with a worse record is the Pasdun korale.

As regards the possible connection between drink and offences of this nature, it is worth noting that in the Kalutara and Panadure totamunes, which contain 159 distilleries and 39 taverns and more than half the taxpaying population, there were only 41 true cases reported, while the rest of the district, with 2 distilleries and 33 taverns, contributed 49 reports.

Homicides.—The number of homicides reported was 10 (the same as in 1901), distributed as follows :—Rayigam korale 5, Totamunes 4, Pasdun korale west 1. A knife or sharp cutting instrument was used in 8 of the cases, a pistol in 1, and clubs in 1. In the case where a pistol was used the accused was held to have acted in self-defence, and was acquitted. In only one case was the quarrel which led to loss of life attributed to liquor. In two cases the accused died before trial, and in one they were convicted during the year. All the others were pending before the Supreme Court on 31st December, 1902. The usual return is annexed :—

Homicide Return.

[In the cases marked (*a*) the injured person was conveyed to hospital and died there on the date given in column 3.]

No.	Village and Number of Village.	Offence committed.	Body discovered.	Accused apprehended.	Date of Inquest.	Magisterial Inquiry commenced.	Committed or discharged.	Date of final Trial.	Result.	Punishment.	Instrument used.	Probable Motive.	Attributable to Liquor or not.	Circumstances.

Nov. 6	Nov. 6	Nov. 6	Nov. 7	Dec. 29	Committed to Supreme Court	Pending	—	Knife	Robbery	No	The deceased was stabbed by the accused whilst he was returning from Aramangolla, to which place he had gone to recover a debt due to him. The probable motive was robbery.

My predecessor took the trouble when showing the distribution of serious crime with reference to the tax-paying population to eliminate from the division officer's list all persons exempted for the year, who died within it, or who were reported as having left the district. This involved a great deal of labour, as it had to be done village by village to enable the figures to be grouped according to the reports from each. I have not thought it necessary to do this, but have taken the reported tax-paying population according to the lists sent in by the division officers, which is sufficient for the result desired.

The number of cases of serious crimes reported to the Magistrate and decided within the year, the number found to have been committed in various villages, the number punished and unpunished out of those decided, and the tax-paying population is shown in the following statement. This is an approximate record of the criminality of each village, but is not always a true test, as I am aware of at least one case where a village of very respectable people had a number of offences committed in it undoubtedly by residents of an adjoining village of bad character. The residents of this last village preyed on their neighbours, whose village thus got the discredit of the criminality, which really belonged to that in which the offenders lived. This itself had very few offences committed within its own limits :—

The number of villages in which no serious crime was reported falls from 63 to 59, but the tax-paying population is increased to 9,091, and the proportion free from all serious crime remains about the same. Similarly, 143 offences in 102 villages took place, as against 149 in 101 villages in 1902. The tax-paying population in these villages was 21,506, or more than a third of the whole. 161 villages representing 30,597 taxpayers, were therefore practically free from crime, the total offences being only 143.

Of the villages with eight reports or over, seven are the same as in 1901, and include Panadure and Kalutara. Outside police limits, Horana has the worst record, though it is a little better than in 1901. The average is one crime to every thirty taxpayers. The Korale Mudaliyar and the Muhandiram both live at Horana, but it still maintains its unenviable notoriety. Nothing but steady weeding out of the bad characters will bring this part of the district into order, and time is needed to effect this. As regards the criminality of this korale, it remains practically where it was in 1901. 207 offences were found to have been committed, against 209 in the previous year! But the results are far less satisfactory, 44 punished against 54.

The next statement shows the distribution of crime by korales, with the number of distilleries and taverns :—

Statement showing the Tax-paying Population and Number of Offences found to have been committed, punished, and unpunished in each Korale, with the Proportion of Offences to Taxpayers and the Number of Taverns and Distilleries and the Number of Taxpayers to each Tavern.

Division.	Total Tax-paying Population.	Total Offences committed.	Punished.	Unpunished.	Number of Offences per 1,000 Taxpayers.	Percentage of punished to Total Offences committed.	Number of Taxpayers to each Offence.	Taverns.	Distilleries.	Number of Taxpayers to each Tavern.
Rayigam Korale	13,273	207	44	163	15·5	21·2	64	20	—	663
Kalutara and Panadure Totamunes ...	31,132	249	69	180	7·9	27·7	125	39	159	798
Pasdun Korale West	5,799	66	34	32	11·3	51·5	87	6	2	966
Pasdun Korale East	5,931	44	17	27	7·4	38·6	134	7	—	847
Total ...	56,135	566	164	402	10·0	28·9	99	72	161	779

This return deals only with the cases disposed of to 31st December of the year under review. It shows 10 more true reports, 31 fewer offences punished, and 41 more unpunished. The only korale which shows an increase in the percentage of convictions to unpunished offences is the Pasdun korale west. The relative criminality of the district remains the same as shown below, but Pasdun korale

west would show a better ratio if the immigrant population paid tax and were included. On the increased tax-paying population the figures in the district ratio is slightly lower :—

	Number of Offences per 1,000 Taxpayers.		
	1900.	1901.	1902.
Rayigam Korale	14·4	16·9	15·5
Pasdun Korale West	11·3	10·9	11·3
Kalutara and Panadure Totamunes ...	10·2	9·3	7·9
Pasdun Korale East	6·9	6·1	7·4
Total. ...	11·0	11·0	10·0

The Magistrate's quarterly returns do not agree with the previous figures for crime, as they are based on the offence being of a cognizable or non-cognizable character. They include cognizable offences which are not classed as serious crimes, and do not show the results in the superior courts.

The following statement compiled from the Magistrate's quarterly returns shows all cognizable offences reported :—

Section of Penal Code.	It was not proved that any Offence had been committed.	Charge false; no such Offence committed.	Offence not within the Jurisdiction of the Court.	Committed to District Court.	Committed to Supreme Court.	Accused Dead or Insane.	Accused cannot be arrested.	Offences compounded.	Evidence insufficient to convict any one.	Offender unknown.	Convicted in Police Court.	Total.

Total ...	159	260	1	73	18	5	6	7	170	269	262	1,230

The total number of offences affecting the person, against property, and others is shown in the next summary :—

	A.	B.	C.	D.	E.	Fa.	Fb.	Fc.	Fd.	Fe.	Ff.	Total.
Offences affecting the person	49	120	—	47	14	2	2	—	32	17	50	333
Do. property	76	133	1	25	3	2	4	6	132	248	85	715
Others	34	7	—	1	1	1	—	1	6	4	127	182
Total ...	159	260	1	73	18	5	6	7	170	269	262	1,230

Note.—This return shows only 73 cases committed to the District Court, against 79 in the serious crime return. The difference is explained thus: 3 cases not included in the quarterly return, 2 reports filed in one case committed, and two cases shown as pending, which are entered in the serious crime return as committed.

As compared with 1901, the figures show 112 fewer cases, and omitting those classified A and B of 11 :—

	1901.	1902.
Committed to higher courts...	130	91
Offenders dead or insane	2	5
Offences compounded	136	7
Convicted in the Police Court	271	262
Total ...	439	365

leaving a balance of 446 cases in which the offender has escaped punishment for one of the following reasons :—

	1901.	1902.
Cannot be arrested	10	7
Evidence insufficient to convict	150	170
Offenders unknown	219	269
Total ...	379	446

The tendency to settle cases without the sanction of the court is increasing. This is easily arranged : a few deliberate contradictions in the evidence of the complainant and his party and the court is compelled to acquit and mark Fd. As regards the cases in which no offender is known, I have accepted the figures sent by the courts, but I cannot help mentioning that some of the cases must be wrongly marked. I can hardly credit the fact that in 17 cases against the person the offender was unknown. Certainly, in one case in which a woman was stabbed she certainly did know, but had good reasons for not telling.

XXV.—DUTIES OTHER THAN ROUTINE.

Owing to the very wet weather during the latter half of the year travelling was much interfered with. I, however, visited all the principal centres, inspected lands and roads, and went carefully into the crime books of the headmen, inquiring into the steps taken to detect and arrest offenders.

XXVI.—EVENTS OF INTEREST.

The news of the serious illness of His Majesty the King on the eve of his Coronation was received with universal regret, and the stages of his recovery were watched with the keenest interest. His illness evoked an extreme feeling of loyalty and of sympathy with the Royal family. When the Coronation ceremony was finally happily held the local celebrations were most heartily joined in.

On the 23rd July the election of a member for the Local Board in place of the late Mr. C. van Royen was the cause of much excitement. The contest resulted in the election of Mr. T. de Alwis.

The Kalu-ganga Steam Navigation Company began to run their steamer in April, but at the end of the year ominous rumours of its withdrawal, since unfortunately proved true, began to be heard. There were many difficulties to be surmounted, and it is possible that these had not been sufficiently considered beforehand. On a river which suffers from such heavy floods as the Kalu-ganga, a more powerfully engined boat would seem to be required. The choice of a screw steamer instead of a stern wheeler, as used on the Nile, where there must be much floating *débris* at times, was also probably a mistake. But whatever the causes, the failure of the venture is most unfortunate, as the steamer was a great convenience.

Change of Officials.

The only change among the senior officers were in the Kachcheri. Mr. Saxton succeeded Mr. Fox on 9th January, 1902, and left for Ratnapura as Government Agent, Sabaragamuwa, on 20th March, and Mr. Thaine acted till my arrival on 13th May.

On 1st February Mr. J. V. G. Jayawardana, Mudaliyar of Rayigam korale, was transferred to the Totamunes, and Mr. R. S. Wijesekara from the Totamunes to the Rayigam korale. At the same time Mr. E. J. Gunasekara, Muhandiram of the Totamunes, was transferred in the same capacity to Rayigam korale and appointed Inquirer into Crimes.

Mr. Rajapakse resumed duties as Shroff of the Kachcheri in April.

Mr. R. D. de Zilva, Mudaliyar, was appointed Head Clerk of the Kachcheri from 11th November, Mr. G. H. Keuneman being transferred to Batticaloa as Head Clerk.

Mr. J. F. de Silva was appointed Police Clerk on 10th October in place of Mr. Abeyesekara transferred to the Fiscal's Office, Negombo.

C. D. VIGORS,
Assistant Government Agent.

Kalutara, March 16, 1903.

CENTRAL PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE HON. THE GOVERNMENT AGENT, CENTRAL PROVINCE, FOR 1902.

As I assumed the duties of the acting appointment only on 10th November, this report cannot be anything but a merely formal one.

REVENUE.

The amounts brought to account in the three Kachcheries during 1901 and 1902 were :—

	Kandy. Rs.	Matale. Rs.	Nuwara Eliya. Rs.
1901	3,403,527	35,519	95,292
1902	3,299,177	36,013	110,423

showing a total decrease of Rs. 88,725, entirely in the Kandy District. The particulars are shown in Appendix A.

The large fall in revenue requires some explaining. It has been going on since 1900, and is confined to the Kandy District, the revenue of Nuwara Eliya showing a steady increase from Rs. 65,684 in 1899 to Rs. 110,423 in 1902, and that of Matale from Rs. 28,476 in 1899 to Rs. 36,013 in 1902.

The chief decrease is under the head of Railway Receipts, which showed an increase in 1900 and 1901, but fell in 1902 to Rs. 77,262 less than in 1901, though it is satisfactory to know that the revenue from this source in 1902 exceeded that of 1899 by Rs. 84,461. A statement showing Railway Receipts for the last five years is appended :—

Statement of Railway Receipts during Five Years, 1898 to 1902.

Year.	Rs.
1898	2,489,856
1899	2,383,168
1900	2,491,525
1901	2,553,559
1902	2,476,297

The next item accounting for the decrease is Licenses, &c. It is chiefly under Arrack and Stamps.

Arrack.—The rent for 1902 was sold for a larger amount than for the previous year, but a decrease is shown because the renter had not completed the instalments before the close of the year, and a sum of Rs. 58,593·87 was only credited in January, 1903.

Stamps.—The decrease is chiefly due to the fact that in 1901 the renter bought stamps in this Kachcheri for licenses, but in 1902 bought them elsewhere.

There was also a continued decrease under Land Sales, which is only to be expected. As was pointed out in last year's report, there is very little Crown land available for sale or at least saleable in this district. There is plenty in Upper Dumbara, but there is no demand for it, and there is not likely to be any until it becomes available for paddy cultivation through the extension of irrigation works.

Two statements are annexed, the first giving the acreage disposed of in the last ten years (Appendix B), and the other the number of lots sold to Europeans and natives respectively (Appendix C). It will be noticed that no lots were sold to Europeans during the year, as all the available land for which there is a demand by them has been disposed of.

The recoveries of medical aid dues and of police tax appear to have been decidedly less prompt in 1902 than in previous years.

For purposes of reference, a comparative statement of the revenue collected in the Kandy District during the last ten years is appended (Appendix D).

Appendix E gives the sums recovered on account of medical aid dues from estates in the Province during 1902, and the one succeeding it (Appendix F) is a comparative table of work done during the last five years.

The recovery of police tax in each district of the Province is shown in Appendix G.

There is a satisfactory increase in the receipts under Post and Telegraphs.

EXPENDITURE.

The following is the statement of expenditure in 1902 at each Kachcheri in the Province, exclusive of the salaries and the exchange compensation of the superior officers paid at the General Treasury :—

Kachcheri.	Personal Emoluments. Rs. c.	Other Charges. Rs. c.	Total. Rs. c.
Kandy ...	41,818 9	39,038 37	80,856 46
Matale ...	12,258 31	3,892 99	16,151 30
Nuwara Eliya ...	10,470 9	6,971 40	17,441 49
Total ...	64,546 49	49,902 76	114,449 25

13471 C

FOOD SUPPLY.

There has been no scarcity of food in the Kandy District during the year, and prices have remained normal. The average rates for the principal food stuffs have been as follows :—Paddy at Re. 1·50 per bushel, country rice Rs. 4, imported rice Rs. 4·50 to Rs. 5, dry grain Re. 1·25.

Rice and dry grains form the staple food of the villagers. The locally-grown grain is insufficient for the population, and has to be supplemented by imported rice. The proportion of one to the other it is difficult to ascertain exactly, but probably more than one-third of the food supply is imported.

All the Ratemahatmayas report the increasing cultivation of vegetables, in nearly all cases with successful results. Sweet potatoes are largely grown, but I am inclined to think this cultivation might be still further extended. The food supply of the district is on the whole satisfactory.

IRRIGATION.

The principal irrigation works in Kandy District are :—

(1) Amunuwela amuna in Harispattu.
(2) Wirapitiya-ela in Lower Dumbara.
(3) Udugoda Bandara-ela in Lower Dumbara.
(4) Teldeniya Wahala-ela in Lower Dumbara.
(5) Siyambalagastenna-ela in Lower Dumbara.
(6) Palliyawela amuna in Lower Dumbara.

No large irrigation work was undertaken in this district during the year. A proposal was made to construct an anicut at Amunuwela at a cost of Rs. 4,893, but the work has been shelved for the present as the villagers have not yet paid the last instalment due by them for previous works.

Surveys have been undertaken in the case of Amunuwela, Udugoda Bandara-ela, and Siyambalagastenna-ela.

A proposal is under consideration for the improvement and repair of Teldeniya Wahala-ela at a cost of Rs. 706. The cultivators have agreed to pay a rate of 50 cents per acre in perpetuity.

Wirapitiya-ela and Udugoda Bandara-ela were breached during the year, and estimates have been prepared for their repair at a cost of Rs. 767 and Rs. 3,243 respectively.

An Irrigation Sub-Inspector for the Central Province was appointed in 1902, but as he has sent in no report yet, I am obliged to close this report without it.

LEGISLATION.

The Ratemahatmayas nearly all want more legislation for the suppression of the illicit sale and drawing of toddy. I do not think more legislation is required, unless it be legislation to prevent Magistrates from imposing fines so small that they can have no deterrent effect, as well as enabling them to give rigorous imprisonment where they consider such punishment should be substituted for a fine.

WORKS MOST REQUIRED IN THE DISTRICT.

Referring to the list in the Administration Report for 1901, I have to note that provision has now been made for the following works therein specified:—

(1) Improvements to Dikoya hospital. Rs. 8,000 has been voted for a new male ward and Rs. 1,000 for repairs to the Medical Officer's quarters.
(2) Uda Pussellawa hospital. Rs. 10,000 has been voted for alterations and additions.
(3) A vote was last year asked for for altering the Fiscal's Office, Kandy, into a museum for Kandyan art. A sum of Rs. 1,610 has been allowed for this purpose, and a further sum of Rs. 1,000 for the purchase of objects suited for the museum.
(4) Kurunduoya-Uda Pussellawa road. Rs. 3,000 has been granted for a survey of this proposed road.

In addition, a sum of Rs. 8,700 has been voted for the adaptation of the Post Office, Kandy, vacated since the acquisition of the Grand Hotel, as police quarters. Police offices, &c., are what I suggest it is best fitted for.

Of works still required in the Kandy District, the following are the most pressing :—

(1) Improvement to the hospital at Madulkele. The old ward is no longer fit for use, and should be reconstructed.

(2) New police stations at Teldeniya and Deltota.

(3) *Roads.*—Grant towards extension of the road from Nugatenna through Bintenna to Alutnuwara on the Mahaweli-ganga, and extension and connection of the following roads :—

(*a*) Deltota and Rahatungoda road.
(*b*) Norwood-Upcot road and Maskeliya road at Glenugie.
(*c*) Railway Gorge road with Nanu-oya road.
(*d*) Wanarajah and Norton Carolina roads.
(*e*) Uda Pussellawa road to be extended to Dikwella in the Province of Uva.

(4) *Bridges.*—Bridge over the Mahaweli-ganga to serve the traffic on the road to Teldeniya, Rangala, Nitre Cave district, and Uda Dumbara.

The iron bridges lately removed by the Railway Department should be utilized by being converted into road bridges and erected where such bridges are required in the Province. There are nearly a dozen such bridges ranging from 50 feet upwards in span lying about at the various stations, of which apparently it is not intended by the Railway Department to make any use.

(5) Headmen's ambalam at Kandy near Police Court. (Provincial Road Committee to contribute half.) An excellent design for this building in the Kandyan style has been supplied by the Provincial Engineer, Mr. Creasy.

(6) Grants in aid towards cost of providing pure water supply and drainage in towns in the Central Province under Small Towns Sanitary Ordinance.

(7) Light railway into Dumbara from the Main Line at Katugastota.

(8) Grant for extension and improvement of the Public Recreation Ground at Bogambra in Kandy, a work beyond the means of the Municipal Council to provide for entirely.

(9) Surveys for the following works :—

(*a*) Driving road from Getambe near Peradeniya to Katugastota bridge along the bank of the Mahaweli-ganga. If this could be constructed, it would form perhaps the finest and most picturesque drive in Ceylon.

(*b*) Driving road from Katugastota bridge *viâ* Lewella ferry to join the Kandy-Haragama road near the 2nd milestone.

(*c*) Driving road from Peradeniya *viâ* the reservoir to the Ampitiya road.

I mention these roads here because, although they would for the most part be within the Municipal limits, it is not likely that the Municipal Council will ever be able to afford their construction (a portion of the second road was in fact begun by the Council some years ago, but had to be abandoned), and until they are constructed the potentialities of Kandy and its neighbourhood as the show place of the Island will never be fully developed. Under these circumstances some help from Government might not unreasonably be expected.

GOVERNMENT SCHOOLS.

As in former years, so in 1902, attention has been paid to the attendance at the vernacular schools, and the improvement mentioned in last year's report has been maintained. No new schools were opened during the year. One, that at Pattiyagama in Lower Hewaheta, was closed for insufficient attendance. I annex a list showing the average attendance at each school in the district (Appendix H).

THE SANITARY CONDITION OF THE PEOPLE.

This has received the constant attention of the Board of Health throughout the year, especially in the nineteen towns now under the Small Towns Sanitary Ordinances.

The Board of Health, consisting of the Government Agent, the Colonial Surgeon, and the Provincial Engineer, held nine meetings during the year.

All the Board of Health towns were scavenged during the year, in every case under the direct supervision of the police and local Medical Officers. One Horbury latrine was erected at each of the following places :—Wattegama, Norwood Pundalu-oya, Talawakele, Nanu-oya, and Tillicoultry, and two at Pussellawa, Bogawantalawa, and Maskeliya, twelve latrines in all. Drains were built at Norwood, Maskeliya, and Talawakele at a total cost of Rs. 2,244. At Kadugannawa a slaughter-house was provided, and at Pussellawa the bathing-place was improved by a wall.

A statement of the balances of the Board of Health towns on 31st December, 1902, is annexed (Appendix I).

The health of the people remained fairly good throughout the year. In the middle of the year there was some sickness in the district, chiefly chickenpox, measles, eye disease, and fever. The Ratemahatmayas were careful to see that bazaars and private houses were kept clean, and pressure was at once brought to bear on the people to clean up their premises whenever signs of such premises being in an insanitary condition appeared.

There were 22 cases of suspected cholera, with 7 deaths, in October and November of 1902, at Pallekelle estate near Kandy.

The usual precautions have been taken against plague. The sites selected for camps have been kept cleared of jungle and ready for use ; where there are plague buildings, as in Lower Hewaheta, they have been maintained. Something has also been done to spread information about plague and its prevention among the villagers, and the headmen have been instructed as to what they would have to do in case of an outbreak.

Three statements are annexed showing the number of persons treated at the hospitals and dispensaries in the district (Appendix J, K, L).

PLANS FOR THE IMPROVEMENT OF THE PROVINCE.

Reference should be made to the heading "Works most required in the District" in each of the three Administration Reports.

CRIME.

In most cases the headmen have worked well during the year, but in several punishment was found necessary. Four Koralas were dismissed or required to resign during the year, and the salaries of some others were withheld. Several Arachchies also were dismissed. On the other hand, rewards were paid in any deserving case that occurred.

The Crime Books of the Koralas are examined every month at the Kachcheri, and any case of failure to arrest or to detect the offender is carefully inquired into, to make certain that the headman has done his best.

Cattle Stealing.—There was a notable decrease in the number of cattle thefts reported in 1902—51, as compared with 70 in the previous year. Of these 51 cases, 28 occurred in Yatinuwara and Lower Dumbara, so that theft of cattle is a rare offence over the rest of the district. As usual, in about half the cases reported, the animal had either only strayed, or the case was a false one, so that there remains a very small proportion of true cases to the population of the district.

CATTLE.

Health of cattle has been very good. There were only two cases of murrain, and a few cases of hoof-and-mouth disease in the wet months at the end of the year at Dikoya and Norwood. In five of the nine divisions of the district there was no disease at all.

NEW AREAS OF CULTIVATION.

Not much new land was brought under cultivation during the year. Accurate statistics on this point cannot be obtained, but, exclusive of chenas, the new area is probably under 1,000 acres. More than half the area has been cultivated with vegetables, the use of which is increasing among the villagers, and which form an important addition to the food supply.

WASTE LANDS ORDINANCE.

During the year no fresh proceedings under the Waste Lands Ordinance were taken, but proceedings in the case of five lots were continued from previous years, with the result that 4A. 0R. 23P. were admitted to be private and 30A. 0R. 25P. were declared the property of the Crown; while 321A. 0R. 17P. remained unsettled at the end of the year, but will shortly be settled.

A statement is annexed showing the extent to which the Waste Lands Ordinance was put in motion in the Kandy District in 1902 (Appendix M).

FORESTS.

In this Province the more important forests are under the control of the Conservator. Under the Government Agent are two Forest Rangers, and there is one under each of the Assistant Government Agents. Forest watchers, an increase in the number of whom has been sanctioned this year, are employed under the Rangers.

No demarcation was undertaken in Kandy or Nuwara Eliya Districts during the year. This is one of the most effective methods for preventing encroachments, and it greatly facilitates the work of protecting the forests. In some cases the boundaries have become untraceable.

A large part of the work, especially in Nuwara Eliya District, consists of reporting on applications for chenas and for purchase of land. In Nuwara Eliya District 897 applications for chenas were reported on during the year.

Theft of firewood still continues to some extent from forests, such as Udawattekele, close to Kandy. The appointment of the extra watchers should do something to diminish this. Several successful prosecutions were instituted during the year, and in other cases the defendants compounded. Rules under the Forest Ordinance are under consideration, which should made conviction more certain.

The total expenditure was Rs. 7,613·79, and the revenue Rs. 7,113·43. In addition, ebony from Pallegama in this Province was sold at the Central Timber Depôt in Colombo for Rs. 20,785·09. The greater part of the forest area suffers from lack of communication with markets, particularly the forests in Uda Dumbara.

CHENA CULTIVATION.

An extent of 98 acres was allowed for chena cultivation on Crown land in Upper Dumbara in the Kandy District, as against 87 acres in 1901 and 172 acres in 1900. In Kandy District chena permits are only allowed in Upper Dumbara division.

TIN TICKET SYSTEM.

The tin ticket system came into operation during 1902. The statistics with regard to the Kandy District are as follows:—

Number of bills issued	No.	999
Value of bills issued	Rs.	17,214 67
Amount collected	„	14,210 7
Arrears on December 31, 1902	Rs.	3,004 60

(The arrears have since been recovered and credited.)

The work of collecting bills for cooly expenses would be much expedited if the same procedure could be adopted as in the case of medical aid bills. An estate defaulting after due notice could then be distrained on for the amount.

SALE OF LAND BY VILLAGERS.

There have been some sales of small lots of land among the villagers in the Kandy District, but there seems to be no reason to believe that in any case the vendor had insufficient title.

VITAL STATISTICS.

The returns of births and deaths registered in each district with percentage of birth- and death-rate to the population are appended:—

District.	Births.	Per Cent. of Births to Population.	Deaths.	Per Cent. of Deaths to Population.
Kandy ...	14,512	3·85	11,507	3·05
Matale ...	4,038	4·38	3,487	3·78
Nuwara Eliya ...	4,071	2·66	3,410	2·23

The marriage returns are as follows:—

	Kandy.	Matale.	Nuwara Eliya.	Total.
General ...	341	42	104	487
Kandyan ...	696	267	149	1,112
Mohammedan ...	30	Nil	Nil	30

In Kandy District 99 Kandyan divorces were granted during the year.

There is a large apparent fall in the birth- and death-rate since 1901. The explanation is that the rate was previously calculated on a wrong population basis, which was probably under-estimated. The 1902 rate is calculated on the returns of the last Census.

EVENTS OF INTEREST.

An Agricultural Show was opened by His Excellency the Lieutenant-Governor on 6th May, and the prizes were presented by Mrs. im Thurn on the 8th. The Show lasted three days, and should do good among the villagers. A report on it is annexed (Appendix N).

The postponed festivities of the Coronation of His Majesty the King were held in August. A perahera took place on the 21st, and a Levée and Ball on the 22nd. Nugawela Ratemahatmaya of Harispattu was created Disawa, a well-merited honour.

At the end of August the Lieutenant-Governor spent a week touring through Matale District.

Mr. Wace, the Government Agent, went on leave on 10th November, and was relieved by the present writer.

J. P. LEWIS,
Acting Government Agent.

Kandy, March 4, 1903.

REPORT ON THE MATALE DISTRICT FOR 1902.

REVENUE AND EXPENDITURE.

THE revenue collected at the Matale Kachcheri in 1902 showed an increase of Rs. 494·45 over that collected in 1901. The expenditure showed a decrease of Rs. 1,687·60. A comparative statement of the revenue and expenditure of the district is given in Appendix O.

The sale of Revenue Stamps produced Rs. 277·17 in excess of the sale of the previous year. The decrease of Rs. 518·58 in the sale of Postage Stamps at the Kachcheri was due chiefly to the suspension of one of the stamp vendors.

There was a decrease of Rs 494·55 in Police Court fines, and a decrease of Rs. 186·25 in other fines, principally of road defaulters. Fines for Forest Offences unfortunately show an increase of Rs. 283·36.

The increase of Rs. 305·59 under Survey Fees and of Rs. 336·59 under Dispensary Collections are satisfactory, as is also the increase of Rs. 336·62 under Police Rates. The small increase of Rs. 249·63 under the Sale of Timber was due to the sale of some katu-imbul trees for making tea boxes.

The decrease of Rs. 281·33 under Rent of Lands is due to the fact that fewer chena permits were issued. The decrease of Rs. 1,356·98 under Crops on Crown Lands was due to a decrease in illicit chena cultivation and the absence of the necessity of seizing and selling crops on such chenas. The decrease of Rs. 603·55 under Unclaimed Deposits is due to the fact that there were fewer unclaimed deposits to transfer to revenue. The decrease of Rs. 515·48 under Land Sales, notwithstanding the fact that the land sales were more numerous, is due to the fact that no large and important block was offered for sale.

The following is a comparative statement of revenue which was derived from this district but credited in other Kachcheries during 1901 and 1902 :—

	1901. Rs. c.	1902. Rs. c.
Postage Stamps in Colombo	4,842 96	4,393 27
Telegraph Stamps in Colombo	5,476 69	4,884 25
Tolls in Kandy	14,538 67	14,388 37
Value of Timber in Kandy	—	1,118 31
Value of Fuel in Kandy	—	3,071 23
Value of Pallegama Timber in Colombo	7,054 50	10,392 52
Survey Fees in Kandy for Certificates of Quiet Possession	2 50	—
Total ...	31,915 32	38,247 95

I.—FOOD SUPPLY OF THE PEOPLE.

The Ratemahatmayas' reports show that there has been no scarcity in any of the three divisions of this district. The lateness of the south-west monsoon caused some anxiety in Matale south. In Kandapalla korale in Matale north I noted that there was some loss owing to the absence of the usual slight showers which ought to have prevailed at that time. The north-east came in exceptionally early this year, at the end of September, and brought with it more rain in every part of the district than had been known for generations. All the tanks were quickly filled, cultivation was started nearly two months earlier than usual in many places, and there is every prospect of an exceptionally fine paddy harvest. Several fields were cultivated, which are usually abandoned for want of water. The excessive rains did some damage to the kurakkan chenas in Matale north. But I have not noticed that they suffered more than they usually do, now that the villagers have been restricted to cultivate kurakkan in jungles of less than ten years' growth, for the poorness of the soil of land which has been constantly chenaëd, coupled with the slackness of the method of cultivation, is not calculated to yield a good crop, however favourable the season may have been. Notwithstanding this partial damage to the chenas, the villagers are more than compensated by their splendid crops in hill paddy as well as in the paddy grown in their fields. Paddy and straw will no doubt be cheap in 1903, and many of the villagers ought to be able to gather in a sufficient store of food for two years. This will probably mean that Sinhalese labour will be scarce and dear for some time.

The Ratemahatmaya, Matale North, values a bushel of Coast rice at Rs. 5·55, of country rice at Rs. 4·50, and of kurakkan at Re. 1·25 in his division. The Ratemahatmaya, Matale East, values a bushel of Coast rice at between Rs. 4 and Rs. 5, of country rice at Rs. 4, and of kurakkan at 75 cents to Re. 1. The Ratemahatmaya, Matale South, values a bushel of rice at Rs. 4 and a bushel of kurakkan at Re. 1·50.

The following table gives the extents cultivated with paddy and fine grains and the total crops realized in each division. The extent cultivated is taken from the village registers. The figures of the crops realized are only guessed at by the Ratemahatmayas. I have ordered an entry of the crops realized to be made in the village registers below the entry of the cultivated extent in paddy and fine grain, and hope to give more reliable figures of future crops in succeeding Administration Reports :—

Division.		Extent sown. Acres.	Yield. Bushels.
Matale South ...	Paddy	6,097	182,910
	Fine grain	799	7,990
Matale East ...	Paddy	4,449	88,980
	Fine grain	1,534	38,350
Matale North ...	Paddy	4,496	134,895
	Fine grain	1,819	45,475

II.—THE PROGRESS OF IRRIGATION AND VIEWS AS REGARDS THE FUTURE.

The sanction of the Irrigation Department was obtained for the restoration of Moragolla Mahawewa. I held a meeting of the pangukarayo, and started the work of restoration in July. The villagers, under the personal supervision of the Inspector of Irrigation, constructed cross walls across the two breaches, and with considerable pluck and energy finished nearly 1,000 cubes of earthwork in the course of 1½ month. Notwithstanding the exceptionally severe floods at the end of the year, the earthwork stood, but the Inspector found it necessary to cut the bund. Kandapalla korale now possesses an additional tank capable of bringing 90 acres under paddy cultivation.

In the same korale the Talakiriyagama villagers also expended considerable labour and energy in the restoration of a large temple tank named Talakiriyagama Mahawewa. But unfortunately they did not take the Irrigation Inspector's advice to them to cut the bund. They unwisely allowed the water to flow over the bund, with the consequence that it again breached, and all their labour was thrown away. Fortunately the abundant rainfall at the end of the year has enabled them to bring under cultivation a large tract of paddy land which had lain fallow for years. They have every prospect of a wonderful crop, which will go far towards consoling them for their ill-luck over the new tank, and will feed them whilst they make a fresh effort on the breach in 1903. As they will no doubt take care to profit by the lesson of their failure in 1902, I have no doubt that we shall be able to guarantee their success in the coming year.

I impressed upon the villagers on circuit this year the advantages which would result to them from making an effort to complete the earthwork on their tank bunds, instead of being content to do the *modicum* prescribed by the irrigation rules. The Irrigation Inspector also showed them by means of pegs the exact amount of work which they had to do.

In April I held a meeting of the fieldowners interested in the Porutota anicut in Medasiya pattu of Matale South, and persuaded them at last to guarantee the repayment of the cost of work in ten annual instalments. Unfortunately there has been a hitch about the survey, and nothing further has been done so far. I also regret the delay in bringing forward the questions of the Kurukolayaya anicut in Asgiri Pallesiya pattu, Matale South, and of the Helambagahawatta tank or anicut in Gangala Pallesiya pattu, Matale East. Both these questions await the receipt of fresh plans.

The shareholders under Pelwehera tank in Wagapanaha Pallesiya pattu, Matale North, have made no progress with their channels, because they are under the obstinate delusion that Government will do the work for them for nothing. However, they have this year paid the fourth instalment for their lands, and have continued to pay water-rate, and I think that they are now beginning to understand that they have nothing to gain by waiting.

The Moorish fieldowners at Warakamura have this year combined together for the first time for many years, put up a temporary dam across the oya, and brought under cultivation 30 acres of paddy land. They are now desirous of having a permanent masonry dam built by Government, of which they will repay the cost in ten annual instalments. This question now awaits a survey and plan and will, I hope, be taken up in 1903.

The Director of Irrigation visited Bowatenna this year, and had occasion to comment on the "scandalous" waste of the water flowing down the channel. The fieldowners have for years been allowed to cut through the bank of the channel and to take water where they pleased. I hope to take steps early in 1903 to devise a proper system of distribution.

The Inspector of Irrigation was engaged at the end of the year in the survey of a channel at Hathamunagala in Gampahasiya pattu, to see whether there is sufficient irrigable land to justify an anicut being built at a very favourable point across the Amban-ganga. The survey will be completed early in 1903.

The views which I have persistently expressed with regard to the reconsideration of the question of the restoration of Dewahuwa and the necessity for an early survey of the ancient system of irrigation in the north of the Matale District have been realized beyond my expectations. I was fortunate enough to be able to visit Nalanda and Dewahuwa with the Director of Irrigation in December, and I have some hopes that the restoration of Dewahuwa will not be postponed much longer. Now that the chief irrigation problems of the district are engaging the personal consideration of the Director of Irrigation, I feel that it is no longer necessary, nor even becoming, for me to state any positive views of my own as regards the future. The next year or two will, I suppose, be spent in surveying the gigantic and comprehensive system of canals, channels, and reservoirs in Matale North by which our principal rivers and streams were diverted northwards, and water was distributed at will from valley to valley to those regions where it was most required. When that system is restored in its perfection in combination with our modern railways and roads, we may confidently look forward to an age of prosperity which was undreamt of and unrivalled by the Sinhalese in ancient times.

I append a report from Mr. Hawkins, the Irrigation Inspector. It is to his personal supervision principally that the now noticeable improvement in the village tanks of the district is due :—

Earthwork.—The amount of earthwork done on village tanks during 1902 was 39,767 cubic yards. The earth was not merely put on the bund, but on some tanks the bunds were turfed, gravelled, and fenced in. A great deal of earthwork was done on two new tanks, viz., Moragolla Mahawewa and Talakiriyagama Mahawewa. On the former 3,808 cubic yards were done in two months by the villagers and the two breaches filled. The work on this tank was started on the 15th August, and by the 15th October there were 4 feet of water in the tank. On the latter tank 1,536 cubic yards were put into the breach, but it was not enough, and unfortunately gave way by the water overtopping it. Most satisfactory work was done in Naula tank, which is now practically completed. The practice prior to my coming to the district had been to allow the villagers to do their work individually and at any point on a bund and whenever it suited them, with the result that no portion of any bund has been brought up to its proper height, and no turfing and gravelling had been done. The system therefore was adopted of working from one end of the bund towards the other, bringing them to their full height and proper slope, turfing the sides and gravelling the crests.

Tanks.—The number of village tanks on the list is 148. This does not include the two restored by Government, viz., Pelwehera and Karawilahena. With these two the total is 150. Besides the 150 tanks, there are five amunas and 2½ miles of channel to look after. The amunas are Elahera head sluice, Bowatenna channel, Nadeniya, Weragahapelessa, and Kurukolayaya.

Estimates.—Work on all the estimates that were sanctioned early in the year was worked off, with the exception of Pelwehera, on which very little work was required. The bund was kept clear of weeds and the sluices tarred. Not much money was spent on the upkeep estimate, as all the balls and spindles wanted renewing and pipes replacing. This could not be done out of so small an amount as Rs. 247. Hitherto it had been the practice to patch the broken pipes, but it was only a waste of money doing this, as all the pipes so patched are as bad as ever. Instead of renewing the ball and spindle, it had been suggested to put in cement pipe sluices, and the good parts of the sluices so taken out can be utilized in repairing other sluices.

Sluices. — The following tanks were sluiced during the year :—Tumbakarawila, Kotakilligewewa, Galekotuwewa, Pahalawewa. Cement pipes were also issued to a number of tanks which were short, and all the pipes in stock were used up.

Surveys.—A survey of all the irrigable land under Moragolla Mahawewa was made in July, costing Rs. 28·80. The extent was nearly 90 acres. The Dorawelagala survey was taken in hand, but owing to the wet weather was not completed. Channels were traced under Pelwehera, and an estimate sent in showing the cost of cutting the same.

All the katty kanganies worked well during the year. They were each given a slope gauge and taught how to use it. It is a great drawback that they are not employed all the year round.

The headmen, as a rule, did not display much active interest in irrigation, except in the Kandapalla korale, where the Korala proved of great assistance, and not only showed energy himself, but infused considerable energy into the villagers. This accounts in some measure for the small default in his korale.

The fields under almost every tank were cultivated and yielded good crops, especially in Kandapalla korale.

III.—LEGISLATION.

The experience of another year confirms the opinion which I expressed last year that a pass should be legally required for the removal of cacao within a defined area, and that the traders in cacao should be licensed and legally compelled to keep proper accounts.

I repeat my opinion that a legal presumption of marriage should be created in favour of lasting and fruitful unions among the Kandyans. I also agree with the opinion which has been previously expressed by more than one Government Agent, that the registrars should be authorized to register marriages outside their offices. And I think with the Ratemahatmaya, Matale South, that a fee of Rs. 2·50 should be legalized for the dissolution of a Kandyan marriage. Among the poorer classes this would serve to strengthen the at present far too loose contract of marriage.

Some amendment of the Small Towns Sanitary Ordinance is urgently required. The control of small towns is at present vested in the Provincial Board of Health. The Provincial Board of Health is the Kandy Municipality. It is manifestly absurd that the Kandy Municipality should be expected to take any real interest in or to understand the needs of either Dambulla or Rattota. It is also anomalous that the Assistant Government Agent should be deprived of all control over those small towns, although he is given practical control of the far more important Local Board town of Matale as Chairman of the Local Board. To give an instance of the inconvenience of the present cumbersome procedure which has to be adopted in respect to the improvement of these towns : if I wanted to put up a lamp post at Dambulla, I should have to urge its necessity before the Provincial Board of Health. The Board of Health would then have to approach the Governor in Executive Council before the expenditure could be sanctioned. As Chairman of the Local Board I can without difficulty pass the erection of any number of lamp posts which may be required, at a single meeting of the Board. I do not think that any small town will be satisfactorily administered until a Small Town Board is appointed consisting of the Assistant Agent, District Engineer, Medical Officer, and two unofficial residents of the town appointed by the Governor. If the towns do not possess two persons capable of representing them, they are not worthy to be brought under the Ordinance. If they do, the people in those towns should have some voice in the expenditure of their own money. It would certainly make the working of the Ordinance more popular. The proceedings of the Small Town Board which I have advocated might be submitted to the Chairman of the Provincial Board of Health for approval in the same way that the proceedings of the Local Board are submitted to him.

The law respecting fermented toddy urgently requires amendment. Fermented toddy is a mildly alcoholic, cheap, and (when unadulterated with croton seed to give it "a nip") wholesome beverage drunk by the majority of the villagers and coolies in this district. But owing to the fact that Government has granted to the arrack renter a monopoly of its sale, and that the renter nowhere sells it, fermented toddy can nowhere at present be legally bought, nor can it be legally drunk unless the toddy has been drawn or bought when it was sweet and kept about twelve hours to ferment. To keep within the law the villagers or coolies are practically compelled to buy arrack, which is exactly twenty-five times dearer than fermented toddy. No little sensation would, I imagine, be caused if all the Europeans in this Colony were compelled to buy nothing but champagne, or to brew their own beer, or distil their own spirits in small quantities. But the cases are fairly parallel, and the number affected in the case of the natives is far greater. Of course the law is evaded, and it is almost useless to seek for enhanced penalties until the present anomalous position is changed. Personally, I should be inclined to advocate the imposition of a tax on every kitul tree from which toddy is drawn, and the grant of licenses under strict conditions for the sale of fermented toddy in one or more authorized places in every village where such licenses might be required. I should then advocate considerably enhanced penalties for the illicit sale, possession, or drawing of fermented toddy.

IV.—WORKS.

Works Done.

Roads.—The defective drainage at the 21¾ mile of the road from Balakaduwa to the junction of the Trincomalee and Anuradhapura roads was improved.

A great improvement is also noticeable on the Rattota road since the increased expenditure on its upkeep was sanctioned at the beginning of the year.

With a vote of Rs. 3,000 from Government, the culverts and bridges on the Sigiriya road were finished and the road was improved.

Bridges.—No new bridges were constructed, but six timber bridges on the Palapatwela-Galewela road and one timber bridge on the Ukuwela road were converted into iron bridges at a cost of Rs. 3,332·27 and Rs. 492·83 respectively.

Drainage.—An estimate of Rs. 34,500 was submitted by the Public Works Department for the effective drainage of Matale town.

Wells.—The following work was done :—

					Rs.	c.
Miwalapataha well was planked with palu at a cost of			...	...	72	36
Yatigalpota well	do.	do.	...	...	75	24
Walaswewa well	do.	do.	...	...	78	12
Dandubendiruppe well	do.	do.	...	...	59	84
Beliyakanda well	do.	do.	...	...	50	70
Yakuragala well	do.	do.	...	...	66	24
Galewela well was provided with cement basin for			...	...	45	14
Paldeniya well was repaired for		...	...	...	4	50
A mould was made for ring wells costing		...	...	...	85	47

The wells at Beliyakanda and Yakuragala are new wells found after a good deal of prospecting.

Buildings.—The following additions and alterations were made at the Matale hospital :—The nurses' quarters were converted into a ward for female diarrhœa patients with latrine and baths. A ward for female diarrhœa patients with latrines and baths was also constructed between the old nurses' quarters and female general ward. A maternity ward with two latrines was newly erected. Special quarters were also built for the Sisters. Total cost, Rs. 11,043·04. New married men's quarters for the Police were completed at cost of Rs. 4,999·79.

Works required.

Roads.—The raising of the road from Balakaduwa to the junction of the Trincomalee and Anuradhapura roads is urgently required through the Naula bazaars just beyond the 34th mile.

An increased estimate is needed for the proper gravelling of the Palapatwela-Galewela road. It is also necessary that the metalling of the road should be continued as far as the 28th mile. The dangerous zig at the top of the Bomba pass near the 37th mile should be improved without delay.

I have asked for a vote of Rs. 2,000 for improving and gravelling the Sigiriya road. The question of its upkeep by the Public Works Department has been deferred till June, 1903.

Permanent cooly lines are required at the 10th mile, Mirisgonioya-Beligamuwa road, in order to keep a permanent labour force on the road.

The extension of the Rattota road to Laggala on the grant-in-aid system has been again brought before the Provincial Road Committee, Kandy, by some of the estates interested in it.

Bridges.—A bridge is very urgently required over the Pallepola-oya on the Palapatwela-Galewela road. The inconvenience caused by the want of this bridge has been pointed out for the last ten years, and in each year more severely felt. A wire bridge is required on the short cut between Matale and Bandarapola.

Drainage.—It is proposed to undertake the drainage of Matale town in sections.

Water Supply.—The shortage of the present supply in Matale town caused grave inconvenience at the hospital at different times during the year. This question, which is of vital importance to the whole town, is awaiting the report of Mr. R. W. Smith of the Public Works Department. The water supply of Aluwihare is also receiving consideration.

Buildings.—A permanent dispensary building is very urgently required at Galewela.

Wells.—New wells are required at Wilgomuwa, Kongahawela, Maragomuwa, Helambagahawatta, and Bambaragahawatta. The wells at Pubbiliya and Dambagolla require cement basins. The wells at Alutwewa, Polattewa, Kubukgolla, Diganpataha, Nagalawewa, Talagoda, Elagomuwa, and Weliwarnagolla require planking. Most of this work in connection with wells will be taken in hand during the dry season of 1903.

V.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

In my previous Administration Reports I have noted how vitally the welfare of the low-country of Matale North and East depends upon a comprehensive system of irrigation. Now that the Director of Irrigation has directed his personal attention to this district, I feel that it is at last possible to look forward to the not very remote success of a forward irrigation policy in Matale. That policy will no doubt be dictated by the general policy of the Irrigation Department, for the system of irrigation in this district forms only one link, albeit the first, in the long and important chain of reservoirs and waterways by which the north was once irrigated. It will unavoidably be somewhat retarded by the necessity for accurate surveys. What precise plan it should assume, it is not for me to say. I can only promise on my own part and that of my headmen that the Irrigation Department shall receive our most cordial assistance and co-operation.

The question of Railway Extensions is hardly yet within the range of practical politics. But the ultimate success of a forward irrigation policy is intimately connected with a forward railway policy, and estates have already been pushed forward northwards to within 15 miles of our future giant tanks.

The transfer to the Public Works Department of the Balakaduwa minor road and the road from Kalalpitiya to Ukuwela in exchange for the remote section from Elahera to Pallegama, advocated in my last Administration Report, has become an accomplished fact. The question of the transference of the Sigiriya road to the same Department has been deferred for the consideration of Government till June, 1903, and will then, I hope, be finally sanctioned.

The improvement of the Kaikawela-Kongahawela road has been maintained, and with a small bridge at Raitalawa it will be open to cart traffic as far as the Amban-ganga. There is, I am afraid, no immediate prospect of carrying the cart road further until new estates are opened, as three expensive bridges are necessary.

The Kambarawa-Gammaduwa path was converted into a bridle road, but requires much improvement. The villagers were delighted at being able to take buffaloes along it for the first time. It should before long make a useful tavalam road.

Where there is a sufficient population I thoroughly believe in the principle of self-help in the construction of village cart roads. The earthwork can be done by the villagers under the surveillance of the Village Committee, leaving only the construction of bridges and culverts to the District Road Committee, which might be helped by an annual vote from Government for this purpose. In the absence of a vote from Government, the funds of the District Road Committee should be utilized as far as possible. A splendid example of the working of this principle is to be seen in the Haningomuwa road. I hope in 1903 to extend the principle to the District Road Committee roads from Yatawatta to Mahawela and from Dewilla to Biridewela. Those roads will never be made into village cart roads until the villagers make themselves responsible for their upkeep, and the sums now spent by the District Road Committee on their upkeep are more usefully transferred to the construction of bridges and culverts. The villagers will keep them up far better than the District Road Committee can out of its small votes.

River crossings in outlying parts of the district are receiving attention. A magnificent edanda formed by two enormous logs of 60 feet each, supported in the centre by two forked posts fixed into the solid rock, making a rather welcome resting-place on the 120 ft. crossing, was constructed across the Kalu-ganga at Pallegama. Two fruitless attempts were made, but it was finally erected at the third attempt by the villagers of both Laggala korales aided by an elephant. The work took 33 days in all, and cost the District Road Committee only Rs. 40. The villagers are deservedly proud of their work. The edanda was draped and opened with religious ceremonies, and the cloths used for its drapery were distributed among the poor.

Another fine edanda was erected at Etanwela in Laggala Udasiya pattu later in the year. Its length is 82 feet, and it took 845 men and 11 days to complete it. This work was also done "pinata," to acquire merit, and cost nothing.

The District Road Committee has voted Rs. 704·50 for a wire bridge over the Amban-ganga at Elahera and Rs. 120 for a dandumaruwa at Ritimula.

The principal river crossings which require attention in future are two crossings over the Mirisgoni-oya on the Dambulla-Kandalama and Dambulla-Eraula roads, and a crossing over five branches of the Amban-ganga between Kongahawela and Moragolla. In these three places suitable trees can be found for dandumaru.

The division of Pallesiya pattu into two korales, advocated by me last year, received the sanction of Government. Unexpected opposition was offered by the villagers to the incorporation of Ambana with Matale East, with which it is geographically connected. The incorporation is, however, an administrative necessity, and must come in time.

The most pressing administrative reform required in this district at the present time is the creation of a Gansabhawa for Matale South. I am firmly convinced that the persistence of crime, and especially crimes of violence, in Matale South is to a great measure due to the want of a cheap, accessible, informal, and summary tribunal for the settlement of all the minor civil and criminal cases among the people. I also attribute to this same cause the slow progress made by the villagers in parts of Matale South in garden cultivation. Progress is well nigh impossible so long as disputes as to the ownership of land remain undecided.

Pallesiya pattu in Matale East might very well be brought under the jurisdiction of the same tribunal, and the Ratemahatmaya of Matale East might be given powers as President for the rest of Matale East. The additional work thus thrown on him would be very slight, and might easily be done by him on circuit instead of by the President, who has practically nothing to do outside Pallesiya pattu except to walk long distances every month on circuit.

It is difficult to start any new industries in this district, where trade is contrary to the custom of the people and the mechanical arts are usually practised by persons of inferior caste. The wants of the natives are also so few that it is hard to find any article of universal or even general request which the villagers could make at a cheaper rate than that of the present market. I had some hopes that I had found a paying industry in the mat-making now practised by the Durayas at Malhewa near Yatawatta. This matting is made from a rush which grows near Dodangaslanda in the Kurunegala District, and bound with niyanda fibre it makes a very neat and durable matting for bungalows. I sent a sample to Messrs. Cargills, Limited, to ascertain whether there was a commercial future before it. The primitive method of its manufacture is unfortunately so slow that it does not at present seem to admit of competition with modern methods and better appliances. It is really sold for less than it is worth, the Durayas being of a very low caste and content with a poor return for their labour. They also have other occupations from which they derive a livelihood. However, I feel sure that there is something to be made of this matting, if only the right men could be induced to take it up. The fibre mats made at the same place are, owing to the scarcity of fibre plants and the slow method of the extraction of the fibre, too expensive to supply any large demand. Some better form of mordant for the dyes used to colour these mats will, I hope, be discovered by the scientific staff at Peradeniya, to which the matter has been referred.

The villagers have one source of wealth which still remains practically undeveloped,—their cattle. I have been in correspondence with the Government Veterinary Surgeon and the Ratemahatmayas on this subject, and I hope to be able to devote especial attention to it in 1903.

VI.—SANITATION AND THE HEALTH OF THE PEOPLE.

The Assistant Colonial Surgeon kindly reports as follows:—

> The sanitary condition of the district was on the whole satisfactory. There were no outbreaks of cholera and smallpox. 325 cases of chickenpox were reported from the villages at the early part of the year, and measles have been prevailing to some extent, the number reported to me by the headmen being four. Malarial fever (and its sequelæ), which is the most

prevailing disease in the district, was mostly prevailing during the months of May, June, July, and August, and the total number treated at the dispensary and hospital was 9,128. They were of a wild nature, and mostly of an intermittent type. There were 1,438 cases of dysentery and diarrhœa, the cause of which could be traced to unwholesome food, and in some cases to climatic influences (malarial).

The health of the town was good, and the sanitary state can still be improved by improving the drainage, which fact I have brought to the notice of the Chairman of the Local Board in my last year's report, as well as in my health reports during the year.

The articles of food stuff exposed in the market for sale were frequently examined by me personally, and in many instances dry fish found unfit for human consumption was rejected and buried.

There is a plague site selected near Aluwihare and ready for immediate use. A quantity of necessary disinfectants are always kept in stock. The superintendents of estates are advised to pay particular attention to the sanitary condition of the cooly lines.

Closing of the North road for immigrant coolies has protected the district from infectious diseases.

An outdoor dispensary was opened at the cholera hospital at Aluwihare. An apothecary is residing to treat the villagers daily who seek treatment. This has greatly helped the people, who are not able to come to Matale for treatment.

The reports from the Medical Officers at Dambulla, Rattota, and Elkaduwa, and the apothecaries of Nalanda, Galewela, Kongahawela, and Mousaheriya show that the year has been an exceptionally healthy year throughout the district. This may have been due to the abundant rainfall throughout the year. There were fewer cases than usual of chickenpox and measles.

It is very disappointing that Government has not sanctioned the construction of a permanent dispensary building at Galewela. The apothecary is allowed to live in a tumble-down building, which yearly costs a great deal to repair, although he attends to 7,701 persons in the year, and the number of times his patients are treated is 10,541. The dispensary building at Mousaheriya is also very urgently in need of repair.

The swamps below Dambulla tank were filled in, and the work of making an esplanade was begun by me, but did not receive sufficient pecuniary encouragement from the Provincial Board of Health. I had to finish the work through the Gansabhawa. Both Dambulla and Rattota were scavenged twice a week.

Precautions versus Plague.

The sites chosen for the erection of hospitals and camps were cleared. Precautionary measures were taken in having all houses in Matale and other bazaars whitewashed, and all wells, drains, and compounds cleansed at intervals.

VII.—CRIME.

The following report upon the crime of this district has been kindly furnished by the Police Magistrate, Mr. W. Dunuwille :—

It is satisfactory to be able to report that crime generally has been on the decrease throughout the district during 1902.

There were five murder cases: all were brought to trial, and except one, in which the prisoner was acquitted on the ground that the death of the deceased was due to an accident, the rest resulted in convictions. Of these four, two were cases of a heinous nature and the prisoners were sentenced to death, and in the other cases the prisoners were convicted of the minor charge and sentenced to various terms of imprisonment.

Knife Cases.—There were 28 cases under this head, and they were not of a serious nature. I did not think it necessary or expedient to inflict the lash in any one of them.

Toddy Cases.—There were no less than 143 convictions, and the fines realized amount to Rs. 1,102. I had stated in a former report that this class of offences cannot be put down except by fresh legislation, and I am more than ever confirmed in this opinion by what transpired in a case in which an old offender was tried, convicted, and fined Rs. 50. The Ratemahatmaya of the district was instrumental in prosecuting this man, and it appears that as he was returning home after the case the Ratemahatmaya met him on the road and inquired from him what was the result of the case. His answer was, "I have paid the Police Magistrate Rs. 50 and obtained a license to possess toddy." This only shows that the law at present in force has no deterrent effect.

Cacao Stealing.—There were 39 cases instituted, and convictions secured in 19. As compared with past years, there has been a marked decrease in the theft of cacao. The Assistant Government Agent has fully gone into this subject in his last Administration Report, and I do not think it necessary for me to make any remarks.

Cattle Stealing.—There have not been many cases of actual thefts of cattle. This crime is not prevalent in the Matale District.

Headmen.—I am happy to be able to state that the headmen throughout the district have been very useful in detecting crime. They seem to understand their duties thoroughly, and they are discharging them with great satisfaction to all concerned. I venture to think that the headmen of Matale District are more up to their work and more zealous and painstaking than those of any other.

I cannot close these remarks without expressing my indebtedness to the Assistant Government Agent (Mr. Alexander) in carrying on my work, as he has invariably co-operated with me in bringing offenders to trial and in otherwise assisting me in the administration of justice.

VIII, IX.—CRIME (*continued*).

In Appendix Q are given comparative tables of serious crime in 1901 and 1902 taken by me from the Koralas' Serial Crime Report Register started by me last year. They show the nature of the crimes committed, and the manner in which the rural police have acted. These statistics have been taken from the Korala's register, because I found that the A B C returns include trivial cases of drunken and disorderly behaviour, cruelty to animals, and other more or less petty offences, the lettering of which can only supply the most misleading information as to the real state of crime in any district. The treacherous character of the general statistics of crime which are prepared from the A B C returns has been pointed out by me to the Government Agent, and is a matter requiring the serious attention of the Inspector-General of Police and of Government.

The following facts which correspond accurately with my observations and experience of the district may be deduced with some confid ence and certainty from the tables mentioned :—

(1) All the crime in this district is practically centred in Matale South and Pallesiya pattu Matale East, in the neighbourhood of Matale town, Rattota town, and the estates.
(2) The same causes have for the most part conduced to acts of violence and of fraud, as these two classes of crime are found together.
(3) Crime has slightly decreased in the most criminal part of the district.
(4) The detection of crime has improved in Kohonsiya, Gampahasiya, Asgiri Udasiya, and Asgiri Pallesiya pattus of Matale South, and this improvement has been accompanied by a decrease of crime. The same remarks apply to Pallesiya pattu, Matale East.
(5) The detection of crime has deteriorated in Medasiya pattu and Udasiya pattu, Matale South, and this deterioration in detection has been accompanied by an increase of crime.
(6) Crime has slightly increased in Matale North, especially in Udugoda Udasiya pattu.
(7) The number of false cases has decreased.
(8) The Kandyans when left to themselves and their primitive surroundings show wonderfully little propensity to crimes of any kind.

The causes which have conduced to the existence of crime in Matale South and Pallesiya pattu, Matale East, and which are beginning to make themselves felt in Udugoda Udasiya pattu, Matale North, are partly due to the natural reaction of modern civilization. An increased standard of comfort is almost invariably followed by an increase of cupidity. Increase in wealth means an increase in the number of articles of property which can be stolen. Increase in trade brings with it an increase in the facilities for the disposal of stolen produce. The growing increase of population and the admixture of races and the consequent development of character and of the character of the criminal all add their contribution to the increase of crime, but so long as the reaction continues comparatively slight it is not a matter for serious uneasiness, when compared with the growing progress of civilization and prosperity in the district. There are other causes also beyond the control of the administration, *e.g.*, idleness and poverty, often the result of the sale of their lands by an agricultural population, which is unsuited to any other occupation except that of agriculture. There are, however, two causes which can, I think, be to some extent removed. The present unsatisfactory condition of the liquor laws requires amendment, as has been already suggested in this report. I have also previously referred to the necessity for a Gansabhawa for Matale South to summarily dispose of the minor cases between the villagers and to obviate the waste of the Magistrate's time and the unfortunate postponements which constantly endanger the successful prosecution of serious cases in the Police Court.

The improvement in the detection of crime in Kohonsiya pattu is due to the increased activity of the Korala, and in Gampahasiya pattu to the same cause and to the infusion of a lot of new blood among the Arachchies. I can only repeat my remarks of last year respecting the Koralas of both Asgiriya korales. They have done even better work this year.

The deterioration in Medasiya pattu is due to an undignified dispute between the Korala and one of his Arachchies, and the consequent lack of discipline among the other Arachchies. The offending Arachchi has been made to resign, and some of the other Arachchies punished. Unless there is an improvement in 1903 more changes will be necessary.

The deterioration in Udasiya pattu is due principally to the change of Koralas and the inexperience and almost stupid excess of caution on the part of the new Korala. He does his best; but unless there is an improvement in the criminal statistics of Udasiya pattu during the next few months, a more capable Korala must be found.

The Korala of Udugoda Udasiya pattu is now past work, and is proposing to resign. He has done well during his time; but a younger man is much wanted to cope with the crime, which is almost certain to increase with the great development of the korale.

I do not think very much importance need be attached to the increase of crime in Matale North. It is rather an increase in the number of cases than in the number of criminals. There is practically no violent crime. The little stealing done during the year was, I believe, entirely the work of outsiders.

Three of our most noted burglars, who were each no doubt responsible for more than one of the items in our returns, are now in jail. A fourth is absconding, and has left the district. I hope that this may augur well for the statistics of 1903.

The following similar returns have been prepared for the regular police stationed in Matale town. The percentage of convictions to institutions is worse in 1902 and 1901, but has not been followed by an increase in the number of crimes. The percentages for both years are considerably below the percentages of the rural police, but this is only natural in a town where the chances of detection are fewer and the chances of escape more numerous.

I have found the police sergeant a very civil, obliging, painstaking, and capable police officer, and could not wish to have a better man in charge of the police station.

Matale Town.

	1901.	1902.
Murder or homicide	1	—
Grievous hurt	1	—
Hurt with knife	2	—
House-breaking	6	5
Theft from a dwelling house	3	5
Theft or receiving stolen property over Rs. 20 ...	4	1
Total ...	17	11

	1901.	1902.
Total cases of violence	4	—
Total cases of fraud	13	11
Total True Cases ...	17	11
Convictions, &c.	6	1
Pending	—	1
Percentage of convictions to true cases ...	35 per cent	10 per cent.

X.—Cattle Stealing.

There is practically no cattle stealing in this district. The Village Committee rules respecting cattle require some amendment, and a register of calves should be kept. These slight precautions will help to prevent any unlooked-for outbreak of this crime in the district. The President of Matale North has always exercised great vigilance over the enforcement of the existing cattle rules in his jurisdiction, with merited success.

XI.—Cattle Disease.

There were no cases of murrain or rinderpest. There were a very few cases of hoof-and-mouth disease, which were cured without difficulty.

XII.—New Acreage brought under Cultivation.

It is impossible to give accurate figures of the yearly increase. There have been no important extensions of European estates during the year beyond some new clearings near Hylton and Clodagh estates. Native garden cultivation is slowly but steadily increasing year by year.

I annex a statement showing the total acreage under each kind of cultivation in this district. The figures are compiled from the returns for the Census of 1901. It contains the best information available. The total acreage of cacao on European estates may be taken to be accurately represented by 7,478 acres. According to the Census return, the native acreage in cacao is represented by 2,889 acres. This corroborates the figures which were compiled from the lists prepared by the Ratemahatmayas, and which I stated to be over 2,000 acres in my last year's report :—

Acreage under each Kind of Cultivation.

	Acres.		Acres.
Tea	21,577	Cocoanuts	2,082
Coffee	708	Tobacco	2
Cacao	10,367	Paddy	17,490
Cinchona	1	Other Products	6,750
Cinnamon	8		

XIII.—Waste Lands Ordinances.

A block of 159 acres 1 rood 15 perches known as the Unagollayaya lands, situated in the village Walaswewa in Kandapalle korale of Matale North, was dealt with under the Waste Lands Ordinances. After inquiry the claim was admitted by the Crown on condition that the claimants should pay the fees for a certificate of quiet possession for the land, and that one chain reservation should be kept on either side of the Gansabhawa road and ela, which run through the land. Another block of 267 acres known as the Palleyaya lands, situated in the village Kandangomuwa in Udugoda-Pallesiya pattu of Matale North, was also dealt with. No claimants having come forward, the land was declared to be the property of the Crown.

Notices were sent for publication in connection with a block of land at Wehera, 433 acres 3 roods 0 perches, and another block at Millawana, 1,121 acres 1 rood 34 perches.

Preliminary steps were taken to bring lands in Nugahapola, Raitalawa, Hunukale-ela Palle Aswedduma, and Hadugama villages under the operation of the Waste Lands Ordinance. The survey of the Bulanawewa lands and the re-survey of the Palugaswewa lands (the first survey having been found incorrect) were ordered with the same object in view.

XIV.—Chena Cultivation.

The number of permits issued in 1902 was 45, as compared with 93 in 1901. Permits were only issued in absolutely necessary cases. The extent chenaëd was 229 acres 2 roods 27 perches, as compared with 404½ acres in 1901.

XV.—Sales of Land by Villagers.

No cases have been reported this year in which the villagers have fraudulently sold Crown lands. They have not sold their own lands either to planters or others on any large scale during the year.

XVI.—Work other than Routine and Miscellaneous.

The collection and preparation of exhibits for the Kandy Exhibition furnished some interesting work, in the course of which I learnt some useful information about the native methods of painting, sculpture, and lacquer work. The native arts of painting and sculpture are generally decadent. There is a lamentable falling off both in the new frescoes and figures in the Aluwihare and

Dambulla temples. The only new work which will, so far as I know, compare favourably with the better specimens of old is that done by the Gurulawela Muhandiram. The frescoes in the little vihare of Gurulawela, which he has just completed after five years' work, are well worth a visit. I shall be interested to see how long they will last. Few of the native painters now take much thought of the paints which they use. Very few, indeed, now make their own paints. The paints are generally of the worst and cheapest kinds procurable in the native bazaars. The Muhandiram won the first prize with his figures in ivory, and a second prize for painting on pottery.

The lacquer work is of course more mechanical, but interesting. It is now engaging the attention of Mr. E. E. Green, who is trying to import a better quality of lac and the insects which produce it from Southern India. The lac workers of Hapuwida in Matale South obtained the first prize.

The first prizes for Kandyan fans and for Kandyan mats of three kinds were also secured by Matale workers from the Asgiriya korales and Gampahasiya.

I am much indebted to my Kachcheri Muhandiram, Mr. P. B. Nugapitiya, who also won two prizes for vegetables and arecanuts, for the interest which he took in the Exhibition.

At the end of September I accompanied Mr. Booth, the Government Agent, Anuradhapura, on a very pleasant circuit in Tamankaduwa and Laggala. Our object was to define the boundary between the Central and North-Central Provinces, and to recommend the establishment of a game sanctuary between the Sudukanda and Eluwanakanda range and the Mahaweli-ganga. The country through which we passed from Topawewa to Pallegama was new to both of us and most interesting, especially in its history. Its plains were the battle fields of the ancient wars between the Sinhalese and the Tamils, and the Minipe-ela and buried villages are concealed in its jungles.

Events.

June 12, 1902.—Mr. F. J. Pigott, District Engineer, left to assume duties as Provincial Engineer Galle, and was succeeded by Mr. A. Clementi Smith.

August 6, 1902.—The Kandy Exhibition was held.

August 6, 1902.—This Kachcheri and the district sustained a sad loss in the death of the much respected Kachcheri Muhandiram, Mr. M. B. Nugapitiya. It was some consolation that his brother, Mr. P. B. Nugapitiya, was allowed to succeed him.

August 9, 1902.—The Coronation of His Majesty the King was loyally observed in Matale town and throughout the district.

December 22, 1902.—Mr. Clementi Smith, the District Engineer, met with an unfortunate railway accident. Mr. A. de Livera was sent later to act for him.

December 31, 1902.—M. Keppitipola, Ratemahatmaya, Matale South, retired from the Public Service. He had been in Government Service for thirty-six years, and had served with distinction as Ratemahatmaya of Matale North for ten years and Ratemahatmaya of Matale South for twelve years previous to his retirement. Sanction has been received for the appointment of his son, Mr. H. D. Keppitipola, who was acting for him during the past two cacao seasons as Ratemahatmaya, Matale East.

XVII.—LAND SALES.

The extent of Crown lands sold during the year 1902 was 239 acres 3 roods 14 perches, against 188 acres 0 roods 5 perches in 1901; and the amount realized was Rs. 4,120·50, against Rs. 4,641, in 1901. The average price realized per acre was Rs. 17·13, against Rs. 24·68 in 1901.

A sum of Rs. 45·50 was credited on account of different instalments of lands sold under Sir Henry Ward's Minute.

A statement showing the number of lots purchased by natives and Europeans during the last five years is annexed:—

Year.	By whom purchased.	No. of Lots.	Extent. A. R. P.	Amount realized. Rs. c.	Average Price per Acre. Rs. c.
1898	Natives	27	53 2 12	1,110 0	20 71
	Europeans	11	269 1 16	8,224 50	30 53
1899	Natives	19	90 1 2	1,039 25	11 51
	Europeans	2	1 2 9	68 50	44 1
1900	Natives	49	55 1 17	740 83	13 36
	Europeans	13	62 1 31	1,890 50	30 26
1901	Natives	23	65 1 30	1,196 0	18 73
	Europeans	11	122 2 15	3,415 0	25 30
1902	Natives	56	177 2 21	2,434 0	13 70
	Europeans	30	62 0 33	1,686 50	27·11

XVIII.—STATEMENT OF KANDYAN MARRIAGES AND DIVORCES FROM 1891 TO 1902.

	Marriages.	Divorces applied for.	Divorces allowed.
1891	231	24	9
1892	204	40	14
1893	527	33	5
1894	505	57	14
1895	656	62	24
1896	290	47	24
1897	387	46	26
1898	304	42	20
1899	1,297	147	125
1900	1,023	82	47
1901	623	77	59
1902	267	55	39

The attention of the Ratémahatmayas has been drawn to the unsatisfactory return of marriages registered in 1902.

XIX.—SCHOOL RETURN FOR 1902.

Name of School.	Average Number on List.	Total Number of Attendance during the Year.	Average Daily Attendance.	Percentage of Boys attending School Daily.

XX.—WORK DONE UNDER ORDINANCES NOS. 23 AND 24 OF 1889.

A meeting was held at the Kachcheri on 30th April, 1902, under section 35 of chapter VII. of Ordinance No. 23 of 1889, at which the fieldowners agreed to repay the cost of an anicut at Porutota in ten annual instalments.

It was only necessary to issue authority in one case to the Ratemahatmaya, Matale North, to seize the land of a defaulter under Pelwehera tank under section 54 of chapter IX. of Ordinance No. 23 of 1889. The amount was then paid.

The question of irrigation elas and estate drains fortunately gave me no bother during the year, and no proceedings were necessary under sections 60 and 61 of chapter X.

The following is a return of irrigation cases decided by the Ratemahatmayas under section 26 of chapter VI. of the same Ordinance :—

Return of Irrigation Cases instituted and decided under Ordinance No. 23 of 1889 during 1902.

	Matale South.	Matale North.	Matale East.
Number of cases instituted during the year ...	34	47	21
Number of cases decided during the year ...	33	47	20
Number of cases in which convictions were obtained ...	20	16	10
Number of cases dismissed or otherwise disposed of ...	13	31	10
Number of cases pending on 31st December, 1902 ...	1	—	1

I annex returns of the work done by the Presidents, Matale North and East, under chapter V. of Ordinance No. 24 of 1889, and of the Chairman, Village Committee, Matale South, under chapter VII. of the same Ordinance (Appendix R).

XXI.—THE CACAO QUESTION.

This question was fully treated in my Administration Report last year, and the conclusions which I had then formed remain unaltered.

I have had occasion during the year to notice that the boundaries of cacao estates, where they adjoin native gardens, are often very ill-defined. This is a serious defect calling for speedy remedy. It would considerably facilitate protection if a clear space or path of at least 6 feet were opened in such places, and it should not be difficult to gradually plant a strong thorn hedge on the outer side of this space. When estates or gardens adjoining already existing cacao plantations are newly planted with cacao, the owners should not be allowed to plant within four yards of their boundary without the consent of the adjoining owners, and they should be compelled to construct a fence or plant a hedge.

The sanction of the Government Agent was received by me this year to the employment of all the headmen in the neighbourhood of cacao estates throughout the district on patrol duty during the months of October, November, and December. This insured the protection of the cacao crop, and it had the further good effect of diminishing crime all round. It also enabled me to strictly enforce the "tundu" system started last year. Fixed beats were arranged, and the headmen patrolled from 4 to 7 A.M. and P.M. For this special work they have been promised remuneration.

Special police were also employed (in co-operation with the headmen) by the superintendents of Wariyapola, Suduganga, and Bandarapola, and by the superintendents of Aluwihare and Wiltshire. The police patrols were carefully and constantly supervised by myself, the police sergeant, and the Ratemahatmayas, Matale South and East. There were a good many unfortunate changes among the men owing to sickness.

An informal deputation was held by His Excellency the Lieutenant-Governor in Colombo in July, at which the Lieutenant-Governor expressed a desire to obtain the native opinion on the question of legislation. Instructions were received by me to assist the Chairman of the Matale Planters' Association to the best of my ability in obtaining the native opinion in this district. It was felt desirable that this opinion should not be gathered through the ordinary official channel of the Kachcheri, as the native owners might possibly be inclined to give a more unreserved opinion if their views were ascertained unofficially. In accordance with these instructions I had some unofficial correspondence with the Chairman of the Matale Planters' Association, in the course of which he finally sent me a circular which he had drafted to the native owners. The wording of the circular was amended by me in some respects to render the language more precise, and on my suggestion a column was added for the address of the signatories, in order that they might be identified if necessary. The circular as thus issued met with some support in some quarters, and a good deal of suspicion in others.

It has finally been decided to submit the whole question to a new Commission, and it is to be hoped that the Commission will be able to clear the air of the many hazy notions which are now prevalent with respect to it.

There is an unconscious tendency to exaggerate the effect which special legislation is expected to produce, and to forget the well-known saying that men cannot be made moral by Act of Parliament. Special legislation will certainly not make it possible, in my estimation, for planters to employ fewer watchmen. It will certainly not decrease the work of the regular and rural police. Whatever legislation may be sanctioned, it will certainly be still advisable to maintain an efficient patrol during the season when the crop is ripe, and to enforce the "tundu" system.

E. B. ALEXANDER,
Assistant Government Agent.

Matale, February 26, 1903.

REPORT ON THE NUWARA ELIYA DISTRICT FOR 1902.

THE area of the district is 363 square miles. The population by last Census is—

General	49,539
Tamil Immigrants	99,028
Total ...	148,567

REVENUE.

The revenue for the year amounted to Rs. 110,422, the largest ever collected. It has been steadily on the increase since 1897 :—

	Rs.		Rs.
1897	45,447	1900	83,092
1898	89,023	1901	95,291
1899	65,684	1902	110,422

In 1898 the revenue was swelled abnormally by large land sales. The above figures are exclusive of the arrack and road toll revenues, which are collected in Kandy.

Revenue stamps show a satisfactory increase of 12 per cent., denoting a prosperous year. Judicial stamps show a corresponding decrease, which, in view of the increased sale of revenue stamps, is difficult to account for. Postage stamps realized Rs. 12,661, the result of the first full year's sale in Nuwara Eliya. Hitherto they have been obtained from Colombo and accounted for there. No comparison with previous years can therefore be made.

Timber, which realized Rs. 61,210 in 1901, fell to Rs. 59,971 last year, owing to the break up of the Diyatalawa Camp late in the year. A large decrease under this head must be looked for in 1903.

Land Sales realized Rs. 4,762 only, a 12 per cent. increase on the 1901 revenue, but there was little business done. No large extents were sold. A new source of revenue, viz., collections under the Medical Aid Ordinance, yielded Rs. 7,451, and the recoveries under the Irrigation Ordinance were double than those of the previous year.

Police Court Fines, which have been steadily falling for some years, show a slight increase.

Land Rent.—The decrease under this head is due partly to leases having fallen in and partly to the large amount of arrears recovered and credited in 1901.

FOOD SUPPLY.

The comparative crop return given in previous reports is continued for 1902.

Return of Area and Crop of Paddy and Fine Grain.

Division.	Paddy.				Fine Grain.							
					Crown.				Private.			
	1901.		1902.		1901.		1902.		1901.		1902.	
	Extent cultivated.	Crop.	Extent cultivated.	Crop.	Extent cultivated.	Crop.	Extent cultivated.	Crop.	Extent cultivated.	Crop.	Extent cultivated.	Crop.
	Acres.	Bushels.	Acres.	Bushels.	Acres.	Bushels.	Acres.	Bushels.	Acres.	Bushels.	Acres.	Bushels.
Kotmale ...	2,714	81,420	2,717	81,510	—	—	—	—	55	—	53	—
Walapane ...	4,955	35,710	4,981	35,908	563	—	598	—	1,652	—	1,912	—
Uda Hewaheta ...	13,257	145,134	13,273	145,223	57	—	93	—	1,005	—	1,016	—

There is nothing new to report under this head. Three to four-fifths of the population, *i.e.*, the estate coolies and the town and bazaar residents, depend on imported rice; the villagers consume home-grown grain. Paddy, kurakkan, Indian corn, and vegetables are the principal items in the food supply.

Tea is the main industry and supports four-fifths of the population. Cardamoms are grown by villagers to the extent of about 1,000 acres. The cultivation of cocoanuts and arecanuts is insignificant. English vegetable growing is a paying and increasing industry in and about Nuwara Eliya, and experiments in Australian fruits have met with no small measure of success.

Prices ruled as follows:—

	Rs. c.		Rs. c.
Paddy, per bushel ...	1 50	Imported rice, per bushel ...	5 0 to 6 0
Kurakkan do.	1 37		
Indian corn do.	1 37	Cocoanuts, per 100	6 0 to 8 0
Village rice do.	4 0		

IRRIGATION.

I regret to record another unproductive year so far as irrigation works are concerned. There is much to be done in the way of small works, but the machinery provided by the Irrigation Ordinance is too cumbrous to admit of their being carried out. There is ample correspondence about them, but nothing ever comes of it. Minor irrigation works should be dealt with locally, like minor roads and village works. The principal irrigation works of the district are:—

The Bodi-ela, 10 miles long, which has been practically condemned by the Irrigation authorities, owing to slips on the first two miles of channel. It seems strange in these days of engineering skill that some inexpensive means of carrying the water across these slips cannot be devised. There is no certainty, of course, that slips will not occur again, but the same uncertainty applies to every up-country ela, and an effort might at all events be made to save the fine masonry works along this ela from decay and destruction.

The *Ma-ela*, which is the only irrigation work of the district accomplished under the provisions of the Irrigation Ordinance, is six miles long, benefits a large extent of country, and its further improvement, for which an estimate has been made, is very necessary.

The *Waduwawala-ela*, four miles long, which irrigates the hillsides opposite to the Bodi-ela. This ela is in very bad order, and the cultivators under it refuse to pay for its improvement. The only alternative is a rigorous enforcement of the irrigation rules until the ela is in proper working order.

The *Mulahal-ela*, three miles long, to which the same remarks apply, though perhaps in a less degree.

The *Lamasuriyagama-ela*, which the villagers are anxious to see extended and improved. They asked for the work eight years ago, and it is now three years since they guaranteed repayment of the cost. The scheme is still "under consideration."

The irrigation headmen are unremunerated, and it is not easy to get satisfactory work out of them.

The irrigation rules are each year being more systematically enforced. There are irrigation channels all over the district kept up under these rules, and many of them would largely benefit by small works of improvement being carried out upon them. The first difficulty is to get the shareholders to consent to pay; the second is to get the money advanced and the work carried out after their consent has been obtained. In 2½ years I have not succeeded in getting a single work carried out.

The year was an unusually wet one, and the water supply was good throughout. Both maha and yalá crops were above the average.

LEGISLATION.

The following subjects taken from my last year's report are suggested :—

(1) Increased powers to the Nuwara Eliya Board of Improvement for regulating the erection of new buildings.
(2) Regulations for the humane slaughtering of cattle and other animals. The system in force in many places is barbarous.
(3) Amendment of the game laws. *Attempt* to kill should be made an offence.
(4) Empowerment of Village Tribunals to try cases of illicit sale of toddy and cruelty to animals.

In addition to the above, the question of administration of small estates of Rs. 1,000 and thereabouts is one which seems to require further consideration. Cases occur in which, in view of the expense of administration and the want of ready money to meet it, it would have been far better for the heirs to have inherited nothing at all.

WORKS REQUIRED.

The progress made since the list of works for 1901 was compiled is as follows :—

Town Works.

(1) Railway construction. Approaching completion as far as Nuwara Eliya.
(2) The park. A marked success.
(3) Model dwellings. Fully occupied. Further buildings under construction.
(4) Water supply. Complete.
(5) Esplanade. Under extension.
(6) The lake. No progress since completion of path. Dredger awaited.

District Works.

(1) Bridle road from Nuwara Eliya to Uda Pussellawa nearly finished. This path will bring Lower Uda Pussellawa within 11 miles of Nuwara Eliya.
(2) Maturata hospital completed and opened.

The works still required are :—

Town.

(1) Electric lighting.
(2) Improved drainage.
(3) Widening of the town bridge.
(4) Extension of United Club buildings.
(5) Telephones.
(6) A shelter on Pedro.

Kotmale District.

(1) A light cart road from Sangilipalam bridge to Ulapane railway station, through Kotmale Valley, with connection to Pussellawa through Rothschild estate.
(2) Light driving road from Railway Gorge road to Dimbula road at Abbotsford through Lorne and Dessford.
(3) Bridges at Kadadora and Kosgolla over the Kotmale-ganga.

Uda Hewaheta District.

(1) Junction of Rahatungoda and Deltota cart roads.
(2) Outlet cart road from Kurundu-oya valley to Brookside.
(3) Second class cart road from Padiyapelella to Maturata hospital.
(4) Repair and extension of Ma-ela.
(5) Repair of Bodi-ela.
(6) Repair of Waduwawala-ela.
(7) Extension of Lamasuriyagama-ela.
(8) Galaboda irrigation scheme.

Walapane District.

(1) Extension of Kandy-Kurunduoya cart road to Ragala.
(2) Repair and re-opening of the Mulhalkele hospital.
(3) Bolagandawela irrigation scheme.
(4) Wire footbridges over the Anda-oya, Kuda-oya, and Uma-oya.

In the district progress is slow. The chief need so far as the Sinhalese population is concerned is improved irrigation, and, as already stated, there is no department in which it is so difficult to get anything done. Decentralization in irrigation matters is, in my opinion, the best remedy. It should be necessary to go to the central authorities only in the case of works of magnitude. Small village works should be decided on and carried out locally, and funds for making advances for such works should be available. The people of this district are only just beginning to learn that they must help themselves in the matter of irrigation. They have been accustomed in former times to have irrigation works carried out for them by Government, and when asked to pay for a work their ardour cools at once. One or two useful works *promptly* carried out under the repayment system would do more to bring the advantages of the Ordinance home to the villagers than any amount of argument. At present the Ordinance largely defeats itself by the delays consequent on its too elaborate procedure.

PLANS FOR IMPROVEMENT.

Nuwara Eliya should be supplied with all that is necessary to equip it as a mountain home for Europeans, as a sanitarium for those whose health has been impaired by residence in the low-country, and for the rearing and education of children. The above has for some years past been the object in view, and though some who knew Nuwara Eliya in its primitive state may regret the loss of the wild picturesque scenery of former days, the change is inevitable. Nuwara Eliya must march with the times. Ground which a few years back was a certain field for snipe is now appropriated for cricket and golf. A well-kept park now occupies the site of former swamp and unsightly brick-kilns. A few years ago it was impossible to walk across the plain without getting bogged. Polo, cricket, football, hockey, and golf are now firmly established upon it.

An important departure was, thanks to the foresight of Government, initiated in 1902, in the opening in Nuwara Eliya of a branch of the Hakgala Garden, under the able supervision of Mr. W. Nock. Work was commenced in January, and by the end of the year the ground was completely transformed and fruit was ripening on the newly planted fruit trees. The value of this garden for the spread of knowledge of horticulture can hardly be over-estimated.

Nothing was done last year towards improving the lake in the absence of the expected dredger, which is now, I believe, under construction. The deepening of the bed and embankment of the lake shores will not only render the lake itself sanitary, but will affect advantageously the whole of Nuwara Eliya in the way of improved drainage and reclamation of swamp.

In the social line improvements are going forward. The United Club will, it is hoped, be shortly enlarged and placed on a better footing. A similar Club for the Burgher community is under formation, and will supply a want. The Golf Club has enlarged both its premises and its links. The Boat Club has with an improved lake a future before it.

In the town proper there is marked improvement: hovels are being gradually eliminated, overcrowding is being mitigated, and streets and buildings improved. The new bazaar will before long be a street of some pretensions.

SANITARY CONDITION.

The sanitary condition of the district was good. There were no epidemics, attention was paid to the water supply of villages, and seven new wells were constructed in localities which most needed them. A small expenditure each year on the improvement of village wells, as was done last year, would do much for the improvement of the sanitary condition of the inhabitants. The headmen require to be kept up to the mark in the matter of village scavenging. The town of Nuwara Eliya was healthy throughout the year.

The following works have been carried out under the Sanitary Rate Ordinance, in addition to systematic scavenging :—

Works carried out under the Sanitary Rate Ordinance.

Town.	Work done.	Schemes under consideration.
Nanu-oya	... Erection of a latrine	.... Erection of latrine, drainage, water supply, and slaughter-house
Talawakele	... Erection of latrines and drainage	Extension of drainage and water supply
Dimbula	... —	... Drainage and water supply
Agrapatana	... —	... do.
Kotagala	... —	... Drainage
Lindula	... —	... do.
Tillicoultry	... Erection of latrine	... do.
Pundalu-oya	... do.	... do.
Kandapola	... —	... do.
Ragala	... —	... do.
Padiyapelella	... —	... Latrines

The medical wants of the district were fairly well met. There are well-established hospitals at Nuwara Eliya, Lindula, Dimbula, Ramboda, Uda Pussellawa, and Maturata, and permanent outdoor dispensaries at Agrapatana, Watagoda, Pundalu-oya, Nanu-oya, Nildandahena, Mulhalkele, and Hanguranketa. Gonagama and Lamasuriyagama are visited by a Medical Officer weekly. The only parts of the district insufficiently served are the outlying villages of Uda Hewaheta and Walapane.

I annex the usual statement of work done :—

Patients treated at Hospitals and Dispensaries.

Hospital or Dispensary.	Average Number of Inmates.	Number treated at Outdoor Dispensaries.
Nuwara Eliya Hospital	32·55 ...	1,881
Uda Pussellawa Hospital	11·30 ...	3,169
Mulhalkele Hospital	21·30 ...	2,851
Lindula Hospital	56·37 ...	5,873
Ramboda Hospital	24·26 ...	2,570
Dimbula Hospital	24·60 ...	2,570
Agrapatana Dispensary	— ...	2,299
Padiyapelella Dispensary	— ...	1,240
Watagoda Dispensary	—	1,113
Nildandahena Dispensary	— ...	1,713
Maturata Hospital	22·33 ...	2,975

I still advocate the maintenance of a fixed staff of attendants available for service at any place where cholera or other severe epidemic may break out. The uselessness of relying on local labour in stamping out disease has been demonstrated over and over again. There may be difficulties in arranging for the employment of such attendants when not on special duty, but greater difficulties than this have been overcome.

The Mulhalkele hospital building was pronounced unsafe and closed (temporarily I trust) at the end of the year. This hospital was established ten years ago in a coffee store on Mulhalkele estate, and has done excellent work in ameliorating the condition (moral and physical) of the Walapane villagers. It served a population of nearly 10,000 persons, the majority of whom have now been suddenly cut off from medical assistance, which they have so long enjoyed. The re-establishment of this hospital is, in the interests of a large and poor population, urgently necessary.

I annex a return of medical aid dues of Nuwara Eliya District collected for second, third, and fourth quarters of 1902. The dues for first quarter were collected in Kandy Kachcheri.

No. of Bills issued.	Total Value of Bills issued.	Amount recovered.	Remarks.
1902.	1902. Rs. c.	1902. Rs. c.	
2nd quarter ... 259	2nd quarter... 4,714 14	July ... 783 30	Arrears on December 31, 1902, amounted to Rs. 6,004·89. Of this a sum of Rs. 4,334·20 was for fourth quarter of 1902, bills of which quarter were received from the Medical Officers during January and February, 1903. Deducting the latter sum, the actual amount which was in arrears on December 31, 1902, was Rs. 1,670·69.
3rd do. ... 264	3rd do. ... 4,706 10	August ... 2,471 76

		December ... 1,928 78	
		Total ... 7,452 55	

CRIME.

The district has been comparatively free from serious crime. There were no murders or attempts to murder. There were only four cases in which the knife was used, resulting as follows :—

Reported	4
Brought to trial	4
Convictions	2
Acquittals	2

The rural police have co-operated satisfactorily in the prevention and detection of crime. They know their duty, and when occasion arises, which is not often, do it fairly well. There are, roughly speaking, 300 villages in the district, and "serious" crimes occurred in 41 only. No headman had the chance of particularly distinguishing himself, while at the same time no flagrant case of neglect of duty came to my notice. The regular police under Sergeant-Major Ramasamy have acquitted themselves on the whole well, the Sergeant-Major setting an excellent example to the force in his charge.

The town of Nuwara Eliya has been kept quiet and orderly, and thanks, I think, in large measure to the house-to-house night patrol, no case of house-breaking or attempt at house-breaking occurred. Considering the number and variety of matters outside regular police duties in which their services are requisitioned, the men have, with a few exceptions, acquitted themselves creditably ; drill and discipline has been well maintained. The force deserves a special word of praise for the efficient protection of the town by night. Sergeant-Major Ramasamy has maintained his reputation as an energetic and trustworthy police officer, and he has been well supported by Sergeant Noor.

CATTLE STEALING.

There have been only four cases of cattle stealing during the year :—

Reported	4
Brought to trial	4
Convictions obtained	1

The figures do not call for remarks.

DISEASE AMONG CATTLE.

The year was a healthy one for cattle. There was no murrain and no serious outbreak of hoof-and-mouth disease. The number of cattle in the district is put down at 11,747, of which none died of contagious disease.

NEW AREAS OF CULTIVATION.

The extent of Crown land sold during the year was—

	A.	R.	P.
Kotmale	84	1	22
Uda Hewaheta	45	0	39
Walapane	39	2	20
Total ...	169	1	1

All sales of land for tea cultivation has been stopped, and hence the small acreage sold, consisting mainly of small lots already under native cultivation on lease to villagers. The actual extent newly brought under cultivation during the year may be roughly put down as follows :—

	Acres.		Acres.
Cardamoms	20	Cocoanuts	5
Paddy	43	Plantains	40

WASTE LANDS ORDINANCES.

The Wetalawa claims, consisting of 150 acres, were referred to the Waste Lands Ordinance Committee for proclamation. This is a speculative revival by low-country men of a claim long ago abandoned by the respective Kandyan villagers concerned. The land claimed has for the last twenty-five years been reserved by the Crown as village common property. There are a few other claims now receiving attention, but on the whole the land claim question is not acute in this district. The Pedro reserve and the Meepilamana reserve (Elk Plains) are being proclaimed as reserved forests under Ordinance No. 10 of 1885.

CHENA CULTIVATION.

Chena cultivation has not increased, but large extents in Uda Hewaheta and Walapane are annually cleared in spite of the efforts made to keep down the extent of Crown chena allowed. It is clear that the only means of curtailing chena is by providing facilities for paddy and other grain cultivation. Any other method adopted can only result in the impoverishment of the villagers, who have always depended upon chenas for their chief food supply. This fact deserves greater attention on the part of the irrigation authorities than it has hitherto had.

The extent of Crown chena leased in 1902 was 691 acres. Licenses were, as in the two previous years, granted only in cases where chenas were absolutely necessary for the support of the applicant.

SALES OF LAND BY VILLAGERS.

No case has come to my notice during the year in which a villager has sold his house and field, and even in the case of chena or waste land sales have not been frequent. There is no tendency on the part of the larger landowners in this district to buy up villagers' holdings. So far as I can ascertain, no sale with insufficient title on the part of the vendor has taken place.

WORK OTHER THAN ROUTINE.

The supervision of the Nuwara Eliya prison labour force occupies considerable time. Its strength is about thirty men, and they are employed in the work of draining and reclaiming the Nuwara Eliya Plain, so important for the health and well-being of the sanitarium.

Prison discipline was well maintained, and there were no escapes. The Nuwara Eliya prison is, in spite of the less arduous work imposed here, by no means a popular one. Few of the prisoners kept here would not gladly change their present quarters for Colombo or elsewhere, if given their choice.

The Ceylon Fishing Club, to which the Assistant Agent acts as Honorary Secretary, had a successful year, so far as ova importations were concerned: out of the 65,000 ova imported 10,548 fry were put out into the Club waters. It has now been ascertained beyond doubt that trout are breeding in Ceylon, and local experiments in hatching fry are about to be made.

The Nuwara Eliya section of the Ceylon Planters' Rifle Corps, of which I was in command, numbered 22 members, of whom only five failed to make themselves efficient, owing to absence from the Island and other unavoidable causes. The shooting record was fair; five marksmen and seven extra efficients.

MISCELLANEOUS.

In January work was commenced on the new experimental garden in Nuwara Eliya.

In February all the land required for the Uda Pussellawa Railway Extension to Ragala was taken up.

In March Mr. Stanley Colls, District Engineer, left for South Africa, having been appointed District Engineer of Pretoria. He has left his mark in Nuwara Eliya. He was succeeded by Mr. R. W. I. Crabbe.

In April I left for England on six months' leave, the work of the district being carried on in my absence by the Hon. the Government Agent, with the assistance of Messrs. R. A. G. Festing and J. Scott of the Kandy Kachcheri.

In May the successful Agri-Horticultural Exhibition in Kandy attracted great attention in the district. Headmen and villagers heartily co-operated in the work.

In June the news of the serious illness of His Majesty the King was received with the deepest concern throughout the district. Intercessory services were held in all the churches.

In July there was general thankfulness at the news of His Majesty's restoration to health.

In August the Coronation was celebrated: Royal salute of twenty-one guns, services in all the churches, public address, a ball, and a display of fireworks. There were local celebrations throughout the district, school treats, and feeding the poor.

In September Mr. Constantine assumed duty as Police Magistrate *vice* Mr. Cookson appointed to Puttalam.

In October I returned from leave and resumed charge of the district.

In November the Kitson light was started on experimental lines in the town.

In December the laying of the Nuwara Eliya railway line was completed as far as the entrance to the Plain.

E. M. DE C. SHORT,
Assistant Government Agent.

Nuwara Eliya, February 27, 1903.

APPENDIX.

N.—Report on the Kandy Agri-Horticultural Exhibition, adopted by the Committee at Meeting held 7th September, 1902.

(I.) *Preface.*

It was in September, 1900, that the Government Agent proposed to hold an Exhibition in Kandy, and the Committee appointed for the purpose resolved that the Exhibition should be held in May, 1901. All preliminary preparations were made and catalogues circulated when the news reached Kandy in January, 1901, of the Royal Visit in April; it was then agreed that the Exhibition should be postponed, as it was recognized that the double function would throw too much work upon the chiefs and headmen of the Province. It was then decided that the Exhibition should take place in September, 1901, but it was finally decided that May was a more favourable season for an exhibition of fruit and vegetables and flowers, and the Exhibition was put off till 7th, 8th, and 9th May, 1902; even then an alteration of dates became necessary on account of the revival of the Kandy races in that month, the Committee being anxious to meet the convenience of the promoters of that meeting.

(II.) *Attendance;* (III.) *The Decorations.*

The weather on the days selected proved most favourable; the attendance on the second and third days was to some extent disappointing, the races at Peradeniya perhaps accounting for this. The total receipts at the gate amounted to Rs. 1,080·06, and the public subscribed most generously, a total of Rs. 3,701·97 being realized by subscriptions alone. The Duke of Cornwall's Light Infantry Band was in attendance on the second day, the Kandy Band supplying the music on the other days. The Show was kept open for three days, the price of admission on the last day being reduced to 25 cents in the afternoon; schools were admitted free. The villagers attended in large numbers. The Show buildings, which had been erected most satisfactorily by Mr. Fernando, were completed on the 26th April and handed over to the chiefs of the Kandy District for decoration, a gold medal being awarded for the best decorated section. The result was a most brilliant and characteristic display, and His Excellency the Lieutenant-Governor on opening the Show paid the following compliment to the chiefs:—"I have heard," he said, "a good deal of this art of decoration, and now I can believe all that I have heard. Kandy can go beyond all other towns in Ceylon in perfecting this art, which seems so peculiarly its own, and on this occasion the chiefs seem to have gone even beyond their usual mark."

(IV.) *Exhibits from Estates.*

Before treating of the individual classes in the Exhibition, it is perhaps well to notice one criticism that was very generally passed on the Exhibition, both in the newspapers and by individuals, viz., the absence at the Exhibition of estate products. The Committee had after full consideration resolved that it was not necessary at this stage of the industry to grant any prize for tea. Special prizes for cacao and rubber were however advertised, but drew little competition. Although a large amount was spent on advertisements in the newspapers, and although catalogues had been circulated throughout the Province and copies sent to each local Planters' Association, and posters put up at the railway stations and resthouses, at the last minute the Secretary was perpetually hearing that "so and so knew nothing about the Exhibition or he would have sent in exhibits," &c. However disappointing to the promoters of the Exhibition and to the general public, no blame attaches to the Secretary, in the opinion of the Committee, for the paucity of estate products exhibited at the Show. The lack of interest displayed in this branch of the Exhibition may be due to the fact that many years have elapsed since the last Exhibition was held in Kandy, and the consequent change in the *personnel* of the staff on the estates.

Agri-Horticultural Exhibitions to be successful must be held at regular and recognized periods and dates to arouse interest and competition among producers and cultivators, and it is hoped that as one result of the recent Exhibition arrangements will be made in future for the holding of these Shows at fixed intervals in Kandy, and a healthy spirit of competition aroused in all classes to produce and exhibit the best of all products.

(V.) *The Medals.*

The gold and silver medals were supplied by Messrs. Orr & Co. of Madras at a cost of Rs. 957·72 from designs submitted at suggestion of the Chairman by Mr. B. Campbell of the Survey Department, who also designed the diplomas which accompanied each award.

To come to the classes in detail, I annex a report which Mr. Nock has kindly written on the first five classes, being the flowers, fruit, and vegetables:—

(VI.) *The Classes in detail.*

Class I.: Flowering Plants in Pots.—This class was very poorly represented, there being only twelve exhibits in the whole class, for which twenty-five prizes were offered. Of these, there were fifteen which did not draw a single exhibit. The twelve exhibits sent in were of a very low order, and in several cases no prizes were given, as the judges did not think them worthy of an award.

As it takes a considerable time to establish flowering plants in pots and get them into a condition worthy of being shown, I am afraid the postponement of the Show from the year before and the uncertainty of the exact date it was to be held was the cause of this class being so badly represented.

Class II.: Cut Flowers.—This class was very well represented. There were 68 exhibits shown for prizes, besides many exhibits not for competition, and taking it altogether there was really a very fine display, which compared very favourably with former Shows.

Roses were rather poor, and, except in section 3 for a collection of six kinds, there was little competition; the wet weather at the end of the previous month no doubt accounted for this.

Carnations and pinks were well shown, there being nine exhibitors for the two prizes; all were very good, and the prizes in each case were carried off by Mrs. F. C. Loos, jr., with a very even, well selected, and well set up lot.

Asters and chrysanthemums were poor, and though there were three exhibits of each there was no prize awarded.

Pansies, verbenas, and poppies made a good show, and well deserved the prizes awarded.

An extensive and well-arranged collection of hybrid hibiscus and amaryllis was shown by Mr. T. C. Huxley, and although these were the only exhibits the prizes given were well merited.

The collection of cut flowers sent from the Queen's Cottage Gardens and Hakgala Gardens, not for competition, were very good, and added considerably to the display.

The best general collection of garden flowers and of wild flowers, in a given space, were well competed for, there being several exhibits, Mrs. F. C. Loos carrying off the prize for the first named and Mr. P. Jusay Appuhami for the wild flowers. The latter was a good collection, but the arrangement was much too crowded—a common mistake.

There were only two exhibitors for hand bouquets, which was very disappointing. This was probably due to the fact that both professional and amateur had to compete for the same prize.

Buttonholes and table bouquets attracted ten exhibitors, and the exhibits showed improvement over former Shows.

There were five exhibits of circular wreaths, and all were very pretty; the one shown by Mr. J. H. Siebel was quite up to date, and was easily first.

There was keen competition for the best table decoration, there being five exhibits. The first prize was awarded to the Misses Vanderstraaten for a very good, light, and tasteful arrangement.

Class III.: Ferns and Foliage Plants in Pots.—The prize of a gold medal for the best collection of ferns brought out eight exhibits, and Mr. F. W. Vansanden was an easy first with a nice, even, clean collection.

The specimens of single ferns shown was disappointing both in quantity and quality, and was much below those shown on former occasions.

The best general collection of foliage plants arranged in a given space was won by Mrs. Pole-Fletcher with a very nice group, and this would have been more effective if it had not been so crowded.

Other sections of foliage plants were very badly represented, and had it not been for a nice lot sent in by the Royal Botanic Gardens there would have been a very poor show.

The failure in this class can only be accounted for by the lack of courage and energy on the part of householders to send in their plants for exhibition, as I am sure there are very good collections in the neighbourhood.

Class IV.: Fruits.—There were no less than 169 exhibits of various fruits, but on the whole the quality was not of a very high order and left room for much improvement. The majority of the mangoes, pineapples, and bananas were shown in an unripe state.

Class V.: Vegetables.—Considering the few prizes offered, the show of vegetables was very good indeed, both as regards European and native. The collections which carried off the first prize in each case were really good, and certainly, with regard to the collection staged by Messrs. K. A. Saibo & Co., were quite as good as are seen in County Shows at home.

In future I would suggest that a separate prize be given for market gardeners and professionals, amateurs, and cottagers. If this was done I think very many more would exhibit, and more encouragement would be given to the cultivation of really first class vegetables.

The celery and leeks sent in by Mrs. W. O. Garth of Nuwara Eliya and the potatoes by Mr. A. J. Kellow of Albion were really very good, and compared very favourably with what are grown in Europe.

W. NOCK.

Class VI.: Vegetable Products.—In making their awards on cocoanut oil the judges gave the gold medal to an oil that had not been prepared in the Central Province, and which had been previously exhibited. Upon this being pointed out to the judges, the prize was awarded to an oil which had been already very highly commended by the judges, and which had been prepared in Kandy. This class was a good one, and there was good competition in oils.

The samples of tobacco and cigars were pronounced by the judges to be very good.

The rubber samples shown were of high value and carefully prepared.

Class VII.: Food Products.—There was good competition in the cardamoms exhibit, and the judges recommended that a second prize be given in addition. The prizes were taken respectively by Duckwari and Dryburgh estates.

The exhibits of cacao were not as numerous as might have been desired, but the samples shown were above the average quality.

Class VIII.: Dairy Produce.—There was nothing particularly noteworthy in this class, except that there was no exhibit of ducks' eggs.

Class IX.: Preserved Fruits.—There were no exhibits of dried fruits in this class.

Class X.: Minerals and Gems.—As might have been expected, there were few exhibits in this class, and little or no competition; no awards were made.

Class XI.: Cattle.—This was a very satisfactory class, not only in quantity, for at the last moment six extra stalls had to be built, but also in quality. It is, however, strange that no Coast bull was exhibited. There was a good competition in the class for milch cows, and an extra prize had to be awarded.

Class XII.: Poultry.—The entries were disappointing.

Class XIII.: Natural History.—Few sporting trophies were exhibited; Mr. Green's collection of butterflies was much admired.

With the object of drawing attention to the possibilities of sericulture in Ceylon, the Government Entomologist also exhibited an interesting series of silk work cocoons and specimens of raw and spun silk.

Class XIV.: Miscellaneous.—Allusion has already been made to the decorations, and the display of fireworks was good.

Class XV.: Arts and Manufactures.—In some ways this was a disappointing class. With so many brass and silver workers as are now employed for the Kandyan Artworks Association, it was expected that there would be a good display of brass and silver work. But it is very difficult, if not impossible, to persuade these men to get their work finished by a given date, and many who were making things to exhibit were too late for the Exhibition.

There was a good collection of native jewellery and gold work; and the specimens of brass and silver work exhibited were of good quality.

Perhaps one of the most interesting features of the Exhibition was the mat-making and weaving from Udapalata and Uda Dumbara, which was carried on in huts outside the Show buildings by native workmen and women, while inside the building silversmiths and lacquer workers were on view making their boxes and painting their sticks, so that the public were allowed to get some notion of the way in which the finished articles exhibited at the Show were made.

(VII.) *Small Gardens Competition.*

I wish to draw attention to the competition suggested by Mr. Carruthers, viz., "the small gardens competition," which was peculiar to this Exhibition, and forms a new feature in such displays, and in which Messrs. Carruthers and Wright kindly acted as judges. I cannot do better than quote their report and suggestions: "The gardens visited showed most creditable keenness, though the short space of time that the competitors had to raise their plants from seed and their ignorance of the best methods of cultivation damaged the results. The crops raised, however, and the care shown were most encouraging, and we propose to recommend to the Kandy Municipal Council a definite scheme for an annual competition on these lines. We believe that with a small amount of instruction in vegetable growing many waste plots adjoining houses in the Municipality would be made into productive gardens."

(VIII.) *Statement of Accounts, &c.*

I lay before the Committee the statement of accounts as furnished by Mr. Bishop, the Honorary Treasurer, to whom our best thanks are due for the trouble he has so kindly taken to help us in this most important part of the work. The Committee also owes a special debt of gratitude to Mr. Carruthers, who from the commencement took the greatest interest in the Exhibition and worked hard to ensure its success. Thanks are also due to Messrs. Nock, Huxley, and Wright who assisted in the final arrangement of the exhibits, and to the judges from Colombo who so kindly gave their time to award the prizes; to His Excellency the Lieutenant-Governor, who opened the Exhibition on the 6th; and to Mrs. im Thurn, who kindly distributed the prizes and awards to successful exhibitors. I wish also to recognize the assistance and co-operation afforded by all the chiefs and headmen of the Central Province :—

NORTHERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, NORTHERN PROVINCE, FOR 1902.

PRELIMINARY REMARKS.

THE condition of the Province during the year under review was satisfactory. There was neither epidemic nor scarcity of food, and the general health of the people and cattle was good. Much money was introduced by the railway works, and wages ruled higher than in previous years.

The Province was in charge of Mr. J. P. Lewis from the 17th May to the end of October, during my absence in Colombo. Consequently my remarks on the general administration are not so full as is usual.

REVENUE.

The revenue returns show an increase of Rs. 293 in the gross revenue collected in 1902, compared with the revenue collected in 1901 :—

	Rs.
1901	785,344
1902	785,637

Deducting from the above collection on account of—

	1901. Rs.	1902. Rs.
1. Passage money of immigrants	13	24
2. Sale of Delft horses	1,675	1,000
Total ...	1,688	1,024

the collection on account of ordinary revenue is Rs. 783,656 for 1901 and Rs. 784,613 for 1902, added to which the sums collected under the Thoroughfares Ordinance (in 1901 Rs. 80,031 and in 1902 Rs. 81,605) give the total contribution by the people to public objects in 1901 Rs. 863,687 and in 1902 Rs. 866,218.

The following statement gives the actual ordinary revenue due and collected on account of 1902 as compared with 1901, excluding passage money of immigrant coolies and sale of Delft horses and receipts under the Thoroughfares Ordinance :—

	Rs.
Total ordinary revenue collected in 1901	783,656
Deduct arrears of 1900 do.	3,892
	779,764
Add arrears of 1901 outstanding on December 31, 1901	2,927
Total ...	782,691
Total ordinary revenue collected in 1902	784,613
Deduct arrears of 1901 do.	2,927
	781,686
Add arrears of 1902 outstanding on December 31, 1902	4,281
Total ...	785,967
Real ordinary revenue of 1901	782,691
Do. 1902	785,967
Increase ...	3,276

All the revenue of the two years has now been collected, with the exception of the following :—

Rs. 2,970 on account of police rates of 1902.
„ 1,055 on account of arrrack rents of 1902.
„ 256 on account of water-rate, 1902, Mannar.

Rs. 4,281

The increase in the real ordinary revenue has been chiefly—

	Rs.		Rs.
Imports—Sugar ...	... 444	Recoveries on Irrigation Works	... 10,666
Arrack, Rum, and Toddy	... 2,702	Police Rates ...	... 399
Salt rented ...	... 867	Fee for Title Deeds ...	... 313
Salt sold in retail ...	... 10,841	Postage Stamps ...	... 3,645
Ferry Tolls ...	... 153	Government Railways	... 27,736
Revenue Stamps ...	... 1,310	Rent of Government Buildings	... 109
District Court Fines...	... 1,136	Interest ...	... 128
Government Agent's Fines	... 398	Unclaimed Deposits ...	... 567
Judicial Stamps ...	... 3,302	Firewood ...	... 2,037
Survey Fees ...	... 1,561	Land Sales ...	... 26,779

Whilst the decrease in the real ordinary revenue has been chiefly—

	Rs.		Rs.
Imports :—		Port Dues ...	... 803
Grain ...	... 12,060	Salt for Released Districts	... 67,850
Cotton Manufacture	... 4,280	Road Tolls ...	... 396
Spirits ...	... 560	Bridge Tolls ...	... 768
Others Goods ...	... 418	Fines—Police Courts	... 1,124
Exports of Chanks ...	... 701	Fines—Other Departments	... 963
Elephants ...	... 1,400	Warehouse Rent ...	... 3,004

Increases.

Arrack, Rum, and Toddy.—Due to higher amounts realized in the sale of these rents.

Salt rented.—Due to higher amounts realized in the sale of these rents..

Salt sold in retail.—To good fishing season at Mannar.

Stamps, Revenue and Judicial.—The revenue from stamps has been fluctuating for some years past.

Recoveries on Irrigation Works.—To restoration of Giant's tank.

Government Railways.—To opening of the Northern Railway.

Land Sales.—Owing to increased demand for land and competition at the sales.

Decreases.

Imports : Grain ; Cotton Manufacture.—Due to falling off in imports.

Exports : Chanks.—To less export of chanks in 1902, owing to the dullness of the market in India.

Elephants.—To no elephants having been exported during 1902.

Salt for Released Districts.—In 1901 a large quantity of salt was sent to the Southern and Western Provinces owing to less production at Hambantota. Such was not the case in 1902.

Police Court Fines.—The decrease is casual.

Warehouse Rent.—Due to falling off in imports of grains, &c.

The increase or decrease under other heads of real ordinary revenue does not call for special remark.

The total receipts under the Thoroughfares Ordinances were as follows :—

	1901. Rs. c.		1902. Rs. c.
Jaffna	65,764 13	...	67,583 0
Mannar	8,390 36	...	8,137 1
Mullaittivu	5,876 93	...	5,885 69
Total ...	80,031 42		81,605 70

Expenditure under the Thoroughfares Ordinances was as follows :—

	1901. Rs. c.		1902. Rs. c.
Jaffna	63,527 66	...	64,277 1
Mannar	8,100 81	...	8,045 9
Mullaittivu	5,610 35	...	5,862 92
Total ...	77,238 82		78,185 2

Excluding from the above such casual receipts as value of trees cut down on roadsides, refund of charges overdrawn, &c., the actual contribution by the people in the shape of taxes under Thoroughfares Ordinances was as follows :—

	1901. Rs. c.		1902. Rs. c.
Jaffna	64,955 0	...	65,971 0
Mannar	7,745 0	...	7,631 25
Mullaittivu	4,905 0	...	4,985 0
Total ...	77,605 0		78,587 25

Number of persons who actually paid the taxes under the Thoroughfares Ordinances during 1901 and 1902 :—

	1901. Rs. c.		1902. Rs. c.
Jaffna	64,343 0	...	65,594 0
Mannar	6,189 0	...	6,097 0
Mullaittivu	3,913 0	...	3,954 0
Total ...	74,445 0		75,645 0

WEATHER.

The rainfall registered in the Jaffna District was 47·46 inches, while that registered for 1901 was 40·11 inches. The total rainfall registered in the Mannar and Mullaittivu Districts were respectively 55·21 and 81·55 inches.

CROPS.

The grain crops of the Jaffna District for the year 1902–03 were satisfactory, and would have been more so had the rain fallen earlier during the sowing season in Jaffna. In the Mullaittivu District the yield was very good.

FOOD SUPPLY.

According to the headmen's reports the outturn of the paddy crop of the Province was estimated at 956,993 bushels of paddy, which would produce 478,496 bushels of rice; the "varagu" crops amounted to 10,738 bushels, and the other dry grains yielded about 66,367 bushels, making in all 1,034,098 bushels local crop :—

	Bushels.
Paddy :—	
Jaffna	666,198
Mannar	107,604
Mullaittivu	183,191
	956,993
Varagu	10,738
Other grains	66,367
Total ...	1,034,098

The imported grain amounted to—

	Cwt.		Bushels.
Paddy	557,105 at 2½ bushels	=	1,299,912
Rice	113,961 at 1¾ ,,	=	199,431
Other grains	10,811 at 2 ,,	=	21,622

and those exported—

Paddy	36	=	84
Rice	2,606	=	4,560
Other grains	96	=	192

The consumption of home-grown and imported was—

	Bushels.
Paddy	2,256,821
Rice	194,871
Other grains	98,535

Taking the usual estimate of two bushels of paddy to one of rice, these figures show a quantity of 1,323,282 bushels of rice. This does not, however, include the balance of rice in stock at the end of the preceding year, nor does it exclude the balance at the end of the year under review.

To this should be added kurakkan, paddy, gingelly, &c., brought from the Vanni and the North-Central Province by land, and whose quantity is unascertainable.

The yield of cocoanuts was good, and the demand for them was great.

The supply of garden produce, vegetables, fish, turtles, &c., was satisfactory. There has been a continuous rise in the price of vegetables, fowls, and eggs for some years past, chiefly owing to the large export of these articles to Colombo and other places.

The yield of the palmirah produce was not so good as in the preceding year. The demand, however, is on the decrease.

The following statements give statistics as regards food supply, which have been furnished by the Collector of Customs :—

Statement of Foreign and Coastwise Imports of the following Articles in the Northern Province during the Years 1901 and 1902.

HEALTH OF PEOPLE.

Fever, which generally prevails during the latter part of the year, was less virulent than in previous years.

There were two cases of smallpox, one in Jaffna and the other in Kankesanturai; both were treated successfully.

In January there were 29 persons remaining at Kayts suffering from cholera, which had broken out in December, 1901, of whom 5 recovered and 24 died. Since then there were no cases of cholera during the year.

SANITATION.

The sanitation of the town of Jaffna is maintained by a sanitary officer and coolies under him at an expenditure of Rs. 4,000 granted by Government for the purpose. The usual sanitary measures were carried out with special precaution at the places of pilgrimage. The measures required by the Plague Committee were continued throughout the Province. Rats were destroyed in Jaffna to the number of 3,338 in 1900, 6,305 in 1901, and 11,830 in 1902; total, 21,473.

The towns of Point Pedro and Valvettiturai, Mannar, and Mullaittivu were brought under the Small Towns Sanitary Ordinance. Scavenging was carried on to a limited extent. The moneys collected were accumulated until sufficient funds exist for the erection and maintenance of permanent latrines and for providing an adequate scavenging staff.

The sanitation of villages was enforced through headmen, and as a result villages are generally clean, excepting the fishing villages. There were several complaints made to me by the villagers that their dwelling compounds were flooded during the heavy rains, and steps were immediately taken to drain the water off as far as possible, but in many cases it was not possible.

The water supply of the villages was satisfactory. It is solely derived from wells. I am glad to say that the project for the water supply to the town of Jaffna, which has been long under consideration, had so advanced that arrangement was made for preparation of estimate and fixing of the sites of the reservoirs early in 1903.

TOBACCO CULTIVATION.

The following is the statement of tobacco exported beyond sea and coastwise:—

Statement of Tobacco exported beyond Sea and Coastwise during the Years 1901 and 1902.

	Beyond Sea. Quantity. Cwt. qr. lb.	Beyond Sea. Value. Rs. c.	Coastwise. Quantity. Cwt. qr. lb.	Coastwise. Value. Rs. c.
1901	28,269 2 4	673,061 68	51,220 2 12	583,660 60
1902	43,982 0 12	1,029,806 28	34,560 1 0	454,967 50

There has been a fall in the price of the leaves grown locally, and it is a matter of great anxiety with the tobacco growers of the Province that the price is on the decline for some years past. The fall in the price is chiefly owing to the markets being glutted, and unless a fresh market is found for the local product no material improvement can be effected.

A trial was made by Mr. MacD. Gibson at Pallai in curing the Jaffna tobacco to suit European markets.

I have nothing new to mention as regards this important industry, which will continue to be unsatisfactory to the producer until he begins to realize the necessity for improved methods of curing the product. I can only call attention to my observations in previous Administration Reports.

CATTLE.

The following is a statement of cattle in the Jaffna division:—

Buffaloes	3,723
Black cattle	159,316
Sheep	75,629
Goats	58,519

No cases of cattle diseases have been reported during the year under review. There was a heavy mortality among the cattle in the island of Delft, which was due to drought and insufficient water and pasturage for the excessive number of cattle in the island. The headmen's estimate of the mortality is shown below, but the actual number of deaths seems to have been much larger :—

Black cattle	1,084
Buffaloes	36
Sheep	141
Goats	103
Total ...	1,364

In my last Administration Report I pointed out that this preventible mortality was a disgrace, and that the only remedy is to reduce the cattle to the capacity of the pasturage and water.

With a view to improve the cattle in Delft I introduced two Scinde bulls for breeding purposes, but the result was unsatisfactory owing to local conditions. The Scinde bulls at Mannar and Mullaittivu are doing well.

Rules under Ordinance No. 10 of 1891 not having been framed yet for the Province, it is found difficult to regulate the sale, removal, and branding of cattle. However, the island of Delft having been brought under the operation of the Village Communities' Ordinance, it was found possible to introduce into that island a system of branding under the rules framed under that Ordinance; and about 2,000 heads of cattle have already been branded. Hitherto there was practically no branding or registration of ownership in the island.

NEW TRACTS FOR CULTIVATION.

A Company, under the name of "The Jaffna Agricultural Company," was started by certain enterprising gentlemen for the purpose of extending paddy cultivation in the Northern Province. The Association has asked for 3,000 acres of land irrigable by the Karachi scheme near Paranthan. Government has permitted the sale of the block on terms favourable to the pioneers.

IMMIGRATION.

The immigration route continues closed from 1900. A few labourers for Giant's tank work were allowed to land and depart by Mannar.

TIMBER AND FIREWOOD.

Revenue from Released Areas.—The annexed is a statement of revenue derived from released areas during 1902 in the Northern Province :—

	Rs. c.
Royalty on timber	7 92
Royalty on firewood	11 75
Canes and bamboos	—
Averam bark	1,135 0
Green leaves	343 60
Coral stones	51 15
Jungle sticks	71 64
Other forest produce	30 40
Total ...	1,651 46

The following statement of revenue of the Forest Department has been furnished to me by the Assistant Conservator, Northern Circle :—

	Rs. c.	Rs. c.
I.—Timber, &c., removed by Government Agency :—		
(*a*) Timber	3,121 71	
(*b*) Fuel	2,894 48	
		6,016 19
II.—Timber, &c., removed from forest by purchasers :—		
(*a*) Timber	394 49	
(*b*) Fuel	932 48	
		1,326 97
III.—Miscellaneous :—		
(*a*) Fines and forfeitures	83 31	
(*b*) Refunds	15 75	
(*c*) Other sources	16 61	
		115 67
Total ...		7,458 83

Free Grants of Timber.—No free grants were issued in Jaffna and Mullaittivu Districts. In the Mannar District free grants were issued for common timber, and jungle sticks to the value of Rs. 50·49.

Prosecutions on Account of Forest Produce.—None reported.

Firewood.—The supply of firewood to the town of Jaffna is carried out by dealers who lease the Crown land formerly used by the Forest Department, as a firewood depôt. These dealers get their supply from the Forest Department, and also from private parties. A license was issued by me in November on a stamp of Rs. 50 to collect firewood in the released areas for the supply of Point Pedro. The supply to the Jaffna town having been a subject of complaint for some time, I found it necessary to issue licenses for the collection of firewood in the released areas of the Punakari division on the

same terms and conditions as those of the Forest Department, with the result that the depôts have now a good supply in stock. But I am doubtful that the Forest Department gets full value from the places of issue at Mandaklaar and elsewhere owing to defective supervision.

Forest Reserve.—As mentioned in my last report, six blocks of forest in the Mullaittivu District were reserved during the year.

SALT.

A quantity of 54,602 cwt. was manufactured at the Chiviateru salt pans, but there was no formation at Karanavai or Vellaiparavai lewayas owing to unfavourable weather. The cost of the salt was 25·85 cents per cwt.

The total charges incurred during 1902 on account of salt were as follows :—

	Rs.
Cost of collecting and storing salt	12,961
Watching and destroying salt unfit for collection	656
Cost of establishment	4,374
Commission to headmen on salt sold	2,064
Transport of salt from one store to another within the Province ...	6,137
Repairs to stores...	688
All other miscellaneous charges	81
Total ...	26,961

Salt revenue and quantity of salt sold during 1902 was :—

Cwt.	Particulars.	Rs. c.	Rs. c.
— ...	Rent of the monopoly of the retail sale in the Jaffna District	57,267 0

Wastage	1,387	
		73,443
Balance on 31st December, 1902 ...	—	32,885†

	Cwt.
* Removed in 1902	42,982
Removed in 1903	11,620
	54,602

† Actual balance in store on 31st December, 1902, 35,385 cwt., difference 2,500 cwt. being salt paid for but not removed.

DESTRUCTION OF WILD BEASTS.

Rewards were paid for the destruction of seven leopards and three bears in the Jaffna District, and for sixteen leopards and five bears in the Mannar District. In the Mullaittivu District rewards were paid for killing twenty-nine leopards and fifteen bears. Many more are killed than are shown in these figures. The people prefer to sell the skins to traders for a higher amount than the Government reward.

WORKING OF THE PROVINCIAL AND DISTRICT ROAD COMMITTEES.

Abstract of Money spent by the Provincial and District Road Committees on Minor Roads, Buildings, &c., in 1902.

PILGRIMAGES.

At the annual festival of the Hindus in honour of the snake goddess (Nakammal) at Nainativu about the middle of the year over 20,000 people assembled. Everything went off quietly. The usual sanitary precautions were taken, with satisfactory results.

About the same time the festival at Madu Church near Vavuniya was celebrated, and a number of pilgrims, both Hindus and Catholics, attended. 23,216 persons were counted at the "pitchai choru" (distribution of rice) at the festival, and there were 997 carts. There were only two deaths, both of children. The water supply was good, and the general health of the pilgrims was excellent.

CRIME.

The headmen generally co-operated with the police in the prevention and detection of crime, with very few exceptions, which were met by suitable punishment. A sum of Rs. 1,446 was paid to unpaid headmen as rewards and to meet expenses incurred by them in the performance of their duties.

Annexed is a statement of the number of cases of murder or attempted murder and of those in which the knife has been used :—

	Reported.	Brought to Trial.	Convicted.	Pending.
Murder	5	5	2	—
Attempted murder ...	1	1	1	—
Manslaughter	2.	2	—	—
Hurt with knife ...	70	70	28	6
Grievous hurt with knife ...	10	10	4	3

Charges of cattle stealing are on the decrease. There was only one case against two accused persons, both of whom were acquitted.

CASTE AND RELIGIOUS DISPUTES.

I made special mention in my last report of these disputes being a fertile source of crime. These were much in evidence during the year under review, no less than twelve cases being reported of unlawful assembly, with modifications as to rioting and grievous hurt, homicide, &c. As I have stated, they are due to Vellalas resenting the adoptions of customs hitherto peculiar to them only, as of wearing jewellery, riding in carriages, using tom-toms at social functions, &c., by the low-caste Nalawas and others, who have become rich and decline to follow the old "customs."

A large mob of Vellalas assembled at Neervali and demolished the Roman Catholic church there (a shed with cadjan roof) used by the Nalawa converts, broke the furniture, and hacked to pieces the images held sacred by the converts. It was a most impudent outrage committed by a gang of miscreants in broad daylight on the King's Coronation Day. A punitive police force was quartered there for three months. The cost of their maintenance is being recovered. The place is now quiet. Eleven of the Vellalas were convicted and sentenced to two years' rigorous imprisonment each.

At Kopay, a village close to Neervali, a similar cadjan-roofed shed used as a Roman Catholic school was burnt down by night. The people are peaceful and loyal. The incendiary could not be of that village, and is supposed to belong to Neervali, but however no trace could be found of him.

2. At Tunnalai certain Hindu Vellalas stopped a wedding procession which sought to proceed to the Wesleyan chapel with the beat of tom-tom. Though prosecutions of the offenders had ended unsatisfactorily, the whole difficulty gradually died out.

3. A similar procession of the jewellers of Valvettiturai was stopped by the Vellalas of the place for having used "native music" at the function. The offenders were prosecuted, and five of them were sentenced to one year's rigorous imprisonment each.

4. At Sarasalai an unlawful assembly of Vellalas set upon native musicians, who were proceeding to "play" at the wedding-house of a Covia (low-caste) man. The offenders were tried before the District Court and have been acquitted.

5. A riot between two factions of the Vellala people at Manipay, when the annual Hindu festival at that village came off, led to fifteen persons being fined Rs. 50 each by the District Court.

6. A riot between Vellalas and Nálawas at Manthuvil was dealt with by the District Court, and seven persons were fined Rs. 25 each.

7. After a fight between two factions of Tamils at the Nallur Kandasamy temple, the faction which was worsted pursued their opponents, and, taking them by surprise, wounded one of them to death and hurt various others. Fifteen of the aggressors were tried and acquitted before the Supreme Court. The principal witness spoiled the case by varying his statements, and pleading that the assault on him had affected his memory.

8. For disturbing a procession of blacksmiths of Puloly six Vellalas were sentenced to six months' rigorous imprisonment each.

9. There were a few other caste quarrels which did not come to court, but gradually died out.

PROPOSALS IN REGARD TO PUBLIC WORKS.

Under instructions I repeat the list of former years as they remain to be dealt with :—

(*a*) Water supply for Jaffna.
(*b*) Reclamation of the Karaiur tidal flat.
(*c*) Road to Mullaittivu from Paranthan.
(*d*) Road to Tunukkai from Paranthan.
(*e*) Completion of Mannar-Madawachchi road and its continuation from Mannar to Talaimannar.
(*f*) The repair and completion of the new trace on the Mannar Coast road from Mannar to Illuppaikkadavai.
(*g*) Annual votes for wells.
(*h*) Improvement of the road from Vavuniya to Parayanalankulam.
(*i*) A road from Pallai to Chempianpattu.
(*j*) Side drains for Chavakachcheri and Kodikamam bazaars.
(*k*) A new resthouse for Vavuniya.
(*l*) Extension of the telegraph to Kayts.

(*a*) It is satisfactory to note that an officer has been sent to make a survey of the work, and it is hoped that the work will be taken up as early as possible if the report and estimate are satisfactory.

(*b*) The consideration of this work must, I think, await the completion of the railway.

(*c*), (*d*), (*e*), (*f*), and (*h*) These works are being carried on by sections, and it is hoped that they will be completed as early as possible, as their necessity has been fully shown.

(*g*) This is one of the most useful votes made to the Government Agent, as it tends to the improvement of the water supply of the villages where the supply is badly wanted. The usual vote is Rs. 1,500.

(*i*) I would repeat the same remarks made by me last year on this subject.

(*j*) It is now contemplated to remove the bazaar at Kodikamam to a site on higher level, but side drains for both these villages are distinctly necessary.

(*k*) As I said in my last report, a new resthouse for Vavuniya is very desirable on a site near the railway station. The existing resthouse is too small, and is inconveniently situated close to the hospital.

(*l*) The port of Kayts is really the most important in the Province, and is the only one unconnected by wire with Jaffna. It is desirable in the interest of Government and the public to extend the telegraphic communication to this port.

The following abstract shows the amount expended on public works in the Province during the year :—

	Public Works Recurrent.	Rs.	c.
1.	Maintenance of roads	112,427	65*
2.	Maintenance of inland navigation	3,012	40
3.	General	73	37
4.	Repairs to buildings	9,315	44
5.	Additions to buildings	2,216	14
6.	Repairs of bridges	5,519	17
7.	Miscellaneous	10,045	79
	Total	142,609	96

	Public Works Extraordinary.	Rs.	c.
8.	New works and buildings	23,853	64
9.	Alterations and additions to buildings	5,533	16
11.	New roads	30,448	94
12.	Addition and improvement to roads	26,343	82
16.	Miscellaneous	3,557	85
	Total	89,737	41

SUPPLEMENTARY SUPPLY BILL.

	Public Works Extraordinary.	Rs.	c.
8.	New works and buildings	7	50
13.	New bridges	180	59
	Total	188	9
	Jaffna Railway Loan	4,236	4
	Grand Total	236,771	50

* Rs. 30,315.75 of this was Committee money.

WORKS MOST REQUIRED AND PLANS FOR IMPROVEMENT.

For reasons stated at the commencement of this report, I have no fresh recommendations to make. What is required is steady systematic continuance of the policy of irrigation and improved means of communication between the villages and the main arteries and the railway now in process of construction through the Vanni. These points have been fairly freely set forth in the Administration Reports of the past few years.

EVENTS.

1. The chief event of the year was the opening of the first section of the Northern railway at Jaffna on the 11th March by His Excellency the Governor, with great popular demonstration. The people appreciated the benefits of the railway, and there was much enthusiasm shown on the occasion. Addresses and telegrams poured in expressing the gratitude of the Tamils all over Ceylon.

2. The termination of the war in South Africa and the conclusion of peace was hailed with joy by the loyal people of this Province, who evinced great interest in the celebrations fixed for the Coronation Day. The sudden illness of the King, however, came as a shock. Prayers were offered in the various religious edifices, both Christian and Hindu, for the speedy recovery of His Majesty, and grateful thanks were given when the recovery was announced.

3. An Agricultural and Industrial Show was held at the instance and under the supervision of Sir William Twynam, K.C.M.G. As a first attempt it was creditable, especially in consideration of the short notice given; however, all the Jaffna arts and industries cannot be said to have been fairly exhibited, and there was hardly sufficient competition. There was a good show of different kinds of paddy. Marine exhibits were poor.

4. The Coronation of His Majesty King Edward VII. was celebrated with great pomp and enthusiasm, and alms were freely distributed among the poor in commemoration of the important event.

5. Mr. R. W. Allegakoon, Police Magistrate, Point Pedro and Chavakachcheri, was transferred to Chilaw, and Mr. G. Prins took up duties in his place.

6. Mr. Chit Kailayapillai, Chief Mudaliyar of the Kachcheri, was transferred to Batticaloa. He was succeeded by Mr. S. Sabaratnam.

7. His Excellency the Lieutenant-Governor and suite made a tour in the Vavuniya and Mannar Districts in September, and returned to Colombo visiting Rameswarem on their way.

8. Mr. Constantine was succeeded by Mr. Denham in the Assistant Agency of Mannar, and Mr. Schrader by Mr. Festing in that of Mullaittivu.

CHENA CULTIVATION.

Only nine permits were given to chena cultivators in the Jaffna District, 154 in the Mullaittivu District, and none in the Mannar District. The chenas were chiefly confined to tank beds with a view to having them cleared.

NURSERY GARDENS.

There is a small garden maintained by Mr. Rudd for many years past at the police station near the Kachcheri from casual funds realized by sale of dead timber. It has done good service in the free distribution of mahogany, inga sama, teak, and similar trees and shrubs throughout the Province. A small grant from Government for its continuance is desirable.

The garden at Kanakarayankulam was closed, as the site was found to be unsuitable, but the Vavuniya garden is doing good work. This is referred to in the report of my Assistant at Mullaittivu.

IRRIGATION.

Village Tank Restoration.—The annual labour due by the shareholders was performed during the year. Annexed is a statement of the number of working village tanks in the Province :—

District.	Tanks in. 1901.	Tanks in. 1902.
Jaffna	32	32
Mannar	179	179
Mullaittivu	290	296
Total	501	507

There is an increase of six tanks brought under restoration in the Mullaittivu District.

The number of days' labour called out was 69,049, which, at 37½ cents a day, is equivalent to Rs. 25,893·37.

A return of labour on tanks furnished by the Chief Irrigation Inspector is annexed:—

[For Return see next page.]

The year 1902 witnessed the completion of the Giant's tank, which is a source of immense benefit to the cultivators of more than one-half of the Mannar District.

The irrigation rules under Ordinance No. 23 of 1889 were strictly enforced throughout the Province, and certainly with good results. In the Mannar District a certain section of the cultivators petitioned that they should be exempted from labour on their village tanks, which are now supplied with water from the Giant's tank, on the plea that they pay irrigation interest for the water supply. The demand was both illogical and ill-advised, for until the village tanks are completed the waste of water would be great, nor could a perpetual flow of water be supplied all the year round. Taking this view, Government declined to exempt these villagers from their liability under the irrigation rules of the Province.

Return of Tank Labour for 1902 of Mullaittivu, Mannar, and Jaffna Districts.

Divisions.	No. of Working Tanks.	No. of Days' Labour called out.	No. of Days' Labour done by Villagers.	Extra Labour called out in Repairs to Breaches.	Extra Labour done in Repairs to Breaches. VILLAGE TRIBUNALS.

Village Tribunals and Committees did not exist in the Province until one was established at Vavuniya when the Assistant Agency was removed to Mullaittivu. During the year another was established for the island of Delft, in consideration of the isolated position of the island and the limited means of the inhabitants. The Maniyagar of the island has been made the President on a salary of Rs. 880 per annum for the combined post. Rules under section 6 of the Ordinance No. 24 of 1889 have been framed and passed, and the Tribunal so far works satisfactorily. The Tribunal at Vavuniya is doing good work, and the people seem to appreciate it.

A return showing the work done by the two Tribunals during the year under review is annexed :—

Return showing the Number of Criminal and Civil Cases instituted, decided, and appealed under the Village Communities' Ordinance for the Year 1902.

	Vavuniya North and South, Panankamam, and Metkumulai.	Delft East, Middle, and West.	Total.

WORKS OTHER THAN ROUTINE.

Mr. J. P. Lewis, who acted as Government Agent, took much interest in the Archæology of the Province. Some interesting discoveries were made of Buddhist remains anterior to the Tamil occupation of the Province. Two large upright images of Buddha were found at Chunnagam and Tunnalai, which were not too much broken to be restored completely, and were set up in the park at the Government Agent's residence.

In Jaffna some tombstones of the Portuguese period were discovered. My Assistant at Mannar has remarks on the Archæological work in that district, in which Mr. Denham takes commendable interest.

LEGISLATION.

I have no fresh suggestion to make. I would only repeat what has already been stated as to the need for regulation of the Hindu temples' temporalities.

RAILWAY LAND ACQUISITION.

Statement of Lands acquired for the Northern Railway during the Year 1902.

Number of lots acquired	35
Extent acquired	1A. 0R. 31·43P.
Amount paid for land	Rs. 1,355·62
Total amount incurred on account of the acqusition	„ 47,042·26

The line has been opened as far as Pallai, and the total collection on account of the Railway from March to end of the year was Rs. 27,736·63 for the open section.

Statement of Land sold in the Jaffna District in 1902.

Description of Land sold.	Extent. A. R. P.	Price. Rs. c.
Fit for paddy	260 2 6 ...	10,069 0
Fit for garden	88 3 3 ...	1,581 0
Fit for cocoanut	444 2 27·61 ...	14,175 0
Total ...	739 3 36·61	25,825 0
Sale in 1901	609 2 33 ...	11,187 0
Increase in 1902	184 1 3·61 ...	14,638 0

It may be noted that the amount realized in the district in 1902 is more than double the amount realized in 1901. There were ten sales held during 1902.

The following is a statement showing the approximate extent for which applications were forwarded in 1902 to the Surveyor-General for survey :—

	Acres.
March	6
July	22
August	27
November	55
December	288
Total ...	398

including five Crown requisitions for survey of 285 acres in The Islands division to prevent encroachments. The fall in the private applications for survey was due to the introduction of the new land sale regulations in January, 1902.

There were not many sales of private lands, but, on the contrary, there is a good demand for Crown lands.

WASTE LANDS.

The Waste Lands Ordinance has not been introduced into this Province.

HORSE ESTABLISHMENT.

	Rs.
Revenue	1,000
Expenditure	1,050

There were thirty foals born during the season, but of these five were born dead, and there were sixteen deaths, caused chiefly by want of grass for the mares and foals.

The present stock consists of—

	At Delft.
Stallions	3
Brood mares	59
Foals	16
	At Iranativu.
Young stock	41

Since the commencement of the breeding experiment in 1898 the total expenditure has been Rs. 6,190·36, and the revenue Rs. 8,839·80, leaving a profit of Rs. 2,649·44.

The financial results of the year would be better had I not decided to keep back ponies from sale until they are between three- and four-year old; of course they will come in for sale in 1903.

The year 1902 was a disastrous one in Delft for both cattle and horses. The usual April–May showers having failed, the overstocked pasture was exhausted, and the water supply ran short on the plains. Consequently the weak cattle and horses had to travel over 4 miles to the only available water at Saraputti, and then return to the plain to pick up the scanty herbage. In result the reports show that the villagers lost 1,364 head of animals (see remarks under head "Health of Cattle"), and 5 mares and 21 foals of the Government stock died.

The rains began in October, and continued until the end of December to such an extent that the pasture grounds were completely flooded. Only the sandbank round the Island afforded shelter and a precarious food supply. The people assert that such a flood has been almost unprecedented in their recollection.

Delft island is in extent 18 square miles, excluding the salt lakes. The "village" pasture land may be estimated at 7,000 acres, the "horse plains" 3,000 acres, and the village compounds 1,000, a total of 11,000 acres, but of this a great deal is mere coral stone. Cattle, sheep, and goats are more than double this number. The land can only carry one beast to the acre where there is good pasturage, so that it is clear that Delft has double the amount of beasts it can feed. But no cattle disease occurs, and the only natural check on production is death by famine. The people will not sell their cattle except at a ridiculous price, based probably on the recollection that when the Government cattle were in the island the breed was preferred; so they ask Rs. 20 to Rs. 25 for these degenerate cattle. I had one bull killed and weighed, and he scaled 59 lb. Similar animals could be purchased on the mainland for Rs. 8 to Rs. 10, and they make no use of the cattle. They run wild. I am now having them branded under the Gansabhawa rules to endeavour to make ownership certain and ascertain the actual numbers. But while I was trying to improve matters in the interest of the cattle and the horses, a few persons, instigated and supported in Jaffna, proceeded to enclose the pasture lands, over which the village cattle and horses graze in common, by asserting ownership to the horse enclosures on the plains. These plains were formerly kept for the sole use of the Government stud, and were cut off from the inhabited part of the island by a wall. These attempts at encroachment I firmly resisted. The Legislative Council was appealed to by the would-be encroachers, but my action in securing the pasturage land as common pasture was upheld. A good deal of heat was imported into this somewhat trivial matter. I have therefore thought it well to deal with it at some length.

MISCELLANEOUS.

I consider it only right to refer to the very commendable public spirit of Mr. V. Vallipuram, a native gentleman of Jaffna, in providing a "chattiram" and a well in the Grand Bazaar for the comfort and convenience of natives who visit the town. On a previous occasion he largely contributed towards the erection of a latrine for the use of the public near the Grand Bazaar, and then applied to me for permission to build a "chattiram" or "native resthouse" with a well for the public. Permission to use a site in the market ground was readily granted by the Provincial Road Committee, and a commodious upstair building and a substantial well were constructed at a very cosiderable cost.

The Kachcheri,
Jaffna, June 2, 1903.

R. W. IEVERS,
Government Agent.

REPORT ON THE MANNAR DISTRICT FOR 1902.

Area, 943¼ square miles; Population at the Census of 1901, 24,926.

I.—REVENUE AND EXPENDITURE.

The revenue of the year amounted to Rs. 74,779·38, showing an increase of Rs. 20,184·21, or more than one-third, on the revenue of 1901. This is the highest revenue since 1894.

There has been an increase in the totals under each head of service, with the exception of Customs, which shows a decrease of Rs. 1,986·77. This is due to the fact that no elephants captured in the Mannar District were exported to India in 1902, while the revenue under this head in 1901 amounted to Rs. 1,400. There has also been a steady decrease in imports since the enforcement of the quarantine regulations, which close the Mannar ports to trade with South India.

The chief items showing an increase were:—

I.—*Licenses:* (*a*) *Arrack, Rs. 1,900.*—The rent was sold for a higher amount.

(*b*) *Salt, Rs. 8,613·06.*—Due to good fishing and sale of natural-formed salt.

15,721 cwt. of self-formed salt were collected in the leways at Thalvodai in 1895 and were stored at Thalvodai and Mannar. Of this salt, 4,591 cwt. were sold from these stores. The balance 11,130 cwt. were removed to Jaffna on Government account. This salt is sold at Rs. 2·36 a cwt., so that its total value was Rs. 37,101·56; deducting the expenses for cost of collection, removal, and weighing, which amounted to Rs. 6,844·10, the estimated profit to Government was Rs. 30,257·46. The expenses, except the cost of weighing at Jaffna, were paid from the Mannar Kachcheri, and it may fairly be claimed that the value of the 11,130 cwt. which were removed and sold at Jaffna, which amounts to Rs. 26,266·80, should be properly credited to the Mannar revenue.

(*c*) *Ferry Toll, Rs. 84.*—The rent sold for a higher amount, which shows an increased traffic between Mannar and the mainland.

The only decrease under the head "Licenses" was in Police Court fines (Rs. 502·19), due to less fines inflicted.

II.—*Fees of Court:* (*a*) *Recoveries on Irrigation Works, Rs. 10,697·17.*—This increase was due to the recovery of water-rate—interest on the Giant's tank works (*vide* remarks on "Irrigation").

(*b*) *Collection at Dispensaries, Rs. 50·72.*—Due to more persons resorting to Government treatment.

The only decrease of any appreciable amount under this head of Service was in judicial stamps, which show a decrease of Rs. 361·95, due to less litigation.

III.—*Sale of Government Property:—Other Forest Produce, Rs. 217.*—Due to the high amount, paid for the right to collect avaram bark, which sold for Rs. 1,000. This right has rapidly become more valuable. The figures for the last four years are—

	Rs.		Rs.
1899	200	1901	750
1900	240	1902	1,000

The collection gives employment to a large number of Moormen, chiefly round Vidattaltivu, who go out into the Wanni in gangs between June and September.

IV.—*Land Sales, Rs. 1,446·31.*—Due to more land sales being held in 1902. 69 lots of Crown land were sold in 1902, as against 22 in 1901.

Few lots fetched more than Rs. 10 per acre. Land was purchased round Attimoddai and Vidattaltivu for tobacco cultivation, a few lots for cocoanuts, and some small building lots in Mannar town, for which there is a demand.

For land there is, however, no general demand locally (*vide* my remarks under "Schemes for Improvement" and "Irrigation").

The purchasers of land are nearly all Moormen, who have been making money by trading in Mannar or by exporting chanks and bêche-de-mer.

The complete survey of the land under Giant's tank, which will be commenced early in 1903, will bring 4,000 acres of Crown land into the market in small lots, and a better idea can then be obtained as to whether the local demand will meet the supply.

Application was this year made for the survey of 25 lots of land—an extent of 24A. 2R. 38P.—which were sold under Ordinance No. 23 of 1889 for default and purchased for the Crown, there being no other bidders at the time. This happened before the Giant's tank restoration, which has now made these lands irrigable, and there should be no difficulty in obtaining purchasers for them.

Fourteen private applications for survey of Crown land were made in 1902. The people are not yet accustomed to come forward and deposit survey fees; they prefer to wait until the land is put

up on a Crown application. In one or two cases on circuit I pointed out pieces of land to the villagers as suitable for cultivation, and got applicants to deposit fees.

It will, however, take time to accustom these ignorant villagers to paying in of their own accord fees—to be kept in deposit for many months in the Kachcheri—before they can purchase the land.

A sum of Rs. 7,631·25 was paid under the Thoroughfares Ordinance in addition to the ordinary revenue.

The payments made at the Mannar Kachcheri are always heavy: the payment of the Immigration Departments at Paumben and Tuticorin are made through Mannar, as well as payments on account of the inspection of pearl banks.

The total expenditure on votes allowed the Mannar Kachcheri was Rs. 90,494·64, the largest items being Rs. 10,262·45 on account of inspection of pearl banks, Rs. 61,125·23 on account of immigration, and Rs. 1,637·66 on account of pensions.

II.—WEATHER.

The total rainfall for the year as registered in Mannar was 55·21 inches, against 29·10 inches in 1901. This is the heaviest rainfall since 1891. It was distributed as follows:—

	Inches.
First quarter	12·41
Second quarter	5·82
Third quarter	Nil
Fourth quarter	36·98

No rain fell in July, August, and September. The two heaviest falls were 3·45 inches on 20th June and 3·41 inches on 27th October. The rainfall at the end of the year was very heavy. The streets and esplanade at Mannar were flooded, but the outlets cut by the headmen proved sufficient and little inconvenience was caused. The only road damaged was the South Bar road, where two culverts were injured. The year would have been an admirable one for storage of rain water were there sufficiently large reservoirs in the town, but unfortunately such good rainfall is rare in Mannar.

III.—AGRICULTURE, &C.

Rice and Paddy.—The imports of rice in 1902 amounted to 35,567 bushels, as against 33,763 bushels in 1901. There was also an import of 5,761 bushels of paddy, while there was a marked falling off in the export of paddy, only 2,085 bushels being exported in 1902, as against 7,360 bushels in 1901 and 21,276 bushels in 1900. This was probably due to the very bad season in the Musali division and in the Wanni, where there was practically no cultivation. The headmen's estimate of the paddy harvest for 1902 is 107,604 bushels, against 118,000 bushels in 1901.

Tobacco.—The yield of tobacco in 1902 is estimated at 9,660,000 leaves; the previous year the estimate was 9,380,000. The district suffered from over-production, which was not confined to Mannar alone, but extended to the northern peninsula. New areas for tobacco were opened in the Jaffna District, and the market was at one time glutted. The Mannar District suffered most, as many of the Jaffna traders who had come down in previous years to Attimoddai and Vidattaltivu to buy tobacco found they could get it as cheap nearer home.

Prices varied greatly, and those cultivators who were able to get their tobacco early on the market realized good prices, while others, especially in the Perunkali and Illuppaikadavai pattus, were obliged to sell off large stocks at a very low figure.

The variation in prices was so great that tobacco cultivators at Manayankulam obtained Rs. 25 per 1,000 leaves, while a large quantity of tobacco at Kuruntankulam sold at the rate of Rs. 5 per 1,000. The average price was probably Rs. 7·50 per 1,000.

Straw.—At the close of the year 740 bundles of straw were exported from Mannar to Jaffna—a new export.

Fishing.—The fishing season was a good one, as is shown by the increase in the amount of salt sold for curing purposes and in the increased export of dried fish.

There was an increase of Rs. 3,400·25 in the declared value of the dried and salted fish exported from Mannar in 1902 over the amount declared in 1901; 335 cwt. of fish in excess of the previous year were exported.

IV.—FOOD SUPPLY.

The main source of the food supply is rice, the usual meals of the people being cold rice in the morning and rice and curry in the noon and evening. The fresh curry is eaten in the middle of the day, while the rice is fresh cooked for the midday and evening meal; the remains of the latter serve for the following morning.

The chief kinds of curry are: (1) a fried curry called poriyal; (2) a stew called varai; (3) an araiyal (or pounding) consisting of chillies, scraped cocoanut, tamarind, and onions pounded; (4) a hot or black curry, in which the chilly forms the chief ingredient; (5) a white or milk curry, in which cocoanut milk is used with lime juice; (6) a "sothi" or watery curry, which is the concluding dish.

With the majority the black curry and the "sothi" are the usual kinds of curry eaten. The curries are usually fish curries. Fish is generally procurable, as is shown by the amount annually dried and exported to Colombo and Negombo.

Vegetables are scarce on the island, but on the mainland green plantain, brinjal, murunkai leaves, and pumpkins are in common use.

A meat diet is undoubtedly on the increase amongst those who can afford it. A large number of sheep and goats is annually slaughtered, though beef is very little eaten. There is only one butcher in Mannar, and in 1902 he slaughtered 48 cattle.

There is an increased use of groceries, and this is clearly evidenced by the rapid changes taking place in the class of goods exposed for sale in the bazaar. Five years ago it was impossible to get any "European stores" in Mannar, and now there is no difficulty in obtaining ordinary groceries.

The Adigar of Mantai reports that in the morning cold rice is giving place to tea: "even in the Wanni tea is drunk in the mornings." He adds, "Coffee is only used as medicine."

The poorest classes, who cannot afford to have more than one curry a day, add to their diet the root and fruits of the palmirah; these are, however, commonly eaten by most of the villagers in the island.

Fruit is scarce in the district. Palmirah fruit can be obtained all over the island and Mantai north and south. Plantain, mango, jak, oranges, pomegranates, and limes are grown in some villages in Mannar island, Mantai north and south, and Nanaddan west, and in most of the villages in Panankamam and Metkumulai. Pineapples can occasionally be obtained from a few villages in the Wanni.

It is difficult to get the villagers to grow anything besides the murunkai, the chilly, and plantain, which are, as a rule, the only plants in his compound, but in one or two villages—*e.g.*, Achchankulam and Attikuli—the increased water supply from Giant's tank has encouraged further cultivation.

The year was on the whole a good one; there was no scarcity felt at any time. The average price of paddy was from Re. 1 to Re. 1·50, rice Rs. 3·50 to Rs. 4·50, and fine grain Re. 1 a bushel, while good fishing enabled the villagers in the island and along the coast to procure fish easily and cheaply.

V.—SANITARY CONDITION OF THE PEOPLE.

The death-rate for the year was 35·4 per mille, as against 47·6 in 1901. The birth-rate was 39·15 per mille, as against 37·8 in 1901. The births exceeded the deaths by 93, instead of being in a minority of 243, as was the case in 1901.

For the first five months of the year the deaths exceeded the births for each month, the excess for the five months being 93, the next seven months giving exactly double this majority to the births, leaving the latter 93 to the good.

The figures are better than last year. The population of Mannar has however *decreased* by approximately 150 since the last Census (held on 1st March, 1901), while the Census showed Mannar to be the *only* district in the Island of Ceylon in which there had been a decrease in population during the decade (1891-1901). It is necessary to briefly analyze the causes of this heavy mortality.

(*a*) *Climatic Conditions.*—The changes in season appear to be felt more in Mannar than elsewhere. The heavy rains of October and November are followed by the cold and damp December and January evenings. The death-rate is always heaviest during the first three months of the year. As my predecessor states in his report for last year, "every man expects to have fever, and looks on its coming and going as one of the ordinary incidents of life." "Mannar fever" is of a particularly strong type, and, though the patient generally recovers from the attack, he succumbs to the first chill or cold he may subsequently catch.

(*b*) *Improper Treatment.*—Recourse is still had to a very considerable extent to the native "pariaris," or doctors. Though many of these practitioners now prescribe quinine in fever cases, they yet maintain many and injurious forms of treatment. It is generally laid down by them that in all cases of fever the medicine given is sufficient nourishment, and they refuse to allow their patients to touch any food. Cases have come to my knowledge where persons treated by these men have died literally of weakness, having taken no nourishment of any kind for several days after the fever had left them.

(*c*) *Infant Mortality.*—The death-rate amongst children in Mannar is very high. Out of 519 deaths during the first six months of 1902, 263 were children under 15, or 51 per cent., and in some parts of the district the rate is still higher.

In one headman's division during March, out of 19 deaths 17 were of children under 15, and of these 9 were children who did not live a week.

This mortality is chiefly due to improper treatment and improper nourishment. The illnesses which cause most of these deaths are convulsions, bronchitis, and pneumonia, due largely to exposure and neglect of the children during the wet months. It is not at all uncommon to see infants in arms given palmirah roots to eat, and little or no care is taken to discriminate between the meals of the parents and the small children.

Another cause is (*d*) *Puerperal Mortality*, which has always been high in this district. Efforts were made for some time to induce women qualified as midwives to practise here, but without success.

In October the town midwife was persuaded to go up to Colombo for a free course of instruction for six months at the De Soysa Lying-in Home. It is to be hoped that the experiment will prove a success, and that the woman will be ready to adopt new methods.

(*e*) *Local Conditions.*—The health of Mannar town would be greatly improved by a proper water supply; the present difficulty in procuring water (*vide* "Works most required") is a tax on sanitation and cleanliness.

The improvement of the water supply, especially of Mannar, the spread of improved methods, and an increased confidence in the Government medical treatment will do much to counteract the natural disadvantage of climate from which the district suffers.

All the villages of the district are within range of dispensaries, which are freely availed of, as will be seen from the statement annexed:—

Name of Hospital or Dispensary.	Number of Patients treated.		
	Indoor.	Outdoor.	Total.
On the Island.			
Mannar hospital	272	2,410	2,682
Pesalai hospital	58	1,850	1,908
Talaimannar dispensary ...	—	1,299	1,299
On the Mainland.			
Adampan hospital	283	1,929	2,212
Puliadyirrakam hospital ...	166	840	1,006
Vankalai dispensary... ...	—	2,329	2,329
Marichchukaddi dispensary ...	—	994	994
Uyilankulam dispensary ...	—	164	164
Silavaturai dispensary ...	—	3,846	3,846
Murungan dispensary ...	—	1,291	1,291
Vidattaltivu dispensary ...	—	2,445	2,445
	779	19,397	20,176

The dispensary opened at Iranai-illuppaikulam for the bad months of the year was again continued, and the Metkumulai villages petitioned that it might be kept open for a few more months.

Parangi is not prevalent in this district, except in two villages, Talaimannar and Attimoddai; in the latter it has long existed, but has not spread. Talaimannar is a large and prosperous fishing village. The disease has spread rapidly. There were 60 cases from Talaimannar treated at the Mannar hospital this year, and last year 21. The only other cases of parangi which ever come into hospital are beggars passing through the district. I have asked that special measures be taken to treat the Talaimannar cases locally, or at an isolated spot in the neighbourhood, to prevent the disease spreading to Mannar town, to which all cases are now brought. The probable causes of its prevalence at Talaimannar are the dirty habits and living of the villagers and a poor water supply.

The sanitary condition of the people of the district is on the whole good. Compounds are kept fairly clean; the rubbish is heaped up on waste pieces of ground to be burnt when the next visit of inspection is anticipated.

The side drains through the principal villages are kept open, and attention is paid to white-washing and clearing of jungle.

Two new latrines are being built in Mannar, and were near completion at the end of the year. The town is kept clean by a force of scavenging coolies.

There were no outbreaks of any infectious illness throughout the year.

VI.—HEALTH OF CATTLE.

The health of cattle throughout the year was good. The rains at the end of the year came in good time and were heavy, so that the dry season was little felt. The rains, however, caused a heavy mortality amongst goats, large numbers dying from hoof disease called "kurainoy."

Large herds of cattle wander over many parts of the district apparently uncared for, yet there is seldom any disease amongst them. There have been no outbreaks of murrain since 1895, when it was brought into the district by cattle from Jaffna.

The quarantine regulations have put a stop to the importation of Indian cattle into any places in the Mannar District, and the immunity of the district may be partly due to this.

The number of cattle vouchers issued was 4,482, as against 4,076 in 1901, due to increased demand for cattle for export.

VII.—EDUCATION.

The following are the Government schools in this district:—

English.

Mannar Good Shepherd's.

Vernacular.

Achchankulam.
Adampan.
Alkaddiveli.
Arippu.
Karisal.
Kathankulam.
Katkidanthakulam.
Mannar.
Mannar Good Shepherd's.
Modutakam Paddankaddi Kudiyirippu.
Mullikulam.
Mullitidel.
Murunkan.
Navalkulam.
Pallimunai.
Pallimunai.
Papamotai.
Pesalai.
Pivarykulam.
Suriyakaddaikadu.
Sirukandal.
Talaimannar.
Thailankudurippu.
Thalvopadu.
Tottavelly.
Uvaiaddipannai.
Uiylankulam.
Vanchiankulam.
Vankalai.
Vidattaltivu.

Two new schools were built during the year, one at Iranai-illuppaikulam in Metkumulai, the first Government school opened in this part of the district; the other at Putuveli in Musali south, which will benefit a large area round Silavaturai, where the children, nearly all Moors, have previously had no education.

A school at Ernkilampiddy is urgently needed. In this large and prosperous village with a population of 1,893 persons there are not more than half a dozen children able to read and write. The people are very anxious to have a school, and agreed to build one on the lines proposed by the Director of Public Instruction.*

VIII.—IRRIGATION.

The most important events of the year were:—

(1) The results of the year's work under Giant's tank and the first collection of water-rate.
(2) The commencement of the survey of the Akattimurippu scheme.

(1) My predecessor wrote in his diary last year that "the outlook at the end of the year, owing to the scanty rainfall, is gloomy in the Musali division, and would have been so in Mantai and Nanaddan divisions but for the Giant's tank."

There was a complete failure of crops in the Marichchukkadi group of villages, and only in a few villages in the Musali were any crops reaped. Special permission was granted to these cultivators to capture elephants as a measure of relief.

In the Perunkalli and Illuppaikadavai pattus there was also a failure of crops, but the sale of tobacco, which is now the main cultivation of these divisions, relieved any distress.

On the whole the villages under Giant's tank fared well, while the value of the restoration to this district was most abundantly proved. Not only did the Gaint's tank in its first year save the

* A school at Erukilampiddy has since been sanctioned.

Mantai and Nanaddan cultivators from a water famine and a disastrous season, but it enabled a sirupokam to be cultivated, *vide* statement given below :—

Name of Village.	Extent sown. Bushels.	Nett Produce. Bushels.	Name of Village.	Extent sown. Bushels.	Nett Produce. Bushels.
Karunkandal ...	30	250	Nanaddan ...	35	150
Parappankandal Periyakulam	112½	700	Pallankoddai ...	50	250
Do. Sirukulam	30	200	Siruchampankaddikadu	20	50
Malaiaruttakaddai Adampan	5	50	Kusavankuli ...	35	112½
Kannadi ...	25	100	Koddaikulam Mavilankani	20	100
Pidarikulam ...	12½	75	Attikuli ...	3	50
Murunkan ...	75	250	Puthirakandan...	10	30
Pontivukandal...	50	150			

The extent cultivated and the produce reaped at Parappankandal constitute a record which has never been approached in this district. The extent sown would have been much larger had it not been for the laziness of the cultivators, who in many villages applied for water for their tank and then did not take the trouble to cultivate.

The rainfall during the last quarter of 1902 was very heavy, 36·98 inches falling between October and the end of December, a complete contrast to the rainfall of the previous year. It rained almost uninterruptedly from the early part of October, and in consequence the supply of water from Giant's tank was not required at this time. Cultivation was for a time retarded, as all the fields were flooded, and even in many of the villages where there had been "puluthi" cultivation—*e.g.*, where the paddy had been sown in September in fields prepared in April—the heavy rains prevented germination. In order to relieve the strain on the bunds of their tanks the villagers opened the vans and kept the water low, and when the rains stopped the tanks were again filled up from Giant's tank.

The prospects for 1903 are, however, favourable. Cultivation was delayed, but the crops have been good, notably at Mavilankerni, Attikuli, Kannaddi, and other Nanaddan villages.

The most important work now remaining in connection with the Giant's tank is the cutting of the channels to connect the various tanks, both to expedite and to control the flow from one tank to another. The Sub-Inspectors furnished particulars for all the channels required, and in one or two villages, as, *e.g.*, Palaikuli to Periyanavatkulam, channels were cut by the villagers.

In most cases the work can be done by the villagers themselves, though in some few cases the assistance of Government will be required ; it is important that these channels should be cut in 1903 under the supervision of the Chief Inspector of Village Tanks. The most important channels are—

(1) From Periya Udaippu to expedite the flow of water to Vaddakkandal.
(2) From Sinna Udaippu to Karunkandal.
(3) 11th mile sluice to Vanchiankulam.
(4) 12th mile sluice to Kovvankulam.

The chief work of construction in connection with Giant's tank was the insertion of a spill—200 feet in width—at Kuruvil at the north-east corner of the tank. The spill was constructed at a cost of Rs. 7,654·64. A sluice was constructed at the Palaikuli tank at a cost of Rs. 652 to expedite the flow of Giant's tank water to the lower tanks.

The sluices placed in the bund of Giant's tank and the Alavakkai sufficiently served the tanks below them, with the exception of the Isamalatalvu sluice at the 17½ miles from Mannar. This sluice is only capable of supplying water to the tanks below it where there is a 3-feet head of water running in the Alavakkai, and even then the level of the sluice is such, compared with that of Ismalatalvu tank, that only a very small supply of water can possibly reach this tank from this source. At other times water runs back through the Ismalatalvu sluice into the Alavakkai, and so goes to swell the water supply of Giant's tank.

The only means of supplying the cultivators below Ismalatalvu tank with water is by bringing it from the Thambana Alavakkai sluice 1½ mile further down the road by a channel, which should be cut by the Irrigation Department.

Water-rate.—1902 was the first year of the collection of water-rate, and the annexed statement will show the results of the collection :—

Water-rate Account.

	Rs. c.
Total amount due as per specification	11,073 89
Amount struck off by whole tanks	152 76
Amount struck off for errors	94 98
Amount struck off on account of tanks exempted for 1902 as no water reached them	156 61
Amount recovered in cash	9,741 78
Amount recovered by sale of land	493 28
Amount for which land has been purchased for Crown	410 32
Balance due	24 16*
Interest recovered, Rs. 44·25. Total ...	11,073 89

There was only a balance due at the end of the year of Rs. 24·16.*

The cultivators under two tanks, viz., Kovilkulam and Naruvilikkulam, were exempted, as Giant's tank water did not reach their tanks, but in the case of both of them it is to be hoped that in 1903 water will be brought to them by the cutting of channels.

The amounts Rs. 493·28 and Rs. 410·32—recoveries by sales of land—represent for the most part lands which were rendered fit for cultivation by the supply of Giant's tank water being now afforded them, but which had previously not been cultivated. The owners preferred to let them be sold for whatever they would fetch rather than clear them of jungle and open them up for cultivation. Where

* This amount has since been accounted for by payment and corrections in the specification.

the land was bought in for the Crown the lands were generally situated in tavadi (uninhabited) villages. The absentee proprietor did not want to incur the expense of working these lands from a distance, while there was no one on the spot willing to buy.

The amount struck off for errors is very small, considering that this was the first year in which the specification had been tested by the exaction of payment based on it. In all cases in which petitions were presented for a re-assessment, the owners' deeds were examined, and alterations made—when necessary—in the specification. The largest amount recovered as water-rate was Rs. 114·68 from the Bishop of Jaffna; the average amount paid by the cultivators was from Rs. 4·45 to Rs. 5.

Tank Labour.—The work done on the tanks by the villagers in the Musali pattu was very satisfactory. In the Mantai and Nanaddan pattus the people prefer to commute rather than labour themselves. Good work was done by the Sub-Inspectors of Village Tanks, whose reports I annex :—

Report of the Sub-Inspector of Village Tanks, Mantai, &c., for 1902.

1. Total number of tanks under restoration in the Mantai, Iluppaikadavai, and Perunkalli pattus is 67, and the number of days' labour due on them was 2,090¾, equivalent to Rs. 7,838·84, at the rate of 37½ cents for a day's labour.

2. The quantity of work contributed by the proprietors during the year was 155 cubes, equivalent to Rs. 116·25, and the extra work done by them was 185 cubes. The proprietors of Karunkandal, Parappankandal Periyakulam, and Parappankandal Sirukkulam have also undertaken to do as soon as practicable 1,542 days' work due from them, equivalent to Rs. 578·25. These tanks were full all round the year, and no work could have been done before.

3. Total amount of work done by hired labour during the year was :—

Earthwork	...	...	...	...	4,408 cubes
Turfing	...	...	...	...	1,745½ squares

4. Total number of tanks under restoration in the Metkumulai and Panankamam pattus is 39, and the number of days' labour due on them was 2,057, equivalent to Rs. 771·37½, at the rate of 37½ cents for a day's labour. The quantity of work done during the year by the proprietors was 681 cubes, and the extra work done by them was 115 cubes.

5. *General Remarks.*—Rain began to fall plentifully and suddenly earlier this year. In Mantai pattu most of the tanks had water remaining in them about the time earthwork commenced, and the sudden rainfall prevented the works in a few tanks being completed. In Mantai Giant's tank water, with continual heavy rain flowing into the tanks, caused breaches in the most wasted parts near the vans of Vaddakkandal, Parappukadantan, and Vannakulam, which were promptly blocked up by the cultivators. In Metkumulai also two tanks, viz., Kanakarayankulam and Vavunian Periyakulam, breached on account of the excessive rain, and were promptly blocked up by the proprietors. In some tanks in Mantai the bunds are badly scoured owing to the tanks getting full earlier and before the monsoon had properly settled; a few days blowing of the south-west monsoon was the cause. Sufficient balance is reserved for the repair of these tanks. Works done by the proprietors in Iluppaikkadavai, Metkumulai, and Panankamam pattus were very satisfactory.

Report of the Sub-Inspector of Village Tanks, Musali and Nanaddan Pattus, for 1902.

The paddy crop reaped during 1902 was moderately good, the lateness of the rain having prevented cultivation in several villages in Musali. Giant's tank water was supplied to the village tanks in the Nanaddan pattus for sirupokam cultivation in May, and as the people did not utilize the water, it remained in the tanks, and earthwork had therefore to be postponed. When the rain commenced in October there was no intermission, and consequently earthwork could not be done in some tanks in Nanaddan, where earth could not be taken outside the beds. The work in Musali has been satisfactorily done.

A statement of the work is annexed :—

	For Musali.	For Nanaddan.
Number of days' labour due	8,090¼	... 15,232½
Value at 37½ cents a day	Rs. 3,036·04	... Rs. 5,712·98½
Earthwork done by villagers	4,557 Cubes	... 1,116 Cubes
Value at Re. 1 a cube	Rs. 4,557	... Rs. 1,116
Turfing done by villagers	2,455 Squares	... 558 Squares
Value at 50 cents a square	Rs. 1,227·50	... Rs. 279
Earthwork done by Sub-Inspector of Village Tanks	—	... 1,955 Cubes
Value at Re. 1 a cube	—	... Rs. 1,955
Turfing done by Sub-Inspector of Village Tanks	—	... 597 Squares
Value at 50 cents a square	—	... Rs. 298·50

Irrigation Adigar.—It was decided to appoint an Irrigation Adigar for the district. Mr. Vettivelu, retired Adigar of Mantai, has been recommended for the post.

2. *The Akattimurippu Scheme.*—Mr. Bradley, Irrigation Engineer, was appointed to take up the survey of this important scheme, and arrived in the district on 31st August.

The first surveys were started from the tekkam at Parayanalankulam, as it was at first thought that water might be brought from the Aruvi-aru, which supplies Giant's tank, by a channel on the south side of the river to Akattimurippu tank. Levels were then taken to see if the existing Yoda-ela, which comes from Cheddikulam, could be used in connection with the tekkam at Parayanalankulam, but this was not found practicable. Recourse was then had to an alternative scheme of a storage tank in the neighbourhood of Kulinchivillu and Mavillu, the supply of water for this tank to come from the Kal-aru, a river running into the sea between Silavaturai and Marichchukaddi.

A suitable spot for an anicut was found on the Kal-aru, while the levels taken showed the feasibility of cutting a channel running from the river to the low ground, so as to include Kulinchivillu and Mavillu in one large storage tank. If carried out on the present scheme, this would mean a tank of nearly 3,000 acres with a useable head of 30 feet of water; from this tank a channel would

run to Akattimurippu. The success of the scheme depends on the supply of water in the Kal-aru. In the wet weather, as in 1902, the river brings down a large volume of water, but no account has been kept up to the present of its flow in ordinary years.

The necessity of a scheme to benefit the Musali pattu, in the same way as the Mantai and Nanaddan people are benefited by Giant's tank, is so imperative and so generally admitted that it is to be hoped that it will be taken up as early as possible. The Musali Moormen are industrious and deserving; they are quite willing to pay water-rate at Re. 1 an acre, and even offered Government to pay at Rs. 2.

IX.—WORKS MOST REQUIRED.

For Mannar Island.

(1) A water supply for Mannar town.
(2) Extension of the Mannar-Pesalai road to Talaimannar.
(3) Quarters for the medical officer and dispenser at the Mannar hospital.
(4) A dispensary at Erukilampiddy.

For the Mainland.

(5) The Akattimurippu irrigation scheme.
(6) The completion of the Mannar-Madawachchi road.
(7) Improvement of the Coast road from Illuppaikadavai to Marichchikaddi.
(8) The Kurai scheme.

(1) The need of Mannar is very great. At present all the inhabitants of the town, between the months of June and October, are obliged to go to two wells two miles distant to get drinking water, or else pay other people to get it for them. They are often obliged to wait at the wells for a considerable time, for they soon empty and the water slowly runs in from the spring.

There are three ways suggested for supplying the want:—

(*a*) Water storage.
(*b*) Artesian wells.
(*c*) Conveyance of water from Giant's tank.

With regard to (*a*), there is not sufficient roof area in Mannar to serve as a catchment area, while the rainfall is so variable that it could not always be depended upon to fill the reservoirs sufficiently to meet the town's demands.

Initial experiments are, however, being made, and one of the two old Dutch reservoirs in the Fort was connected by guttering with the eaves of the buildings running alongside. The other cistern will be cleaned and used in 1903.

(*b*) Artesian wells have already been tried between 1892 and 1894, but without success. The experiments were, however, made intermittently and without proper tools; the work was finally abandoned for lack of funds.

As the experiment was not made under the best auspices, it might be worth while making further experiments under the direction of a specialist, but I believe that in the opinion of many experts an artesian well is unlikely to be successful in Mannar.

In (*c*), conveyance of water from Giant's tank, I believe the solution of the difficulty of providing Mannar with water will be found. If the water is brought by an open channel running parallel with the Mannar-Madawachchi road from one of the tanks below Giant's tank—I would suggest Kalikataikadu, 6 miles from Mannar, where the levels would I believe be correct—and thence by guttering on piles across the Mannar channel to a large cistern on the esplanade, I do not believe that the cost would be at all excessive.

I trust that Government will allow these schemes to be fully considered by a qualified engineer, and that one of them may be found feasible.

(2) A start will, I understand, be made with the extension of the Pesalai road to Talaimannar next year, but only a mile will be taken up. The development of cocoanut plantations and the opening up of the large village of Talaimannar should follow the completion of this road, which will, I hope, be pushed on.

(5) I am glad to report that the survey of the Akattimurippu scheme has been commenced, and the prospects are favourable (*vide* remarks under head "Irrigation").

(6) Considerable progress has been made with the Mannar-Madawachchi road during the past year. There is now only one portion which in wet weather would seriously inconvenience the driving of a carriage or riding of a bicycle from Anuradhapura as far as the Mannar ferry, viz., an odai at the 4¼ mile from Mannar. An inlet from the sea runs in here flooding the road to a depth of 2 to 3 feet in wet weather. This odai can be filled in at no great cost, and I understand that an estimate for the work was drawn up by the Provincial Engineer. It should be early attended to.

(7) The Coast road is being yearly improved, but much remains to be done between Mannar and Illuppaikadavai. The Nayar causeway at Vidattaltivu was completed this year.

(8) The Kurai scheme must wait until the completion of the Akattimurippu, but it is important that it should not be lost sight of.

X.—PLANS FOR IMPROVEMENT.

Mannar is the most isolated district of the Island, and perhaps on this account the resources of the district and the people may be under-rated. Yet these resources are considerable. The island affords excellent soil for cocoanut plantation, and this fact is being more fully realized every year by the Moormen of Mannar town.

In 1901, 50 acres of land were planted with cocoanuts in the whole of the district, while the Adigar of Mannar island states that in 1902 an extent of 75 acres was planted in the island alone.

Further, the excellent fishing and the abundance of palmirah trees ensures these villagers against want.

In the mainland, since the restoration of the Giant's tank, the villagers in the Mantai and Nanaddan pattus are in a position to cultivate two crops of paddy yearly, and are insured against any water famine. When the Akattimurippu scheme is in working, the Musali cultivators will be

equally fortunate. The soil of the district is particularly rich, and the crops are good. The people have few wants.

Yet land in the Mannar District can nearly always be purchased at Rs. 10 an acre.

One of my predecessors has remarked in his Administration Report: "With a decreasing population the lands already in the hands of the people are sufficient." Though I cannot agree with his conclusion, there is some truth in what he says.

The population of Mannar has made no increase during the last ten years, families rule small, and it is only the poorest classes who emigrate into other districts.

The Mannar man is well off: he has generally 20 marakals of land, and he and his family want no more. He does not even wish to labour to improve his land; he prefers to pay for outside labour to do his tank work for him. Out of 2,271 cultivators in the Mantai and Nanaddan pattus, only 980 do the required labour on their tanks, the remainder paying Government to do the work for them, which necessitates the employment of a large number of coolies annually from Jaffna.

These cultivators' lands are sufficient for their wants, but not for their progress.

If civilization means "the desire for more things and the getting them," then civilization has much way to make up in Mannar.

If the district is to be opened out and the large and rich extent of Crown lands disposed of, for which, under present conditions, there will not be sufficient purchasers, development must be looked for from outside as well as inside the district. To induce any immigration into the district it will, however, be necessary to improve the means of communication between Mannar and the rest of Ceylon.

The Northern Railway will very soon reach Madawachchi, 52 miles from Mannar, while a line from Mannar to Madawachchi in connection with a steam ferry to Paumben is by no means an unfruitful scheme. It has strong advantages to recommend it besides the purely local ones I am submitting. It will serve as the best route for the estate cooly, as well as be the means of opening up the rich and well-irrigated—I am premising the completion of the important Akattimurippu scheme—pattus of the Mannar District.

Better communication by sea with Jaffna would also be of great benefit to Mannar, allowing of more rapid transit of mails and increased traffic. Private enterprise may be looked to for the supply of this want, with the assistance of a Government subsidy for the conveyance of the mails.

In the district a principal want is skilled labour; all furniture, tools, &c., are brought from Jaffna or Colombo, and it is even cheaper to buy ordinary household furniture, as tables and chairs, in Colombo and pay the heavy charges for transit than have them made in Mannar. I am attempting to start industrial education in connection with the large Roman Catholic school at Mannar, with the co-operation of the parish priest.

Improved means of transport will to a certain extent remedy the want by the importation of mechanics and skilled labourers, who will soon find a market in Mannar, but I would prefer the skilled labour to be developed in the district.

XI.—CRIME.

It is a pleasing feature in the Mannar Administration Reports that remarks under this head almost invariably commence, "There is no serious crime in the Mannar District." This is particularly true of 1902. There were no cases throughout the year in which a knife was used as a weapon of offence.

There were two criminal cases committed to the District Court, and in both cases the accused were acquitted. The first case was one of lurking house-trespass and theft from a dwelling-house in the village of Karunkandal during a Roman Catholic festival. This occurred in 1901, but there was no evidence to go before the court until early in 1902, when three accused were finally charged. The evidence was quite insufficient for a conviction, though it is probable that the right persons were arrested.

The second case was one of hurt. A low-country Sinhalese, renter of a cocoanut garden near Pesalai, beat with a rope a boy, whom he found trespassing. The boy died a few hours afterwards; the Magistrate visited the spot, and an inquest was held. It appeared from the medical evidence that the deceased was in a very bad state of health, and that a push or fall would have been sufficient to cause serious injury. The Attorney-General directed a committal to the District Court under section 314 (hurt). The accused was acquitted by the Police Magistrate of Mullaittivu, who had been appointed Additional District Judge to try the case.

There have been no other serious cases. There have been no cases of cattle stealing throughout the year. Cattle are plentiful and allowed to run wild by their owners.

Cases are generally brought, both in the civil and criminal courts at Mannar, with the object of effecting a settlement rather than of gratifying a revenge. One man beats another with a sandal or cuffs him over the head; the latter rushes off to court with the hope that the Magistrate will let him institute a case; if so, on the day fixed the parties come forward and the complainant states that he now wishes to withdraw the case, the accused having settled the matter with him, generally by a small monetary payment.

The only offences that ever occasion any trouble in the district are cases of persons maliciously setting fire to paddy ricks or burning down fences, the result of local jealousies. One or two such cases occurred in Mannar, while annoyance was caused to respectable residents by some rowdies indulging in the childish trick of throwing stones on roofs at night; this was soon stopped by the police.

The Inquirers have done their work efficiently, and are very useful in this district in dealing with the petty disputes, which often become the causes of serious trouble.

The Vidanes have had little work to do in the prevention of crime. They have, however, as a rule, kept their villages in good order, and prevented any disturbances taking place on holidays and festivals. The Udaiyar of Mannar east and the Police Vidanes of Erukkilampiddi and Vankalai deserve mention.

The police force of Mannar town have on the whole behaved well and done all that was required of them. A constable was charged with extorting money from Giant's tank coolies, and it was proved that he had done so. I am glad to report that my recommendation that he should be dismissed the force—his previous conduct had been bad—was approved.

I annex a statement showing the number of cases instituted and disposed of in the civil and criminal courts during 1901 and 1902 :—

XII.—IMMIGRATION.

The Immigration Department suffered a heavy loss in the death of Mr. C. H. Wilkinson, the Superintendent of Immigration, in August while on leave in England. Mr. Wilkinson was a zealous and efficient Superintendent, and it was under his direction that the principal buildings at the Tataparai Depôt were built. He had been Superintendent since 1897. During the absence of Mr. Wilkinson the work at the Immigration Department at Paumben was attended to by Mr. Paranjothy, the Head Clerk, who deserves great credit for the way in which he carried on the work. In September Mr. A. H. Taylor was appointed to act as Immigration Agent at Paumben.

The opening of the Madura-Mandapam Railway on 1st August is likely to prove of great importance, not only to the Immigration Department, but also to Ceylon. A powerful rival alternative to the Tuticorin-Colombo route is now introduced. The railway started under the most favourable conditions, as it opened during the great festival at Rameswaram and brought down thousands of pilgrims on the first day. The route was therefore well advertised, and it will only take time to accustom the natives to it. This introduces the important question, Is it possible to concentrate cooly immigration, to force it into one channel, and do away with the present expensive system of the maintenance of separate cooly depôts at Tataparai, Ammapatam, Tondi, and Paumben?

With regard to Tataparai, the answer must at present be "No."

It is easier for coolies from the Tinnevelly districts to go to Tuticorin, and they will doubtless continue to do so.

Further, the Madura-Tuticorin route is the old established route, and as such will hold its place for some time, even for coolies from the Madura district.

Again, the mails are at present conveyed from Tuticorin daily, while there is only a bi-weekly steamer service from Paumben. This is the chief consideration for the cooly in weighing the merits of the two routes. He knows he can get on as soon as he arrives at Tuticorin. If he goes to Paumben, he will have to wait and most probably be kept some days in quarantine, which he dislikes. But it can, I think, only be a question of time for the Madura cooly to choose the Paumben route. The steamer traffic will follow the cooly, and when the latter realizes that by going to Paumben he will escape the long journey out by launch from Tuticorin to the steamer, a passage particularly disliked by him, he will decide for the Paumben route.

The time taken in the train journey from Madura to Mandapam is only two hours longer than to Tuticorin, while the fare from Madura to Mandapam, when the railway opened, was Re. 1, Madura to Tuticorin Re. 1·3½ annas.

As regards the Ammapatam and Tondi coolies, they at present walk down from their villages to catch the steamer. They are now closer to the railway, and the extra cost of railway fare will be made up to them by saving of time on the road and of the night at sea. The question now arises, What changes will be necessary in the Paumben Immigration Department to meet its probable requirements?

The chief necessity is a cooly camp, for which a site has been chosen at Kondegalla. This land should be acquired as soon as possible, provided that the water supply is found sufficient.

The cocoanut topes belonging to the Immigration Department in Paumben will serve as a quarantine camp; they are separately fenced off, and can afford accommodation for several days' arrivals of coolies.

A steam launch belonging to the British India Company now plies between Mandapam and Paumben. It would, however, be both cheaper and better for Government to purchase a small steam launch to convey coolies going to Ceylon from the railway station and camp to the steamers. This can be done as soon as the stream of immigration begins to flow to Paumben, as it most certainly soon will do.

XIII.—LEGISLATION.

I do not consider that any special legislation is at present called for. Existing legislation is quite sufficient, if properly codified and administered.

XIV.—WASTE LANDS ORDINANCE.

Not in force in this district.

XV.—NEW AREAS OF CULTIVATION.

It is difficult to estimate how far new areas are being cultivated. The number of acres of Crown land purchased this year is in excess of previous years, but this by no means represents all the new areas opened up.

The Adigar of Mannar reports an increase of 75 acres in cocoanut plantation this year on the island, which is almost entirely private property.

The Mantai Adigar reports that about 14 acres of new cultivation have been opened in his division, 8 acres for paddy and 6 for tobacco.

The figures given by the headmen for tobacco are—

	Acres under Cultivation.
1901	469
1902	483

though I have little doubt that there has been a larger increase in this cultivation.

XVI.—CHENA CULTIVATION.

No chena was allowed. At only one village (Vidattaltivu) was any request made to me for chena cultivation; the request was refused.

XVII.—SALES OF LANDS BY VILLAGERS.

The ordinary sales took place amongst themselves, though very little property, I think, changed hands. In about half the cases where land was sold for default of payment of water-rate, &c., the land was bought in for the Crown for lack of purchasers. There is no local demand for more land at present.

XVIII.—WORK OTHER THAN ROUTINE.

I visited Paumben four times during the year and Ammapatam once.

Some of my time was spent on the compilation of a Gazetteer for the district. It should be of considerable assistance to officers of all Departments and any travellers in the district, besides being an easy book of reference for the Revenue Officer. Every village—both inhabited and tavadi—is included, while the information given shows the distance of each village from the nearest road, resthouse, or Government bungalow, post and receiving office, school, headman's residence; as well as the number of inhabitants in each village; the chief occupations pursued by them; their cultivation and industries; the number of tiled and thatched houses, cattle, guns, carts, salt boutiques, &c., in the village; and any other facts of interest in connection with it. The villages are arranged according to the chief headman's division, while there is also an alphabetical index, and a number is given under each place in the map, which is given at the commencement, referring to the page on which the information required with regard to the particular village can be found.

XIX.—MISCELLANEOUS.

Antiquities.

Six old cannon, relics of Dutch occupation, which were lying outside the Fort, were mounted on the ramparts.

An interesting find was made in September in the pavement of the Fort gateway.

Two Portuguese tombstones were dug up bearing coats of arms in good preservation, though unfortunately only a portion of the inscription can be deciphered; the bottom of each stone is broken off. This is the first time that any relics of Portuguese occupation have been found in Mannar, and until this year no Portuguese tombstones had been found in the north of the Island.

In November at Mookaryankulam portions of three statues of Buddha were dug up; one of the statues in red granite measured from neck to heel 6 feet 5 inches, and stands on a pedestal 2 to 3 feet in height. The head is missing, though it is probable that a head, which was previously found near the spot, belongs to this statue. Further excavations will be made next year.

Bears, Leopards, and Stray Dogs.

Rewards were paid for killing—

Leopards	16
Bears	5
Stray dogs	45

Licenses.

Elephants.—Fifteen licenses were issued to capture elephants, as against 24 in 1901. None of the elephants captured in 1902 were exported. Two of them fetched very good prices in the Central Province. The others have not as yet been removed from the district. All the elephants were caught by Moormen, mostly from Kondachchi and Karadikuli.

Liquor.—There was an increase of one in the number of licenses issued to sell liquor by wholesale and retail, a notable increase for Mannar, where there are only three liquor shops, but not followed by any increase in the roll of drunk and disorderly.

Guns.—There was a notable increase in the number of gun licenses issued:—

1901	26
1902	378

The headmen were this year called upon to furnish lists of guns, and I issued licenses on circuit. Nearly every villager now owns a gun. This is due more to the cheapness of the guns than to the abundance of game.

Carts.—Little change from the figures of the previous year:—

1901	224
1902	217

XX.—EVENTS OF INTEREST.

Mr. Constantine was in charge of the district until 10th February, when I succeeded him.

3rd March.—Visit of Professor Herdman, who had been investigating the pearl oyster banks off Silavaturai.

5th June.—Celebration of peace in South Africa by a torchlight procession, fireworks, &c., at Mannar.

25th June.—News of His Majesty the King's illness received at Madu. A special service was held and prayers offered for his recovery.

26th June to 2nd July.—The Madu festival, which was attended by over 20,000 people, passed off very successfully. There was no disturbance of any kind.

5th July.—Celebration of the news of His Majesty's recovery at Mannar.

8th and 9th August.—Celebration of the King's Coronation, which was attended by the largest crowds ever seen in Mannar in the memory of the oldest inhabitants. Rs. 1,120 were collected amongst the people for this celebration, a large sum for a small district. The poor were fed and cloths given to the poorest women. The address explaining the significance of the day was read to the people from a pandal, erected by two of the leading merchants of the place, and songs were recited by their composers in celebration of the Coronation. A Tamil play was acted. Sports were held for children and grown-ups. The town was decorated on both days, and on the evening of the 9th was illuminated, while there was also a display of fireworks.

15th September.—His Excellency the Lieutenant-Governor and Mrs. im Thurn arrived at Parayanalankulam on the borders of this district. They proceeded *viâ* Murungan and the Giant's tank to Mannar, where two days were spent, and from thence to Pesalai, which they left on 19th September in the "Rengasamy Puravy" for Paumben.

In December it was announced that a pearl fishery would take place at Marichchukaddi, in this district, the first held after an interval of twelve years. Preparations were at once made for putting up the camp.

E. B. DENHAM,
Assistant Government Agent.

REPORT ON THE MULLAITTIVU DISTRICT FOR 1902.

Area, 1,154¼ square miles; Population, 15,136.

I.—REVENUE.

THE total collected for the year amounted to Rs. 28,991·42, showing an increase of Rs. 11,474·04 over the amount collected last year. In addition to this there is the amount of the arrack rent for the district, which was credited at Jaffna, viz., Rs. 13,980, making the total revenue of this district Rs. 42,971·42.

The heads of revenue in which the increase over last year is most noticeable are—

		Rs.	c.
1.	Licenses, showing an increase of	495	24
2.	Fees of Court	1,762	20*
3.	Unclaimed Deposits, showing an increase of	454	0
4.	Land Sales	8,981	98

* Out of which a sum of Rs. 1,475·05 is the increase on account of Survey Fees.

There is only one head of revenue that shows any serious decrease, viz., Revenue Stamps, amounting to Rs. 749·03.

The statement of revenue may be considered encouraging. Not only is it the largest amount credited since the amalgamation of Vavuniya and Mullaittivu, but the increase is due chiefly to land sales. This is a healthy sign, indicating that the district is being opened up for cultivation.

II.—EXPENDITURE.

Under this head there is little calling for notice. The total for the year was Rs. 18,125·57, being almost exactly the same as that of 1901, which was Rs. 18,134·81. As usual, the chief items are Personal Emoluments Rs. 13,056·53 and Travelling Allowance Rs. 1,588·57.

III.—WEATHER AND CROPS.

I append a return showing the rainfall for the district at the four places of observation :—

Return of Rainfall in the Mullaittivu District for 1902 and 1901.

	Mullaittivu. Inches.	Nedunkeni. Inches.	Vavuniya. Inches.	Mankulam. Inches.	Total. Inches.
January ...	8·52	23·72	8·50	8·15	48·89
February ...	6·18	7·46	7·40	3·67	24·71
March ...	2·83	2·49	1·80	1·80	8·92
April ...	·55	2·17	4·26	3·55	10·53
May ...	—	·48	2·48	1·45	4·41
June ...	3·23	2·83	1·10	2·50	9·66
July ...	·03	1·65	—	—	1·68
August ...	1·66	3·31	4·20	2·20	11·37
September ...	·98	6·10	3·60	3·80	14·48
October ...	12·98	14·26	20·62	15·92	63·78
November ...	29·02	40·53	19·75	21·36	110·66
December ...	15·57	10·50	13·30	29·95	69·32
Total for 1902 ...	81·55	115·50	87·01	94·35	378·41
Total for 1901 ...	40·13	172·32	45·88	31·57	289·90

The table shows a fairly evenly distributed rainfall. It was considerably above the average at Mullaittivu and Vavuniya. Nedunkeni, as usual, has the highest rainfall, though it is not so disproportionately high as it was in 1901. There is a total increase of 88·51 inches for the four stations of observation over the previous year. There was more than enough rain at the end of the year, and in many places cultivation was delayed owing to the excess of rain.

Crops.

The annexed return of agriculture for the year is much more satisfactory than the return for 1901 :—

Return of Agriculture for the District of Mullaittivu for 1902.

Nature of Crop.	No. of Acres under Cultivation.	Gross Produce.	Average Produce per Acre.	Average Quantity of Seed sown per Acre.	Average Quantity yielded on Seed sown.	Price per Bushel, per Pound, or per Thousand.
		Bushels.	Bushels.			
Paddy ...	11,620$\frac{13}{40}$	183,141$\frac{1}{4}$	15·76	2½ bushels	6·30 fold	Re. 1·25 to Re. 1·50
Other grain ...	109½	1,225	11·19	3 quarts	119·25 fold	75 cents
		lb.	lb.			
Tobacco ...	289½	144,750	500	2,000 plants	·25	10 to 15c. per lb.
		Nuts.	Nuts.			Rs. c.
Cocoanuts ...	1,351$\frac{29}{40}$	4,913,230	3,634	80 trees	45	per 1,000 50 0
Palmirah nuts ...	765$\frac{29}{120}$	8,526,470	11,142	300 trees	37	per 1,000 2 50
Fruit gardens ...	422$\frac{1}{4}$	—	—	—	—	—
Vegetables ...	73½	—	—	—	—	—
Spices ...	38½	—	—	—	—	—
Miscellaneous ...	7	—	—	—	—	—

Paddy.—There is an increase in the number of acres cultivated by 1,050 acres, in the crops by 75,883 bushels, in the yield per acre by 5·62 bushels.

Other Grain.—Here there is a decrease in the number of acres cultivated in 1901 of 8 acres, but the yield has increased, showing a gross produce of 1,225 bushels, as against only 760 in 1901.

Tobacco.—There is an increase of 46 acres in cultivation over last year, giving an increased yield of 23,000 lb. The yield per acre is average. The yield per acre of the year 1900, which was 897 lb., is not likely to be repeated.

As to cocoanut and palmirah cultivation, the figures are much the same as last year's. There is an increase of 5 acres in cultivation under the head of Fruit Gardens, and of 20 acres under Vegetables. There is a lot more to be done in this district under these last two heads.

The experimental garden at Vavuniya is doing well, and fruit trees and vegetables can be purchased cheaply therefrom, but there is no great demand by the natives for them. The little trouble required to cultivate is presumably too great. Yet, even if the native does not care to grow them or himself, there ought to be a good enough market at Mullaittivu and Vavuniya to encourage him to do so.

IV.—FOOD SUPPLY.

The food supply consists chiefly of rice. In the maritime pattus fish and the various products of the palmirah are eaten. Kurakkan, plantains, brinjals, buffalo, milk, game, and honey are a further supplement.

From the reports received from the headmen and medical officers of the district there appears to have been no scarcity of food. Rice and paddy were averagely cheap throughout the year :—

Description of Grain.	Raised.	Imported.	Exported.	Used for Seed.	Balance for Food.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
Paddy	183,141	115	10,831	24,860	147,565
Rice	—	20,874	12	—	20,862
Dry grain	1,225	183	33	12	1,363

Taking two bushels of paddy as yielding one of rice, the grain available for food was 94,644 bushels of rice and 1,363 bushels of dry grain, or, roughly, 95,000 bushels in all. This among a population of 15,136 allows 6⅓ bushels per head, which should be sufficient.

V.—IRRIGATION.

The only work of restoration by the Public Works Department during the year was the continuance of the restoration of Kanukkeni tank, which is now rapidly approaching completion. A sum of Rs. 16,575·16 was spent during the year towards the completion, with an additional sum of Rs. 596·27 on the maintenance of work already done. A sum of Rs. 193·98 was spent on the maintenance of Periyakulam tank.

Statement of Water-rate Recoveries.

	Amount due. Rs. c.	Amount recovered. Rs. c.	Balance. Rs. c.	Remarks.
Periyakulam ...	109 18	109 18	—	—
Kanakarayankulam	59 40	59 40	—	—
Vavuniya ...	88 25	87 70	0 55	Outstanding
Maha Rampaikkulam	215 95	215 95	—	—
Vengalacheddikulam	124 63	124 63	—	—
Mamadu ...	243 2	243 2	—	—
Madukanda ...	214 36	214 36	—	—
Iratperiyakulam ...	255 30	254 67	0 63	Exempted
Periya Olukkulam ...	48 13	48 13	—	—
Total ...	1,358 22	1,357 4	1 18	

This is satisfactory, and calls for no comment.

Statement of Irrigation Fines recovered during 1902.

	Balance on January 1, 1902.	Imposed during 1902.	Total.	Amount recovered.	Balance.	Remarks.

Total ...	3,689 11	5,229 45	8,918 56	5,049 21	3,869 35	Exemption Rs. 843·07

Constant pressure has to be brought to bear on the Udaiyars, who are responsible for collecting the fines. They are allowed 1½ per cent. commission on the fines collected, but this is not apparently of itself sufficient inducement to keep them up to the mark.

I append a return, furnished by the Chief Inspector, of tank labour in the district during 1902, and an abstract showing the percentage of labour and default :—

[For Return see next page.]

Abstract of Tank Works for 1902, Mullaittivu District.

Particulars.	No. of Working Tanks.	During 1902. Days.	During 1902. Days.	Centage.

No. of days' labour done ...	—	—	20,971	65·8
No. of days' labour in default	—	—	9,884½	31·1
Amount commuted Rs. 330·62, at 37½ cents per day ...	—	—	881½	2·7
No. of days exempted ...	—	—	133½	·4
Total ...	297	31,870½	31,870½	100

VI.—LEGISLATION.

I have nothing to suggest. I repeat the remarks made by my predecessor in his report for 1901, as a case in point has already been forced on my notice :—

> I believe legislation would be beneficial on the subject of Hindu Temporalities. The management of temple property is in some cases absolutely under the control of the incumbent. There are no trustees : he renders no accounts, he utilizes the produce as he thinks best, he neglects the temple, allows it to fall into disrepair, perhaps scandalizes his religionists in his personal conduct, and they have no voice in his removal, no power to appeal to. *J'y suis, j'y reste* is the motto of the worthy Brahmin, and he is accountable to no man.

VII.—WORKS REQUIRED.

Most of these are recommended by my predecessors :—

(1) A permanent and better building for the dispensary at Nedunkeni.
(2) Dispenser's quarters at the Mullaittivu hospital.
(3) Removal of the beacon at Mullaittivu to a site further inland.
(4) A landing jetty at Mullaittivu.
(5) A good road from Mullaittivu to Kokkulai along the coast.
(6) Improvements to the "old trace" road from Mullaittivu to Vavuniya by the erection of culverts and bridges.
(7) An outdoor dispensary at Oddusuddan to be visited two days in the week by the apothecary of Nedunkeni.

VIII.—PLANS FOR IMPROVEMENTS.

Improvements must be made on general lines: improvements on the means of communication, in the sanitary condition of the people, in the facilities for cultivation (*i. e.*, tank restoration). The first of these will be largely helped by the railway; the second is a matter which rests with the Assistant Government Agent and his headmen. Frequent inspection on circuit is the chief thing required to forward this end. Of irrigation I have spoken in its place. With little or no experience of the district I cannot make any special suggestions, and can find no definite schemes formulated by my predecessor.

IX.—HEALTH AND SANITATION.

The health of the population in the past year seems to have been about normal. As usual, fever and parangi were the chief diseases. There were no epidemics of any kind. I append a list of the number of patients treated at the hospitals and dispensaries in the district:—

Hospital or Dispensary.	
Civil Hospital, Mullaittivu	450
Outdoor Dispensary, Mullaittivu	3,323
Civil Hospital, Vavuniya	673
Outdoor Dispensary, Vavuniya	8,173
Puthukudiyiruppu Dispensary	1,877
Nedunkeni Dispensary	2,090
Kokkulai Dispensary	800
Mankulam Dispensary	1,610
Mankulam Dispensary, Mannar road	2,615
Total ...	21,611

It is gratifying to learn that in a district otherwise so backward the natives are nearly all willing to take European treatment when sick.

A public latrine was erected on the beach road at Mullaittivu during the year by the Board of Health. When the port of Mullaittivu is open a public latrine is a necessity. There is no regular system of scavenging in Mullaittivu or Vavuniya. Coolies are hired to do the work when it is required. In the villages the sanitary condition of the people depends almost entirely on the Assistant Government Agent. The people are too indolent to look after their own welfare in this respect. By inspection on circuit the Assistant Government Agent insists on their keeping their compounds clean and tidy and well ventilated, looks after the condition of their wells, and sees that the village is not overgrown with weeds and jungle.

Sites for temporary plague hospitals have been chosen and were kept clear of jungle, and a stock of disinfectants is kept at the Kachcheri. The bazaars in Mullaittivu, Vavuniya, and Tanniyuttu have been regularly inspected during the past year.

Appended are the vital statistics for the district for 1902:—

Vital Statistics for 1902.

	Estimated Number of Inhabitants.	Births.	Deaths.	Birth-rate per 1,000.	Death-rate per 1,000.
First quarter ...	15,140	159	205	10·50	13·54
Second quarter ...	15,146	162	156	10·79	10·30
Third quarter ...	15,153	131	124	8·65	8·18
Fourth quarter ...	15,136	106	123	7· 0	8·13
Total 1902 ...	15,136	558	608	36·87	40·17
Total 1901 ...	15,186	660	648	43·46	42·67
Decrease ...	50	102	40	6·59	2·50

X.—CRIME AND POLICE.

	Reported.	Tried.	Convicted.	Pending on December 31.
Number of cases of murder or attempted murder ...	2	2	—	—
Number of cases in which the knife was used ...	5	4	1	1

Of the murder cases, the first was a case of suspicion; the body of the man supposed to have been murdered was never found, and there was no evidence. The man was missing, and he was last seen with the accused, who had gone out shooting with him. Inquiries and search were made, but no definite result was arrived at, and the accused was discharged. In the second case there was not sufficient evidence, and the accused were discharged at the direction of the Attorney-General without being put upon their trial. There was also a case of homicide not amounting to murder; the case is pending. The Police Vidane of Chundikulum is deserving of special mention in this last case. He arrested the accused at once and sent the injured man promptly to the hospital at Mullaittivu, where he subsequently succumbed to his wounds.

There was on the whole very little crime in the district, but it must be admitted that it is unsatisfactory that in the two murder cases sufficient evidence should not have been produced.

There is no regular police force in the district, nor is one needed at present.

XI.—CATTLE.

There was little disease during the year, and no cases of death from disease. There was a scare of "hoof-and-mouth" disease at the end of the year in Kilakkumulai south, the infection being supposed to have been brought in from the North-Central Province. But prompt measures were taken to segregate the infected animals, and a watch was kept on the Trincomalee road to prevent cattle from the North-Central Province coming in. These precautions prevented the spread of the disease.

There were estimated to be 8,631 head of buffaloes and 10,800 head of black cattle in the district.

Two cattle stealing cases were instituted during the year, of which one is still pending and the other has been disposed of :—

Instituted during the Year 1902.		Convicted.		Acquitted.		Pending on 31st December, 1902.	
Cases.	Persons.	Cases.	Persons.	Cases.	Persons.	Cases.	Persons.

XII.—NEW AREAS OF CULTIVATION.

The following is the return of lands opened for paddy cultivation during 1902 :—

District.	Extent. Acres.
Maritime Pattus	85
Vavuniya South (Tamil Division)	58
Vavuniya South (Sinhalese Division)	61
Vavuniya North	31
Total	235

Sixty-one grants for lands, amounting to 125A. 1R. 15P., were given during the year. The total acreage sold during the year amounted to 1,174A. 3R. 38P. No lands were granted under Sir Henry Ward's minute.

XIII.—WASTE LANDS ORDINANCE.

Not in operation in the district.

XIV.—CHENA CULTIVATION.

The people of Puthukudiyiruppu were allowed chenas as usual, the extent being 176 acres. Permits covering an extent of 1,377 acres were granted for tank bed cultivation.

XV.—SALES OF LAND BY VILLAGERS.

There have been few sales of land, and none of any importance have been brought to notice.

XVI.—EDUCATION.

There are no Government schools in the district. The following list shows the number of voluntary schools, and how they are supported :—

	Schools.
By Roman Catholic Mission	7
By the Church Missionary Society	9
By villagers	8
By the Mullaittivu public	1

Half the schools in the list appearing as supported by villagers are not really worthy of the name of "schools;" they are merely pansalas, at which the incumbent priest teaches a very small number of boys. All the above schools are vernacular, except one school supported by the Roman Catholic Mission and one by the public of Mullaittivu.

XVII.—TRADE AND INDUSTRY.

Coastwise exports of Ceylon produce from the port of Mullaittivu during 1902 amounted in value to Rs. 71,513·60. The value of foreign produce exported coastwise was Rs. 1,538, making the total value of coastwise exports Rs. 73,051·60, as against Rs. 72,115 in 1901.

Of Ceylon produce, dried fish is the most important item, its value being more than half of the total exports, viz., Rs. 41,471. The chief markets for Ceylon produce exported coastwise from Mullaittivu are the Northern and Western Provinces. But all the foreign produce exported, such as merchandise, cotton and piece goods, &c., goes to the Jaffna District.

The total value of the imports was Rs. 59,812·65, showing an increase in value of over Rs. 2,000 on the previous year. The chief imports in their order of value were paddy, merchandise, salt, arrack, and curry stuffs. The import trade is chiefly with the Jaffna District.

Apart from agriculture, fishing is the principal industry. There are fifteen fishing stations along the coast, and 74 boats are employed.

Trades are not greatly patronized in the Wanni. There are 28 goldsmiths' shops and a few blacksmiths' and carpenters'.

XVIII.—MISCELLANEUS.

Leopards and Bears.—Rewards were paid as under :—

	1900.	1901.	1902.
Leopards	21	27	29
Bears	11	10	15
Gun Licenses.			
1900			30
1901			331
1902			10
Game Licenses.			
1900			3
1901			5
1902			1
Cart Licenses.			
1900			99
1901			126
1902			25

Experimental Garden.

The garden was worked by three coolies under the supervision of the District Mudaliyar. Plants issued during the year were :—

Cocoanut ...	... 1,124	Mango	... 20
Arecanut ...	... 88	Jak ...	... 46
Orange ...	... 50	Talipot palm ...	... 5
Lime ...	... 24	Croton cuttings	... 25

The following are in the nursery ready for distribution during 1903:—

Cocoanut ...	... 2,000	Lime ...	... 500
Arecanut ...	... 1,000	Mango ...	... 30
Orange ...	... 500	Jak ...	... 50

There was a large increase in the number of cocoanut plants issued during 1902 over the previous year, but there was a falling off in the demand for all the other plants. The vegetable garden attached to the nursery garden thrived during the year. Various native vegetables were planted and did well.

XIX.—VILLAGE TRIBUNAL, VAVUNIYA.

A statement of work done is appended :—

Pending on January 1, 1902 :—

XX.—EVENTS OTHER THAN ROUTINE.

1. The "Coronation" was celebrated with great loyalty on 9th August at Vavuniya and Mullaittivu.

2. His Excellency the Lieutenant-Governor passed through the district on his way to Mannar, stopping at Venkalacheddikulam on 14th September.

3. Mr. Schrader left the district in December, being appointed District Judge, Ratnapura.

R. A. G. FESTING,
Assistant Government Agent.

February 14, 1903.

SOUTHERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, SOUTHERN PROVINCE, FOR 1902.

I.—REVENUE.

THE revenue of the Province amounted to Rs. 1,354,723·02, being an increase of Rs. 190,681·11 over that for 1901. All three districts contributed to the increase, as follows:—

	Rs. c.
Galle	74,228 83
Matara	36,516 81
Hambantota	79,935 47
Total ...	190,681 11

A comparative statement is annexed showing the revenue for 1901 and 1902:—

LAND SALES.					
Crown Lands sold ...	85,591 15	163,534 11	77,942 96	—	More land sales
Premia on Leases ...	10,610 0	6,056 50	—	4,553 50	Fall in the plumbago market
Total ...	96,201 15	169,590 61	77,942 96	4,553 50	Increase Rs. 73,389·46
Grand Total ...	1,164,042 12	1,354,723 23	225,500 26	34,819 15	Total increase Rs. 190,681·11

The revenue from railways in this Province is no longer brought to account in the Galle Kachcheri. A statement kindly furnished by the General Manager shows an increase of Rs. 5,163·35, as follows :—

	1901. Rs. c.	1902. Rs. c.
Passengers	392,668 89	385,690 96
Goods	135,803 59	148,169 59
Miscellaneous	855 58	630 86
	529,328 6	534,491 41

The principal increase in revenue was under the heads Arrack, Salt, and Land Sales. The depression in the plumbago trade noticed in the previous report was the chief cause of the decrease in Tolls, Sale of Timber, and Premia on Leases. There are now indications of improvement in the plumbago industry, and an increase under these heads of revenue may be hoped for.

The Customs revenue amounted to Rs. 383,273·87, an increase of Rs. 3,729·50 over the figures for the previous year. The following return gives the figures for the shipping in the port of Galle in 1901 and 1902 :—

	1901. Steamers.	1901. Sailing Vessels.	1902. Steamers.	1902. Sailing Vessels.
With cargo	139	12	141	15
In ballast	29	—	21	—
For coal	68	—	81	—
Total ...	236	12	243	15

Coal sold to Ships.

	Tons.		Tons.
1896	16,200	1900	12,966
1897	3,653	1901	17,479
1898	9,328	1902	21,315
1899	5,673		

II.—LAND SALES.

The following statement (Appendix A) shows the revenue from land sales in the Province in 1900, 1901, and 1902. The Hambantota District principally contributed towards the increase, owing to a large sale of paddy land under Sir Henry Ward's Minute.

In the Galle District, owing to the stagnation in the plumbago industry, there were few sales of plumbago lands, but there was a considerable increase in the number of sales, and a large number of village lots were disposed of. The following statements (Appendix B and C) show the number of sales and the exnt alienated in 1901 and 1902 and the revenue for each of the last ten years. Mr. Amerasekara, the Land Clerk of the Galle Kachcheri, deserves credit for the large number of sales fixed and for the efficient working of the Land Department.

III.—WASTE LANDS ORDINANCE.

The settlement of the Morawak korale made satisfactory progress, and the work of the Settlement Officer in this division is almost completed. The large chena claims in the Giruwa pattus should receive early attention. The following statement (Appendix D) furnished by the Settlement Officer shows the work done in each of the three districts during the year.

IV.—IMPROVEMENT OF PROVINCE.

New Works required.

The following works mentioned by my predecessor still await consideration :—

(1) Improvement of Galle harbour.
(2) Extension of railway from Matara to Tangalla *vid* Beliatta.
(3) Water supply for Tangalla.
(4) Restoration of Badagiriya tank.
(5) Dispensaries at Akmimana and Wakwella.
(6) Houses for District Judge and Police Magistrate, Matara.

It has been decided that the Waggalmodara canal must be cleared by the landowners interested in it, and the Government have agreed to provide temporary infectious diseases hospitals at Galle.

To the above I would add—

(7) Water supply for Hambantota.
(8) Extension of the road from Udugama to Hiniduma. The District Road Committee cannot undertake this work owing to the heavy cost of bridging several large streams.
(9) Cement concrete drains in all crowded bazaars, such as Ambalangoda, Dodanduwa, Weligama, Hakmana, Dikwella, Beliatta, and Tangalla. These drains would prevent encroachments on the sides of the roads, and, being easily flushed and cleaned, would improve the sanitary condition of the bazaars.
(10) Extension of cart road from Bundala to Kirinda.
(11) Annual grant to District Road Committee, Matara, for extension of roads in Morawak korale.
(12) A villagers' ward at the Deniyaya hospital.
(13) A new Post and Telegraph Office at Matara.

V.—FOOD SUPPLY.

There was no scarcity in the Province generally during 1902. Rice is largely imported, and is the staple food of the people. In some of the more remote divisions there is a good deal of chena cultivation, the supply of home-grown rice being insufficient, and the price of imported rice being high. Along the coasts there is an abundant supply of fish.

There is some prospect of trawling operations being started on the southern coast. Curing yards might be established at Hambantota and Kirinda, where salt is available.

The Mudaliyars of the Galle District report as follows regarding the food supply of their respective divisions :—

Four Gravets.—The chief article of food on which the people of my district depend for their subsistence is rice, which is both locally grown and introduced from foreign countries. The quantity of country rice raised each year in this district forms but a very insignificant fraction of the annual consumption, the total extent of mud lands available for paddy cultivation being only about 5,000 acres, of which some portions are left uncultivated every year on account of various causes. No new areas have been added for several years past, and, on the contrary, the existing fields are slowly and gradually being converted into plantations of different sorts.

The abolition of the paddy tax has done hardly any good, save that of preventing the fields being sold for default.

There are but a few cultivators in my district who seem to take any interest in the cultivation of paddy, and their number seems to be gradually decreasing. The absence of irrigation works leaves cultivation wholly to the mercy of weather, the unfavourable changes of which often affect the crops most seriously, the produce in several cases being not worth the trouble taken, and consequently some of the fields are every year being neglected or converted into plantations of vegetables, sugarcanes, or the like. Thus our dependence on foreign rice is yearly on the increase, an evil which appears to be irremediable.

The year 1902 has not been very favourable for paddy cultivation, and although the goiyas did what was in their power, not more than 4,300 acres could be brought under cultivation, against 4,500 acres of the preceding year. The drought in February and March and the incessant rains which followed it damaged the crops seriously, and hence the produce was only about 51,600 bushels, against 85,500 bushels of the previous year. Want of employment on tea estates or in connection with the plumbago industry forced the majority of the villagers to seek a livelihood in the cultivation of their lands, and various attempts were made for the cultivation of vegetables, &c., which, with but very few exceptions, were failures.

The native products of jak, breadfruit, sweet potatoes, and yams, which are very much used as supplementary to rice, had to suffer as much from bad weather as rice, and vegetables and the supply of fish also were much below the usual average, and so our dependence on the imported articles this year was greater than that of the last.

The supply of foreign rice was all the year round equal to the demand, but the price was somewhat high. The prices of other imported articles of food, such as Maldive fish, dried chillies, onions, and spices, were also high, and the poorer classes have had a very bad living this year, due mainly to want of employment.

Bentota-Walalalwiti Korale.—The year under review has been, notwithstanding the abundant rains, favourable to cultivation, and consequently the paddy harvests were on the whole successful. There was therefore no scarcity of food felt by the masses, and the necessity for increased importation did not press itself. The vegetable products were also satisfactory.

Wellaboda Pattu.—The food supply of the people consists principally of rice, sweet potatoes, the produce of the jak and breadfruit trees, and fish both fresh and preserved. Different other kinds of fruits, roots, leaves, and yams also contribute a fair quantity thereto. Throughout the year the supply was good and ample.

The local paddy crop represents about 20 per cent. of the requisite supply of rice. During the year the quantity yielded was in excess of that obtained during the previous years. This was principally the result of many labourers who usually found work at plumbago pits finding it on paddy fields or gardens in their villages.

The tree and the root crops were satisfactory, and fish was caught in fair abundance. The markets were well stocked with imported stuff. Prices were ordinary.

Work generally could be found, and the means of earning food were fair and satisfactory.

Talpe Pattu.—The food supply of the people in this district has continued to be satisfactory during the year. It consisted, as usual, of rice, fine grain, yams, vegetable, fruit, and fish. Of these, rice formed the chief article of food. The larger portion consumed consisted of Coast rice, and the quantity obtained from crops locally raised cannot be held to have reached above a third of that consumed. Fine grain is only cultivated in small patches here and there, Crown chena cultivation being altogether prohibited. The outturn from these crops is consequently very small, and it does not supplement the general food supply much. Cultivation of yams is carried on to a great extent in the interior divisions, and they, sweet potatoes in particular, form in season the daily meal of the poorer classes. Of fruits, jak and breadfruit go a good way to supplement the food supply throughout the district. Vegetables are also grown largely, and, as a rule, in excess of the local demand. The surplus finds a ready sale in the town, whither it is taken not infrequently by the growers themselves. The quantity of fish taken during the year was fairly large. It admitted of being taken for sale outside after satisfying the local demand for it. Cocoanuts were plentiful and cheap. Prices of all articles of food remained moderate during the year, and no difficulty in obtaining the necessary articles conveniently and at will has been experienced anywhere.

Gangaboda Pattu.—The food supply of Gangaboda pattu has been normal, a large number of the poorer villagers being just able to find means of subsistence. The paddy crops of the pattu, especially the yield of the fields in Baddegama, Ganegama, Telikada, and Majuwana divisions, ought to be amply sufficient to feed the inhabitants, but for the reason that most of the extensive and fertile paddy lands in these divisions are in the hands of the Moor and silversmith capitalists of the Galle town, the villagers get only the cultivator's half share. This no doubt supplements the scanty crops of their own blocks of field in the majority of cases, but the aggregate income is not sufficient to make ends meet. Potato plantation is the next

industry in this direction. These and manioca crops help considerably to minimize the chances of starvation. The year under review has had fairly good crops of paddy, potatoes, and manioca, or otherwise the lack of remunerative employment, owing to the depression of trade consequent on the non-paying low price of plumbago which prevailed, might have been more severely felt. Imported rice is freely used by the villagers between the harvests. The growth of vegetables, so essential as a healthy dish, is very little undertaken, except to some extent in the Kimbiya division. This apathy of the villager is doubtless due to the fact that most of the land suitable for vegetable growing is frequently submerged by the recurring floods, and the plantations are consequently damaged. Jak fruits during the season take a prominent part in the villager's diet.

Hinidum Pattu.—The food supply of the people has been the same as during the previous years, and consisted of rice, yams, jak, breadfruits, potatoes, amu, meneri, and kurakkan. The above products are grown by themselves (except about two-thirds of the rice, which is imported), and have been plentiful during the year. A bushel of imported rice is Rs. 4·50, and a bushel of country rice Rs. 5.

VI.—SANITARY CONDITION OF THE PEOPLE.

The health of the Province was generally satisfactory. In the Galle District some cases of cholera occurred at Panangala and Udugama, and there was an epidemic of dysentery at Bentota and the adjoining villages. In the Matara District there was an outbreak of smallpox at Weligama, a crowded locality ; 14 cases occurred, with 2 deaths. There are two plague camps at Galle, one of which is being used as an infectious diseases hospital until new buildings are provided by Government.

The following return (Appendix E) shows the number of patients treated at the hospitals and dispensaries in the Province.

At Ambalangoda the Sanitary Rates Ordinance is in force, and the revenue is sufficient to provide for scavenging, public latrines, &c.

In September the ss. Polynesien arrived at Galle with a case of plague on board. The patient was removed to the southern plague camp, and the contacts, thirty in number, were segregated at the house of observation. After ten days' detention the patient was well, and he and the contacts were discharged.

The sanitation of the villages generally is attended to by the Village Committees. In some of the more populous villages sanitary improvements are required, but the Committees have not sufficient funds to do much in this direction. I would suggest that large and populous villages be proclaimed as "principal villages" under the Village Communities' Ordinance, and that the same sources of revenue as are granted to Boards of Health under the Sanitary Rates Ordinance be granted to the Village Committees for the improvement of such villages.

VII.—VITAL STATISTICS.

The following comparative statement (Appendix F) shows the births, marriages, and deaths in the Province in 1901 and 1902. The population of the Province at the end of 1902 was estimated to be 569,944.

VIII.—SANITARY RATES ORDINANCE.

The only town in this Province in which the Ordinance No. 18 of 1892 has been brought into operation is Ambalangoda. In consequence of the riot which ensued in 1901 when the rate was collected punitive police were stationed in the town. The amount due for the maintenance of the police was Rs. 6,297·24, and of this sum Rs. 5,173·98 was paid to the Government Agent. The defaulters are being dealt with by the Police Court, and a further sum of Rs. 442·32 has been recovered.

The punishment has had a very salutary effect, and the town was quiet and free from crime during 1902. There is, however, still some opposition to the collection of the rate, and in some cases it had to be recovered by distraint. The whole amount due for 1902 has been recovered. A case has been instituted against the distraining officers on the ground that the distraint was illegal.

A statement of the revenue and expenditure of the Board of Health is annexed (Appendix G). The large balance shown at the end of 1902 is required for the building of a market.

IX.—IRRIGATION.

The Dedduwa and Waggalmodara works in the Galle District are in the charge of the Director of Irrigation. Ten years have now elapsed since they were taken in hand, and an assessment has now to be made for the maintenance of the works. Considerable progress was made in 1902 with the collection of arrears of water-rate due, but the following arrears have still to be recovered : Waggalmodara Rs. 1,648·36 ; Dedduwa Rs. 4,103·91.

The following statement indicates the progress made during the year under review in the collection of water-rate :—

	Up to December 31, 1900.		Up to December 31, 1901.		Up to December 31, 1902.	
	Rs.	c.	Rs.	c.	Rs.	c.
Waggalmodara	1,561	31	1,713	20	2,426	37
Dedduwa	5,072	60	7,185	36	12,927	3

The Director of Irrigation has decided that the clearing of the canal at Waggalmodara forms no part of the scheme, and that this work must be done by the people themselves.

Committees were elected for the Walawe and Kottawa divisions of the Talpe pattu, and rules have been drawn up by them. They have wisely adopted the huwandiram system, which has done so much to improve irrigation in the adjoining Matara District. The Digoda tank in this pattu requires a new sluice gate and some minor repairs.

Mr. Van Houten was appointed Sub-Inspector of Irrigation for the Galle and Matara Districts. His work lies chiefly in the Matara District, where there are 126 village works. In the Hambantota District the village works are in charge of Mr. Ferguson, Chief Inspector. The number of village tanks is 632, of which 457 are situated in the West Giruwa pattu, 127 in the East Giruwa pattu, and

48 in the Magam pattu. The work done on them consisted of 9,557 cubes of earthwork and 27,713 square yards of bund clearing. Sluices should be provided for some of the large tanks.

The large works in progress are in charge of the Director of Irrigation. I agree with my predecessor that the restoration of the Badagiriya tank is one of the most desirable works in the Province, and I regret that there is as yet no indication of the work being undertaken.

X.—FOREST DEPARTMENT.

The Southern Province is a released area under the charge of the Government Agent, with the exception of a portion of the Hambantota District, which, as there is no Assistant Conservator in the Province, has been placed in charge of the Assistant Government Agent.

The District Forester of Galle, Mr. Erskine, submits the following report and the usual returns of revenue and forest offences :—

Area of Forests.—No increase has been made under this head during the year. The proposed areas amount to, roughly, 130,311 acres. I would estimate fully 25 to 30 per cent. of this as chena, which cannot very well be separated, as they form part of the tracts laid aside to be dealt with at some future date. I mention this fact as on first sight the 130,311 acres appears a formidable area under virgin forest, which is not so.

Roads and Paths.—During the year some temporary new cart tracts were opened up to tap some fuel forests.

Buildings.—Under this head we have only four small river watchers' huts.

Financial.—During 1901 the Southern Province released areas brought in the second best revenue for the Island, and this year the results have been more substantial, the surplus being Rs. 25,982·80. I think we have done extremely well, as one of our officers (Matara) was away on leave. Value of sales made to Public Departments amounts to Rs. 6,322·99, and if added to above total gives still more satisfactory surplus.

Clerical Staff.—There was a change in the staff last year, Mr. Dissanaike, Clerk and Depôt-keeper, leaving for Nuwara Eliya, and Mr. Amarasekara taking his place. Mr. Buultjens has given every satisfaction, and I must say his work is very heavy, as all correspondence for the Province has to be attended to by him. His salary is very inadequate, being only Rs. 20 per mensem. His predecessor drew Rs. 35·75 a month. Considering our revenue is second to none, his case is one for consideration.

Prosecutions.—There have been many more prosecutions last year under breaches of forest rules compared with 1901. Chena cases still stand out very prominently. They amount to the large number of 2,257, about 300 less than previous year. There can be no doubt that having the few Forest Department overseers looking after the Crown's interest keeps the headmen system up to the mark, and, on the other hand, the headmen watch the felling in Crown forests as a check on the overseers. It is for this reason and having officers who command all the outlets that the Crown is protected. There were cases of large plumbago thefts brought to light by the Forest Department and heavy compensation accepted, and the lands are expected to realize high prices.

Miscellaneous.—Mr. Erskine, District Forester, Matara, proceeded early in the year on leave for twelve months. His work has been attended to by the Forest Ranger, Tangalla, who has done very well.

Annexed are statements showing revenue and expenditure and cases :—

Statement of Receipts and Expenditure on account of Timber sold in the Southern Province for the Year 1902.

REVENUE.	Amount. Rs. c.	Total. Rs. c.
I.—Timber, &c., removed from forests by Government Agency :—

XI.—CHENA CULTIVATION.

Chena cultivation on Crown land is prohibited in the Galle and Matara Districts. In some parts of the Morawak korale it is probable that there is occasionally an insufficient supply of rice and other food, and in such cases permits to chena might be allowed. This cultivation was also prohibited for some years in the Hambantota District, but after some correspondence on the subject in 1902 it was decided by Government that permits should be granted on a limited scale in cases where it was considered really necessary to grant them. In spite of this concession, however, the number of cases instituted in the Tangalla court shows that there is still a great deal of illicit chena cultivation.

XII.—CATTLE DISEASE.

Mr. Jayatilleke was appointed Stock Inspector for this Province. He reports that eight cases of rinderpest occurred in the Talpe pattu, of which six were fatal. There was an outbreak of hoof-and-mouth disease in the Wellaboda pattu. Out of 174 cases 152 were cured.

The Inspector having proposed to start a farm for the improvement of stock, some Crown land has been secured in the Weligam korale and a stud bull was obtained. The Village Committee has passed some rules, and it may be hoped that the Mudaliyar will succeed in inducing the people to take an interest in the scheme.

XIII.—LEGISLATION.

It is suggested by the Assistant Government Agent, Matara, that Village Tribunals should have jurisdiction to hear maintenance cases. The amount of maintenance ordered by a Police Court is usually very small, and there seems to be no good reason why the Village Tribunals should not deal with such cases. A similar suggestion is made by the Mudaliyar of Wellaboda pattu.

In order to give effect to the proposal made under the head of Sanitation to proclaim "principal villages" under the Village Communities' Ordinance, an amendment of the Ordinance would probably be necessary. A clause might be added empowering the Governor to proclaim such villages, and to hand over to the Village Committees the items of revenue mentioned in section 2 of Ordinance No. 11 of 1900.

XIV.—CRIME AND POLICE.

Thirty-five homicides were reported during the year. The number given in the report for 1901 was 32, but 3 cases in which the accused were discharged on the order of the Attorney-General were omitted from that list. The number of homicide cases was therefore the same as in the previous year. The details are given in Appendix H. Of the 35 cases reported, 21 resulted in convictions, and 8 accused were sentenced to death. Four cases resulted in acquittals, and 3 accused were discharged by the Attorney-General. The other 7 cases are pending. The distribution of the homicide cases was as follows :—

Galle	14
Matara	9
Hambantota	12
	35

The most atrocious case occurred at Dampalla in the Matara District. The accused killed a man, a woman, and four children with a katty.

Apart from homicide cases, the returns show a marked decrease of serious crime. Appendix I shows the summary of serious cognizable offences disposed of by the Police Courts. The total number was 1,185, as compared with 1,834 in 1901.

A similar result is shown in Appendix J, which gives the number of serious offences reported. Cattle stealing and thefts of property under Rs. 100 are omitted in this return. The total number of cases is 693, as compared with 892 in 1901.

Appendix K shows the distribution of serious crime in the Province and the proportion of serious crime to population. The West Giruwa pattu has the largest number of crimes, and has also the largest population. Nearly all the other divisions show a satisfactory decrease of crime.

Mr. Thornhill, Assistant Superintendent of Police, who deserves much credit for the hard work done by him, reports as follows on the work of the police and the crime in the Province :—

Headmen and Detection of Crime.—There is practically very little to add to what was stated in my report for 1901. The same cordial co-operation continues to exist between the regular and the rural police. Their work has been efficiently and well done.

The rural police are practically under the control of the Mudaliyars, but it would appear that the Mudaliyars, probably because they have not the time owing to their other and varied duties, are not able to exercise much supervision over them. They are consequently

left a great deal to their own devices. If more supervision could be exercised over their work by a system, say, of itinerating Inspectors, who could examine their report books and crime reports, see that they properly supervise the habitual criminals and persons prohibited from carrying knives, and generally advise them as to their duties, I am confident that a higher state of efficiency might be attained.

Itinerating Inspectors might be further utilized for the purpose of enforcing certain Ordinances, like the Opium, Explosives, Firearms, Poisons, Arrack, and the like, which are now practically a dead letter, for the reason that no particular person is responsible for their working, and the only cases which come up before the courts are those which are casually brought to the notice of the police in the ordinary course of business.

Annexed are statements (Appendix L, M, N) showing rewards and punishments given to the regular and rural police.

Ordinance No. 3 of 1898—use of the Knife.—The following is a statement showing the number of persons prohibited from carrying knives under the Ordinance :—

		Persons.
Police Court, Galle...	...	48
Do. Matara	...	34
Do. Tangalla	...	9
Do. Hambantota	...	1
Do. Balapitiya	...	1
Total	...	93

Though 490 persons have been prohibited from carrying a knife, only two prosecutions have been entered against them in 1902 for infringing the order. In one case the accused was acquitted, and in the other case the accused was sentenced to six months' rigorous imprisonment. This may be due to the fact that the order is strictly obeyed, or, which is more likely, that the order is rendered futile by the fact that a knife could be easily secreted on one's person, and headmen are not invested with the power to arrest a person who is seen infringing the order.

The fact that no application has been made by any of these persons to be licensed to carry a knife rather goes to support the theory that the order is disobeyed with impunity. But, nevertheless, only one man so prohibited, as far as is known, has been brought up for any offence in which the knife was used.

Constable Arachchies have been forced to send in every month a return showing whether all those who have been prohibited have obeyed the orders, and whether they have changed their residence, on pain of their pay being withheld until it is done.

There has been an appreciable reduction of knife cases in 1902, due no doubt to the fact that the Magistrates now only inflict lashes in cases where the accused have been guilty of a brutal assault, and no facilities are now given to disgrace a man by trumping up a false case with the aid of a few scratches collusively or self-inflicted.

The Effect of Punitive Police where they have been imposed.—The punitive police stationed at Ambalangoda in November, 1901, were only removed in November, 1902. The effect has been most satisfactory. Under the new system organized there has been far less difficulty than under the old system of distraint in collecting the special rate, which was paid up in 1,265 cases out of a total of 1,592 persons, of whom 6 were exempted. A list was submitted to the Police Court, Balapitiya, of the 321 defaulters, many of whom had absconded as they were in such circumstances that they really could not pay. Ambalangoda is restored to perfect order, and the people who had previously organized themselves into a body to defy the authorities have become more amenable to reason.

Crime.—The usual returns are appended. There has been an increase of the tax-paying population, while an appreciable reduction of serious crime is noticeable in nearly every one of the pattus (Appendix J).

Crime, especially of a violent nature, fluctuates so much from year to year that it is impossible to say with any degree of certainty if crime is on the decrease or not; but it is quite certain that serious crime has decreased very appreciably in 1902, showing a reduction of 649 cases over the previous year (Appendix I).

A comparison of the population with the number of distilleries and taverns in the different pattus will show that the presence or absence of taverns has no real bearing on crime, as is popularly supposed. In fact crime seems to preponderate where there are least taverns, which may perhaps be accounted for by the fact that in those places there must be a great deal of arrack and toddy sold illicitly. Instead of reducing the number of taverns, I am in favour of increasing them, so that if drink is answerable for crime, crime will at any rate be concentrated round an appreciable and known area. The same argument holds as regards gambling. If proper places are licensed for the purpose and kept under strict supervision, there would be less promiscuous gambling, which is answerable for a great many assaults, thefts, and burglaries. Out of a grand total of 1,185 cases, it is very gratifying to note that there were only 18 cases in which the accused could not be arrested. It will be seen that these 18 cases are by no means the most serious of the offences described (Appendix I and K).

There were 35 cases of homicide in the Province. Of these, 8 resulted in convictions for murder, 13 for manslaughter and grievous hurt, 7 in acquittals and discharges, and the rest are pending. In one case the murderer ran amuck and killed six persons. In another the murderer shot two women dead, and in another three persons were killed by the murderer (Appendix H).

Cattle Stealing.—I am not so sure that cattle stealing can be said to be prevalent to any great extent in the Galle District (including Balapitiya) considering that there were 45,626 head of cattle in the district, and there were only 248 cattle stealing cases instituted for the whole year. Of course there may have been more cattle stolen, of which no complaint

was made. But as far as we can judge from institutions, there certainly appears to be comparatively very little cattle stealing, though the number of cases is in excess of 1901 by 68. In 40 cases the accused were not discovered, 209 accused were acquitted for want of reliable evidence, and only 55 persons were convicted.

Cattle are indispensable to the villager, and as he is apparently unable to look after them, it is very desirable that some method should be adopted to prevent this form of crime, especially in the outlying villages, where cattle are stolen and the owners do not come to court, because it means great expense and trouble to them. In fact the expenses incurred by the complainant in travelling to the court and back, say two or three times, in connection with one of these cases (leaving his wife and children, if any, to the mercy of the accused's relatives and friends), would swallow up all his property, and in the end the only satisfaction he would get is to see the man who stole his cow, if he is convicted at all, which is doubtful, go to jail for a few months, which, after all, is very poor satisfaction, especially if the accused is a man who does not mind "a little jail," and there is nothing that could be recovered from him.

These cases are very often compounded on the way to the court, the owner taking a few rupees in satisfaction, perhaps a good deal less than the animal is worth, so as to save the trouble of a Police Court case. But what very often happens is that the complainant's witnesses are paid a small fee by the accused to say they know nothing whatever about the matter, so as to cut the ground from under the complainant's feet.

To obviate all these difficulties, I am of opinion that cattle stealing cases should be heard promptly and, if possible, on the spot. It would have the double effect of preventing parties who have no evidence making up any, and the accused from tampering with the evidence for the prosecution. With this view I would suggest that, as a tentative measure, the Presidents of the Gansabhawas be given jurisdiction to try all cases under section 368, Ceylon Penal Code, and punish up to Rs. 100 fine and six months' rigorous imprisonment in cattle stealing cases.

I am confident that cattle stealing would very soon decline, and cattle lifters would seek other and less hazardous employments. I venture to make this suggestion because in a very few cases indeed are the animals worth over Rs. 20 each.

Office Work.—Mr Collette, Acting Assistant Superintendent of Police, after long and loyal service in the Police Service, retired on the 19th April, 1902, and was succeeded by Mr. Plant of the Civil Service, who held office for a few months.

Mr. Plant organized a gymnasium, and much credit is due to him for encouraging the police to take an interest in athletics and sports in general. I have noticed that those policemen who take an interest in athletics invariably take an interest in their work also, and are far more dependable.

The recreation room has been much improved. A library has been started there. Better lighting has been adopted, the tables have been re-covered, the floor has been improved by the laying down of coir matting, the couches have been re-cushioned, old "Graphics" have been bound, and several games have been added. The whole is a great improvement.

Towards the end of September, 1902, Mr. Bowes was appointed Second Assistant Superintendent of Police, and is giving much satisfaction.

Some heavy work fell on the office in the matter of collecting the punitive police tax at Ambalangoda, but it was satisfactorily done.

Sergeant Lockhart, who was specially deputed to look after the Boer prisoners of war, did his work very satisfactorily.

Special praise is due to the active and energetic Mudaliyar Mr. Peries of Gangaboda pattu, who is setting an example to his brother Mudaliyars by doing all in his power to suppress crime in his pattu.

The Inquirer System, Ordinance No. 15 of 1896.—A great deal has been said both for and against the system. Perhaps it has its faults, but there is no question it has shifted a great deal of the ordinary routine work from the Magistrates' courts and left the Magistrates more leisure to attend to more serious work. I am referring to such work as inquests, inquiries into complaints where the accused are unknown, and the like. So long as the Magistrates are not too credulous the system can do no practical harm.

A step has been taken in the right direction in appointing all Mudaliyars to be Inquirers. Of course they are not ordinarily expected to inquire into crimes, their duties being more of an executive nature, but when an emergency arises they have the power to act. Besides, it removes any erroneous impressions that may have arisen in the minds of the villagers that the Inquirer was a superior officer to the Mudaliyar, which was likely to cause friction between the two officers.

The Identification System.—Identification offices are now established in Galle and Matara. Very few cases, indeed, have occurred where previous convictions have not been conclusively proved. Criminals under police supervision have regularly reported themselves, except in sixteen instances. Fifteen of them were prosecuted, and one was excused upon sufficient reasons being shown to the Inspector-General of Police.

There are three classes of habitual criminals :—

(1) Sentenced to police supervision by a court.
(2) Licensed to be at large.
(3) Those twice or oftener convicted of a "crime" or under section 83 of the Criminal Procedure Code, and who do not come under (1) or (2).

Of these, the third class are the most numerous, but they are not under any obligation to report themselves to the police, either at stated times or when they are changing their abode. The difficulty therefore of supervising them is considerably increased. They suddenly go away, commit an offence, and are back in their house before even the offence has been discovered at the place where it is committed. It is not at all improbable that some of the light-fingered gentry of different parts of the Island, who have relatives employed in houses in Colombo, had a hand in the numerous burglaries which were reported some time ago in

the papers. Where communication is rapid and easy, the "swag" was probably brought down to Galle or any of the intermediate stations or taken up to Kandy, &c., and distributed in the villages long before the police in Colombo had even received information that a burglary had been committed.

If, however, it could be arranged that these habituals should not leave their places of residence without giving the police forty-eight hours' notice of their departure and arrival, and stating where they are going to, it would give the police time to communicate with police of that locality, and the man's movements could be watched. When a habitual criminal is put under such restrictions there is very little encouragement to him to commit crime, as his chances of escape are reduced to a minimum. At present when such an habitual leaves a station it takes the police all their time to find out where he has gone to, entailing no end of correspondence and a great deal of delay and trouble in ascertaining his whereabouts.

It would require fresh legislation, but I am of opinion it would simplify the system considerably if all habituals be brought under the restrictions mentioned above.

I annex reports furnished by the Police Magistrates of Galle and Balapitiya. Mr. Woodhouse reports :—

Jurisdiction.—The jurisdiction of the Police Court extends over about 450 square miles, bearing a population according to the last Census of about 170,000 souls.

Police Court Institutions.—5,092 cases were investigated in the police Court in 1902; 6,966 persons were charged, of whom 2,869 were convicted. Of these cases, 2,429 were under the Penal Code, and the rest under other Ordinances. The fines for the year amounted to Rs. 6,845·96.

Supreme Court Sessions.—There were only two sessions in 1902. Out of 42 cases committed, 22 resulted in convictions and 2 are pending. The following is a statement showing the results of cases committed to the Supreme Court :—

No. of Cases.	Offence.	No. of Persons charged.	No. of Persons convicted.	No. of Persons acquitted.	No. of Persons awaiting Trial.
11	Murder	15	11	3	1
2	Attempt to murder	4	2	2	—
10	Robbery	25	2	23	—
2	Rape	2	1	1	—
1	Unnatural offence	1	1	—	—
1	Attempt to rape	2	—	2	—
1	Hurt to public servant	1	1	—	—
1	Theft	1	1	—	—
2	Forgery	2	2	—	—
2	Unlawful assembly	14	3	2	9
2	Uttering forged note	2	—	2	—
6	House-breaking	17	12	5	—
1	Riot and murder	5	2	3	—

District Court Sessions.—The following is a statement of cases committed to the District Court in 1902 :—

	No. of Cases.	No. of Persons charged.	No. of Persons convicted.	No. of Persons acquitted.	No. of Persons awaiting Trial.
January	4	5	5	—	—
February	8	12	6	6	—
March	10	16	14	2	—
April	7	15	5	10	—
May	8	13	6	4	3
June	11	25	10	60	8
July	11	27	3	10	2
August	6	13	7	8	—
September	3	3	2	1	—
October	6	6	4	2	—
November	5	7	4	1	2
December	10	11	7	2	4

Homicides.—There were 11 cases of homicide, as against 10 in 1901. As in 1901, 2 resulted in convictions for murder. Of the remainder, 7 ended in convictions for manslaughter, 1 in acquittal, and 1 is pending.

Knife Cases.—There were 121 so-called knife cases in 1902, as compared with 174 in 1901. The following statement will show the results of these cases :—

Number of—	Police Court.	District Court.	Supreme Court.	Pending.
Cases	113	7	1	—
Persons charged	167	19	1	—
Persons convicted	58	9	1	—
Sentenced to lashes	19	—	1	—
Acquitted	109	10	—	—

An appreciable reduction in the number of false cases under this head was noticeable towards the latter part of 1902, due no doubt to people finding out that lashes were being inflicted only in cases of unusual cruelty and brutality, or where the accused has been previously convicted of a similar offence.

Robbery.—There were 173 charges of robbery, of which only 15 turned out to be true. The figures for 1901 were 67 and 20.

Cattle Stealing.—Out of 155 cases, 134 were tried summarily in the Police Court, resulting in 14 convictions; and 4 in the District Court, all resulting in convictions. In 17 cases the offenders were reported unknown. In 1901 there were 97 cases, resulting in 20 convictions. In view of the great increase of this form of crime, I would suggest that Magistrates in this Province be authorized to exercise the powers given them under section 368 of the Ceylon Penal Code to lash in these cases.

House-breaking.—333 cases were reported in 1902, as against 209 in 1901. In 126 cases only were any accused charged at all, of which 31 resulted in convictions. The figures for 1901 were 39 and 10.

The suggestion made in last year's report that section 83 of the Criminal Procedure Code should be strictly enforced has been acted upon, and I am assured the results have proved satisfactory. This year should see a great reduction in this form of crime.

Vaccination.—The Medical Department has been unusually active in prosecuting under this Ordinance. There were 1,007 cases in 1902, as against 338 in 1901. The fines recovered under this Ordinance netted Rs. 887, as against Rs. 325 in 1901.

It is to be regretted that accused persons, very often women with children, should have to travel great distances, sometimes 30 or 40 miles, simply to plead guilty and pay a small fine. I think some provision should be made to enable Mudaliyars or Presidents to recover these fines.

Perjury.—There have been no convictions for perjury in 1902. There has, however, been no lack of false evidence, but witnesses are so clever that it is impossible to bring them under any provision of the law. It is remarkable that while Christians are forced to swear on their most sacred writings, Buddhists, Mohammedans, and Hindus, though they have oaths as binding, are permitted to give their evidence on a form of affirmation, which very few of them understand, and which, when understood, has no more binding force than a promise to tell the truth. A revision of the Oaths and Affirmation Ordinance is very desirable.

Cruelty to Animals.—232 cases were instituted in 1902, as against 119 in 1901, showing greater activity on the part of the officers of the Society for Prevention of Cruelty to Animals.

Police and Inquirers.—Both the regular and their rural brothers have done their work admirably under the able guidance of Mr. Superintendent Thornhill. In scarcely a single case of serious crime have they failed to produce the offender. The Inquirers have been more largely availed of in 1902 at some additional expense to Government, and I trust that their work will not be in vain, for a prompt and careful inquiry into an offence at the spot, even if it does not result in the detection of the offender, cannot but have a beneficial effect in the long run.

Mr. Ekanayake reports:—

Balapitiya has held the first place in crime for the previous three years. I venture to think that it lost this distinction last year.

There was only one murder, as compared with three each for 1900 and 1901. Other crimes against person are much less than in the previous years. The total number of crimes in 1902 is 1,785, as against 2,017 in 1901; and the number of accused 2,407, as against 2,971 in 1901.

A very large proportion of the violent crime in this district is due to civil disputes, owing especially to infinitesimal division of property. The Partition Ordinance is very rarely taken advantage of, mainly owing to the difficulty in ascertaining all the co-owners, who are in many cases scattered through several Provinces. Recently a case was brought to my notice in which the plaintiff had spent six months in hunting up his co-owners, and has not succeeded fully, although he has over eighty in his list. I am convinced that a simple, inexpensive, and expeditious settlement of land disputes would be the most important preventive of crime in this district. The only murder last year was due to a civil dispute, and of the 21 grievous hurt cases 8 are due to civil disputes.

I have spent a large portion of my time each day in inquiring into petitions referring to civil disputes, and in a great many cases effected amicable settlements or cleared and simplified the issues. In all cases in which a breach of the peace was likely, I have freely bound over parties to keep peace. Over 150 persons have been so bound over last year.

Considering the ease with which arrack and toddy can be obtained, a surprisingly small proportion of crime can be attributed to arrack. I have not found a single case in which the crime can be traced to use of opium.

I have in cases of petty fights always punished both parties, as it is often a mere accident that these fights do not end more seriously. Hence the large number of cases of affray last year. When the cause of the quarrel is of a permanent nature, I have bound over the parties.

Cattle stealing is the chief crime in this district. The ease with which the cattle can be transferred to Kalutara District, where there is a ready market, is the chief incentive to this crime. Comparatively few cattle are brought into this district, except in transit from the south.

The majority of cattle stealing cases are true, but the evidence is mostly false. The chief difficulty in tracing stolen cattle is the cessation of headmen of all inquiry or effort beyond their divisions. If means could be devised of apprising the headmen along the route taken by the thieves of the thefts, there would be more cases of arrest of the stolen cattle. I would suggest that rewards be offered to persons intercepting stolen cattle or giving information leading to their capture, and that adequate batta be paid to headmen travelling outside their divisions if they succeed in capturing cattle.

In connection with this crime I must mention the services of Mr. G. E. Perera, the Inquirer into Crimes of Elpitiya, who has been during his short term of office as Constable Arachchi very active in his efforts to suppress this crime in his district, and has been instrumental in seizing several stolen cattle in transit, and has raided and arrested the stolen cattle of the chief cattle lifter of the place.

In the case of stolen cattle seized during transit, the difficulty is to find the owner, and though it is morally certain that the cattle are stolen, there is no legal evidence to convict for theft or retention of stolen property. The only punishment possible, viz., punishment of driving without permit and confiscation of the cattle, which falls within the Village Tribunal jurisdiction, seems to be hardly adequate. The finding of the owner is beset with

the difficulty that the accused can always induce their accomplices and regular receivers to produce vouchers to suit the cattle, the brands on the buffaloes being very difficult to decipher after a few years and easy to obliterate.

The police of the district has been fairly efficient, and generally the police officers have been fairly kept to the mark. It is necessary that police officers should be instructed on the importance of recording the complaint made to them at the earliest opportunity. It is the practice, which I have often to correct, to write the report after they come to the court, the case undergoing a considerable change in the interval. The headmen should be supplied with note books duly paged, in which they should be ordered to note the complaint as made originally, pending the fuller report after inquiry.

XV.—VILLAGE TRIBUNALS.

There are three Village Tribunals in the Galle District, in Bentota-Walallawiti korale, Gangaboda pattu, and Hinidum pattu, the last two being in charge of one President, who visits Hiniduma once a month. I agree with Mr. Fowler that this arrangement is not satisfactory. The work of the Hinidum pattu is very light, and the Mudaliyar could easily attend to it in addition to his own duties. The Village Tribunal in Gangaboda pattu might then be abolished, and an Itinerating Magistrate appointed instead for the Galle and Balapitiya divisions. The returns of work done by the Village Tribunals appear in Appendix O.

XVI.—VILLAGE COMMITTEES.

The Village Committees throughout the Province did excellent work as usual. Appendix O shows the receipts and expenditure of the six Committees in the Galle District. The Committees have paid great attention to the opening and improvement of roads and building and repair of school bungalows. The Village Communities' Ordinance is well suited to the requirements of this Province, and has greatly benefited the rural districts. I have mentioned under head VI., "Sanitary Condition of the People," my suggestion that "principal villages" should be proclaimed under this Ordinance, and special sources of revenue set apart for their sanitation.

A list of works carried out by the Village Committee of Wellaboda pattu in 1902 is given in Appendix P.

XVII.—EDUCATION.

The Galle District is well provided with schools. The list includes—

Government Schools	39
Aided Schools	106
Unaided Schools	2

The Village Committees have gone to considerable expense in building and improving school bungalows and providing gardens.

XVIII.—NEW AREAS OF CULTIVATION.

There has been little advance during the past year. Tea is reported to have made no progress. The Mudaliyars' reports show a slight extension of cocoanut and cinnamon cultivation, but the figures are unreliable. The extent of land alienated was 2,437 acres, but probably half of this area had been previously cultivated, and was granted at half-improved value and certificate of quiet possession. It is probable that the area under cultivation did not exceed that of 1901 by 1,000 acres.

XIX.—SALES OF LAND BY VILLAGERS.

No cases were brought to my notice in which villagers had sold their houses or gardens. There were several cases in which villagers sold or leased lands to which they had no sufficient title, most of them being Crown lands containing plumbago.

XX.—WORK OTHER THAN ROUTINE.

In the station nearly the whole of my work must be classed as routine. On circuit my attention was given to roads and resthouses, village works, inspection of lands, &c.

In August I visited the game sanctuary with the Assistant Government Agent. Deer and peafowl were seen in considerable numbers, and the way in which the deer trotted off to a little distance and stood to watch us ride past shows that the sanctuary is well watched, and that the deer are not molested. Pig were seen in large herds, and moved out of the way reluctantly as we approached. It would perhaps be as well to thin out the pigs, as all the available water is required for game. Some work has been done on the old tanks, but water is still scarce in the dry weather. The head watcher of the sanctuary has been granted the rank of Dadayakkara Arachchi.

XXI.—MISCELLANEOUS.

Mr. Fowler left the Province in February after having administered it for two years.

In April a marine biology station was established at Galle, and Mr. Hornell was placed in charge of it.

In June the intended Coronation festivities were postponed owing to the serious illness of His Majesty. A service of intercession was held on the 28th.

In August the Coronation of Their Majesties was celebrated with great loyalty by all classes.

In November the punitive police were removed from Ambalangoda after being quartered there for nearly a year, and the Boer prisoners of war were removed from Urugasmanhandiya.

It has become a tradition to mention in the Administration Report the invaluable services of Mr. Hunter, Head Clerk of the Galle Kachcheri. This very efficient officer has been rewarded by promotion to the Kandy Kachcheri.

H. W. BRODHURST,
Acting Government Agent.

Galle Kachcheri, March 23, 1903.

H.—Homicide Return.

[In the cases marked (*a*) the injured person was conveyed to hospital and died there on the date given in column 3.]

No.	Village and Number.	Offence committed.	Body discovered.	Accused apprehended.	Date of Inquest.	Magisterial Inquiry commenced.	Committed or discharged.	Date of Final Trial.	Result.	Punishment.	Instrument used.	Probable Motive.	Attributable to Liquor or not.	Circumstances.
		1902.	1902.	1902.	1902.	1902.		1902.						
1	Tiriwanebokkagodella, 143, Hambantota District	Jan. 9	Jan. 9	Jan. 13	Jan. 11	Jan. 14	Committed	June 13	Convicted	Death	Knife.	Gain	No	This was a triple murder. The bodies were found thrown into the jungle on the old Badulla road. A Boer prisoner of war had seen the accused and the three deceased persons together before the murder, and was able to identify the accused amongst fifteen others
2	Udupillegoda, 153, Matara District	Jan. 11	Feb. 21 (*a*)	1st accused Jan. 11, 2nd accused Jan. 12	Feb. 22	Jan. 14	Committed	June 11	Convicted	1st accused sentenced to death, 2nd accused discharged	Gun	Anger, land dispute	No	The accused shot at the deceased, a woman, who was reaping the crop of a field, which was the subject of a dispute. The deceased died in hospital. The second accused was said to have abetted the first
3	Walpita, 196, Galle District	Jan. 15	Jan. 15	Jan. 15	Jan. 15	Jan. 16	Committed	May 23	Convicted	1st accused 10 years' rigorous imprisonment; 2nd, 3rd, and 4th 8 years' rigorous imprisonment each	Clubs and mamoties	Anger, land dispute	No	The accused (4) attacked the deceased with clubs and mamoties and killed him in the course of an altercation about the ploughing of a field, which was the subject of a dispute
4	Kudabedigama, 75, Tangalla, Hambantota District	Jan. 17	Jan. 17	Jan. 17	—	Jan. 18	1 accused committed, 1 accused discharged	Aug. 11	Discharged	—	Katty	Revenge	No	The accused waylaid and stabbed the deceased to death, in order to pay off an old score about cattle trespass
5	Ihala Obada, 66, Tangalla, Hambantota District	Jan. 20	Jan. 20	Jan. 20	—	Jan. 22	Committed	Aug. 7	Convicted	Death	Gun	Anger	No	The accused, who was incensed at deceased breaking into a granary and removing some kurakkan which he maintained was his own, shot the deceased with a gun
6	Gorakawala, 197, Matara District	Jan. 22	Jan. 23 (*a*)	Jan. 23	Jan. 24	Jan. 23	1 accused committed, 1 accused discharged	June 17	Convicted	Death	Gun	Anger, to facilitate escape	No	The deceased happened to come up when the accused was stealing toddy from deceased's kitul tree, when accused fired at the deceased and killed him

7	Ihala Keembiya, 197, Galle District	Jan. 29	Jan. 29	Jan. 29	Jan. 29	Jan. 29	2 accused committed, 8 accused discharged	June 10	Convicted	10 years' rigorous imprisonment each	Gun	Anger, land dispute	No	The dispute was about a field. A free fight having taken place, two men were injured, and the paddy they had reaped taken away from them. The Police Officer was called in, and while he was inquiring into the matter, a son of the deceased is said to have run up to the spot, when the Police Officer gave the accused a general order to attack. The first accused thereupon fired at the deceased and killed him on the spot. It is feared that the Police Officer was perfectly innocent, though he was found guilty by the jury, and he was sacrificed owing to his unpopularity with the deceased's relations.
8	Ulahitiyawa, 116, Tangalla, Hambantota District	Feb. 17	Feb. 18	Feb. 17	—	Feb. 18	Committed	Aug. 8	Convicted	10 years' rigorous imprisonment	Knife	Anger, property dispute	No	The deceased had leased a land to the accused, and the deceased objected to the accused pulling up some "mun" plants, when accused stabbed the deceased.
9	Beralapanatara, 198, Matara District	Feb. 21	Feb. 21	Feb. 25	Feb. 23	Feb. 24	Committed	June 12	Convicted	Death	Gun	Anger, property dispute	No	The deceased was going up a kitul tree to steal toddy, when accused, who was his younger brother, shot him dead.
10	Hingurekanda, 62, Tangalla, Hambantota District	March 7	March 7	March 7	—	March 9	Committed	Aug. 13	Acquitted	—	Knife	Revenge	No	The accused stabbed the deceased because he gave evidence against him in the Gansabhawa.
11	Kotamba, 48, Tangalla, Hambantota District	March 12	March 12	March 12	—	March 13	Discharged	—	—	—	Gun	Self-defence, and to protect property	No	The deceased was shot dead by the accused while in the act of breaking into his house. The deceased came armed with a "kris" and hand axe to steal, and kill if necessary. Accused was discharged on orders from the Attorney-General, presumably on the ground that under the circumstances accused's act was justifiable.
12	Karagoda, 168, Galle District	March 27	April 11 (a)	March 27	April 11	April 11	Committed	Oct. 22	Convicted	3 years' rigorous imprisonment	Mamoty	Anger	No	Deceased died in the hospital of injuries caused by accused with a mamoty for objecting to his removing some cocoanuts which deceased had picked.
13	Dampella, 40, Matara District	March 29	March 29	March 29	March 30	March 30	Committed	Aug. 15	Convicted	Death	Katty	Anger	No	The accused ran amuck and killed a man, a woman, and four children with a katty.
14	Aluttanayangoda Ihala, 203, Galle District	April 3	April 3	April 3	April 4	April 4	Committed	July 16	Convicted	Death	Gun	Anger, property dispute	No	Accused, having failed to obtain a conviction against the deceased's son for house trespass in connection with a house to which both parties claimed a title, shut himself up in the house armed with a gun and other weapons, and shot the deceased dead and injured her son as they approached, presumably to take possession of the house.

No.	Village and Number.	Offence committed.	Body discovered.	Accused apprehended.	Date of Inquest.	Magisterial Inquiry commenced.	Committed or discharged.	Date of Final Trial.	Result.	Punishment.	Instrument used.	Probable Motive.	Attributable to Liquor or not.	Circumstances.
		1902.	1902.	1902.	1902.	1902.		1902.						
15	Harumalgoda, 139, Galle District	April 6	April 7 (*a*)	April 6	April 7	April 7	Committed	Oct. 24	Convicted	3 years' rigorous imprisonment	Clubs	Anger and ill-feeling	No	The accused injured the deceased with a club when he was going through accused's land. Bad feeling appears to have existed between the parties owing to old law suits. The deceased succumbed in the hospital.
16	Wettambuwawa; 70, Tangalla, Hambantota District	April 13	April 13	April 14	—	April 14	Committed	July 5	Convicted	10 years' rigorous imprisonment each	Knife	Gambling quarrel	No	The deceased objected to accused gambling on his land, when the second accused held him and first accused stabbed him to death.
17	Dandeniya, 91, Matara District	April 23	April 23	April 23	April 24	April 24	Committed	June 14	Discharged	—	Katty	Anger	No	The accused mortally wounded the deceased, whom he found in his house carrying on illicit intercourse with his (accused's) wife.
18	Majuwana, 102, Galle District	April 24	April 24	April 24	April 25	April 25	Committed	Pending	—	—	Knife	Unknown	No	There appears to have been much bad feeling between the accused and the deceased's brother. The accused were said to have murdered the deceased in order to implicate the deceased's brother, whereas the accused maintained that the deceased's brother himself inflicted the fatal injury. The accused having been acquitted, the brother is now being put on his trial.
19	Babarenda, 91, Matara District	May 2	May 3 (*a*)	May 2	May 5	May 6	Committed	Aug. 4	Convicted	10 years' rigorous imprisonment	Club	Anger	No	An altercation having arisen between the deceased and his nephew about the removal of some pots at the accused's request, the accused intervened and assaulted the deceased with a club and killed him.
20	Dodanpahala, 95, Matara District	May 4	May 4	May 4	May 5	May 6	Committed	July 4	Convicted	7 years' rigorous imprisonment	Knife	Anger, money dispute	No	The parties were brothers-in-law. They quarrelled over a rupee, and the accused stabbed the deceased in the chest.
21	Piyadigama, 99, Galle District	May 24	May 24 (*a*)	May 25	May 24	May 24	Committed	Oct. 22	Convicted	Death	Knife	Anger	No	The deceased was averse to accused, a habitual criminal, keeping deceased's sister as his mistress. They quarrelled about it, and accused stabbed the deceased in the abdomen and caused an injury, to which deceased succumbed in hospital.
22	Ketiyape, 172, Matara District	June 19	June 19	June 19	June 21	June 19	2 accused committed, 2 accused discharged	Dec. 1	Discharged	—	Clubs	Anger, land dispute	No	The deceased objected to the accused (4) taking jak fruit from a land to which both parties claimed a title, when the accused clubbed deceased to death.

23	Waharakgoda, 24, Tangalla, Hambantota District	July 21	July 21 (a)	July 21	—	July 22	Discharged	—	—	—	Club	Self-defence	Liquor	Deceased came to accused's compound drunk and abused him. In the course of the altercation deceased stabbed accused's cousin on the head. Accused came to the rescue, when deceased turned on him with knife in hand. Accused in self-defence struck deceased two blows on the head with a stick, and deceased succumbed to the injuries in hospital. The accused was discharged on orders from the Attorney-General, on the ground that his act was a justifiable one in self-defence.
24	Koholankala, 143, Hambantota District	Aug. 2	Aug. 2	Aug. 3	Aug. 3	Aug. 4	Discharged	—	—	—	Gun	Revenge	No	The accused's mistress had left him and gone to deceased. Finding he could not persuade her to come back to him, accused threatened to do harm to the deceased if he persisted in keeping her. Subsequently, while on his way to work at Weligatta, 8 miles off, deceased was deliberately shot dead. There was no evidence of the actual commission of the offence, which must have occurred about midnight, but there was strong reason for suspecting the accused of the crime. There is practically nothing to actually connect him with it. Accused was discharged on orders of the Attorney-General for want of evidence.
25	Getamanna, 27, Tangalla, Hambantota District	Aug. 2	Aug. 2	Aug. 2	—	Aug. 2	Committed	Nov. 26	Convicted	5 years' rigorous imprisonment	Knife	Anger	No	The parties, who were little boys, quarrelled over a popgun, and accused stabbed the deceased and caused his death.
26	Horagampita, 195, Galle District	Aug. 12	Aug. 12	Aug. 12	Aug. 13	Aug. 14	1 accused committed, 3 accused discharged	Oct. 31	Convicted	3 years' rigorous imprisonment	Knife	Anger	No	The deceased and the third accused quarrelled near a footbridge, and in the course of the struggle both fell into the oya below. The first and fourth accused, sons, and second accused, nephew of the third accused, plunged in after them, and the first accused stabbed the deceased.
27	Katukoliha, 54, Galle District	Sept. 1	Sept. 1	Sept. 1	Sept. 2	Sept. 2	Committed	Oct. 30	Convicted	7 years' rigorous imprisonment	Knife	Anger, land dispute	No	The parties had quarrelled about an enclosure. On the night in question the accused went to the deceased's house ostensibly for the purpose of ascertaining if any one living there had taken a cloth of his, but really to embroil deceased in a quarrel. In the course of the fight which ensued accused was injured and deceased stabbed to death.
28	Miliduwa, 96, Galle District	Sept. 10	Sept. 13 (a)	Sept. 13	Sept. 13	Sept. 13	Committed	Nov. 14	Convicted	5 years' rigorous imprisonment	Knife	Anger, money quarrel	No	Accused stabbed deceased in the course of a quarrel over some money, and deceased subsequently died of the injuries in the hospital.

No.	Village and Number.	Offence committed.	Body discovered.	Accused apprehended.	Date of Inquest.	Magisterial Inquiry commenced.	Committed or discharged.	Date of Final Trial.	Result.	Punishment.	Instrument used.	Probable Motive.	Attributable to Liquor or not.	Circumstances.
29	Pateweliwitiya, 186, Galle District	1902. Sept. 22	1902. Oct. 1	1902. Oct. 1	1902. Oct. 1	1902. Oct. 1	Committed	1902. Pending	—	—	Knife	Unknown	—	The deceased disappeared mysteriously on 22nd September. It was not till the 1st October that the body was found buried in the jungle with injuries over the ribs, apparently caused with a katty. The accused are supposed to have attacked him with a katty when he was stealing their toddy.
30	Galagama, 13, Tangalla, Hambantota District	Oct. 10	Oct. 10	Oct. 10	—	Oct. 10	Committed	Pending	—	—	Gun	Anger, land dispute	No	The accused shot two women dead for cutting pumpkin creepers from a land which the parties possessed in common.
31	Kosgoda, 16, Galle District	Nov. 14	Nov. 14	Nov. 14	Nov. 14	Nov. 15	Pending	—	—	—	Crowbar	Anger	No	In the accuseds' (6) absence the deceased and others went and built a hut on a land claimed by the accused and occupied it. When the accused got to hear of this they went and pulled down the hut, and in the course of the fight that followed fourth accused cracked the deceased's skull with a crowbar.
32	Kirinda, 134, Matara District	Nov. 16	Nov. 16	Nov. 16	Nov. 16	Nov. 17	Committed	Dec. 8	Convicted	10 years' rigorous imprisonment	Knife	Anger	No	The deceased and his uncle were quarrelling because deceased was supposed to have damaged the plantation in his uncle's enclosure, when the uncle's son ran up with a knife and stabbed the deceased.
33	Ratgama, 45, Galle District	Nov. 19	Dec. 9 (*a*)	Nov. 20	Dec. 9	Nov. 20	Committed	Pending	—	—	Knife	Anger	No	The first accused's wife had left him and gone to her father's house. The first accused, finding he could not persuade her to come back to him, threatened to dash her child on the ground. The woman's father intervened, when first accused stabbed him in the chest, and second accused struck him with a club. The injured man died in the hospital.
34	Kataluwa, 153, Galle District	Dec. 9	Dec. 9	Dec. 9	Dec. 10	Dec. 10	Committed	Pending	—	—	Rice-pounder	Anger	Liquor	The deceased while drunk abused his brother's wife at her house, when his brother, the accused, clubbed him to death.
35	Talawa, 111, Tangalla, Hambantota District	Dec. 15	Dec. 15	Dec. 15	—	Dec. 17	Committed	Pending	—	—	Gun	Anger, cattle dispute	No	The deceased and his stepson were out wild boar hunting, when they met the accused (3), who were out on a similar errand. An altercation took place between them about a bull which had been stolen from the accused, and the first and second accused fired at deceased simultaneously and killed him.

I.—Summary of Serious Cognizable Offences disposed of by the Police Courts of the Southern Province during the Year 1902.

P.—List of Village Committee Works for the Year 1902.

GALLE WELLABODA PATTU.

Weragoda Division.

Telwatta-Kiralagahawela road (2 miles) was repaired.
Weragoda-Ronnaduwa road (1½ mile) newly opened to 12 ft. Portion still left unfinished.
Weragoda-Metiwala road (1 mile) repaired.
Mitiyagoda-Metiwala road (1 mile) repaired partly.
Alutwala-Kalupe road (2 miles) improved.
Godagama (Kahawa) girls' school newly built on purchased site.
Weragoda boys' school kept in repair, tiles shifted.
Metiyagoda girls' school kept in repair.
Kajugaha Ambalama-Kahatapitiya road kept in repair.
Uduwaragoda-Kahawa road (half mile) improved.
Weragoda cattle pound.

Hikkaduwa Division.

Dodanduwa (Degalle)-Godabedda road (half mile) repaired and improved.
Dodanduwa (main road) Godabedda (half mile) was repaired.
Modara Patuwata-Walamulla road (1 mile) was repaired.
Walamulla-Dodanduwa road (half mile) was repaired and improved.
Patuwata-Tiranagama road (1 mile) was repaired and improved. Excessive rain has damaged a culvert.
Tiranagama-Pinkanda road (1½ mile) repaired and partly improved. Rain has caused some damage.
Narigama-Punchipatana road (1½ mile) improved and repaired.
Wewala-Nalagasdeniya road (1½ mile) repaired and improved.
Wawlagoda-Wewala road (1 mile) repaired.
Hikkaduwa-Hettigoda road (half mile) repaired.
Gonapinuwala-Dodankahawila road (2 miles) was badly damaged by rain ; repaired.
Totagamuwa-Kalupe road (2 miles) repaired and improved.
Werellana-Munugoda road (2 miles) partly improved.
Sinigama-Munugoda road (1 mile) repaired.
Malawenna-Pereliya road (2 miles) partly improved.
The Hikkaduwa girls' school was completed and given over to the school department. This relieved the Village Committee of payment of rent for a private building.
The work of putting up outhouses for the Hikkaduwa Village Committee court-house hall was commenced and some progress made.
The wall screening the rocks used as a latrine by women at Dodanduwa was not proceeded with for want of funds.
The Tiranagama Wewala-ela stream was cleared.
Wawlagoda public well : not complete.
The hackery stand at Hikkaduwa kept in repair.

Ambalangoda Division.

Watugedara-Waudaduwa road : two-thirds opened to 12 ft. The rest and the culverts have to be made, including a bridge across Madu-ganga (2 miles).
Balapitiya-Watugedara road : bridge completed with two ends of it filled in and walled. The road has to be thoroughly repaired and two culverts made (2 miles).
Keraminiya-Randomba road (1 mile) repaired and a large culvert made.
Randomba-Rukmalgahatotupola road : half a mile repaired.
Wilegoda-Watugedara road (2 miles) repaired, but badly damaged by the rain.
Maha Ambalangoda-Dawa road (1½ mile) repaired and partly improved.
Ketantota-Wilegoda road (1 mile) repaired.
Polwatta-Indiketiya road (2 miles) : nothing done.
Karandeniya-Magala road (3 miles) : nothing done.
Madakumbura-Talgahawatta road (1 mile) : nothing done.
Maha Edanda-Batuwanhena road (2 miles) : 1 mile complete ; the rest has to be made.
The Village Committee court-house was whitewashed and tiles shifted.
Porambe-Kaluwadamulla : 1 mile.
Dampota-ela stream : half a mile.

Madampe Division.

Henamulla-Kuligoda road (1½ mile) was partly improved and repaired.
Wellaboda-Kuligoda road (2 miles) was partly improved and repaired.
Kuligoda-Kulitota (1 mile) : nothing done.
Akuraleduwa (half mile) : nothing done.
Kuli-ela stream partly cleared (1½ mile).
Welle-ela stream partly cleared (1½ mile).
Indiketiya-Batapola road (2 miles) was improved.
Batapola-Etkandura road (3 miles) was repaired.
Batapola-Ronnaduwa road (2 miles) was partly improved.
A new girls' school was built and opened at Akurala. This has to be improved.
The boys' school at Akurala was repaired.

Ratgama Division.

Bopagoda-Pinkanda road (3 miles) : further portion was opened to 12 ft.
Ranapanadeniya-Hegoda road (3 miles) repaired. Much damage has been caused by rain.
Katudampe-Imbula road (1½ mile) repaired.
Gammeddegoda-Ganegoda road (1 mile) repaired ; a portion left.
Bussa-Ganegoda road (2 miles) repaired.
Pitiwella-Hegoda road (2 miles) improved.
Bussa-Hegoda road (2 miles) repaired.
Well at Udugalpitiya : not complete.
Village Committee's court-house was thatched and whitewashed.
Owekanda-Kapumulugoda road (1 mile) : nothing done.
Bopagoda-Kanattetotupola road (1 mile) : nothing done.

Ambana School.

The Ambana boys' school house was thatched and kept in repair
Kahaduwa-Horangalla road (2½ miles) repaired.
Waturawila-Rekadahena road (half mile) repaired.
Waturawila-Wattehena road (1 mile) repaired.
Kahaduwa-Ambana road (1½ mile) repaired.
Polgahawila-Pinikahana road (1 mile) repaired.
Kuttiyawatta-Polgahawila road (1 mile) partly repaired.

REPORT ON THE MATARA DISTRICT.

Area, 501½ square miles: Population, 203,750.

I.—REVENUE.

THE figures for the last five years, exclusive of the Arrack Farm, credited in Galle Kachcheri are :—

	Rs.		Rs.
1898	127,468	1901	130,562
1899	130,915	1902	146,656
1900	149,618		

Rs. 74,882, the amount realized by the Arrack Farm, being added, the actual revenue of the district is found to be Rs. 221,538, an increase of Rs. 9,633 over that of 1901.

The main increases in revenue are in Land Sales, Rs. 20,592; Survey Fees, Rs. 1,427; Fees for Title Deeds, Rs. 667; Police Rates, Rs. 439; and Postage Stamps, Rs. 412. The great increase in Land Sales is proof that the district has more than recovered from the depression caused in 1901 by the fall in the price of plumbago and citronella oil.

The chief decreases in revenue are Rs. 6,461 in Arrack, Rs. 1,063 in Road Tolls, and Rs. 1,030 in Bridge Tolls, all due to less prompt payments than in 1901; Rs. 817 in Revenue Stamps; Fines (other Departments), Rs. 1,826, due to fewer road tax defaulters being fined; Judicial Stamps, Rs. 1,088; and Timber, Rs. 685.

A comparative statement of the revenue collected in the district during the years 1901 and 1902 is annexed :—

Heads of Service.	1901.	1902.	Increase.	Decrease.

Other Charges	8,369 88
Pensions	8,324 73
Total ...	37,401 35

II.—FOOD SUPPLY.

In Matara District, as in most parts of Ceylon, rice is the staple food of the people. It is supplemented and flavoured by cocoanut, breadfruit, jak, yams, potatoes, plantains, pumpkins, and other vegetables, fresh fish and salted fish, and in Matara town by fresh meat. About a half of the rice consumed is imported from India; the balance is grown by the people. Great attention is paid to paddy cultivation, and there are few fields, even of small extent, that are not cultivated at least once a year. The headmen estimate that 645,509 bushels of paddy and 54,468 bushels of other grain were produced during the year, but these figures are of doubtful accuracy.

In the hilly parts of the district, where the paddy lands are of comparatively small extent, chena cultivation, chiefly illicit, is carried on by the villagers. They live on the kurakkan, amu, meneri, and other fine grain and vegetables thus produced when the supply of locally-grown rice fails and the price of imported rice rises beyond their means. Owing to the difficulty of transport imported rice is dear in Morawak korale and Kandaboda pattu, the chief centres of illicit chena cultivation. Whenever the cultivation of fine grain is needed to supplement insufficient rice crops, I am prepared to grant permits for chenas on the vast extent of Crown lands, where the jungle is chena under ten years old.

The people along the coast live largely on fish, the supply of which was abundant as usual. Except in the remote parts of Morawak korale and Kandaboda pattu, the supply of food was plentiful and reasonably cheap. Rice varied in price from Rs. 3·75 to Rs. 4 per bushel. In the more remote parts of the district, to which the supply is precarious owing to difficulty of transport, the price rose at times as high as from Rs. 5 to Rs. 6 per bushel. In such places the necessity for chena cultivation is apparent. The price of paddy was from Re. 1·50 to Re. 1·75 according to the locality; fine grain sold at Re. 1·50, and cocoanuts at about Rs. 35 per 1,000.

The Mudaliyar of Weligam korale states that rice largely takes the place of currency in the payment of labourers at plumbago mines and citronella stills, and remarks that the employer frequently takes an unfair advantage of his labour force in obliging them to take payment in rice at his own price when they could purchase it cheaper elsewhere.

III.—IRRIGATION.

Only one meeting of the Irrigation Committee was held in 1902, at which votes were passed for the works to be undertaken during the year. Thereafter the work of the Committee was carried on by the circulation of papers amongst the members, who are the Mudaliyars and the Presidents of the Village Tribunals of the district.

The revenue of the Committee is derived from one-sixth share of the *huwandiram*, or fees, due to the irrigation headmen. These headmen, who are entitled to 1-48th share of the crop for their services in connection with irrigation and paddy cultivation, generously gave up one-sixth of their fees many years ago for the purpose of repairing the smaller tanks and carrying out other useful irrigation works. The result is that these works are executed without the cultivators having to contribute labour, as they do elsewhere in Ceylon. The irrigation headmen are entitled to great credit for their generosity, which has enabled my predecessors to carry out numerous small irrigation

works of the greatest utility. The Mudaliyars also deserve the thanks of the people for having initiated most of these works, and for the time they have freely spent in preparing and supervising them.

The revenue of the Committee for the year amounted to Rs. 2,387·62 and the expenditure to Rs. 4,215·80, the excess being met from the balance brought forward. The following works were carried out during the year :—

	Rs.	c.
A culvert on the Kananke road	119	96
Repairs to bund of Borala tank	200	70
Anicut at Paraduwa	772	90
Anicut at Dedduwa.	499	63
Distributing gate on Batuwita channel	119	75
Galmulla sea gate	535	50
Retaining wall near Kandarawala distributing gate	79	89
Repairs to Kumbalgama tank and approach road	150	0
Minor works, culverts, bridges, and anicuts	870	49
Total ...	3,348	82

Borala Tank in Weligam korale, which was originally in charge of the Central Irrigation Board, was afterwards placed under the Matara Irrigation Committee. The bund was repaired and raised.

Paraduwa Anicut.—This substantial granite structure takes the place of a native amuna, which was regularly washed away by floods. It irrigates a large tract of fields.

Batuwita Channel.—The new distributing gate supplies water to a large tract of fields in the Batuwita division of the Gangaboda pattu, and will ensure the regular cultivation of many other fields dependent on rain.

Galmulla Sea Gate, commenced in 1901, was completed early in 1902.

Anicut at Dedduwa.—This masonry anicut was completed about the end of the year. A large tract of paddy fields in the Naimbela division is benefited by it.

A few irrigation culverts were constructed, and the village elas and amunas were kept in order by the irrigation headmen. The principal irrigation works—tanks, anicuts, and channels—in the district are in charge of the Irrigation Department. They supply water to about 6,500 acres of paddy land, and were maintained in good order throughout the year. The whole of the irrigation interest due for the year (Rs. 6,623) was recovered without difficulty. Land for the spill of Denegama tank was formally acquired under the Land Acquisition Ordinance. Mr. Van Houten was appointed Sub-Inspector of Irrigation in July, and is making a thorough examination of the smaller irrigation works with a view to their proper maintenance and repair.

The following are the chief works proposed by the Mudaliyars for 1903. A meeting of the Irrigation Committee will be held shortly to decide which of these works shall be undertaken :—

Proposed Works for 1903.

Name of Work.	Estimated Cost. Rs.	c.
Gangaboda Pattu.		
Narangaha flood outlet, for constructing	400	0
Balukawela anicut, for constructing	600	0
Galudamalakumbura anicut, for constructing	500	0
Pamanalla anicut, for constructing	500	0
Meda Uyangoda anicut, for constructing	300	0
Irrigation culverts	500	0
	2,800	0
Weligam Korale.		
Higgoda anicut, for constructing	2,000	0
Three culverts, for constructing	350	0
	2,350	0
Wellaboda Pattu.		
Sea gate, Galmulla, for repairs	190	40
Pitadeniya channel, for repairs	15	0
Two culverts, Kekanadura road, for constructing	120	0
Two culverts, Diyagaha, for constructing	120	0
	445	40
Four Gravets.		
Main channel, Palatuwa to Nupe-ela, for constructing	200	0
Kandaboda Pattu.		
Pottewela tank, for a sluice	200	0
Bridge, Ganegodagam Village Committee road, for constructing ...	865	45
Two bridges, Ganegodagam Village Committee road, for constructing ...	900	0
One bridge, Ganegodagam Village Committee road, for constructing ...	432	72
Four culverts at Rs. 30 and three at Rs. 90	120	0
	2,518	17
Morawak Korale.		
Kadawewa tank, for repairing the bund	300	0

IV.—WORKS REQUIRED.

(1) A water supply for Matara.
(2) Extension of the railway from Matara to Beliatta and Tangalla in Hambantota District.
(3) A bungalow for the District Judge.
(4) A bungalow for the Police Magistrate.
(5) A system of drainage for Matara.
(6) More accommodation for carriages and a covered platform at the Matara railway station.
(7) A villagers' ward at Deniyaya hospital.
(8) A Government building for a Post and Telegraph Office at Matara.
(9) A cart road from Mulatiyana to Urubokka.
(10) Burial grounds for Dondra, Gandara, Dikwella, Akuressa, and Hakmana, where there are populous bazaars.

V.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

A supply of pure water is a prime necessity for Matara, but the cost of any scheme suggested hitherto is far beyond the resources of the Local Board. Drinking water is at present obtained from wells in the town and carted about for sale. The best well is just now (end of January) nearly dry. It is to be hoped that Government will help the Local Board in this matter, and that the members of the Board will agree to raise the rate of assessment, which is at present only 2½ per cent., in order to provide at least part of the funds for this important work.

The extension of the railway from Matara to Beliatta and Tangalla would serve a population of about 104,000 in the Four Gravets, Gangaboda pattu, and Wellaboda pattu, and about 100,000 in West and East Giruwa pattus in Hambantota District.

A new iron bridge at Bandattara is to be built in 1904, and the renewal of the bridge at Polwattemodara on the main road to Galle has also been sanctioned, although rather late, as about 50 feet of this bridge collapsed lately while a cart was passing over it.

The opening of a cart road from Mulatiyana to Urubokka is much needed, to give an outlet to a large number of villages in Morawak korale and Kandaboda pattu. The improvement of the old road from Akuressa to Morawaka is a matter of almost equal importance. Both these works will, I hope, be pushed forward by the District Road Committee in 1903. The improvement of the Mulatiyana-Denagama road will also be taken up if funds permit. When the Mulatiyana-Urubokka road has been completed, one or two cross roads might be cut from it, as suggested by Mr. Fraser, Special Officer, to join the main road from Akuressa to Deniyaya. The proposed cross roads would open up a large extent of country at present without any outlet.

If Government will hand over to the Public Works Department the District Road Committee road from Kirinda, through Kamburupitiya, to Akuressa, the District Road Committee will be enabled to take over and greatly improve several important Gansabhawa roads in the same locality.

VI.—DISTRICT ROAD COMMITTEE WORK.

Single rate payments in 1902 were the highest on record. They were 36,205, as against 33,902 in 1901. In all 37,292 persons, equal to 88·79 per cent. of the men on the list, discharged their liability, either by paying single or double rate or by labouring six or twelve days, as against 35,361 in 1901. 2,519 warrants were issued, as against 3,410 in 1901, and 533 defaulters were brought up before the Chairman, who exempted the great majority of them on the plea of ill-health certified by the Medical Officer, Matara. 104 defaulters, who had no reasonable excuse for neither paying nor working, were fined. Of these, 42, equal to one per thousand, were committed to prison, being unable to pay the fine. The number fined in 1901 was 288, of which 69 went to jail. 3·35 per cent. of the men on the list were exempted, 4·13 per cent. had paid or laboured elsewhere, and 2·5 per cent. were non-effective. They are reported to have left their villages, and their present whereabouts are unknown. No division officer failed to deposit his collections within the proper time.

160¾ miles of road were kept up at an average cost of Rs. 145·43 per mile, and 10 miles of footpath at Rs. 21·50 per mile.

The Government grant of Rs. 1,000 for the improvement of the Mulatiyana-Urubokka road was spent in building a bridge and three culverts. It is unfortunate that this Government grant has not been continued for 1903.

After the sums necessary for the maintenance and improvement of existing roads have been voted, there is not much margin left on the District Road Committee funds for the construction of new roads.

In April it was decided by the Committee that all road work should be given out on contract, and that tenders should be invited. This was done in the case of a few works sanctioned after the Estimates for the year had been passed, but the new system has not had a proper trial yet. It will be continued this year, and I have asked the Mudaliyars to invite the minor headmen to come forward with tenders for the roads in their divisions. If I can get the minor headmen to take up these contracts, I believe the work will be done both cheaper and better than by outsiders, who have not the same command of village labour, nor the same inducement to do good work. Moreover, the legitimate profits on these contracts, instead of being monopolized by a few grasping contractors, will help to increase the scanty emoluments of our unpaid headmen, and will be spent in the villages.

Mr. A. Erskine, Superintendent of Minor Roads, was absent on furlough from 1st April, 1902, and Mr. V. A. van Cuylenburg was appointed to act for him. I annex the latter's report:—

> I took charge of the minor roads in the district from Mr. Erskine, who had gone on leave in April.
>
> The upkeep of the roads this year has been very trying, owing to the heavy rains, resulting in many floods, which caused great damage, especially to the Denagama, Mulatiyana, Kadduwa, and Naimana roads. The embankments at Ovilana, Radawela, and Pallawella were much damaged, and also the Dondra bridge, several large landslips occurring in the newly opened sections of this road. The section of the Kadduwa road between the Kamburupitiya junction and the 12th milepost was so badly damaged that I had to put in a stone foundation and gravel over same to make it fit for wheel traffic.

The new deviation at Motagedara on the Naimana road was breached owing to the culvert at the Matara end being insufficient to admit of the discharge of the large volume of water accumulated there. This was repaired, and now forms one of our best roads. The traffic on the Weligama-Telijjawila road has increased to such an extent (carters from Galle to Morawaka, instead of using the Galle-Akuressa road *viâ* Imaduwa, now go *viâ* Weligama) that I found it very difficult to keep this road in good repair, especially as the gravel *laid* down was of an inferior quality. In connection with this I would suggest that in future roads which have a heavy traffic on them should be repaired with metal or screened gravel.

A section of about half a mile of the Hakmana-Mealla road was laid with a rock foundation and metal over same, and has greatly improved it. The difficulty in procuring gravel for this road, and the substitute we use, "kudapas," makes the road so very heavy during the rainy season, that I would suggest that sections of this road be treated in the same way, say, quarter or one-eighth of a mile every year, if funds admit of our doing so.

In my opinion it is a pity that we had to give up the Ellewela road, as it passes through one of the most populous villages in the Kandaboda pattu (Narawelpitiya). More attention should be paid to the Kirinda road, which now forms the connecting link between the Gangaboda and Kandaboda pattus. Very little money was voted for this road for 1902, so that I was unable to bring it up to a proper state. I have increased the estimate for 1903, which I hope will bring the road to a better condition than what it is now.

A great boon was conferred on the villagers of Hinidum pattu by our clearing and opening out the "Opata road." It is largely used by the villagers who come in for their provisions, &c., to Morawaka. I found great difficulty in keeping up the temporary bridges over the large streams, as they were continually swept away by floods.

Certain sections of the Kotapola-Urubokka road, previously metalled, were picked and re-rolled by me, as the metal did not appear to be well consolidated. Metal was laid in the wheel tracks for over a mile. The gradient is so steep between the 2nd and 5th mileposts that it is very difficult to keep this road in good order. Sections between the 6th and 7th mileposts were damaged by floods, and have been repaired. The section between Beralapanatara and Urubokka will have to be taken in hand this year, for, as far as I can find out, no gravel has been used for repairs, the road being all natural formation. I would suggest in connection with this road that measures be taken to erect an iron railing or wing walls on each side of the Urubokka dam, as some serious accident is sure to occur if it be left in its present unsafe condition.

The Mulatiyana-Urubokka road is about the most difficult road in the district. The rock boulders met with along the trace are enough to make any contractor fight shy of taking up a contract. I would suggest that a start be made from the Urubokka end, say, so far as Dampahala, as the trace passes through very populous villages, and the cutting is far easier. As this road has not been cleared throughout for more than two years, I have made provision in this year's estimates for clearing, as I found it very difficult to go right through.

VII.—VILLAGE COMMITTEES AND VILLAGE TRIBUNALS.

The receipts and expenditure for each Village Committee during 1902 were as under :—

	Balance on December 31, 1901.	Receipts.	Expenditure.	Balance on December 31, 1902.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Village Committee, Four Gravets ...	23 16	872 71	563 27	332 60
Do. Weligam Korale ...	253 68	8,250 88	8,161 6	343 50
Do. Morawak Korale ...	268 90	2,694 1	2,378 82	584 9
Do. Gangaboda Pattu ...	622 27	4,114 86	2,991 20	1,745 93
Do. Wellaboda Pattu ...	166 90	7,947 80	5,569 42	2,545 28
Do. Kandaboda Pattu ...	114 21	3,950 0	2,513 80	1,550 41
Total ...	1,449 12	27,830 26	22,177 57	7,101 81

The following are the chief works carried out by the Village Committee of Gangaboda pattu during 1902 : —

(1) Construction of stables for the Molodduwa Gansabhawa.

(2) Construction of two masonry culverts on Kadduwa-Tibbotuwawa road and two culverts on Pitakatuwana-Aturaliya road.

(3) The erection of new foot-bridges over the Kirama stream at Werakawila and at Vitiyala.

The Wellaboda pattu Village Committee's chief works were the construction of outhouses for the Dikwella Gansabhawa and Kottagoda school at a cost of Rs. 320, and acquisition of land for a boys' school at Naotunna. Four new masonry culverts were also erected at Gandara, Dandeniya, and Dikwella at a cost of Rs. 100.

The Weligam korale Village Committee erected a new wing to the Mirissa school at a cost of Rs. 578·97. The town of Weligama was provided with a Horbury latrine at a cost of Rs. 400. The Marambe school, which was undertaken last year, was completed during the year at a total cost of Rs. 1,000. Rs. 45 were voted by the Village Committee, and a sum of Rs. 155 was raised by voluntary subscriptions from the fishermen interested, for the purchase of buoys to demarcate the fishing limits of Weligama and Mirissa bays.

The Morawak korale Village Committee erected a new school at Morawaka at a cost of Rs. 900.

The Four Gravets Village Committee built five masonry culverts on the Wewa-ihalagoda, Malagoda, and Naimana roads.

The Kandaboda pattu Village Committee has commenced the construction of a school building at Pallawela at a cost of Rs. 950. The work has been given out on contract, and will probably be completed in June next.

Substantial repairs were effected to the Mulatiyana Village Committee bungalow at a cost of Rs. 200.

In addition to carrying out the works already mentioned, the Village Committees maintained 210 miles of Gansabhawa roads and footpaths, with their bridges, culverts, embankments, and edandas, and kept their schools, court-houses, and markets in a proper state of repair.

The chief works proposed for 1903 are the following :—

Name of Work.	Estimated Cost. Rs.	c.
Cattle farm at Sulutanagoda ...	547	0
Repairs to Wewahamanduwa bridge ...	200	0
Repairs to Talpawela bridge ...	160	0
Construction of a cattle pound in the Four Gravets	139	99
Construction of an ambalam at Malagoda ...	63	30
Repairs to the Uda Aparekka bridge ...	125	14
Repairs to the Hindeliya bridge ..	125	14
Construction of a double culvert at Dodampahala	120	0
Construction of five single culverts at Urugamuwa, Gandara, and Wattegama ...	210	0
Construction of a boys' school at Naotunna ...	1.732	50
Repairs to Kottagoda school ...	94	50
Construction of an ambalam at Kekanadura ...	240	0
Construction of an ambalam at Dikwella ...	240	0

Name of Work.	Estimated Cost. Rs.	c.
Acquisition of site and construction of a market at Kirinda	1,000	0
Public wells near the markets at Kamburupitiya, Tihagoda, and Kirinda ...	120	0
To convert Gansabhawa road from Godapitiya Gansabhawa to Kadduwa into a cart road ...	275	0
To improve and widen the footpath from Nadugala through Watagedara to Palatuwa	990	0
Construction of the remaining culverts and improvement of Kirinda-Getamana road	206	0
Construction of a school at Pallawela ...	950	0
Repairs to Deiyandara-Kirama road ...	64	0
Repairs to Kebeliyapala-Pananwela road ...	72	0
Building a new school at Kotapola ...	900	0

Under the head "Education" will be found a list of Village Committee schools in the district and their average attendance.

There are communal markets at the following places, which are maintained from Village Committee funds :—

Weligam Korale.

Kamburugamuwa
Denepitiya
Akuressa

Wellaboda Pattu.

Kotagoda
Aparekka
Dikwella
Ratmale

Gangaboda Pattu.

Tihagoda
Kamburupitiya

Kandaboda Pattu.

Hakmana

Cattle Farm.

Government has sanctioned the establishment of a cattle farm at Sulutanagoda, and has handed over the necessary land and a stud bull to the local Village Committee. Sanguine hopes are entertained by the Mudaliyar, Weligam korale, that he will be able to greatly improve the village breed of cattle. He is taking the keenest interest in the work, and is trying to induce the villagers to do the same.

Village Tribunals.

Revenue of the four Village Tribunals during 1902 :—

		Rs.	c.
Village Tribunal, Gangaboda Pattu		2,149	87½
Do. Weligam Korale		2,111	85
Do. Morawak Korale		1,300	0
Do. Wellaboda Pattu		4,198	81½

VIII.—THE PUBLIC HEALTH AND SANITATION.

The health of the people generally was satisfactory. The birth-rate rose from 42·81 to 46·28 per mille, while the death-rate fell from 25·29 to 24·27 per mille. 9,431 births and 4,945 deaths were registered.

At Weligama small-pox broke out in November in the most densely populated part of the town. The usual precautions were taken. The cadjan huts of the patients were burned, and in two cases tiled houses were unroofed and thoroughly disinfected under the supervision of the Medical Officer, Dr. Wright. The patients were removed to a temporary cadjan hospital, and persons who had been in contact with them were sent to a segregation camp. The hospital and camp, which were outside the town, were guarded by police from Matara and Galle, and the infected houses, pending disinfection or burning, by watchers.

It was greatly to be feared at first that the epidemic would spread rapidly all over Weligama, a town of 6,000 inhabitants. The epidemic ceased, however, with the thirteenth case, and the death of only two patients, a child and an old woman. For this satisfactory issue from a grave peril the thanks of Government and the community are due to Dr. Wright, the Medical Officer, who spared no effort to stamp out the disease. In fairness to the headmen it should be stated that the Vidane Arachchi of Weligama, the Police Officer of Weligama, and the Police Officer of Kapparatota helped the Medical Officer and myself from the start.

A case of smallpox was detected at the Matara railway station, where a look-out was being kept for sick passengers. The patient with her mother was removed to a temporary hospital, where she recovered. The mother, who had nursed her daughter, unfortunately contracted the disease herself, and fell a victim to it owing to her state of extreme debility. These cases have been traced to Weligama. The usual precautions were taken by the Matara Medical Officer, Dr. De Kretser, and myself to prevent the spread of the disease, with the most gratifying success. The disease is supposed to have reached Weligama from Colombo. Some cases of dysentery, chickenpox, and fever occurred here and there as usual.

Dispensaries are provided for the people at Matara, Weligama, Kottagoda, Hakmana, Morawaka, Beralapanatara, Kamburupitiya, Akuressa, Kotapola, and Deniyaya, at which nearly 35,000 patients were treated in 1902. Dispensaries are wanted at Tihagoda, Rotumba, and Mulatiyana to bring European treatment within reach of all the villagers in the district.

The need for a villagers' ward at the Deniyaya hospital has frequently been pointed out by my predecessors. Tamil estate coolies have the first claim on the hospital accommodation, and Sinhalese villagers have often to be turned away for want of room.

Public burial grounds are a necessity near large villages like Dondra, Dikwella, Kottagoda, &c., where there are thickly populated bazaars. After inspecting twenty-one registered private graveyards in Weligama, I closed, for sanitary reasons, six of them in the heart of the town and on the main streets. The others are in less densely populated areas, and do not so urgently require to be closed. Burials are now prohibited in the more densely populated parts of the town by a Gansabhawa rule, the breach of which entails a fine of Rs. 10. The result of several prosecutions is that the people are now beginning to use the public cemetery outside the town, notwithstanding the strong objection of many Sinhalese to being buried alongside or anywhere near their brothers of alleged lower caste.

In Matara the Local Board has decided to double the number of public latrines, so as to provide separate latrines for males and females, in accordance with civilized custom, and to double also the number of latrine coolies in order to secure effective sanitation. Two new bathing kraals have been erected on the river, and two bathing pavilions are in course of construction at other places. A small salt water bath was completed at a cost of about Rs. 700 at the island for the use of women and children and men too feeble to withstand the breakers of the open sea. I regret to state that it is not much availed of as yet, but this is probably due to the want of a shed to dress in. The Local Board will provide this shortly.

The usual precautions against plague and other infectious diseases were observed throughout the district, and towns and villages were kept clean under the supervision of the Local Board and the Mudaliyars.

Except in Matara, the people have an abundant supply of pure water, and I have only to suggest the sinking of wells near the principal market places, wherever a supply of pure water is obtainable.

IX.—CRIME AND POLICE.

There is a bitter cry from the Mudaliyars about the prevalence of cattle stealing to an extent unknown before. They generally attribute this unfortunate state of things to the extreme difficulty of obtaining a conviction before the present Police Magistrate. After my own experience on the Bench for six or seven years, I cannot find fault with the Matara Magistrate for hesitating to convict on what, nine times out of ten, is false evidence. Only one Mudaliyar has admitted that cattle owners are themselves greatly to blame. They will not take the least trouble to look after their cattle, which are allowed to wander about, day and night, obstructing the roads, and feeding, whenever a chance presents itself, on the cultivation of the villagers. Thefts are generally committed at night, and the owners frequently do not discover their loss until a day or two later. So long as the people neglect to kraal their cattle at night thefts are bound to continue, and so long as they do not refrain from instituting false charges and supporting true charges by false evidence, Magistrates must be suspicious and inclined to acquit.

It is true that cattle stealing can be and has been suppressed by drastic measures, such as wholesale convictions, involving both innocent and guilty, and by the application of the lash, but I cannot conscientiously recommend this procedure.

I annex a memorandum on the subject of crime from the Police Magistrate, Mr. H. E. Beven, who is better qualified than I am to report on this subject, as he has investigated the cases throughout the year.

Mr. Beven, Police Magistrate, reports :—

Police Court Institutions.—The number of cases pending on the first day of the year was 97. During the year 2,481 cases were investigated by the Police Court, as compared with 2,812 instituted during the preceding year. 4,836 persons were charged, of whom 1,175 were summarily convicted in the Police Court and 172 were committed before the higher courts. The proportion of convictions obtained is 30 per cent., which, I think, is the normal average. The number of cases left pending at the end of the year was only 49. This, I think, is very satisfactory, considering that the number of monthly institutions average over 200 cases, and that only eighteen days a month are available to the Magistrate for their investigation.

Supreme Court Sessions.—There were two sessions, as usual, held in Matara during the year. 23 cases were committed, of which 11 resulted in convictions. The following statement shows the results of the cases committed :—

Offence.	Number of Cases.	Number of Persons charged.	Number of Persons convicted and sentenced.	Number of Persons acquitted.	Number of Cases pending.
Murder ...	10	12	4 Sentenced to death 2 Ten years' rigorous imprisonment ... 1 Seven years' rigorous imprisonment	5	—
Grievous hurt and robbery ...	1	1	1 Ten years' rigorous imprisonment ...	—	—
Hurt with knife and robbery	1	4	1 Fined Rs. 50 under section 315 ...	3	—
Forgery	1	1	—	—	1
Unnatural offence ...	1	1	—	—	1
Unlawful assembly ..	1	21	—	21	—
House-breaking and theft ...	1	1	1 Three years' rigorous imprisonment...	—	—
Uttering forged note ...	6	6	1 Four years' rigorous imprisonment...	5	—
Theft (old offender) ...	1	1	1 Five years' rigorous imprisonment ...	—	—
	23	48	12	34	2

District Court Sessions.—Sixty cases were committed to the District Court during the year and resulted as follows :—

Number of cases	60
Number of persons charged	135
Number of persons convicted	60
Number of persons acquitted	64
Cases pending	5*

* 11 accused.

Some of the convicts were old offenders, and others notorious village characters. The exemplary punishment they received on conviction in the District Court placed these undesirables out of mischief's way for a lengthened period. The percentage of convictions obtained in the District Court during the year is, I believe, higher than in previous years.

Homicides.—There were 11 cases of homicide during the year, the lowest figure recorded since the year 1899. Of these 11 reported cases, one was really a case of suicide, falsely reported as murder, and three resulted in convictions for manslaughter, so that the number of actual murder cases was only 7. This, I think, is the most satisfactory feature in the decrease of crime during the year which I have to record.

Another feature which I regard as satisfactory, and which is certainly curious, appears from a consideration of the distribution of these cases throughout the year. All save one occurred during the first half of the year. From the 22nd June up to the end of the year the Matara District enjoyed an entire immunity from murder, save and except for one case of manslaughter that occurred on the very border line of the Tangalla district, but just a few yards within the boundary, on the 17th November. Indeed, up to the time of my writing this report (February, 1903) no case of murder has taken place since June, 1902—quite a record for criminal Matara.

Knife Cases.—There were 149 cases, as against 161 in 1901. Of these, 51 resulted in convictions in the Police Court, 76 in acquittals, 13 were committed to higher courts, while the remaining nine were lettered A, *i.e.*, no offence committed, the injuries being held to be the result of accident. The percentage of convictions obtained may appear to be small, but it is really very satisfactory, for in the majority of cases the wounds are very slight—mere scratches sometimes—and are self or collusively inflicted.

The average of false cases is certainly not under 50 per cent. in this district. But the people are now beginning to recognize the futility of this particular species of false case. They so seldom get satisfaction, for they generally find that they have cut themselves in vain, and when they leave court they do so with a stigma attaching to them as unsuccessful prosecutors in a false knife case, which they will never be allowed to forget, especially when they have the hardihood to try the court with a second case of a similar nature! And a false knife case is really very easily detected. If the injury is self-inflicted and occurs on either arm, it is certain to be of a trivial nature and to tail *inwards*. If it occurs on the body, it is certain to tail *upwards*.

In the case of a collusively inflicted injury, *i.e.*, where the complainant gets a friend to cut him or to stab him to implicate the accused, the wound will generally be found implanted on the most inaccessible part of the body, for instance, the centre of the small of the back, but it will seldom be of a serious nature. Now, a native utterly loses self-control when he draws his knife, and to find a wound scarcely one-fourth of an inch in depth on a person's back as the result of an alleged stab caused by another in an uncontrollable fit of passion is scarcely natural.

After more than a year's experience in Matara, I have come to the conclusion that the idea so prevalent that the use of the knife is a matter of almost daily occurrence in this district is an exaggerated one. Of the 149 cases instituted during the year, probably not more than 80 were true. Except in one case, where a deliberate and premeditated use of the knife was proved, I avoided the infliction of lashes. Sentences of rigorous imprisonment, coupled with the prohibition of the use of the knife, are, I find, quite sufficient punishment in the majority of the cases.

Rape.—Six cases. All found to be false.

Robbery.—132 cases, as against 161 during the previous year. Most of these were trumpery, a mere exchange of blows coupled with a false charge of theft. As I remarked last year, robbery as an organized crime does not exist here. Only one bad case came to my notice. This was during the Dondra Fair. The accused waylaid a woman on her way back from the Fair and attempted to deprive her of her gold necklace. A male companion of the latter, however, ran up just in time to prevent this, but was very seriously stabbed in the *mêlée* that ensued. The accused was, I am glad to say, convicted in the Supreme Court, and sentenced to ten years' rigorous imprisonment.

House-breaking very prevalent, but convictions few. Out of 186 reported cases only 8 were committed to a higher court. Under the existing conditions of life of the ordinary villager, no improvement of this unsatisfactory state of things can be looked for.

Cattle Stealing.—248 cases during the year. It is hard to break the native of his habit of indulging in this species of litigation. It has been a pastime with his fathers and forefathers, and it is only natural that he should inherit this strongly marked tendency. A large percentage are, however, true cases, but the evidence is usually "rotten." Seventeen convictions were obtained during the year, which I think is a fair average.

General.—All things considered, Matara is not nearly so criminal as it has been made out to be. In one species of crime it is certainly pre-eminent. I refer to the bringing of false charges, and for this the district is notorious. When the people are so accommodating that they can regulate their charges to fit in with the sittings of court, then the conclusion is irresistible that the majority of the cases are false.

For instance, during the Easter holidays there were no sittings of court for four or five days, not even for entertaining plaints, yet when the court sat on the first day after the holidays the number of institutions on that day did not exceed the usual *daily* average. Similarly, during the Christmas holidays no plaints were entertained from the 23rd to the 29th December (six days), yet on the 29th there were only three or four plaints! Again, it often happens that when villagers come to town in connection with a case already fixed for trial, they take advantage of their presence in court to put in a plaint on the same day. I have often remarked on this coincidence.

In spite of the prevalence of false cases, I am not of opinion that the fining of complainants is advisable. Love of litigation is hereditary with the people, and is the very breath of their nostrils. Wealth is only desirable in so far as it enables them to indulge in litigation, and the height of their ambition is to succeed in a case, especially if thereby their enemy is punished. If one party leaves the court with a sense of elation, then the unsuccessful party will do all in their power to be even with them. The result is a counter case, and if the previously unsuccessful party succeeds in this, the other party will after a short interval retaliate in a similar manner. The result is a series of cases and counter cases. I have had an actual instance of this from Midigama, where two opposing factions continued bombarding each other with false cases until they were tired of the pastime.

The best course is to give neither party cause to exult. Then nothing is left to rankle, and their ill-feeling dies a natural death. In all cases that are found to be false (except, perhaps, in some very flagrant case) it is quite enough to acquit or discharge the accused. If a counter false case is brought, do the same thing. Then both parties leave the court disappointed, and, I am afraid, very much disgusted with the Magistrate, but they bring no more cases! On the other hand, if the ill-feeling is fostered by successful litigation, the ultimate result will be murder or some crime of violence committed by the disappointed party. In short, everything should be done to break the people of their pernicious habit of litigation.

Besides this cause of crime, the next most prolific source is the infinitesimal division and subdivision of land, and the cumbersome method of possession. The breadfruit and jakfruit seasons are always marked by the number of crimes of violence that occur at the time of fruit plucking in disputes about the shares of the produce. Similarly, the ploughing season and the reaping season are always productive of much crime. Drink and taverns take a bad third place in the list of causes of crime.

Headmen.—In the majority of cases the headmen have performed their duties well. All the accused are, as a rule, brought up on the first date, and I have often been able to decide a case on the day of institution, having all the parties before me. It is seldom that, owing to the absence of the accused, I have not been able to conclude a case on the second date, which is a week after institution.

Establishment.—The officers have worked well, and the work has always been up to date. Mr. Claasz, the Chief Clerk, is a thoroughly experienced officer, and has been of much assistance to me.

Police.—The town of Matara was remarkably free from crimes of violence during the year. Not a single case of homicide, nor, as far as I can remember, any case of grievous hurt occurred within its limits. How far the police are responsible for this satisfactory state of things I am unable to say; perhaps their presence exerts a moral influence in the prevention of crime.

So far as the detection of crime is concerned, I am afraid the police have not been very useful. Several cases of house-breaking and theft occurred in the town; in fact on one night as many as four houses were broken into, but the police were unable to trace the offenders. In other respects, I mean in the prosecution of the numerous petty offences common to towns, the police did their duty satisfactorily, but they strike me as lacking zeal and energy. This may, however, be due to the paucity of their numbers. In one matter the police deserve great commendation. I refer to the supervision exercised over old offenders, whose previous convictions are always brought to my notice, and to the vigilance exercised in the arrest of accused who are "wanted." In several cases, some of over a year's standing, where the accused have absconded, the police have been instrumental in arresting and producing before me the absconding party."

It is satisfactory to learn from the Police Magistrate that the headmen in general did their duty, and in most cases promptly produced the accused before the court. The regular police need closer supervision and more frequent inspection by their superior officers.

X.—FOREST DEPARTMENT.

Matara District is a released area in charge of the Assistant Government Agent. Mr. A. Erskine, District Forester, went on leave on 1st April, and his place was taken and his work carried on efficiently during the rest of the year by Mr. W. H. Fernando, in addition to his own duties as Forest Ranger, Tangalla.

The revenue of the Department for 1902 was Rs. 5,910·14, and the expenditure Rs. 1,547·10. The following are the chief items of revenue:—

	Rs. c.
Sale of Timber	4,367 57
Fines, Forest Offences	1,542 57

The teak plantation at Kekanadura, about 20 acres in extent and thickly planted, was cleared of jungle about the end of the year. The unhealthy and stunted trees will now be removed gradually in order to give the good trees more space and light. Mr. Fernando reports that, although the trees are over twenty-five years old, their growth is by no means satisfactory, owing to their having been planted too thickly, and to the plantation having become overgrown with jungle. Twenty-five trees were sold from a small teak plantation, about 2 acres in extent, at Owitigama. They realized Rs. 377, at the rate of 75 cents per cubic foot. There are still 100 trees left in this plantation.

A bad case of illicit timber felling was detected at Dehigaspe in September last in a nedun forest, on the edge of which a carpenter had planted a large workshop and was turning out nedun furniture wholesale. On inspection by the District Forester and myself we found that 108 nedun trees had been felled, while only 76 had been paid for. The value of the timber illicitly felled was estimated at Rs. 150, and the local Vidane Arachchi, Police Officer, and Vel-vidane, without whose connivance the illicit felling could not have taken place, had to make good this amount to Government. The further felling of nedun trees was stopped, the forest being sufficiently worked for the present, and the carpenter was informed that no further permits to fell would be issued to him. Another case of illicit felling was discovered at Mahayayekele, where eleven hora trees were cut down without permit. The timber has been seized, and the offenders are being prosecuted in the Police Court.

XI.—NEW AREAS OF CULTIVATION.

Forty-five land sales were held throughout the year, and 1,838 acres of Crown land were sold, chiefly for plantations of cocoanut, arecanut, &c., and, to a much smaller extent, for paddy cultivation.

I do not give the headmen's figures as to the areas newly opened up in the different products as they are really not reliable. In addition to the 1,800 odd acres purchased from the Crown, the areas of cultivation have no doubt been extended, as usual, by the continual encroachments of the villagers on the adjacent Crown lands. From what I have learnt in the course of my work as Village Settlement Officer, I am inclined to believe that such encroachments are equal to, if they do not exceed in area, the land sold at the Kachcheri. Once a village has been duly settled, however, this game will be stopped, and future encroachments will have to be paid for in hard cash.

XII.—ILLICIT CHENA CULTIVATION.

About 350 cases, representing about 300 acres, were reported during 1902, this being only half the number of the previous year. As usual, most of the chenas were in Morawak korale and Kandaboda pattu.

I have already referred, under the head "Food Supply," to the necessity for granting chenas in the remote parts of the district where the paddy fields are of small extent, and where there are no roads on which the villager can earn enough to satisfy his simple wants. In such places the outturn of paddy is very small and quite insufficient for local needs, while imported rice is dear owing to difficulty of transport.

The sum of Rs. 1,042 was recovered during the year as compensation for forest offences, chiefly illicit chena cultivation. In 168 cases the cultivators who would not pay the moderate fine of Rs. 4 per acre were prosecuted in the Police Court, where 103 convictions were obtained. Cases for illicit felling of timber, illicit gemming, and illicit plumbago mining were also instituted, resulting in 20 convictions and 6 acquittals.

XIII.—EDUCATION.

The people of this district are well provided with schools, owing to the great educational activity of the various Christian Missions, the Buddhists, and the Village Committees.

A list of the schools in the district, with their average attendance, is annexed:—

Four Gravets.

	Average Daily Attendance.		Average Daily Attendance.

XIV.—SALES OF LAND BY VILLAGERS.

I have been unable to get any definite information on this subject, but I believe there has been nothing unusual in the number of such sales, which in some cases included houses also. Occasionally lands are sold to which the vendors have insufficient title or none at all. This is especially the case with regard to Crown lands where plumbago has been discovered.

XV.—CATTLE DISEASE.

There were 203 cases of foot-and-mouth disease in Morawak korale. Twenty-one animals died, while the rest recovered.

XVI.—THE WORKING OF THE WASTE LANDS ORDINANCES AND VILLAGE SETTLEMENT.

Mr. J. G. Fraser, Special Officer, has written a report on this subject, to which reference should be made for full details. He informs me that, prior to 1902, 46,134 acres had been settled in this district. During 1902, 28,453 acres were settled by him, of which 20,698 were declared Crown, 1,559 private, and 196 sold to the claimants on special conditions. The total area settled up to the end of 1902 is therefore 74,587 acres.

Thirty-three villages in Morawak korale were settled by the Special Officer as regards forest and waste lands and lands cultivated for less than five years. The settlement of all other cultivated lands has been left to the Assistant Government Agent. This important work has taken a great deal of my time, which I could ill afford, having regard to my other numerous duties. The Settlement Officer has a large and highly trained staff to assist him, whereas I have a solitary junior clerk, in addition to my two land clerks, already overburdened with work in connection with land sales.

The settlement of the scores, sometimes hundreds, of gardens and fields in each village is a work the magnitude of which is not yet fully comprehended. It is a work which has to be done with the greatest care, so as to leave no possible ground for complaint on the part of the villagers, while, at the same time, the rights of the Crown are adequately protected. To do it thoroughly well will probably take up as much time as the settlement of forest and chena lands, the work now allotted to the Special Officer.

Moreover, re-surveys are frequently necessary to cut out Crown waste land, which has been tacked on to private gardens in the block survey, owing to the negligence and perhaps dishonesty of some of the minor headmen. Unlike the Settlement Officer, the Assistant Government Agent has no surveyor, and the settlement of the village is delayed from four to six months pending re-survey and re-advertisement. I have therefore recommended to Government that the Settlement Officer should complete the settlement of all the land in each village while he is on the spot with his surveyor, and Mr. J. G. Fraser has expressed his willingness to do this.

Mr. Macleod, before he left the district in August, had completed the settlement of three villages, and since then ten villages have been dealt with by me, and will be finally settled in a few months when the necessary re-surveys have been completed.

Two more villages have been advertised for sale or settlement during the first quarter of 1903. In making these settlements I keep in mind the wish of Government that they should be conducted in a liberal spirit, and I trust that the results of my labours will be satisfactory alike to the Crown and to the people.

XVII.—LEGISLATION REQUIRED.

I recommend that Village Tribunals be empowered to try cases for maintenance of wives or legitimate or illegitimate children, now decided in the Police Courts. In many cases the complainant is a very poor woman, who is unable to induce her witnesses to attend the Police Court and give evidence in her favour. She would have less difficulty in securing their attendance and evidence before the Village Tribunal, and I believe that the Presidents of these courts, with the assistance of their councillors, would find it much easier to administer justice in such cases than the majority of Police Magistrates.

XVIII.—WORK OTHER THAN ROUTINE.

My time is largely taken up with routine, especially inquiring into and reporting on innumerable petitions. These petitions were in many cases from dissatisfied claimants to Crown lands sold at land sales, of which 45 were held during the year. The Assistant Government Agent's work as a Village Settlement Officer, and the outbreaks of smallpox at Weligama and Matara, have already been referred to.

At the suggestion of Mr. Edirisinha, Assistant Provincial Registrar's clerk, my predecessor, Mr. K. W. B. Macleod, invited the villagers to register their marriages on payment of a fee of Re. 1·50, being half the usual rates. About 10,000 circulars were distributed through the registrars and headmen to unmarried couples throughout the district. The results of this marriage registration campaign were really wonderful. No less than 7,085 couples registered their marriages, as against 1,355 for the previous year, an increase of 5,730 marriages. Whether this happy result was due to the reduction of the marriage fee to the level of the road tax, or to the somewhat peremptory wording of the circular in Sinhalese, which was frequently taken to be an order, it is difficult to state. Probably it was due to both causes. This circular produced a large crop of petitions. In some cases persons who had separated from their lawful spouses applied for permission to commit bigamy by marrying their new partners, and were greatly disappointed when told that they could not marry again without a divorce.

XIX.—MISCELLANEOUS.

The principal events of interest were :—

The celebration of His Majesty the King's Coronation throughout the district on 9th August.

The outbreaks of smallpox at Weligama and Matara already referred to.

The writer succeeded on 18th August Mr. K. W. B. Macleod, transferred to Colombo as Deputy Collector of Customs.

Messrs. G. N. Galbraith, J. M. Davies, and T. W. Roberts were successively attached to the Kachcheri as Cadets during the year.

Mr. A. E. A. Perera, Mudaliyar of Kandaboda pattu, died on 12th July, and was replaced by Mr. E. B. Gunatileka, Mudaliyar of Morawak korale.

Mr. T. A. Gunawardena was appointed to the vacancy in Morawak korale.

In concluding this report, I wish to place on record my appreciation of the excellent work done by Mr. Chas. W. Bualtjens, Head Clerk of this Kachcheri.

J. O'K. MURTY,
Assistant Government Agent.

Matara, February 24, 1903.

REPORT ON THE HAMBANTOTA DISTRICT FOR 1902.

Area, 1,013 square miles; Population, 105,000.

I.—REVENUE AND EXPENDITURE.

THE revenue credited at the Hambantota Kachcheri in 1902 was Rs. 274,498, as compared with Rs. 194,562 in 1901, Rs. 209,061 in 1900, and Rs. 238,976 in 1899.

2. The following comparative statement shows the principal items :—

	1901. Rs. c.	1902. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.
Salt ...	119,915 68	146,591 40	27,675 72	—
Road Tolls ...	5,407 87	4,446 0		961 87
Bridge Tolls ...	4,506 50	4,763 0	256 50	—
Stamps, Revenue ...	8,996 24	7,735 65	—	1,260 59
Stamps, Judicial ...	8,787 53	7,077 5	—	1,710 48
Fines for Forest Offences	4,284 53	9,766 6	5,481 53	—
Fines for Police Court Offences ...	5,246 68	3,442 42	—	1,804 26
Survey Fees ...	2,938 73	6,753 12	3,814 39	—
Deed Fees ...	554 20	2,734 12	2,179 92	—
Irrigation Recoveries ...	5,292 62	8,287 48	2,994 86	—
Timber ...	1,560 50	675 9	—	885 41
Rent of Lands ...	1,596 0	1,635 42	39 42	—
Sale of Crops on Crown Lands ...	1,567 3	951 93	—	615 10
Land Sales ...	17,903 58	55,191 61	37,288 3	—
Opium	5,125 0	2,425 0	—	2,700 0
Arrack	—	6,700 48	6,700 48	—

3. The improved salt formation and collection of the year, as compared with the poor outturn of the three previous years, allowed a larger sale, which accounts for the substantial increase in the salt revenue.

4. The decrease in Road Tolls is due to arrears, which were recovered and credited in January, 1903.

5. The small increase in Bridge Tolls is due to the Walawe toll having sold for what I think was rather more than its value for 1903. The renter settled within the year.

6. The decreases in Revenue and Judicial Stamps are explained by the fact that in the latter part of the year the vendors were supplied direct from the Treasury, as the Kachcheri vault was found to be too damp to allow of stamps being kept in it.

7. The large increase under Fines for Forest Offences is mainly due to fines in chena cases. Fewer cases were instituted than in last year, but as heavier fines were imposed the total recovered is larger.

8. Fines in Police Court cases vary with the disposition of the Magistrate. They increased in 1901, and have decreased in 1902.

9. The large increases under Survey and Deed Fees are very satisfactory, and are related to the greatly increased recovery under Land Sales, the extent of land sold and prices realized in 1902 being, I believe, a record for the district, and a convincing proof of its advancing prosperity.

10. I annex a statement of extents sold and amounts realized :—

Year.	Extent sold. A. R. P.	Settled on Certificates of Quiet Possession. A. R. P.	Settled on Half-improved Value. A. R. P.	Amount realized. Rs. c.
1898 ...	421 3 24	573 1 37 ...	1 3 38	... 5,435 0
1899 ...	304 0 21	81 1 5 ...	29 1 15	... 23,760 31
1900 ...	555 3 29	134 3 12 ...	34 1 23.	... 12,136 50
1901 ...	863 1 17	157 3 23 ...	—	... 15,098 25
1902 ...	4,001 1 30	234 2 25 ...	—	... 128,824 70*

*Represents purchase amount; only partly paid as yet.

11. The considerable increase in Irrigation Recoveries is the result of a strenuous effort to collect the revenue due within the year, and also to recover outstanding arrears. The recovery of the revenue under this head is a very tedious operation.

12. As transport could not be found for a considerable quantity of ebony felled and prepared in the forest, the sale of the previous year could not be repeated, hence the decrease under Timber. The wood will be placed on the market this year.

13. The decrease in Sale of Crops on Crown Lands is due to a decrease in the number of unlicensed chenas, and also to the fact that owing to unseasonable rains many chenas cleared had to be abandoned, as they could not be burned in proper time.

14. The opium revenue of the district is really increasing, the licenses for 1903 fetching Rs. 2,425, as against Rs. 2,110 in 1902, but in 1901 the amounts of the sales for 1900, 1901, and 1902 were credited together.

15. Towards the end of the year the collection account of the district arrack farms was transferred from the Galle to the Hambantota Kachcheri. For 1901 all the revenue under this head was credited at Galle.

16. The total recoveries on account of arrack revenue of the Hambantota District in 1902 were Rs. 23,402·59, as compared with Rs. 23,132·70 for 1901, Rs. 22,368 for 1900, and Rs. 20,515 for 1899.

17. The expenditure for the year was Rs. 73,851, as compared with Rs. 71,680 in 1901 and Rs. 51,690 in 1900, as follows :—

	Rs.	c.
Personal Emoluments	20,079	26
Pensions	3,394	90
Other Charges	48,924	84
Special Expenditure for improvement of Salt Supply at Pitawatamodara ...	1,452	82*
Total ...	73,851	82

* A sum of Rs. 999·94 was also expended on this object from the vote for collecting salt.

18. As noted in previous reports, the present system of accounting does not allow of any true comparison between the revenue and expenditure of a district.

II.—SALT.

19. The following is the report of Doole Mudaliyar, the Superintendent of the Salt Department :—

I beg leave to submit my report on the working of the Salt Department for 1902. The following is a statement of monthly sales in 1902 :—

	Cwt.		Cwt.
January	4,971	July	3,941
February	4,879	August	6,815
March	4,719	September	6,966
April	4,089	October	4,227
May	4,603	November	6,058
June	4,330	December	6,608

The total quantity disposed of during the year is 61,627 cwt. and in 1901 50,749 cwt., showing an increased sale during the year of 10,878 cwt.

2. The salt district extends from Kudagajabawa on the east to Kottawattawa in Mahawilikalapuwa on the west, a distance of 98 miles. Within this limit there are thirty-seven lewayas and kalapuwas, but only ten yield salt worth gathering. These are Jamburakala, Karagam lewaya, Maha, Koholankala, Bundala, Kirinda, Palatupana, Palatupana Parappuwa, and occasionally, but very rarely, Malalakalapuwa and Embilakala.

3. Though often stated in some of my previous yearly reports, it may, being of interest, be repeated, that for a formation of salt three conditions must be adequately fulfilled :—A sufficiency of saline matter in solution in the water of the lagoons; a steady set of wind blowing evenly in one direction; and great and continuous solar heat to promote evaporation and crystallization. The effect of a fine formation precisely resembles that of an unbroken sheet of snow.

4. Appended is a table showing quantities gathered each year during the period from 1893 to 1902 :—

Year.	Cwt.	Year.	Cwt.
1893	189,562	1898	145,637
1894	110,545	1899	39,812
1895	118,344	1900	28,308
1896	6,894	1901	35,941
1897	1,642	1902	90,695

The total yield for the ten years is 767,380 cwt., with a yearly average of 76,738 cwt.

5. During the year there were collections from the following four lagoons, Palatupana producing comparatively the largest quantity :—

	Cwt.	lb.
Maha Lewaya	11,128	28
Kirinda Lewaya	1,151	3
Palatupana Lewaya	46,077	48
Bundala Lewaya	32,338	83

The salt harvest of 1902 yielded a quantity of 90,695 cwt., worth to the Government a little over Rs. 214,040. Since the harvest of 1898 there has never been such an outturn as was stacked during 1902.

6. Maha lewaya produced a quantity of 11,128 cwt. But for the introduction of sea water into the lewaya by the Pitawatamodara scheme, such a quantity could not have been stacked. A much larger quantity of sea water can be secured by further erecting a sloped approach of cement concrete in front and on the seaside of the wall, which is in course of construction. A vote of Rs. 2,000 was allowed for this purpose during the latter end of the year, but it could not have been fully utilized nor the work completed owing to the sea becoming stormy, rendering work at sea well-nigh impossible. A further vote has been requisitioned. When it is sanctioned, the proposed improvement will be carried out without further delay.

7. Kirinda lewaya being a small lagoon, salt never forms in any considerable quantities. All the salt that formed in it was secured in one day by suspending the Palatupana collections and bringing all its labour force to Kirinda. It was after a lapse of eleven years that it produced this small formation.

8. Palatupana lewaya again vindicated its well-earned reputation of being one of the most valuable Crown domains in the district, having yielded 46,077 cwt. A still larger quantity could have been gathered if there had been sufficient labour.

9. Bundala lewaya, the premier lagoon as it were, has for the last twenty years maintained its place. It holds the unbroken record in the annals of the salt administration of the district of having yielded in 1898 a quantity of 122,269 cwt., being the largest that has ever been produced by a lewaya. Though it has not produced the largest quantity during the year, yet 32,338 cwt. is not a bad mark. Year after year it contributes in this handsome way to the General Treasury.

10. Transport of salt from lewaya into store is still being done on contract and by carts. As much of the rice once brought by steamer to Hambantota to be transported by carts to estates in Kóslanda and other planting districts of Uva is now making its way by train to Haputale and Bandarawela, the services of the cartmen of Hambantota are more easily engaged. This fact and the present excellent condition of the Bundala road have to some extent facilitated removal.

11. In conclusion, I must state that the want of a sufficient number of gatherers at salt collections was again greatly felt. The daily average attendance of salt gatherers during collections at Bundala was 143 and at Palatupana 64. The number to the credit of Bundala might be passed as satisfactory, but the attendance at Palatupana collections was poor. If I had a daily average of at least 200 men in each of the above lewayas, a large quantity of salt could have been credited to the revenue. It has been found that the men of the far interior side of the districts do not so much understand the art of salt gathering as the men of the sea coast villages of this and the Matara Districts do. There are upwards of 150 hardworking and professional sort of gatherers at Dodanpahara and Dikwella and other villages on the sea coast of the Matara District. These men, who are well accustomed to salt gathering, never make it a rule to come to the lewayas, but come only whenever they care to. Besides it may be observed that these men have hardly any cultivation work in their villages. Gatherers are also to be found in the sea coast and other villages of the East and West Giruwa pattus and Magam pattu of the district. If the District Mudaliyars and headmen will exercise their influence and persuade them to come for salt collections, I am sure they can be turned out in large numbers.

20. As noted in my previous reports, and referred to by Doole Mudaliyar, the transport and labour difficulties in connection with the salt collection still continue.

21. The former is being met by the gradual improvement of the roads to the lewayas, and I have to report the completion in 1902 of the work of metalling the road to Bundala, a work mainly due to the direct intervention of His Excellency the Governor, and the interest he has taken in this important question, as shown by his paying it a special visit of inspection, accompanied by the Lieutenant-Governor.

22. There is still, however, very considerable room for improvements to the other roads.

23. The labour difficulty will always be felt with the present demand for other purposes, so long as we are dependent, as we have been, on factors beyond our control, such as weather and water supply.

24. I referred in my last report to the experiment I was about to try in order to have the latter factor more under command at the Maha and Koholankala lewayas. I am glad to be able to report in this that the experiment has been successful, and that by means of a low sea wall and sloped approach at the rocky ledge known as Pitawatamodara the supply of water to these two lewayas is now assured, and can be regulated at will.

25. The success of the experiment is proved by the fact that by its means alone a collection of 11,128 cwt. was made from the Maha lewaya, which, but for this work, would not have yielded an ounce of salt; and a second much larger formation, also secured by the work, was maturing for collection, when the setting in of the rainy weather completely destroyed it, and put a stop to all collecting operations for the year.

26. The total expenditure on this work was Rs. 2,452·75. A further small sum will be required to complete the sloped approach in the sea, work on which had to be suspended owing to stormy weather.

27. In comparison with the cost the advantages of the work are almost incalculable, as not only will a constant supply of salt water be assured, but by working the two lewayas alternately, as can easily be done, steady employment can be provided for the labour instead of the risk now offered. As these two lewayas are the nearest to Hambantota, within 2 and 3 miles, the advantages of their working from the point of view of transport also are most important.

III.—FOOD SUPPLY.

28. The year was a prosperous one, the rainfall being abundant and well continued, and cultivation of all kinds extensive. Very little paddy land was left untilled.

29. For this reason, and also because the burning of chenas was interfered with by the rain, the area chenaëd was less than last year, and the outturn very much smaller.

30. Under the large works of Tissa and Yodawewa, owing to the emptying of the tanks in connection with the scheme of development now in progress, one crop under each was lost, the cultivators being warned in time not to sow.

31. Under Walawe, owing to the insufficient removal of the silt from the channels, some difficulty was experienced in getting sufficient water for Maha; and the lands fed by the Lunama channel, which completely silted up, got none. This is not creditable to the Irrigation Department, in whose charge these channels are.

32. The food supply, however, all over the district was ample, and consisted chiefly of rice, fine grain, vegetables, fruit, and fish. The supply of fish was plentiful, and fresh fish could be obtained cheaply in all the principal bazaars, while large quantities were cured, much of it being carried to the Matara and Galle Districts by fishermen who came from those parts.

33. The following extracts are from the reports of the Mudaliyars on the subject:—

West Giruwa Pattu.

Food Supply, consisting mostly of rice, fruit, and vegetables in this district, was exceptionally good, more than enough, indeed, for its own consumption, though the

population, which amounted to 86,508 souls, was large. This circumstance has, I am happy to be able to say, been the means of making the year a prosperous one. The fish supply was also ample and abundant.

The number of acres cleared for dry grain, which consisted of el-wi, kurakkan, amu, meneri, Indian corn, gingelly, was 2,047, less by 4,095 than the extent cultivated during the previous year. This large decrease, which was due partly to copious falls of rain during the time jungles used to be felled and burnt for such cultivation, and partly to restrictions placed on the clearing of Crown chenas, coupled with the unprecedentedly favourable weather for growing paddy, drove the goiya to leave no land available for this industry uncultivated. Out of a total extent of 38,996 acres of mud land, as many as 27,329 acres have been cultivated with paddy, as against 16,397 acres in the preceding year, and the yield was 655,896 bushels. The yield of dry grain was 65,504 bushels. The number of acres cultivated with vegetables, which consisted mostly of sweet potatoes, yams, pumpkins, beans, onions, gram, and brinjals, was 3,767. The extent of land under cocoanut cultivation was 13,114 acres, and the approximate number of nuts collected was 39,467,000. The number of bushels of imported rice consumed during the year was 8,100 bushels, a consumption confined only to Beliatta and Tangalla, where strangers are resident. The prices of the different articles of food were :—

	Rs. c.
Country rice, per bushel	4 0
Coast rice, per bushel	3 75
Paddy, per bushel	1 44
Kurakkan, per bushel	1 0
Cocoanuts, per 1,000	37 50
Plantain bunches, per 100	40 0
Sweet potatoes, per cwt.	1 0
Indian corn, per 1,000	3 75
Mun (green gram), per bushel...	3 0
Pumpkins, per 100	25. 0
Amu, per bushel	1 0
Meneri, per bushel	1 0

East Giruwa Pattu.

The Food Supply of the People.—In Paranagam and Wewgam palatas kurakkan, sweet potatoes, and jak are the general food of the inhabitants, which are grown by themselves. In these two divisions there are few paddy fields, entirely dependent on rain water and consequently seldom cultivated. The other three divisions, viz., Modaragam palata, Kanuketiya Upper and Lower divisions, have enough of fields, most of which are dependent on Walawe river water and almost regularly cultivated twice a year.

Magam Pattu.

The residents of the Hambantota town generally receive their food supply from Colombo and Galle by steamers and dhonies, such as imported rice, curry stuffs, &c., excepting cocoanuts and plantains, which are included in the productions of this pattu. The population of Magam pattu, other than Hambantota residents, are using for their consumption locally-grown rice, fine grain, Indian corn, breadfruit, jak, and vegetables, besides fish from sea and lakes, which is caught sometimes in abundance.

Fishing boats, about 104 in number, arrived in the following places during the fishing season :—Godagamuwa, Hambantota, Bundala, Kirinda, Amaduwa, Pattanangala, and Pattana. The fishers are people of Galle, Matara, and Tangalla Districts, and their fish is partly sold then and there to the traders and partly cured by themselves and taken away to their villages ; also most of their cured fish is sold in Hambantota.

Country-grown rice and fine grain are plentiful for the population in Magam pattu, and abundantly transported to Tangalla, Matara, and Galle Districts. The prices of paddy per bushel, Re. 1·50 to Re. 1·75, and kurakkan per bushel Re. 1·25 to Re. 1·70. The acreage cultivated during the year with paddy for maha and yala was 6,216 acres, yielded 155,390 bushels. If paddy and kurakkan were not transported to other districts, the price would not probably rise to more than 50 cents per bushel.

This year rain was plentiful, and we never had since a couple of years so much rain as this year. Almost all the residing private lands were under cultivation, except a small extent of land in some villages not cultivated and left waste owing to the neglect of the proprietors in not keeping the bund in proper order and giving space for passing surplus water, and consequently their bunds were washed away. The yala cultivation of Tissa this year has been abandoned for want of water, as water was not stored in the tank owing to the tank bund being raised to a considerable height, and thereby an extent of about 2,000 acres of land was not cultivated, and the gross loss to the public will be about 10,000 amunams of paddy, equal to 60,000 bushels, the value of which could be estimated at Rs. 100,000.

Owing to the incompletion of Yodawewa bund and sluice the cultivation below Yodawewa has temporarily ceased, and thereby a large extent of land could not have been cultivated.

IV.—IRRIGATION.

34. I repeat the programme laid down in my previous reports, which is being steadily followed, with satisfactory results, viz.:—

(1) Steady and systematic improvement of the village tanks and working of the irrigation rules.
(2) The development to the full of Walawe and Tissa schemes now in progress.
(3) The examination and undertaking of new works, such as the Badagiriya tank, the Urubokka river anicuts, the Kehelwatta-Talawa channel, Pandikulam, &c.

35. *Village Tanks.*—More progress was made in 1902 with the work on these than in 1901, but, as in that year, the absence of Mr. Ferguson, the Chief Irrigation Inspector, during the most important season for work, was a heavy handicap.

36. The following is his report :—

Since writing my last report, lists of all the tanks in the district showing the extent owned by each landowner under them have been furnished by the Kachcheri.

The number of tanks in the whole district is 632. Of these, the West Giruwa pattu has 457, of which perhaps about 300 are of any appreciable size ; the East Giruwa pattu has 127, all capable of holding a good supply of water, if they do not already do so ; and the Magam pattu 48, all from the nature of their situation important.

The first part of the year was dry up to April, and after the yala cultivation was over it was too dry to do earthwork, and when I left to go with the Coronation Deputation early in May the weather during the time of my *locum tenens*, Mr. Rodrigo, became so wet, and filled all the tanks in the West Giruwa pattu to such an extent, that earthwork could not be cut from their beds, and the time was extended to the 30th September, so that when I returned in the middle of that month I found, owing to the rain still being heavy, the work undone. Where no excuses could be offered cases were instituted, some of which were still pending at the end of the year. There were two test cases in the East Giruwa pattu on tanks to which Walawe water was supplied, the people refusing to clear or do earthwork on the bunds of their tanks because they paid water-rate for the channel that supplied them ; but on the second occasion we came to an understanding, and they agreed to clear the bunds if time was allowed them, which was acceded to, and they cheerfully did the work in the prescribed time.

In three separate cases where applications were received to restore abandoned Crown tanks under the Government regulations to that effect, claimants came forward to claim the supposed Crown tanks, so that nothing could be done till these claims are settled.

I have to thank Mr. Jayawardana, the West Giruwa pattu Mudaliyar, particularly for the assistance he gave me throughout the year in tank work, also the President, Mr. De Silva, for getting absentee proprietors, whose addresses I did not know, to appear before him, and for the pains he took in the cases instituted.

At first there appeared to be some misunderstanding in the East Giruwa pattu when the test cases were on, but that was done away with, and I had every assistance from the Mudaliyars of East Giruwa pattu and Magam pattu and the Mohandiram of Magam pattu, who was authorized by Mr. Horsburgh to try certain cases. I have to thank Mr. Rodrigo also for the able way in which he carried on the work during my absence.

I have assessed the value of clearing work done this year at a very much lower rate than was the case last year, as last year all the heavy jungle was cleared from most of the tanks, and this year it was more a case of keeping after-growth down than of actual clearing.

The heavy rains at the end of the year led to the overflowing of several tanks, but the only one of any importance that was breached was at Pallattara, and that was speedily repaired. Advantage was taken of the rain in the West Giruwa pattu to sow every available little piece of paddy land, and in some cases high land, for maha. The scarcity of buffaloes alone prevented some of the larger tracts from being cultivated to their full extent. In this connection I have to propose next year a scheme for a better supply of these animals, partly from the capture of the wild ones in the eastern part of the district, where they are plentiful.

I annex the quantities of earthwork done and areas of tank bunds cleared according to the overseers' measurements, it being impossible for me to measure them owing to the water in the tanks. In some cases the amount of earthwork done merits the supplying of the tanks with pipe sluices, and in some instances stone sluices of the North-Western Province pattern. The overseers have done their work fairly well, and this year, the district being freer from fever than last, they had very little sickness.

Earthwork.

	Cubes.	Value. Rs. c.
East Giruwa Pattu	4,039 ...	4,039 0
West Giruwa Pattu	2,011 ...	2,011 0
Magam Pattu	3,507 ...	3,507 0
	9,557 ...	9,557 0

Clearing.

	Square Yards.	Rs. c.
East Giruwa Pattu	17,055 ...	170 55
West Giruwa Pattu	16,558 ...	165 58
Magam Pattu	4,100 ...	41 0
	37,713 ...	377 13

37. The following statement shows the receipts and expenditure of the Irrigation Fine Fund a most useful fund in connection with village tank work :—

Statement of Receipts and Expenditure of the Irrigation Fine Fund.

Receipts.	Amount. Rs. c.	Total. Rs. c.
West Giruwa Pattu.		
To balance ...	... 1,052 18	
Irrigation fines ...	... 195 25	
		1,247 43

		2,689 32

38. *Walawe and Tissa Schemes.*—In the report for last year I stated that "progress with these important works was not so satisfactory as it might have been." I regret to have to repeat this statement for 1902, so far as the Walawe works are concerned.

39. These works have not received proper attention either in upkeep or development. The clearing of silt from the existing channels was very imperfectly carried out, with the result that the cultivators experienced difficulty in obtaining water; while the clearing of the Lunama channel, completed only in 1901, was not done at all, and no water was able to pass down it for the maha cultivation.

40. The Oluwila channel, also completed in 1901, has not irrigated a single acre of land, because, as stated in my last report, "owing to the restoration of the Oluwila tank having been struck out of the estimate, no provision has been made for the water going down the channel being properly distributed to the fields." In its present state it is quite useless, and the money spent on its construction has been wasted. The original scheme and estimate framed by Mr. Cade should be carried out.

41. On the east bank of the river I have also no sufficient progress to report. The plans and estimates are apparently still uncompleted, though all necessary surveys and levels were finished in 1901.

42. The plans of the cadastral survey of that part of the country made in 1900 with a view to its settlement under the Waste Lands Ordinances were also not received.

43. As regards the Tissa scheme, matters are now in a more satisfactory condition.

44. Work on the development estimate was begun under Mr. Llewellin, who deserves great credit for the energetic manner in which he pushed on the operations.

45. The raising of the bund of Tissa, with the necessary alterations of sluices and spill, was completed, with the loss only of the Yala crop; while satisfactory progress was also made with Yodawewa and the large channel from Debarawewa.

46. The anicut at Ellagala was also raised, though, in my opinion, that is a superfluous work, as when the river is flowing full the present anicut sends down all the water required, while when the river is low the present anicut is seldom topped, and every drop coming down goes down the channel. The raising of the anicut may be necessary when the scheme on the west bank is worked out, but, if so, it should naturally form part of that scheme.

47. A commencement was made with the west bank scheme by starting a survey of that part of the country, but as, with the exception of the village of Wirawila, the land which it will serve is remote and uninhabited, and covered with heavy forest, this work could very well have stood over in favour of Badagiriya, which is much more urgent, and which has been asked for by the people who will benefit by it, and strongly urged by several Government Agents and Assistant Agents.

48. As in previous reports, I annex a statement of what is still required to extend the benefits of the Walawe and Tissa schemes :—

Walawe.

A. (1) Raising and strengthening the abutments of the anicut. A heavy flood in October, 1899, showed the necessity for this, but, though included in the improvement estimate and the work started, it still remains at present at a standstill.
(2) Providing spills and scouring sluices along the main channel.
(3) Completion of drainage of Beminiyanwila swamp.
(4) Restoration of Oluwila tank, into which the Oluwila channel should be led. The work at present is, in my opinion, incomplete and useless.

B. (1) Construction of a channel from the Liyangaha-ela anicut through the Magam pattu, with the necessary branch channels and restoration of tanks on the way. (Survey completed in 1901.)

Tissa.

A. (1) More distributing channels.
(2) Complete restoration of Yodawewa with proper spills, sluices, and distributing channels (in progress).
(3) Improvement of Debarawewa bund and spill, supplying proper sluices and distributing channels.

B. (1) Examination of the country and tanks to the west of the river with a view to irrigation from the Ellagala anicut. (Survey begun, but not so urgent a work as Badagiriya.)

49. I repeat my recommendation of the provision of proper outlet sluices or doors from the chief channels of both the Walawe and Tissa schemes. They should be supplied at every off-take.

50. *New Works.*—I regret to report that no steps have yet been taken towards undertaking the restoration of Badagiriya and its connected tank of Maha Ranawaranawewa. There can be no question that this scheme is a most urgent and promising one. It has been strongly urged by Messrs. Ievers, Murray, Fowler, and Brodhurst, while the Director of Irrigation has also, after personal inspection, been convinced of the advantage and necessity of its restoration. I trust that there may be no further delay in putting the work in hand.

V.—LEGISLATION.

51. I have no suggestion to make under this head.

VI.—PUBLIC WORKS.

52. The new court-house at Hambantota, begun in 1901, was completed early in the year.

53. Work in the new T head to the Hambantota jetty was continued till interrupted by stormy weather, and is carried into 1903.

54. The large bridges Nos. 4 and 5 on the Tangalla road were completed.

55. Masonry wells were sunk at Uswewa and Angunakolapelessa.

56. The important work of improvement of the Weligatta-Bundala road, which consisted in converting it throughout from a gravelled to a metalled road, properly culverted, and carried on an embankment and bridges across the swampy ground at Pamaga, was at last completed early in the year, and inspected by His Excellency the Governor and the Lieutenant-Governor. It has considerably facilitated the transport of salt from lewaya to store.

57. The section from Hambantota to Weligatta still requires considerable improvement, and the increased vote should be continued till this is effected.

58. The road from Weligatta to Tanamalwila was in bad order throughout the year, and requires special attention.

59. Some improvement was effected on the Tangalla-Hambantota road as the result of the efforts of Mr. Bucknall, the District Engineer, but the road is still far from being in good order.

60. The minor roads, being all gravel or natural surface, suffered severely from the long-continued wet weather. The traffic on some of these roads is very heavy, and cannot be carried by a gravel road in rainy weather.

61. I have recommended that the small section from Beliatta to Kahawatta, where the traffic is specially heavy, and quite destroys the road when wet, should be taken over by the Public Works Department and converted into a metalled road. I believe this has been accepted in 1903.

62. The fencing of the public drinking wells and tanks at Tangalla to preserve them from pollution was carried out in 1902.

63. The provision of a mast and lantern for Hambantota harbour was started towards the end of the year, but the work remained unfinished at its close.

64. Works still required are :—

(1) Continuation of the work of improving the principal roads, especially that part over which the salt traffic passes.

(2) Water supply to Tangalla. I regret to have again no progress to report with this important work. I trust that as soon as the services of Mr. R. W. Smith are available he may be placed in charge of this scheme.

(3) Water supply to Hambantota. The construction of the Magam pattu channel now under contemplation should, if continued to Hambantota, help to solve this increasingly serious question, but it will probably be found that a supply from Badagiriya tank will also be necessary, and this is an additional argument in support of its restoration, already admitted as desirable from an irrigation point of view.

(4) Addition to Tangalla hospital. This work was provided for in 1901, and again in 1902, but had not been started before the close of the year.

(5) A buoy in Hambantota harbour. This was provided for in 1902, but the work was not carried out.

(6) A new dispensary at Ambalantota, in lieu of the present building. This also was provided for in 1902, but nothing was done.

(7) Sinking wells. An annual vote should be allowed for some years to come.

(8) A grant in aid in Village Committee works. The Committees of this district, as will be seen from this report, are doing excellent work in opening up the country by village cart roads, in the earthwork of which village labour can easily be applied; but for the very necessary works of bridges and culverts and similar undertakings cash and skilled labour are required, and the funds in hand are insufficient to do all that is necessary in this respect. Government has recognized the necessity of rendering aid in this matter, and was good enough to allow me a sum of Rs. 2,000 in 1902, which was fully expended on the construction of a number of very necessary bridges and culverts. This grant should be continued as long as the necessity exists.

(9) Improved means of transport between the salt lewayas and the stores. I have referred to this fully in previous reports and in representations to Government.

(10) Extension of the railway to Beliatta at least. This is the trade centre of the West and East Giruwa pattus, with a population of over 94,000, steadily advancing in development and prosperity.

(11) Improvement of the Coast road east of Bundala. I beg to repeat my remarks in the report of 1900 on the need for taking up the section between Bundala and Kirinda.

VII.—PLANS FOR IMPROVEMENT.

65. I re-state these from previous reports :—

(1) The carrying out of the necessary public works, including the large irrigation schemes.
(2) Vigorous administration of the Irrigation and Village Communities' Ordinances.
(3) A land settlement.
(4) Prompt dealing with crime.

66. The other sections of this report will show what has been effected along these lines in 1902 and what yet remains to be done.

67. The district is one of the most progressive in Ceylon, and the work of administration is correspondingly increasing. A larger staff is required to properly deal with the work.

VIII.—SANITARY CONDITION AND MEDICAL AID.

68. The district is a rural one, the only "towns" being Hambantota and Tangalla. Both are efficiently scavenged by small bodies of scavengers, and the provisions of the Quarantine and Prevention of Diseases Ordinance, the Police Ordinance, and the rules under the Village Communities' Ordinance, so far as they apply to the cleanliness of compounds, removal of rubbish, whitewashing of houses, cleaning of wells, &c., are strictly enforced, the Mudaliyar and police making periodical rounds to see that they are obeyed.

69. In Tangalla public latrines have been provided by the Village Committee, and the markets have a special constable and sweepers to ensure their thorough cleanliness. On the whole, I consider the condition of the towns in this respect satisfactory.

70. The following extracts from the reports of the Mudaliyars show how they interpret their duty in this matter:—

West Giruwa Pattu.

> Happily the district enjoyed perfect immunity from sickness, there having been neither fever nor any other epidemic disease worth noticing. Bazaars were cleansed, sewers, pits, and cesspits in towns cleansed, and houses whitewashed—all as precautions against any epidemic. To add to all these sanitary measures, there were heavy downpours, and the three streams, Kahawatta-ara, Kirama-ara, and Urubokka-ara, which empty themselves into the sea at Sinimodara, Tangalla, and Ranna, respectively, have all kept flowing a great part of the year, affording every opportunity for bathing in and drinking good water.

Magam Pattu.

> The town of Hambantota is as far as practicable kept clean. I have on many occasions gone on town inspection and warned the people to keep their places clean and whitewashed. Headmen are ordered to be strict on the villagers in this matter. I am myself enthusiastic over this.

71. As regards water supply, however, the towns are in anything but a satisfactory condition.

72. Hambantota depends for its supply on a few shallow wells sunk in the sand hills. Where these fail the people must have recourse to the Walawe river, 8 miles away.

73. The water is slightly whitish in colour and smells somewhat, but I have no reason to believe that it is harmful to those who are accustomed to it.

74. Towards the end of the dry season the supply runs very low, in fact the wells become empty, save for a small trickle that can be seen coming in from the bottom of the sides. This is allowed to collect until it can be removed by means of a special kind of flat, wide-mouthed tin tied to the end of a string, or else by a cocoanut spoon. It is then strained through a cloth into the chatty in order to remove the solid matter brought up with it.

75. The town of Hambantota, therefore, depends on an insufficient supply of inferior water, and this cannot be improved by sinking more wells, as they all draw from the same source, viz., the water held in suspension in the sand hills.

76. To give the town a proper water supply it must be brought in from outside, and the only suggestions I can make are to carry on the proposed Magam pattu channel from the anicut at Liyangaha-ela right into the town, a perfectly feasible scheme, or at least as far as the upper end of the Karagan lewaya.

77. The alternative proposal is a supply from the Badagiriya tank, about 8 or 9 miles away, the restoration of which I have strongly recommended as an irrigation proposal.

78. The following paragraph is from my report of 1901:—

> A supplementary tank to Badagiriya, called Maha Ranawaranawewa, further up the river, has also been discovered by Mr. Ferguson and visited by me, and I am inclined to look to these tanks rather than to the Walawe river as the chief source of a water supply to Hambantota, the urgency of which need is a powerful argument for the early undertaking.

79. If the water supply of Hambantota is bad, that of Tangalla is no better or worse.

80. It consists mainly of two large wells situated within two small tanks in the middle of the town, which receive the drainage of the surrounding grounds. These tanks were fenced to preserve the water from pollution by cattle and otherwise only in 1902. The wells are surrounded by filter beds, which must now be practically useless as purifiers. There are a few other small public and private wells, more or less brackish and contaminated, which need not be considered. One of the large wells was analytically condemned in 1902 as unfit for use, the water being tainted with sewage, and the people were forbidden to use it.

81. I doubt if the other well is in a much better state, as only a road embankment separates them, but it is certainly insufficient for the needs of a town like Tangalla, and in 1902, after the closing of the other well, it ran practically dry, and the town was saved from a water famine only by timely heavy rain.

82. The improved water supply of Tangalla is a very old question. The Ambala springs have been selected as the source, and a trace of the channel into the town has actually been surveyed, but for one reason or another the work has never been put in hand. I think, however, that with half the present supply cut off, the closing of one of the two wells, the question is now sufficiently ripe to demand an early settlement.

83. The sanitary condition of the villages generally throughout the district is sufficiently good. There is no crowding of the houses, which usually stand each in its own garden or compound, while there is plenty of waste jungle or open land in the vicinity.

84. In the larger villages, where there are bazaars or markets, the Village Committee maintains special constables and sweepers to attend to their scavenging and sanitation, and the enforcement of the Ordinances already mentioned suffices for all reasonable requirements.

85. Their water supply is derived either from rivers, streams, tanks, or wells, and is, as a rule, sufficient, though not always perhaps of very good quality. Endeavour is being made to supply those villages which are worst off in this respect with good masonry-lined wells, and if the annual vote for this is continued, as it should be, the most necessitous cases will in time be relieved. I have introduced the principle of self-help in supplying wells, requiring the villagers where they are necessary to contribute the earthwork needed for their excavation. When all the necessitous cases cannot be supplied at once, those willing to help in the work should certainly have the preference.

86. With an abundant rainfall and plentiful food supply, the year was on the whole a very healthy one, notwithstanding the usual "fever season" in the Magam pattu.

87. There are two Government hospitals in the district, one at Hambantota and one at Tangalla. The former serves the Magam pattu with a population of 10,500, and is actually larger and better equipped than that at Tangalla, which has to serve a population of over 94,000. An additional ward at Tangalla was provided in the Supply Bill for 1902, but the work was not carried out. What is really required is an entirely new hospital built on modern lines.

88. The district is fairly well supplied with dispensaries at suitable points, but one is urgently required at Migahajandura in Magam pattu, and one should also be opened at Angunakolapelessa or Alutwewa, adjacent villages in East Giruwa pattu.

89. The precautions against plague were continued, and there was no outbreak of any disease during the year.

90. The annexed statement shows to what extent the people availed themselves of the medical aid provided:—

Hospital or Dispensary.	Patients treated. Indoor.	Outdoor.
Hambantota Hospital	314	5,053
Tangalla Hospital	326	5,444
Ambalantota Dispensary	—	3,825
Tissamaharama Dispensary	—	4,591
Ranna Dispensary	—	989
Beliatta Dispensary	—	2,009
Walasmulla Dispensary	—	915
Wiraketiya Dispensary	—	1,589
Talawa Dispensary	—	793
Kirama Dispensary	—	1,708
Katuwana Dispensary	—	1,688

IX.—CRIME AND POLICE.

91. For judicial purposes the Hambantota District is divided into two, under the jurisdiction of the Police Courts of Tangalla and Hambantota. The Tangalla court has jurisdiction over the West and East Giruwa pattus, and the Hambantota court over the Magam pattu.

92. The following statement shows the number of cases of serious crime committed in 1902 in each of these pattus, with its distribution among the villages, or rather headmen's divisions.

93. "Serious crime" has been taken to include the following offences, viz.:—

(1) Homicide.
(2) Grievous hurt.
(3) Hurt with dangerous weapon.
(4) Robbery.
(5) House-breaking.
(6) Arson.
(7) Rape.
(8) Abduction.
(9) Riot.
(10) Unlawful assembly.
(11) Serious assault.
(12) Theft of property over Rs. 100 in value.

Statement showing the Number of Cases of Serious Crime in the Hambantota District for 1902.

Divisions.	Serious Cognizable Offences reported to Court.	Found by the Magistrate: Not to have been committed.	Found by the Magistrate: To have been committed.	Number of Divisions and Offences committed in each: Divisions.	Number of Divisions and Offences committed in each: Offences.	Total Offences.	Of these: Punished.	Of these: Unpunished.	Total Taxpaying Population.	Villages with Eight or more Offences.
West Giruwa Pattu...	134	74	60	54		—	—	—	8,522	Nil.
				25	1	25	17	8	5,667	
				8	2	16	13	3	1,401	
				5	3	15	12	3	1,955	
				1	4	4	4	—	315	
	134	74	60	93		60	46	14	1,7860	
East Giruwa Pattu...	7	4	3	28		—	—	—	2,147	Nil.
				3	1	3	3	—	422	
	7	4	3	31		3	3	—	2,569	
Magam Pattu ...	14	4	10	15		—	—	—	876	Nil.
				4	1	4	3	1	1,160	
				1	2	2	1	1	49	
				1	4	4	4	—	664	
	14	4	10	21		10	8	2	2,749	

94. It will be seen from the above figures that the Tangalla court had to deal with 141 cases of serious crime and the Hambantota court with 14, of which the crimes found to have been actually committed were 63 in the Tangalla court and 10 in Hambantota, giving a total of 73 for the whole district, which cannot be considered to be a very alarming number.

95. When we examine the distribution of the crime further reason is discovered for considering that it is by no means prevalent.

96. In the West Giruwa pattu 60 crimes were committed in 39 divisions, while 54 divisions were entirely free from crime, also six divisions account for 19 crimes, or one-third of the total number.

97. In the East Giruwa pattu three divisions have one crime each, while the remaining twenty-eight are free.

98. The Magam pattu shows six out of its ten crimes, or three-fifths of the whole, committed in two divisions, while three-fourths of the total number of divisions are free from crime.

99. In no pattu has any division more than four crimes, and there are only two which have that number.

100. When these figures are compared with those of 1901, it is found that West Giruwa pattu had 60 crimes in 1902, as against 70 in 1901; East Giruwa pattu had 3 crimes in 1902, as against 13 in 1901; while Magam pattu had 10 crimes in 1902, as against 6 in 1901; or a total for the district of 73 in 1902, as against 89 in 1901—a very substantial reduction.

101. The proportion of punished crimes to unpunished and to the total population is also, I think, satisfactory, and is shown clearly in the following statement :—

Statement showing the Taxpaying Population and Number of Serious Cognizable Offences found by the Magistrate to have been committed, punished, and unpunished in each Pattu, with the Proportion of Offences to Taxpayers, and the Number of Taverns and Distilleries.

	West Giruwa Pattu.	East Giruwa Pattu.	Magam Pattu.
Total taxpaying population	17,860	2,569	2,749
Total offences committed	60	3	10
Punished	46	3	8
Unpunished	14	—	2
Number of offences per 1,000 taxpayers	3·3	1·1	3·6
Percentage of punished to total offences committed	76·6	100	80
Number of taxpayers to each offence	297·6	856·3	274·9
Taverns	10	5	3
Distilleries	—	—	—
Number of taxpayers to each tavern	1,786	513·8	916·3

102. The improvement in respect of the criminal habits of the people referred to in my reports of previous years would thus seem to be maintained, and some part of this improvement must be attributed to the good work done by the regular and rural police, who have acted energetically and co-operated heartily in dealing with offences occurring within their divisions.

103. The system of working described in previous reports was followed steadily, and has, I think, stood well the test of experience.

104. I wish to place again on record the good service rendered by Inspector Peries, and to note the names of Sergeants Johardin Sudar and C. A. Sourjah.

105. The following headmen received rewards for intelligent and zealous action :—

Statement of Headmen who distinguished themselves and received Rewards.

No.	Designation.	Division.	Nature of Work rendered.	Amount of Reward.
				Rs.
1	The Police Officer of Sinimodara	Nakulugamuwa ...	Arrest of a proclaimed offender ...	10
2	The Vidane Arachchi of Kahawatta Upper	Kahawatta Upper	Smart action in the prosecution of a criminal case	10
3	The Police Officer of Mawella ...	Nakulugamuwa ...	do. do. ...	10
4	Do. Kadurupokuna...	do. ...	Arrest of an offender... ...	10
5	Do. Medaketiya ...	Tangalla ...	Successful prosecution in a gambling case	15
6	Do. Katuwana ...	Katuwana ...	Smart action in Village Tribunal criminal case No. 15,990 ...	10
7	Do. Yaggasmulla ...	Marakada Upper...	do. do. No. 18,110	10
8	Do. Hatagala ...	Pahala Kanuketiya	Successful prosecution in a criminal case	5
9	Do. Pallemalala ...	Western Walakada	do. do. ...	10
10	Do. Bundala ...	do. ...	do. do. ...	10
11	The Vidane Arachchi of Tissa ...	Tissa Walakada ...	Seizure of illicit removal of arrack ...	20
12	The Police Officer of Tissa ...	do. ...	Successful prosecution of a criminal case for illegal sale of toddy ...	10
13	Do. Ranakeliya ...	Ranakeliya Walakada ...	Successful prosecution of two cases, one for illegal sale of toddy and the other for removal of arrack without permit	35

106. Rewards were also paid to the following constables of the regular police :—P. C. 1,002 L. H. D. William and P. C. 78 Seneris Silva, both of Hambantota.

107. Although, as shown above, serious crime generally was less in 1902 than in 1901, the number of homicides was alarmingly large, there being twelve cases, of which ten were culpable, as compared with eight in 1901 and five in 1900. Two of the murders—one of them a triple crime—occurred in the Magam pattu, generally so free from serious crime.

108. The annexed statement gives the circumstances and result of each :—

[For statement see pages E 52 and E 53.]

109. The murder and knife cases for 1902 are shown in the following return :—

Tangalla Police Court.

	Reported.	Brought to Trial.	Convictions obtained.
Murder	8 ...	5 ...	2
Knife	51 ...	43 ...	22
Culpable homicide not amounting to murder	2 ...	2 ...	1

Hambantota Police Court.

Murder	2 ...	2 ...	1
Knife	11 ...	11 ...	5

X.—Cattle Stealing.

110. This class of crime does not call for any special remarks as regards this district. It exists, but is not prevalent.

XI.—Cattle Disease.

111. Cattle were healthy during the year. The Mudaliyar, West Giruwa pattu, reports that many cattle in his division feed on citronella grass, which is supposed to preserve them from attacks of disease.

XII.—New Areas of Cultivation.

112. The steady extension of permanent cultivation going on throughout the district was well maintained during the year. The demand for land is increasing, and its value rising. The fact that 4,000 acres of land were sold within the year at an average of over Rs. 32 per acre speaks for itself. The native cultivator does not buy land at a high figure merely to leave it lying idle.

113. The Mudaliyar, West Giruwa pattu, reports considerable extension of cocoanut cultivation, while the Magam pattu Mudaliyar reports the opening up of new paddy land under the Tissa scheme.

XIII.—Chena Cultivation.

114. There was an increase of chena cultivation in 1901 owing to the restriction of paddy and other planting operations due to the drought. As 1902 was a favourable year for paddy and other permanent products, less recourse was had to chena, a favourable sign, as showing that the people are gradually becoming independent of this improvident method of cultivation. Many of the chenas also which were felled could not be burned owing to the heavy rain, and so remained uncultivated. Yet no distress resulted from this cause so far as I am aware.

115. In cases where chenas were considered necessary, owing to scarcity of paddy land or other means of subsistence, permits to chena Crown land were issued, and the restrictive pressure maintained in previous years was relaxed to some extent.

116. It would be most unwise, however, to revert to a system of general licenses by which any appearance of countenancing chena cultivation would be given.

117. As permits were given in necessitous cases when applied for, the Magistrate was asked to impose a slightly heavier fine on those who deliberately broke the law by chenaing without license and refused to pay compensation when demanded. In this way, though the number of cases is smaller than in 1901, the convictions are more numerous, and the amount of fines recovered is considerably greater.

118. The results of land sales in recent years, and the applications to purchase, which are being received in increasing numbers for ordinary waste high land, show that the demand is increasing and its value rising, and every acre thus disposed of is an addition to the permanent wealth of the country, which an acre of chena is not.

119. I annex statement of chena cases in the Tangalla and Hambantota Courts from 1897 :—

Chena Cases, Tangalla.

Year.	Institutions.	No. of Accused.	No. Convicted.	Amount of Fine. Rs.
1897 ...	1,003 ...	1,546 ...	578 ...	957
1898 ...	1,164 ...	1,659 ...	793 ...	1,859
1899 ...	2,172 ...	2,506 ...	1,058 ...	5,277
1900 ...	1,152 ...	1,505 ...	606 ...	2,205

XIV.—Waste Land Ordinances and Sales by Villagers.

120. Actual work in the land settlement of the district may be said to have begun this year when Mr. Fraser took up the inquiries into claims to the lands noticed by me in 1901 and issued

Homicide Return.

[In the cases marked (*a*) the injured person was conveyed to hospital and died there on the date given in column 3.]

No.	Village and Number.	Dates of					Committed or discharged.	Date of Final Trial.	Result.	Punishment.	Instrument used.	Probable Motive.	Attributable to Liquor or not.	Circumstances.
		Offence committed.	Body discovered.	Accused apprehended.	Inquest.	Magisterial Inquiry commenced.								
1	Tiriwanabokka-godella, 143	Jan. 9	Jan. 10	Jan. 13	Jan. 11	Jan. 14	Committed	June 13	Convicted	Death	Knife	Gain	No	This was a triple murder. The bodies were found thrown into the jungle on the old Badulla road. A Boer prisoner of war had seen the accused and the three deceased persons together before the murder, and was able to identify the accused amongst fifteen others.
2	Kudabedigama, 75	Jan. 17	Jan. 17	Jan. 17	—	Jan. 18	1 accused committed, 1 accused discharged	Aug. 11	Acquitted	—	Katty	Revenge	No	The accused waylaid and stabbed the deceased to death, in order to pay off an old score about cattle trespass.
3	Ihala Obada, 66 ...	Jan. 20	Jan. 20	Jan. 20	—	Jan. 22	Committed	Aug. 7	Convicted	Death	Gun	Anger	No	The accused, who was incensed at deceased breaking into a granary and removing some kurakkan which he maintained was his own, shot the deceased with a gun.
4	Ulahitiyawa, 116...	Feb. 17	Feb. 18	Feb. 17	—	Feb. 18	Committed	Aug. 8	Convicted	10 years' rigorous imprisonment	Knife	Anger, property dispute	No	The deceased had leased a land to the accused, and the deceased objected to the accused pulling up some "mun" plants, when accused stabbed the deceased.
5	Hingurekanda, 62	March 7	March 7	March 7	—	March 9	Committed	Aug. 13	Acquitted	—	Knife	Revenge	No	The accused stabbed the deceased because he gave evidence against him in the Gansabhawa.
6	Kotamba, 48 ...	March 12	March 12	March 12	—	March 13	Discharged	—	—	—	Gun	Self-defence, and to protect property	No	The deceased was shot dead by the accused while in the act of breaking into his house. The deceased came armed with a "kris" and hand axe to steal and kill if necessary. Accused was discharged on orders from the Attorney-General, presumably on the ground that under the circumstances accused's act was justifiable.
7	Wettambuwawa, 70	April 13	April 13	April 14	—	April 14	Committed	July 5	Convicted	10 years' rigorous imprisonment	Knife	Gambling quarrel	No	The deceased objected to accused gambling on his land, when the second accused held him and the first accused stabbed him to death.

8	Waharakgoda, 24	July 21	July 21 (a)	July 21	—	July 22	Discharged	—	—	—	—	Self-defence	Liquor	Deceased came to accused's compound drunk and abused him. In the course of the altercation deceased stabbed accused's cousin on the head. Accused came to the rescue, when deceased turned on him with knife in hand. Accused in self-defence struck deceased two blows on the head with a stick, and deceased succumbed to the injuries in hospital. The accused was discharged on orders from the Attorney-General, on the ground that his act was a justifiable one in self-defence.
9	Koholankala, Magam pattu, 143	Aug. 2	Aug. 2	Aug. 3	Aug. 3	Aug. 4	Discharged	—	—	—	Gun	Revenge	No	The accused's mistress had left him and gone to deceased. Finding he could not persuade her to come back to him, accused threatened to do harm to the deceased if he persisted in keeping her. Subsequently, while on his way to work at Weligatta, 8 miles off, deceased was deliberately shot dead. There was no evidence of the actual commission of the offence, which must have occurred about midnight, but there was strong reason for suspecting the accused of the crime. There is practically nothing to actually connect him with it. Accused was discharged on orders of the Attorney-General for want of evidence.
10	Getamanna, 27 ...	Aug. 2	Aug. 2	Aug. 2	—	Aug. 3	Committed	Nov. 26	Convicted	5 years' rigorous imprisonment	Knife	Anger	No	The parties, who were little boys, quarrelled over a popgun, and accused stabbed deceased and caused his death.
11	Galagama, 13 ...	Oct. 10	Oct. 10	Oct. 10	Oct. 10	Oct. 10	Committed	—	Pending	—	Gun	Anger and land dispute	No	The accused shot two women dead for cutting pumpkin creepers from a land which the parties possessed in common.
12	Talawa, 111 ...	Dec. 15	Dec. 15	Dec. 15	—	Dec. 17	Pending	—	—	—	Gun	Anger and cattle dispute	No	The deceased and his stepson were out wild boar hunting, when they met the accused (3), who were out on a similar errand. An altercation took place between them about a bull which had been stolen from the accused, and the first and second accused fired at deceased simultaneously and killed him.

notices for the plans in hand, while the block survey party started work in the north-west of the Giruwa pattu, and will continue till the settlement is completed.

121. The advantages of such a settlement in this district, where there are so many long-standing disputes as to title between Crown and subject, and where the value of the Crown domain is so great and steadily increasing, cannot be over-estimated. I anticipate a marked advance in prosperity on the completion of the settlement.

122. A total extent of 9,378 acres was declared to be the property of the Crown, after amicable settlement with the claimants when any, while no references to court were found necessary.

123. The appeals in the Liniyanpatawa and Handunoruwa land claim cases, in which judgments in favour of the Crown were entered by the District Court in 1901, still remain undecided by the Supreme Court.

124. No authenticated cases came under my notice in which villagers had sold land to which they had no title.

XV.—GANSABHAWA AND VILLAGE COMMITTEES.

125. As in former years, I have continued to give particular attention to the administration of the Irrigation and Village Communities' Ordinances, being convinced that the principles and provisions of these Ordinances are specially suited to the natives of Ceylon, and form an admirable basis for their training in independence, responsibility, and self-government.

126. My endeavour has been to arouse the interest and to stimulate the initiative of the Committees in their work, making them feel that it is their concern, and that with them rests the responsibility for the improvement of their divisions, the suggestion of new works, and the wise administration of the labour and money at their disposal.

127. By means of the system of accounts kept in the Kachcheri I was able to exercise a complete supervision over their operations, and to control expenditure that was unnecessary or beyond their means, while by personal inspection and consultation when on circuit I could assist their decisions as to the works to be undertaken and the best means of carrying them out.

128. The interest of the general body of the public in the doings of their representatives was maintained by the annual publication in the vernacular of the full accounts in labour and money of each division.

129. As the chief headmen of each pattu are *ex officio* Chairmen of the Committees, the administration of the Ordinance is an excellent test of their ability.

130. I have again to repeat my praise of the excellent work done by Mr. Alfred Jayawardana, Mudaliyar of the West Giruwa pattu. I have made a special recommendation that he be promoted to the rank of Gate Mudaliyar, basing my recommendation mainly on the results achieved by him in his division by his energetic administration of the Village Communities' Ordinance.

131. All village works were maintained in good order during the year. Improvements have been carried out and new works undertaken.

132. In the Magam pattu the following works were carried out :—

(1) Commencement of a road from the Tissa bazaar to Helambagaswala and eventually to Andalla, shortening the journey from Hambantota to Tissa by about 3 miles.
(2) Opening a further 2 miles of the road from Ambalantota to Beragama.
(3) Maintenance of road to Suriyawewa.
(4) Maintenance of road from Dungasmulla to Magam.
(5) Maintenance of road from Landejulana to Udamattala.
(6) Maintenance of road from Walawe village to main road.
(7) Maintenance of road from Gonnoruwa to Kurundana.
(8) Maintenance from Landejulana to Pallemalala.
(9) Maintenance from Unatuwewa to main road.
(10) Maintenance of Beddawewa road.
(11) Maintenance of Badagiriya road.
(12) Maintenance of Anukkangala road.
(13) Maintenance of Bundala road.
(14) Maintenance of Udamalala-Keligama road.
(15) Opening and clearing channels to improve supply of the bathing tanks of Chippikulam and Kadukkulam at Hambantota, and clearing their bunds.

133. In the East Giruwa pattu a new Gansabhawa was built at Angunakolapelessa, and wells sunk at Uswewa and Angunakolapelessa. The village roads were maintained in fair order.

134. The following extract from the report of the Mudaliyar of the West Giruwa pattu will show how extensive are the works carried on by the Committees of his district :—

Village Committees.

Induced by the personal inspections made by the Assistant Government Agent from time to time of the several village works in the district, and the complimentary terms in which he has spoken of them, and superinduced, I should say, by the great importance and usefulness of such works, the villagers co-operated in maintaining them and in carrying out new works with increased energy and interest. The new works done have proved to be of equal, if not greater, importance and usefulness.

In limine I beg leave to point out, which I do with no little pride, that what "Local Boards" used to do for towns of equal or less importance elsewhere the Village Committees of this district have done, though on a small scale, for the town of Tangalla. The works they have already done for this important town are :—

(1) Lighting street lamps.
(2) Observing sanitation, following the Government regulations and enforcing Village Committee rules.
(3) Upkeep and supervision of public latrines.
(4) Providing ornamental garden seats.
(5) Keeping the esplanade free of weeds.
(6) Looking after the drinking wells and bathing-places.

The new works executed in the villages during the year are :—

(1) A road 12 feet wide and a mile in length from Eldeniya in this district to Urugamuwa in the Wellaboda pattu of Matara.
(2) A road 12 feet wide and three-fourths of a mile in length from Getamanna to Eldeniya.
(3) A road 12 feet wide and half a mile long from Nihuluwa to Panamulla.
(4) A road 12 feet wide and three-fourths of a mile in length from Getamanna to Dikwella.
(5) A road 12 feet wide and a mile in length from Mahahilla to Getamanna.
(6) A road 12 feet wide and 4 miles long from Kinchiguna to Julampitiya through Kandamaditta.
(7) A road 12 feet wide and 3 miles long from Walasmulla to Dewalagama through Natuwala.
(8) A road 12 feet wide and 4 miles long from Katuwana to Talwatta.

By the opening of these new lines of road the villages which had formerly to be approached by circuitous paths of several miles' distance have come closer to one another, and untraversed, unexplored country opened up, affording every facility for cart traffic. The other works done during the year are the construction of five bridges on the Wiraketiya-Gonadeniya road, the bridges on Bowala road, and a footpath to Daramitiara by voluntary labour ; and all these new roads were provided with temporary bridges without any pecuniary aid from Government or drawing any money from the Village Committee funds ; the completion of the road from Kotamba to Yatigalla and the cross road from Walasmulla to Ranna ; the repairs to the Kahandamodara, Palatuduwa, Pallatara, and Mandaduwa schools, and to the market buildings of Kirama, Wiraketiya, Ranna, and Tangalla ; and the repairs to the old roads appearing below :—

	Miles.
(1) Wiraketiya-Gonadeniya road ...	9
(2) Mandaduwa-Taluma road ...	8
(3) Panawela-Palugahawala road ...	5
(4) Mulkirigala-Okewela road ...	3
(5) Mandaduwa-Palle Julampitiya road ...	5
(6) Kinchigune-Handapangalagegoda road	6
(7) Uda Julampitiya-Pahala Obada road ...	4½
(8) Godigamuwa-Taluma road ...	4
(9) Ranna-Lunumagara road ...	3
(10) Ranna-Kahandamodara road ...	3
(11) Netolpitiya-Ranna road through Rekawa	6
(12) Netolpitiya-Wigamuwa road ...	3
(13) Vitaranadeniya-Wigamuwa road ...	3
(14) Modarawana through Wawwa-Panawela road	3
(15) Kaduruliyadda-Yatigalla road ...	4
(16) Natuwala-Kanumuldeniya road	2
(17) Koholana-Pahala Obada road ...	4
(18) Kirama-Ihala Obada road ...	4
(19) Walasmulla-Mahamaditta road ...	6

(27) Katuwana-Hulankanda road ...	3½
(28) Mimanakoladeniya-Ambagasara road ...	5
(29) Siyarapitiya-Hingurekanda road ...	2½
(30) Killewatta-Koholana road ...	5½
(31) Tangalla through Medaketiya-Henakaduwa road	1½
(32) Medilla-Rekawa road ...	2
(33) Medilla through Patayarawela to join the main road at Marakollia ...	1
(34) From the main road to Hambantota through Kuttandurekakkama and Palatuduwa to meet the minor road to Wiraketiya	2½
(35) From the general cemetery to Danketiya minor road	½
(36) Godawanegoda-Pipiriyagodella road ...	1
(37) From the teak garden at Tangalla through Tahanduwewa to join the village path to Kadurupokuna and Palapota ...	¾
(38) Parepokuna-Palapota road	4
(39) Ketaketiya-Moraketiyara road ...	3½
(40) Moraketiyara-Galagama road ...	2
(41) Sinimodara-Palapota road ...	2½
(42) Godellewela-Kadurupokuna road ...	1½
(43) Mahawela-Handapangodella road ...	2
(44) Nihaluwa-Kendala road ...	2½
(45) Walawela-Kavatota road ...	2½
(46) Pallatara-Walawela road ...	2½
(47) Pallatara-Beligalla road ...	1¾
(48) Getamanna-Kambarankagaspitiya road...	1¼
(49) Getamanna-Urugamuwa limit ...	1
(50) Godakumbura-Mahalella road ...	2
(51) Puwakdandawa-Dedduwawala road ...	4
(52) Palapota-Sinimodara road ...	¾
(53) Kudahilla-Palapota road ...	2
(54) From Palapota to meet the village path from Tangalla to Kadurupokuna ...	2
(55) Dedduwawala-Galagama road ...	2½
(56) Polammanuwa through Nalagama to meet the minor road at Kahawatta ...	5
(57) Beligalla-Etgalmulla road ...	3
(58) Nalagama-Aranwela road ...	2
(59) Palankada-Modarawana road ...	4
(60) Rajapaksawewa-Kadigamuwa road ...	5
(61) Cross road to connect Walasmulla-Ranna road	10
(62) Kottamba-Yatigalla road	6
(63) Kanumuldeniya-Dewalagama road ...	6
(64) Walasmulla to Mahamaditta ...	8

Of the several works which the Committees have in contemplation, and have taken preliminary steps for execution during the year 1903, are :—

A halting bungalow at Gonadeniya, to be used chiefly as headmen's bungalow. This building when ready for occupation will prove to be of immense use to the officers of all Departments—the Forest, the Irrigation, the District Road Committee, and Village Committee, and for all travelling work.

A bungalow at Julampitiya for similar purposes, that division being an isolated one, and not within easy reach or access from much frequented stations of the Assistant Government Agent. The extreme desirability of a halting bungalow in it has been keenly felt. The school which I have caused to be established here works with excellent results, thus proving it to be a great boon to the public.

The Committee proposes also to improve the halting ambalams on the boundary between Katuwana and Morawak-korale, in order that it may be, when necessary, utilized as a house for lodging and entertainment of travellers.

Steps have also been taken to open a road from Galagetiya to Yaggasmulla, encircling Ittademaliya, a distance of 5 miles. This road, when completed, cannot fail to be of great advantage to the villagers, the narrow ridges in paddy fields, which are occasionally submerged in rainy seasons, being the only means by which they can now get into their houses.

Public Markets.

The number of markets in full swing during the year was six. The heterogeneous articles of locally-grown produce exposed at these markets and the ready sale of them form an index to the high development of the country. All these buildings maintain the prestige attaching to them as self-supporting markets; they apply their resources to the payment of the salaries of their custodians and sweepers and of the expenses involved in the repairs to the buildings, and leave a surplus balance sufficient to justify the increase of similar buildings elsewhere, and we have not remained silent or passive. Active steps were taken to double the present number of markets by erecting one at Nihiluwa, one at Talunna, one at Nakulugamuwa, one at Godakumbura, one at Julampitiya, and one at Katuwana, and the work of these markets is fast progressing.

Annexed is a table showing the situation of the several existing markets and the revenue derived from the sale of rents of each of them during the year :—

	Rs.	c.
Tangalla market	291	0
Beliatta market	1,231	0
Walasmulla market	632	50
Wiraketiya market	402	0
Ranna market	65	50
Kirama market	62	0
Total ...	2,684	0

135. I annex the labour and money accounts of each pattu :—

Labour Accounts of the Village Committees for 1902.

Pattu.	No. of Men liable.	No. of Men commuted.	No. of Men worked.	No. of Men unaccounted
West Giruwa Pattu ...	17,991	2,614	11,997	3,380
East Giruwa Pattu ...	2,548	1,067	1,041	440
Magam Pattu ...	2,055	988	830	237
	22,594	4,669	13,868	4,057

Defaulters are being prosecuted.

136. Statement showing receipts and payments of Village Committee and Village Tribunal Funds for the year 1902 :—

Statement showing Receipts and Payments of Village Committee Funds.

Receipts.	Amount. Rs. c.	Total. Rs. c.
West Giruwa Pattu.		
Balance brought forward ...	—	1,862 54
Village Tribunal fines ...	2,059 88	
Commutation of labour ...	1,340 50	
Tangalla esplanade fund ...	163 75	
Market fund ...	3,824 50	
Refund of advance made on account of culverts in 1900 ...	275 0	
Miscellaneous ...	538 80	
		8,202 43
East Giruwa Pattu.		
Balance brought forward ...	—	761 89
Commutation of labour ...	991 0	
Miscellaneous ...	534 16	
		1,521 16
Magam Pattu.		
Balance brought forward ...	—	1,061 14
Commutation of labour ...	635 0	
Market fund ...	190 38	
Miscellaneous ...	386 74	
		1,212 12
Total ...		14,625 28

Payments.	Amount. Rs. c.
Pay of staff of President	540 0
Cost of lighting street lamps	165 0
Pay of constables and sweepers ...	1,235 0
Pay of caretakers and latrine cooly ...	335 25
Pay of clerks and messengers of the Village Committees	800 0
Pay of assistant Gansabhawa clerks ...	360 0
Pay of keeper of Village Committee printed forms	30 1
Construction of Gansabhawa court-house at Talawa	430 0
Construction of Gansabhawa court-house at Angunakolapelessa	400 0

137. There is only one Village Tribunal in the district, viz., that in the West Giruwa pattu, under the presidency of Mr. Silva, whose work as President it gives me great pleasure to commend most highly. His proceedings are characterized by great care and fairness. The small number of appeals shows that the decisions of the Tribunal are acceptable to the litigants, while the fact that only one judgment was set aside may be taken as a proof of their correctness. Mr. Silva has favoured me with the following report on his work :—

1. I have the honour to submit my report on the Village Tribunals of West Giruwa pattu for 1902.

As in last year, the question of amicable settlements has received the best attention of the Tribunal, and I believe even better results have been achieved this year.

2. There has been a considerable decrease in the appeals, as compared with those for last year; only one appeal has succeeded, the others have resulted in the Tribunal's decisions being confirmed.

3. The criminal institutions which are shown in the returns are swelled by Village Committee labour and school cases, which for 1902 number 671 and 230 respectively. About the end of the year Mr. Ferguson, Chief Inspector of Irrigation, started prosecutions in tank cases for failure to do earthwork and bund clearing; and the defaulters have been leniently dealt with. They are mostly absentee proprietors, whose gambarayas have failed to notify them of these requirements. The first few cases have opened the eyes of the proprietors, and they are now fairly well acquainted with the provisions of the irrigation rules. I have reason to believe that they now take to tank improvement work more readily and with much less compulsion.

4. The disposition of the Tribunal to deal leniently with the defaulters at the beginning, when the rules were but recently put in force, has been rightly interpreted. Things are looking more hopeful for the future.

5. The prosperity of the district is bound up with the restoration of the village tanks, which are dotted all over the division, and the rules for the enforcement of labour have not been put in force a day too soon.

6. The new departmental regulations with regard to village schools have done a deal of good in the improvement of school attendance. Given a good teacher who takes a sympathetic interest in his boys, education, which is the only agency, as far as I can see, for the amelioration of the district, should make rapid strides here.

7. While on the subject I should like to suggest that the operation of the Village Committee rule, which makes the sending of boys to school compulsory on parents and guardians, be extended to Mission schools. Village Committees have retired before Missionary efforts. I think we should second their efforts by giving them a helping hand, and the best way to help them would be in the manner suggested by me.

8. As regards the amendments of the Ordinance which I suggested in my previous reports, I beg to state that the experience of another year's working shows them to be very desirable. I would take this opportunity to urge consideration of the matter upon Government.

9. The question has been raised whether partition cases, where the interests involved are not over Rs. 20, are triable by the Village Tribunals. It would be desirable to obtain an authoritative ruling on this point. If these cases can be dealt with by the Tribunal, more beneficial results from the working of the Ordinance may be confidently expected for the poor classes.

10. In view of the fact that the Tribunals have the power of imprisonment—I say this subject to correction—without giving an accused the option of a fine in petty assaults and thefts, it may be necessary to make provision in the rules of procedure for a prisoner who has no bail to give to be let out pending decision in appeal. Can the Tribunal stop hard labour and remand him to jail in such a case?

11. In conclusion, I have to repeat my commendation of the zealous manner in which the headmen have, on the whole, co-operated with me in my work.

138. The following is a tabular statement of work done in the year :—

Work done in Gansabhawa.

Criminal.

Pending on January 1, 1902	136
Institutions during 1902	1,800

XVI.—EDUCATION.

139. The West Giruwa pattu continues to advance in the number of its schools and the interest taken by the people in the education of their children.

140. The Wesleyans are the foremost in their attention to this subject. They have established schools in a number of villages throughout the pattu, and in 1902 they opened an English High School at Tangalla, where the training provided is the best obtainable in the Province, except at Galle.

141. The Romish and English Churches are also active, while the Buddhists are beginning to wake up.

142. The Gansabhawa schools provided by the Village Committees are doing good work, and provide specially for the wants of the more remote villages.

143. There has been no improvement in the backward state of the East Giruwa pattu, though I have no doubt an energetic Mudaliyar might do much to awaken the interest of the people in this matter.

144. In Magam pattu matters are in much the same state as last year. The sparseness of the population in the interior renders it difficult to get together a sufficient number of children.

145. The following statement gives the schools and average daily attendance :—

West Giruwa Pattu.

Gansabhawa Government Schools.

	Average Daily Attendance.		Average Daily Attendance.
Ranna	32	Kirama	40
Nakulugamuwa	285	Mandaduwa	65

Do. (Arabic) mixed	47	Tissa do.	20

XVII.—FOREST WORK.

146. The South-Eastern Circle in charge of the Forest Department includes the northern and eastern half of the Magam pattu. The rest of the district forms a "released area" under the Government Agent and Assistant Government Agent. The released area is worked through a Forest Ranger, Mr. Fernando, and two watchers, assisted by the headmen. The Forest Department charge is worked through a Ranger, Mr. Barthelot, and three Forest Guards.

147. During 1902 the Assistant Government Agent was in immediate charge of both areas, the accounts of which were, however, kept separate.

148. The revenue from the released area was as follows :—

	Rs. c.
Value of timber sold to Public Departments	321 52
Value of timber sold to private parties	531 30
Value of firewood sold to private parties	6 0
Royalty on stones and bricks	62 63
Value of chena produce	2,653 63
Sale of grazing rights	116 0
Compensation for forest offences	432 86
Total	4,123 94

149. The fines recovered in chena cases, amounting to Rs. 6,180, should also be taken as a credit due to the work of the forest staff.

150. Twenty-five telegraph posts were supplied to the Telegraph Department at cost price.

151. The expenditure in salaries and allowances was Rs. 1,640.

152. Mr. Fernando had to act, in addition to his own duties, as District Forester of the Matara District from 1st April, and deserves credit for the way in which he discharged his double duty.

153. Special credit is also due him for his intelligent and energetic action in the Abeyasekara timber case, No. 17,000, Police Court, Tangalla, in which he was paid a reward of Rs. 100 by the Magistrate. The fines imposed amounted to Rs. 200.

154. The chief work in the Forest Department area was the continuing of the cutting up into compartments and enumerating the forest between the Wirawila and Tanamalwila road and the Kirinda-oya, and the extension of the 10-foot demarcation line along the northern boundary of the game sanctuary.

155. Endeavours were made to sell the standing timber in the enumerated compartments, but no satisfactory offers were received in reply to the calls for tenders. There were no sales at the Central Depôt of timber from this Circle.

156. The total revenue for the year was Rs. 489·55, as follows :—

	Rs.	c.
Value of timber sold to Public Departments (paper credit)	249	26
Value of timber sold to private parties	223	24
Other sources	17	5
Total ...	489	55

157. The total expenditure was Rs. 11,194·25, of which Rs. 5,024·54 was salary, &c., of Mr. Moss, Assistant Conservator of the Eastern Circle.

158. There were two prosecutions, which resulted in convictions, and two compositions of forest offences.

159. The value of free grants for agricultural and village purposes was Rs. 747·05.

XVIII.—MISCELLANEOUS.

160. The game sanctuary continues to be successful, and the water supply for the game during the dry season was improved.

161. *Licenses.*—

	1898.	1899.	1900.	1901.	1902.	Value of Stamps in 1902. Rs. c.

XIX.—WORK OTHER THAN ROUTINE.

162. There is an element of routine even in the constant travelling and varied duties that are the lot of the Assistant Government Agent of Hambantota. Perhaps the work most removed from routine was my visit of inspection in March to the game sanctuary. Much of the sanctuary was demarcated by a 10-foot cleared line. In the sanctuary I found game plentiful and fearless. Numerous herds of deer were seen ; one herd at Pottana I estimated at about 200 in number. Buffaloes seemed to be doing well. Absolute proof of the strict preservation and undisturbed state of the sanctuary was furnished by the behaviour of the sambur.

At one large open pool I came upon eight sambur lying and standing round it quite unconcealed, two fine stags being in the open in the middle of the shallow water. Nor did they betray any signs of fear at seeing us and hearing our voices. We showed ourselves in the open, talked to them, and had regularly to "shoo" them away, whereupon they took their departure in a very leisurely fashion, stopping and looking back every now and then. This experience was repeated at other pools, in one of which the sambur were cheek by jowl with a herd of buffaloes. The Pallepottana abandoned tank has been restored, so as to hold up water for the increasing number of game in the dry season. Two more tanks were similarly selected for restoration. The condition of the game and of the sanctuary is steadily improving.

XX.—EVENTS OF INTEREST.

163. His Excellency the Governor, accompanied by the Lieutenant-Governor, visited Hambantota on the 22nd January, and inspected the Bundala road and Boer prisoners of war camp, leaving on the 24th January.

164. The number of prisoners of war at Hambantota was increased in February by some thirty men from Ragama, mostly foreigners. Adequate accommodation was provided for them. The news of the Boer surrender and close of the war was eagerly welcomed in camp, which was broken up in July.

165. The Coronation of His Majesty the King was celebrated enthusiastically throughout the district, where the news of his illness had caused widespread anxiety.

166. The topographical survey of the Magam pattu under the superintendence of Mr. Dyson Blair was completed in June, and should prove a most useful work.

167. Towards the end of the year a detachment of the Ceylon Light Infantry Volunteers was formed at Tangalla, Mr. W. Jayawickrama receiving a commission as Second Lieutenant.

168. Mr. Ferguson, the Chief Irrigation Inspector, went to England in May as a member of the Ceylon Coronation Contingent, and returned in September.

169. Towards the end of December I received seven partridges, which Mr. Ievers, the Government Agent of the Northern Province, was good enough to procure for me, and turned them out near the shore between the Koholankala lewaya and the Malallamodara. I have every hope that they may effect a permanent lodgment in the district.

170. On 18th August Mr. Allnutt relieved Mr. Murty as District Judge, Tangalla, and from 5th November till the end of the year Mr. E. G. Auwardt, Crown Proctor, acted for Mr. Allnutt, who was temporarily transferred to Diyatalawa Camp.

B. HORSBURGH,
Assistant Government Agent.

April 26, 1903.

EASTERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, EASTERN PROVINCE, FOR 1902.

I.—REVENUE.

RETURNS of the revenue of the Province in the prescribed forms have been forwarded to the Auditor-General. The revenue of the Province for the year amounted to Rs. 464,597·05, as compared with Rs. 448,120·69 for 1901, due in the Batticaloa District to increase in Customs imports and larger recoveries on account of Crown lands rented, and in the Trincomalee District to larger issues of salt to wholesale dealers.

The continued decrease under the head "Sale of Crown Land" is due to the policy of Government in deferring sale of lands under new irrigation schemes until completion of the works. The works both under the Lower Rugam anicuts and the works at Vakaneri will, it is expected, be completed before the end of the year. Nearly all the additional land irrigable under the former has already been surveyed, and will be brought forward for sale during the year, and a survey staff is now engaged surveying in detail the lands irrigable under Vakaneri. In the case of Unnichchai a good deal of levelling has to be done, but there also survey in detail will commence before long.

II.—FOOD SUPPLY.

Rice and fish were the staple articles of food, and both were plentiful and cheap throughout the year. The supply of locally-grown rice is more than sufficient for the population, but as large quantities are exported to other districts the poorer classes suffer at times, though never for long or with real distress.

The population of the Province by the Census returns for 1901, exclusive of estates, military, and shipping, was 172,978 persons, as compared with 148,365 at the Census of 1891; and the supply of home-grown paddy in 1902 1,636,823 bushels, having been 1,153,185 bushels in 1901.

Chena cultivation has been much restricted, but the produce of chenas still constitutes a considerable portion of the food of the people, and must continue to do so in some pattus, in default of some less objectionable livelihood which the chena villager can be induced to adopt.

Cocoanuts enter largely into the food of the sea-board population, and game into that of the people of the interior villages.

Fish is procurable at all seasons and in great abundance from the Batticaloa lake, lagoons, and rivers, besides the large quantity of sea fish caught by Sinhalese fisherman of the Southern and Western Provinces during the south-west monsoon.

Subjoined is a statement of the rice sent up-country during the last two years:—

Statement of the Quantity of Coast and Country Rice sent Up-country in 1901 and 1902.

	Coast Rice.		Country Rice.	
	1901. Bushels.	1902. Bushels.	1901. Bushels.	1902. Bushels.
Wambeek & Company ...	4,550	5,611	—	—
Native firms ...	26,200	14,000	25,040	6,000
Total ...	30,750	19,611	25,040	6,000

The quantity of paddy exported to Jaffna from Batticaloa during the year was 46,989 bushels, the quantity of Coast rice imported during the year having been 30,806 cwt.

III.—IRRIGATION.

Maintenance of Irrigation Works.—The maintenance of the following restored irrigation works was carried out during the year by the Irrigation Department:—

Batticaloa District.

Pullumalai tank.
Rugam tank.
Kadukkamunai tank.
Manalpiddi-aru anicut.
Pulukanavi tank.
Divulanai tank.
Tumpankeni tank.
Chadayantalavai tank.
Viragodai tank.
Naulla tank.
Panama tank.
Rotawewa tank.
Lahugalla tank.
Pattipolai-aru scheme (Amparai, Irakkamam, and anicuts).
Sakamam works.

Trincomalee District.

Ilakkantai tank.	Andankulam.
Allai tank.	Periyakulam.
Peruveli tank.	Kanthalai.

New Irrigation Works.

Vakaneri.—Nearly 300 Indian coolies were employed on these works under Mr. O'Brien for the last six months of the year, and during July, August, and September between 200 and 300 local coolies were secured for the work, the average of the latter labour during the other months of the year having been only about 50 coolies daily, owing to the employment of local labour during the greater part of the year on paddy and tobacco cultivation. Work during the year was confined chiefly to the construction of the main embankment of the reservoir, of which about one-third has been completed, but with the arrival of a further force of Indian coolies this month it is expected that the embankment will be completed this year. The spill has been excavated and completed; and in the northern channel 426 cubes of hard rock were blasted and removed and the 12 miles of service roads connected with the works have been completed.

Unnichchai.—The service road was completed, with the exception of the decking for the bridge over the Mavalai-aru, and seventeen new culverts were put in it during the year. The bungalow for the Irrigation Engineer has also been completed. For the foundations of the spill wall 500 cubes were excavated. The whole line of bund and a width of 65 feet of jungle for about 1½ mile for the northern channel were cleared.

Tembittiya.—Satisfactory progress was made during the year with the earthwork, and what little remains, viz., the main river breach, awaits the completion of the sluices and spill wall. Want of masons retarded the work until November, when a detachment of pioneers was sent from Rugam, after which satisfactory progress was made. Difficulty was experienced in procuring carts for transport.

Pullumalai.—The bund and spill wall were repaired effectively and made water-tight, necessitated by erosion of the toe of the bund, due to leakage behind the spill wall.

Rugam Anicuts.—Work is only possible from May to October, owing to the desirability of keeping the Rugam sluices open for paddy cultivation during the north-east monsoon, but even during the south-west monsoon months, owing to leakage from Rugam tank keeping up a constant flow of water under the river surface, the excavation in the foundation of the anicuts was rendered more expensive and difficult. Materials were prepared, including wedging of stone, breaking of metal, &c., and the moulding and burning of bricks, in the early part of the year.

At Kumukkaddu anicut the whole of the concrete foundation was laid, and one abutment and a portion of the other were built. The pitching and part of the foundation of the Sankulakulam anicut were put in. The Virakkadu anicut cylinder foundation was pushed on and forty cylinders were built, some of which have been sunk to the required depth. Owing to scarcity of labour work has not yet begun on the Kidavadipalam anicut. Scarcity of carts for transport and deficiency of labour caused delay and inconvenience. Timber for sheet piling and the greater portion of materials for work during the present year were prepared.

Sakamam and Vammiyadi.—Very little was done during the year in strengthening the bund of Sakamam, all the available labour having been employed on Vammiyadi. A service road 2 miles long was opened from Sakamam to Vammiyadi, and the whole of the earthwork of the bund of the latter reservoir completed. The masonry on both the northern and southern spill walls was practically completed, as also that of the sluice, but the north-east monsoon set in early, and in November unusually heavy rains effected a breach in the new earthwork of the bund and carried away the sluice.

The breach at Vammiyadi has since been repaired, though not without great difficulty in procuring labour. Mr. Hallilèy recommends that the southern spill wall be removed and rebuilt on a site further down on rock and lengthened, thus providing better escape for flood water.

The completion of the new irrigation works referred to above, as well as the construction of the additional reservoir at Kondavedduvan to supplement the Amparai reservoir and the Pattipolai-aru scheme, affords an ample programme for the immediate future, and the Maha Kandiyakaddu scheme inland, between Divulanai and Amparai, is under investigation with a view to further irrigation development later on.

Minor Irrigation Works.

There are some 150 village tanks in the Batticaloa District, only one of which exceeds a 6 feet head of water; they irrigate some 7,000 acres of land only, as compared with the 47,677 acres irrigated under the large restored irrigation works, with which they are entirely unconnected, depending as they do for their supply of water solely on "munmari" or "vanam" rainfall, and are maintained in order by the villagers themselves under communal rules under the Ordinance No. 23 of 1889. The villagers are supplied with cement pipe sluices at cost price whenever applied for by them.

During the year, at the instance of the Director of Irrigation, the village tank staff was reduced to one Sub-Inspector for the Batticaloa District and one for the Trincomalee District, the services of the Chief Inspector and one Sub-Inspector being transferred to the North-Central Province, where they were required for more important work.

The Sinhalese village tanks in the Trincomalee District really belong to the village tank system of the North-Central Province, and are worked on different rules from those of the Tamil tanks in the Batticaloa District; a number of them are fine old tanks of from 10 to 15 feet head of water, some containing stone "bisokotuwas," but the population under them is decreasing and unable to keep them in proper repair; their case has been submitted to Government.

IV.—LEGISLATION.

Game and Firearms Ordinances.—The following amendments of the law are urgently needed in the interests of game protection :—

(1) Amendment of Ordinance No. 10 of 1891 by the grant to the police headmen of power of search of premises for the meat, hides, and horns of game where the delay in obtaining a search warrant from a Magistrate would defeat the object of a search. A clause giving headmen power of search similar to that given to them under the Salt Ordinance would be of great advantage, while providing against abuse of the power.

Police headmen already possess the power of arresting offenders charged with the commission of non-cognizable offences under certain circumstances, but even unqualified power of arrest would not be of much advantage in the case of armed offenders in a remote forest who can resist arrest, and cannot readily be made answerable for any violence which they might commit in such resistance; whereas the power of search indicated would strike at the receiver of the venison, who can be more readily dealt with. The amendment also of sub-section (3) of section 13 of the Ordinance by

the addition of the words "hides and horns" after the word "meat" would make the sub-section complete and facilitate conviction in the Police Court.

(2) Amendment of section 17 of Ordinance No. 6 of 1901 by the grant to all "public servants," as defined in the Ceylon Penal Code, of power to call for the production of gun licenses, and to arrest without warrant any person possessing, carrying, or using an unlicensed gun; the definition suggested would include Government surveyors, irrigation and forest officers, who are the classes of Government officers who have most opportunities of bringing unlicensed gunholders to account.

V.—PUBLIC WORKS MOST REQUIRED.

Batticaloa District.

The public works most required are :—

(1) European ward in Civil Hospital, Batticaloa, promised in Estimates of present year, but subsequently omitted.
(2) Causeway between the Fort and Kalladi (or *viâ* Buffalo island), with drawbridge for passage of steamboats, ballams, &c.
(3) Shallow canal for ballams between Sengaladi and Natur lake. (It has been demonstrated that no canal is required in this locality by paddy agriculturists or cocoanut landowners, but a canal navigable by ballams would form a very convenient and popular alternative route from Batticaloa to Valaichenai during the annual repairs on the Coast road, and would, I understand, enable the Assistant Conservator of Forests to re-open a firewood depôt in Batticaloa, a great want, by means of the access which would be afforded to firewood jungles in the Koralai, Eravur, and Rugam pattus, and by the cheap transport of firewood to Batticaloa.)
(4) Reduction of the level of Periyakallar causeway to admit of more rapid exit of flood water from the lake.
(5) New salt stores, Batticaloa.
(6) Leper Asylum at Kalmunai.
(7) New Police Court and lock-up, Kalmunai.
(8) Permanent quarters for Fiscal's Marshal, Kalmunai.
(9) Quarters for Office Assistant to Government Agent.
(10) Completion of cart road from Pottuvil to Muppane, to connect Uva with an additional port and facilitate opening up of intermediate country.
(11) Improvement of road from North Coast road *viâ* Vakaneri to Gallella on Mahaweliganga, and thence to Minneri, to act as feeder for the Northern Railway and facilitate opening up of intermediate country.
(12) Transfer of following minor roads from the District Road Committee to the Public Works Department :—
  (*a*) Valaichenai to Kalkuda port, 3 miles (urgently required).
  (*b*) Paddiruppu, 16th mile on South Coast road, to ferry of same name, ½ mile. (This is in fact portion of the new proposed Public Works Department road from Paddiruppu to Pullumalai on the Badulla road.)
(13) A new resthouse at the port of Kalkuda, similar to the excellent one designed by Mr. Tomalin and constructed last year by the Public Works Department at Kalmunai.
(14) New resthouse about 35th milepost on South Coast road, instead of the old one at Karunkodditivu, which at present involves a 14-mile stage from Kalmunai.
(15) Ampalams on Valaichenai, Panichchankeni, and Verugal-aru rivers.
(16) Outdoor dispensary buildings at Kokkaddicholai, Nintavur, and Katiraveli.

Trincomalee District.

(1) Gravelling of road from Verugal-aru to Kiliveddi.
(2) Provision of steam ferry boat between Muttur and Trincomalee.
(3) Bridge over Verugal-aru to connect the Batticaloa and Trincomalee Districts.
(4) Metalling Nilaveli road, 8 miles, for salt traffic.
(5) Causeway over Upparu near Kiniyai.

VI.—SANITARY CONDITION OF THE PEOPLE.

The Colonial Surgeon has kindly furnished me with the following information regarding the sanitary condition of the Province during the year :—

The health of the Province during the year 1902 was on the whole satisfactory. There was no outbreak of any epidemic. Two or three deaths from suspected cholera were reported from Tampalakam, but these on investigation proved to be from other diseases. Beyond a few cases of chickenpox, no cases of infectious diseases were reported.

The diseases which prevailed mostly were as usual malarial fevers, parangi, and leprosy. Malarial fevers prevailed throughout the Province, and more or less throughout the year, but mostly during the first and last quarters, and did not assume an epidemic form. The type of the disease was generally mild. Parangi prevails chiefly in the Batticaloa District—in Kalmunai, Maha-oya, Akkaraipattu, and other villages. The Trincomalee District is comparatively free from this disease. Leprosy also is a disease which is confined to the Batticaloa District—in Batticaloa, Kalmunai, and Akkaraipattu—and is scarcely to be met with north of Batticaloa. A large number of cases were examined and reported upon by me. I am not in a position to state if this disease is increasing. The cases examined by me were generally of a mild type, and the subjects were mostly Moors. Other diseases, such as bowel and chest complaints, were also prevalent, but not to any great extent.

The dispensary at Nilaveli was closed and one opened at Tiriyai. A dispensary was also opened at Nadukadu. The district is well supplied with hospitals and dispensaries, both permanent and itinerating, and good work was done at all of these.

66,583 patients (1,653 indoor and 64,930 outdoor) were treated during the year in the Government hospitals and dispensaries of the Province.

The Superintendent, Wesleyan Mission, reports regarding the working of the dispensary under the Lady Doctor as follows :—

Statistics.

Place.	Patients.
Town dispensary	2,938
Visited in homes	1,887
Accouchements	33
In-patients	22
Eravur	1,298
Kattankudi (Government dispensary)	1,351
	7,529

The Medical Lady now resides at the dispensary, which is very convenient for her work. Her patients include representatives of all nationalities and faiths, to whom she ministers with absolute impartiality.

The priest in charge of the Roman Catholic Mission dispensary at Puliyantivu reports as follows :—

Thirty patients come on an average every day, the greatest part of them for malarial and other fevers, sore throats, coughs, colds, gastralgies, diarrhœa, sprains, wounds, and diseases of the skin. Generally, serious cases are remitted to the hospitals; still some cases of pneumonia were treated with success this year.

Plague Precautions.—The plague hospitals, segregation camps, and medical officers' quarters, &c., were kept in good order and in readiness for emergencies. 11,115 rats were killed during the year in the Batticaloa and Trincomalee towns, where also boutiques and houses were whitewashed and drains kept clean and in good order, cleanliness having been enforced also by the Board of Health in the five sanitary rate villages in its charge and by the Vanniahs in outlying villages.

VII.—MURDER AND SERIOUS CRIME.

Five cases of murder and attempt to murder were reported in the Batticaloa District during the year, of which particulars are subjoined :—

Homicides.

On 8th March, 1902, at Navatkuda, a young bride, Kannapper Vairi, was stabbed to death by a disappointed suitor, Manuel Sinnavan, because she refused to elope with him. The accused was tried for murder, and was convicted and hanged.

On 9th March, 1902, at night, Murukapper Arumukam was shot dead in the neighbourhood of a garden occupied by Poker Ahamadulevvai at Periyanavaladi. This man and Ibralevvai Mammadutampi were tried for murder, but were acquitted. It was believed that information that Arumukam had made improper proposals to the wife of Poker Ahamadulevvai had been given by her to her husband.

On 29th July, at Kattankudi, the skull of Ahamadulevvai Sekulevvai was fractured by Kader Saibu Ibrahim with the rudder of a canoe. The deceased having reported that some Crown timber was in the possession of this accused, a quarrel ensued, in which three other men joined the accused. Sekulevvai was brought after the assault to the Batticaloa hospital and died the same day. Ibrahim was tried on the capital charge after the other three accused had been discharged by the Magistrate. A plea of guilty of culpable homicide not amounting to murder was accepted in the Supreme Court, and Ibrahim was sentenced to four years' rigorous imprisonment.

On 29th September, at Kalmunai, a poor woman jumped with her infant child into a pipe well at night; next day both mother and child were found dead, death having been due to suffocation. Increasing poverty appears to have been the cause of the woman's suicide, and she probably thought it best that her infant child should die with her.

Attempted Murder.

On 30th June, at Manjantoduvai, a man called Kattar Seenitampi was stabbed in the abdomen by Nagapper Tampimuttu during a fight between the two men. Owing to disputes about money matters, the parties were angry with one another before the fight. The accused has been committed for trial before the Supreme Court on the charge of attempting to murder. The case is pending.

One murder case was reported during the year from the Trincomalee District, namely, the shooting at night of a servant of the Kandaswamy temple in Trincomalee, the accused in which is awaiting trial before the Supreme Court.

Cases in which the Knife was used.

During the year fifty-three cases in which the knife was alleged to have been used were reported in the Batticaloa District, of which sixteen proved to be false and eight instituted by mistake of law or fact; one case is pending for trial before the Supreme Court; in four other cases the accused were convicted and in two cases acquitted in the District Court; and in fourteen cases the accused were convicted and in eight cases acquitted in the Police Court. In the Trincomalee District there were four such cases reported, in two of which the accused were convicted in the Police Court and in two acquitted.

The following cases were tried by myself as Additional District Judge during the year :—

	Convictions.		Acquittals.	
	Cases.	Persons.	Cases.	Persons.
Riot	—	—	1	11
False evidence	1	1	—	—
Concealment of birth ...	1	1	—	—
Grievous hurt	3	4	1	5
Grievous hurt with dangerous weapons	6	11	—	2
Robberies	1	2	2	7
Theft	5	13	2	5
Cheating	1	1	—	—
House trespass and house-breaking...	2	5	2	5
Escape, &c.	1	1	—	—
	21	39	8	33

As regards serious crime generally, the Tamil population do not contribute much, the Moorish population being responsible for most of the serious crime in the Batticaloa District, though the latter really only stands twelfth out of thirty-one judicial divisions of the Island on the Solicitor-General's geographical list of serious crime for 1901.

VIII.—HEADMEN AND POLICE.

Headmen.

It cannot, I fear, be reported that the headmen co-operate vigorously with the authorities in the prevention and detection of crime, but the police headmen are now under strict orders regarding the reporting of serious crime in their villages direct to the Magistrate; their crime reports are regularly examined on circuit, and a system of checking the Kachcheri copies of these with the Police Court Register is about to be introduced, which cannot fail to have a beneficial effect.

None of the headmen distinguished themselves particularly during the year in the detection of crime, though minor rewards were granted to several for arrest of criminals in troublesome and deserving cases.

Police.

The regular police consists of one Inspector, four sergeants, and thirty-four constables, of whom two sergeants and nineteen constables are stationed at Batticaloa, which might with advantage be raised to the strength recommended by the late Inspector-General of Police on completion of the new barracks and station, more especially in view of the tendency of the people to riots occasionally in connection with temple disputes and other religious matters. In the discharge of their duties as Treasury guards and patrols, in prevention and prosecution, and police duties generally, the regular police gave tolerable satisfaction during the year.

A few of the nine rural constables discharged their duties well, the rest indifferently; they are now being assigned more definite duties in connection with the progress and prosecution of cases of crime reported by the Police Vidanes, by means of which it is hoped to make them more serviceable than they have hitherto proved.

IX.—CATTLE STEALING.

Only thirty-eight cases of theft of cattle were reported in the Batticaloa District during the year, of which twenty were referred to civil remedy, five dismissed as false, one committed for trial before the District Court resulting in conviction, six dismissed for want of evidence, and in four the offenders are unknown, the two remaining cases being still under investigation. In the Trincomalee District eight cases were instituted, in all of which the accused were acquitted.

X.—CATTLE DISEASE.

The Batticaloa District was free from cattle disease of any consequence during the year. In the Trincomalee District 161 cases of anthrax were reported, of which 107 terminated fatally.

XI.—NEW AREAS OF CULTIVATION.

Subjoined is a statement of Crown lands sold and granted during the year, from which it will be seen that the total extent alienated during the year was more than in 1901 :—

Return of Lands sold and granted in the Eastern Province during 1901 and 1902.

	1901. A. R. P.	1902. A. R. P.

Grand Total ...	2,551 1 14·48	3,027 2 5·75

XII.—CLAIMS UNDER THE WASTE LANDS ORDINANCES OF 1897, 1899, AND 1900.

The "Pottanaiveli claim," the first of the two claims referred to in the report for 1901, was inquired into, commencing from 17th January, but the inquiry came to a standstill owing to one set of claimants changing ground and asking for the survey of all the land recited in their deeds, instead of the survey of a smaller extent of land to which they had at first limited their claim, and the Surveyor-General has been asked for a fresh survey.

The second claim referred to, namely, the "Padaiyandakulam claim," which was proposed to be treated as an "unoccupied" land within the definition of section 24 (*c*) of the principal Ordinance No. 10 of 1887, for the reason that it had not been in the uninterrupted occupation of some person for a period exceeding five years next before notice given, has been withdrawn from treatment under the Waste Lands Ordinances, and will be dealt with in the ordinary way in the District Court, if necessary.

XIII.—CHENA CULTIVATION.

Chena cultivation was greatly restricted during the year, and though every effort was made to induce the chena villagers to avail themselves of the liberal terms of Circular No. 59 of 5th June, 1901, to restore the small abandoned tanks in the forest, not a single villager could be induced to come forward and benefit thereby. During the latter part of 1901 I traversed the whole of the Bintenna south pattu, where these tanks chiefly lie, inspecting nearly every hamlet in the forest and endeavouring to induce the people to undertake the work, but the reply everywhere was the same: "We have worked on the tanks so far solely because of the chenas allowed during the first two years of the work; now that the chenas have come to an end in the third year, we don't want to work any more. We don't care for paddy land, and would not take a present of it." This was the universal feeling, and it shows how hopeless it is to expect to convert these people into paddy proprietors, whatever chance there may be of converting them into paddy cultivators under their more wealthy compatriots, who might purchase irrigable lands under such schemes as the Mahakandiyakattu and Wattawalakandiya schemes, the former of which is now being examined with this object in view.

XIV.—SALES OF LAND BY VILLAGERS.

There is no reason to believe that there have been frequent sales of land by villagers, including houses and fields. Ordinary sales take place between villagers, and the notaries before whom they are transacted are particularly careful, since the judgment of the Chief Justice, in respect to the necessity on their part to quote prior registration of transactions affecting lands, to see that titles are good, and that there is no fraudulent collusion between parties to conveyances.

XV.—FOREST ADMINISTRATION.

Now that the topographical survey plans for the Province have been completed and that a new Conservator of Forests has been appointed, it is hoped that, after he has had time to form an idea of how best to preserve our valuable species of timber for State purposes, a start will be made in due course in the Eastern Province in the legal demarcation of such "reserved forest" as may be decided on. It seems clear that all areas over which satinwood, ebony, and the more valuable species grow gregariously might be blocked out as "reserved forests" at once, the question of how far large areas over which such species only grow sporadically should be converted into "reserved forests" being dealt with subsequently.

Comparative Statement showing Timber sold at the Central Timber Depôt, Colombo, on account Eastern Province.

	1901. Rs. c.	1902. Rs. c.

Allowance of Forest Ranger...	199 92	199 92
Cooly allowance of Forest Ranger	—	98 50
	559 92	688 42

There has been a falling off in local sale of timber by the Assistant Conservator of Forests, Eastern Circle, which he states is due—

(*a*) To the value of standing timber sold to a contractor in compartments having not been paid in full during the year, the contract running up to March, 1903;

(*b*) To the Public Works Department buying hardly any timber; and

(*c*) To very little timber having been purchased from local depôts by private parties.

Firewood Depôt.

The re-opening of a firewood depôt is urgently needed in Batticaloa, not only in the interests of the general public in the town, but also because of the large quantities now required by the local Steamboat Syndicate and by the Public Works Department for the lake dredger, it being impossible for either the Assistant Conservator of Forests or the Government Agent to efficiently protect the interests of Government under present circumstances with the reduced staff of Forest Guards placed at their disposal. The abolition, too, of the lake patrol formerly maintained by the Forest Department has thrown on the remaining staff heavier work in the prevention of theft of Crown timber than it can be expected to perform.

XVI.—WORK OTHER THAN ROUTINE.

Almost the whole of the Government Agent's time is occupied with routine work. In August I snatched time from it to climb "Westminster Abbey" and inspected the portions of the Batticaloa District lying to the east and north of it, and in September I inspected the western boundary of the Province, where it abuts on the North-Central Province between the Verugal-aru and Gunner's Quoin. The strip in the North-Central Province on the east of the Mahaweli-ganga should apparently belong to the Eastern Province, and it is not clear why the natural boundary, the Mahaweli-ganga, which has been followed further south, should have been deliberately abandoned here by retaining this strip in the North-Central Province.

SAM. HAUGHTON,
Government Agent.

Batticaloa, March 8, 1903.

REPORT ON THE TRINCOMALEE DISTRICT FOR 1902.

Area of District	1,165	square miles.
Population at Census, 1901	28,891	
Population of Town (within Local Board limits)	10,216	

I AM glad to be able again, in this my seventh year as Assistant Government Agent, Trincomalee, to furnish a favourable report on all points.

The health of the population both in the town and in the villages has been good. There has been no epidemic of any sort. Employment for labour has been plentiful, and crops very good. A slight outbreak of anthrax was brought into the district by cattle from the North-Central Province, but it was rapidly stamped out before it had spread very far.

We had an exceptionally heavy north-east monsoon, which began earlier than usual, the rainfall in November having amounted to 27·20 inches.

The revenue, which I thought had reached its culminating point in 1901, has made another great leap, rising from Rs. 177,458·13 in 1901 to Rs. 221,084·06 in 1902; but this great rise is due to exceptional circumstances, namely, a deficiency of salt in Hambantota, which has led to my selling large quantities for export to the Southern and Western Provinces.

The principal wants of the district, viz., (1) railway communication, (2) severance from Batticaloa, (3) more capital and population, remain unsatisfied; but a start has at last been made towards improved communication with the northern villages, new court-houses have been built for the Village Tribunals, and a new dispensary has been opened at Tiriyai. Plans and estimates have been approved for a supply channel from the Verugal river to Allai tank, and only the question of the method of repaying the cost remains to be settled, so I hope the work may be shortly commenced. A new channel under Kanthalai tank was also commenced during the year, but the progress has been slow, and there has been a delay in the matter of land acquisition. There has therefore been progress in the district, but not half as much as I should like to see.

REVENUE AND EXPENDITURE.

I repeat from my report for 1901 the table of revenue since the year 1890 as follows:—

Year.	Rs. c.	Year.	Rs. c.
1891	126,043 49	1896	149,770 17
1892	139,064 69	1897	161,871 49
1893	139,527 68	1898	159,849 27
1894	141,882 6	1899	153,599 22
1895	147,839 76	1900	152,446 31
Total ...	694,357 68	Total ...	777,536 46
Average for Five Years ...	138,871 53	Average for Five Years ...	155,507 29

1901 ...	177,458·13
1902 ...	221,081·06

The increase is more than 24 per cent. on the revenue of 1901, and 43 per cent. beyond the average for the previous five years. But, as I said before, the circumstances are altogether exceptional: still I can take to myself much of the credit for the increase, as the salt collection at Nilaveli would have been abandoned but for my exertions during the past few years; and this district would have been unable to come to the rescue of the other salt-producing districts, as it has done during the past few months.

The revenue from *Customs* has fallen from Rs. 32,491 in 1901 to Rs. 29,902 in 1902, and has nearly gone back to the figure for 1900. *Port Dues*, however, show an increase of Rs. 1,378, due partly to steamers bringing naval and military stores and partly to schooners coming for salt. *Arrack* stands at the same figure as last year, but will show an increase in 1903. *Salt* has increased from Rs. 29,037 in 1900 to Rs. 44,488 in 1901 and Rs. 86,540 in 1902. *Timber* shows a decrease from Rs. 13,127 to Rs. 12,273, but is far above the average. However, this is really no test, as the larger proportion of the timber revenue of this district is collected in Colombo at the Central Depôt.

Land Sales, with the connected survey fees and deed fees, show a satisfactory increase, and the revenue from the source would be still higher if I could get the survey plans more quickly, as there is steady demand for land in the district.

EXPENDITURE.

The accounts are kept by the Hon. the Treasurer, and will be shown in a statement at the end of the Provincial Reports.

A supplementry vote of Rs. 10,000 had to be taken on account of salt to meet the expenses of the collection, but this is amply repaid by the increased revenue.

A sum of Rs. 4,000 was also allowed for two ferry boats for the new Coast road, but the boats have not yet arrived from the Government Factory, and a commencement of the road was made on a special vote of Rs. 500.

A special vote of Rs. 3,000 towards the cost of Village Tribunal Courts has enabled me (with the aid of village labour) to construct three permanent courts of brick and tile with cemented floors, a great improvement on the old tumble-down mud huts in which justice was formerly administered.

SALT.

I annex the usual return of salt revenue for the year 1902, from which it will be seen that a gross revenue of Rs. 86,540·07 and a nett revenue of Rs. 70,451·09 was made on an expenditure of Rs. 16,088·98, equivalent to 438 per cent. profit. In 1901 the percentage (when there was no collection) amounted to 600 per cent., and in 1900 (with smaller sales and cost of collection) the percentage was 143 per cent. An average struck between these three, viz., 427, will probably give a fair estimate of the profits on the salt monopoly. The balance of salt in store on the 31st December, 1901, was 32,113 cwt., and the balance on 31st December, 1902, was 45,850 cwt., including 14,000 cwt. unweighed, showing an increase of 13,737 cwt. in stock :—

Return of Salt Revenue of the District of Trincomalee for the Year 1902.

Cwt.	qr.	lb.	EXPENDITURE.	Rs.	c.	Cwt.	qr.	lb.	REVENUE.	Rs.	c.	Rs.	c.

			Total ...	16,088	98	36,762	0	0	Nett Revenue ...			70,451	9

LAND SALES.

There has been some recovery in the revenue derived from Land Sales during the year, as the Surveyor-General sent me a number of plans which should have come in 1901, but towards the close of the year the number of plans received has fallen off, and the revenue is less than I hoped it would be.

The following statement shows the revenue from 1891 to 1902. From this it will be seen that the revenue from this source was higher in the five years from 1895 to 1899. The high revenue in 1897 and 1898 was due to the sale of large lots for cocoanut cultivation :—

	Rs.		Rs.
1891	2,879	1897	20,185
1892	5,723	1898	16,354
1893	9,521	1899	15,471
1894	7,632	1900	10,079
1895	15,818	1901	8,840
1896	12,573	1902	11,553

There is still a considerable demand for land, as shown by the large amount held in deposit on account of survey fees, which at the end of the year amounted to Rs. 4,600, or the equivalent for about 1,850 acres.

As soon as new plans are received the lands are quickly bought, but during the year I have had to work largely on old plans, with small results. Altogether 1,464 lots aggregating 7,520 acres were advertised for general sale ; and of these, 267 lots aggregating 1,085A. 0R. 29P. were sold, viz., 838A. 0R. 3P. of paddy land realizing Rs. 14,125·36, or Rs. 16 per acre, and 247A. 0R. 26P. of high land realizing Rs. 3,628·40, or Rs. 14 per acre. In addition to these, 132 lots aggregating 659A. 1R. 32P. were advertised for default of paying instalments. For the greater number of these the arrears were paid up, but a few reverted to the Crown. 127 lots aggregating 88A. 2R. 13P. were granted on certificates of quiet possession.

In addition to the regular land sale work, I found that for a number of lots sold in 1869 no title deeds had been issued, as the deed or stamp fees had not been paid. These lots were advertised as default lands, resulting in the recovery of the overdue fees in most cases. This to a great extent accounts for the rise in "deed fees" from Rs. 394 in 1901 to Rs. 986 in 1902.

Under Sir Henry Ward's Minute Rs. 3,882·50 were recovered for lands sold in 1902 and Rs. 3,993·25 for lands sold in previous years.

THE FOREST DEPARTMENT.

Work has been carried out under the "Circle" system, the Assistant Conservator having control over the North-Eastern Circle, which lies partly in the North-Central Province and partly in this district. The principal areas included in this Circle are :—

(1) The Kanthalai block, a triangular area between the Anuradhapura and Kandy roads, with the Province boundary as its base. This has been proclaimed a "reserved forest" during 1902.

(2) The Chundankadu block in the Tampalakam and Koddiyar pattus, including all lands south of the Kanthalai irrigable area and south-west of Allai tank and west of the Batticaloa road. This area has not yet been proclaimed, as the northern boundary has not been accurately defined.

(3) The northern block, including the whole of Kaddukkulam pattu west. This also has not been proclaimed, as the villages within the block have not yet been demarcated. The eastern boundary is a line of demarcation running from Velveri on the Anuradhapura road as far as Amarivayal at the south-west corner of the Kokkilai lagoon.

The remainder of the district, which is, roughly speaking, a strip of land 7 miles in width from the sea coast, with the addition of the irrigable lands under Kanthalai, is called the "released area," and is worked by the Assistant Agent, with the assistance of a Ranger.

The Assistant Conservator is allowed to cut any valuable timber in the "released area," and the work of the Assistant Agent consists mainly in the supply for local use of common and small round timber for building purposes, fence sticks, and minor forest produce.

I annex a report by the Ranger of work in the "released area." The total revenue, including fines for forest offences, amounted to Rs. 1,371·94, and the expenditure (salary and travelling allowance of the Ranger) amounted to Rs. 590 :—

Report on the Released Area of the Forests under the control of the Assistant Government Agent, Trincomalee, for the Year 1902.

Area.—The area of the released forest, which lies under the control of the Assistant Government Agent, Trincomalee, is about 525 square miles. This includes the villages and private jungles.

Boundary.—It is bounded on the north by Kokkilai lake and Paraiyan-aru ; east by sea ; south by Verugal-ganga, the road from Verugal-ganga to Kiliveddi, and the demarcation line which runs from Kiliveddi to Kandy road ; and on the west by reserve forests belonging to North-Eastern Circle.

Surveys.—Nil.

Prosecutions and Compositions.—There were forty-two cases of forest offences dealt by the Assistant Government Agent, and a sum of Rs. 276, which includes the fine imposed on the delinquents as well as the proceeds sale of confiscated forest produce, was credited in the Trincomalee Kachcheri, besides six prosecutions in the Police Court during the year.

Plantations.—Nil.

Roads and Paths.—Nil.

Buildings.—Nil.

Timber, &c., sold from Depôt.—Nil.

Timber, &c., sold on Payment of Royalty.—The following statement shows the value of sales of different kinds of forest produce under the above heading during the year :—

	Rs. c.		Rs. c.
Timber	589 45	Shed horns	137 50
Alampal	55 56	Honey and wax ...	100 0
Bark	33 55	Firewood	0 60
Cane	16 23		
Clay	100 0	Total ...	1,095 94
Stone	63 5		

A sum of Rs. 589·45 was recovered during the year on account of royalty on timber of common kinds, such as seevintai, uluvintai, nedunarai, and kanukkompu, and required for local use. The issue of licenses for felling valuable timber and the supply of firewood for the Trincomalee town were left with the officers of the Forest Department.

Free Grants.—Permits to fell timber were issued to Assistant Government Agent's, Public Works, and Irrigation Departments under Circular No. 27 of 16th November, 1899, to the value of Rs. 588·54, and fence sticks of the nominal value of Rs. 3,444·19 were cut by villagers for fencing gardens, fields, &c.

Abstract showing Total Value of Produce sold or granted Free.—The total value of produce sold on payment and granted free of royalty amounts to Rs. 5,128·67 for the year.

Statement of Trees felled.—Thirty satin, twenty-ranai, two palai, and six velam trees were felled during the year by the Government Agent's and Irrigation Departments and by private parties.

Value of Timber in Depôt.—Nil.

Revenue credited in the Treasury.—The total amount of revenue credited in the Kachcheri during the year amounted to Rs. 1,371·94, which includes the fines for forest offences and the proceeds sale of the confiscated forest produce.

Expenditure disbursed.—The amount of expenditure during the year is Rs. 590. Of this, Rs. 390 is the personal emoluments and Rs. 200 the travelling allowance of the Forest Ranger.

Outstandings due to the Department.—Nil.

Outstandings due by the Department.—Nil.

Sample Plots.—Nil.

Statement showing Abundance of Seed and Seedlings.—Nil.

The Assistant Conservator of Forests has supplied me with the following information as regards his operations in this district:—588 logs of ebony weighing 143½ tons were felled from the Kanthalai block and the *released area* south of the Kandy road; 213 logs of halmilla, ranai, satin, and palu, containing 3,822 cubic feet, felled from the *released area.* The sales of timber realized Rs. 19,057·29, of which—

	Rs.	c.
Credited in the Trincomalee Kachcheri	8,714	67
Credited in Colombo	10,342	62
Total ...	19,057	29

GAME.

Game seems as plentiful as ever, elephants, buffaloes, sambur, spotted and red deer, and peafowl are met in almost every jungle throughout the district, while teal, snipe, and flamingoes add to the sport and food supply of the district. It seems to me that snipe are not quite so plentiful in the Tampalakam tract of fields as they were last year, but this may mean that we have not such keen sportsmen in Trincomalee as formerly. Bears and leopards are plentiful, and the latter must cause much havoc among the sambur and chital.

Ten game licenses were issued between January and May for the end of last season, and thirty-three between September and December for the new season. The period of the close season was shortened by two months. I was not aware of this till I received early applications for licenses. Of the game licenses issued, thirteen were to Europeans. Five licenses to shoot buffaloes were issued, and ten licenses to capture buffaloes.

Sixty-four guns were newly licensed, and five renewal licenses were issued. The new Firearms Ordinance has not been proclaimed in this district. Two elephant licenses were issued, and two were shot. From the Customs returns I find that only 21½ cwt. of salted meat were sent coastwise to Colombo and 90 cwt. of sambur and deer horns. As the latter are presumed to be "shed" horns, I treated them as "forest produce," and recovered a royalty of Rs. 137·50 at the rate of Re. 1·50 per cwt.

LEGISLATION.

I would again draw attention to my former reports recommending that a law be passed legalizing the election of managers of Hindu temples where there is no trust deed regulating the succession of managers. Fresh legislation will also be necessary to protect the new industry of cultivating pearl oysters in protected areas.

PUBLIC WORKS.

Roads.

The principal roads leading to Dambulla and Anuradhapura are in good order, and steady progress has been made in the work of converting wooden platforms into iron bridges.

A special improvement has been effected by raising a causeway between the 2nd and 3rd mileposts on the Kandy road, thus reducing the slopes of the hills on either side.

There are other hills which ought to be reduced by cutting down the summits and easing the slopes, viz., those between 2nd and 3rd mileposts, near the junction of the Anuradhapura road; between the 6th and 7th miles, where it is possible that a slight deviation might cut off two hills with a dip between; and again near the 9th mile there are two very steep though short hills which ought to be reduced.

The section of the Coast road between Kiliveddi and the Verugal river is still unimproved, though a large estimate was sanctioned rather late in the year for the work.

The new jetty at Mutur is still "settling," and the new section of road is still but little used as the villagers have not yet settled in the lands along the roadside, though most of the lots have been sold.

The North Coast road to Nilaveli was very much cut up towards the end of the year by the unusually heavy salt traffic which was thrown upon the road during the rainy season between October and December. As there is every prospect of this traffic increasing, the section as far as the 8th mile should be metalled at once.

Buildings.

The public buildings have been kept in a fair state of repair. The new jetty was completed in 1902, and is a good substantial building, longer than the old jetty, and a portion near the root has been covered in by a galvanized iron shed. A larger crane is much required at the end of the jetty for the removal of heavy goods from the cargo boats. It is impossible with the existing small crane to land a horse box from the steamer.

Quarters for the Assistant Collector of Customs are to be acquired, and the land was surveyed in July, but as the plan was not received before the close of the year the vote was allowed to lapse.

A small resthouse, probably the cheapest ever built, was erected at Kuchchaveli at a cost of Rs. 765·20, in place of the old building which collapsed in 1901. It consists of a single room and half-walled hall with verandah on three sides, bathroom, storeroom, and kitchen, and is quite sufficient to meet the requirements of the few travellers who frequent this road.

Two new Village Tribunal Courts were erected at Ichchilampattai and Madawachchiya in place of the old wattle and daub buildings. Towards the cost of these the Government contributed a sum of Rs. 3,000, and the balance was paid from subscriptions by the villagers. Owing to the severe weather in the last three months of the year, the completion of these buildings was delayed.

New North Coast Road.

A commencement has at last been made with this important improvement. The Government made a grant of Rs. 4,000 on account of this work, but owing to some discussion about the execution

of the work this sum was devoted to the construction of two iron boats to be built at the Government Factory for use at the ferries. These boats have not yet been received.

Meanwhile, I personally surveyed a new trace leaving the old road at Nilaveli, near the first ford over the Irakkikandi-aru, along high ground leading nearly to the mouth of the river, where there is a good site for a ferry. Thence the trace proceeds northward, skirting Kumpurupiddi village along its eastern limits and in a direct line to the Salappai-aru. North of Kumpurupiddi it passes over a bed of gravel, which will be utilized in gravelling the whole section. At Salappai-aru it joins the new section which I opened along high ground from Kuchchaveli. This section has already been formed and about two-thirds gravelled, and I hope to complete the gravelling in 1903.

I also prospected a new line from Kuchchaveli to Tiriyai, but have not laid out the trace until I could examine carefully the crossing of the Kodikkaddi-aru. The new trace passes entirely over high ground, and avoids all the fords and swamps which rendered the old trace impassable in wet weather.

The Provincial Engineer and the District Engineer inspected the trace as far as Kuchchaveli and made a favourable report, which resulted in a small grant of Rs. 500 being made in 1902 to enable me to make a start with the work. With this grant I first acquired a small extent of private land where the new trace branches off from the old road, and cleared to a width of half a chain all the jungle and trees, rooting out the latter, for a distance of $1\frac{3}{4}$ mile, as far as the river crossing.

During the present year I have been allowed a vote of Rs. 4,000, and with this vote I hope—

(1) To complete gravelling the Kuchchaveli-Salappaiaru section.
(2) To build two culverts near the cultivated lands of Nilaveli.
(3) To cut side drains and form the road of the section from Nilaveli to Irakkikandi river.
(4) To open up (rooting out all stumps) the section from Irakkikandi-aru to Salappai-aru.

When the boats arrive it will then be possible to take carts through from Kuchchaveli to Nilaveli and Trincomalee without a single ford, though of course the road will be heavy until the whole is formed and gravelled. I also hope to survey a perfect trace from Kuchchaveli to Tiriyai preparatory to opening up that section in 1904. Of course, with an annual vote of only Rs. 4,000 the work must be slow, but a good start has already been made at a very low cost.

Minor Roads.

The means at the command of the District Road Committee are so small that little can be done on the minor roads beyond merely keeping them open for traffic, but there has been considerable improvement on all the roads by the removal of boulders, roots of trees, and other obstructions on the longer lines of roads, while the shorter sections have been gravelled and otherwise improved.

There is a very large amount of traffic on the Tampalakam-Kovilkudiyiruppu road, and the bridges on this section are troublesome, the abutments of the oldest bridge being completely undermined and requiring reconstruction. As this road carries the traffic of upwards of 2,000 acres of paddy land irrigated by Kanthalai tank, the Government should give a grant in aid towards the cost of iron bridges.

Money is also required for the restoration of the old Dutch road from Kiniyai into Tamankaduwa, which has been abandoned and is now overgrown with jungle. As some of the best paddy lands of the district at Tineriveli, Kandalkadu, Nellichena, &c., lie along the course of this road, I am anxious to get it restored for the benefit of the Kiniyai villagers.

IRRIGATION.

Irrigation seems to be at a standstill as far as this district is concerned. The Irrigation Engineer lives at Topawewa, which is outside this district, and as he has important work at Minneri he rarely visits this district. His assistant has been here once or twice to report on the improvement of the channels at Andankulam, but each time he has been called away suddenly, and I have seen no results of his work. The Irrigation Inspector, Mr. Buttery, was lent to the Irrigation Engineer for work on the Kanthalai channel, but the work done is next to nothing, and now the whole work of the village tanks is thrown on the Sub-Inspector.

Kanthalai Tank has been full to overflowing for many weeks now, but the Director of Irrigation has ordered that the Per-aru sluice is not to be opened for irrigation purposes, and so the villagers are deprived of their water supply. There is said to be a small leak in the Per-aru sluice, but I am convinced that it is of no importance, and that there is no reason why water should not be issued.

In the Kedumadavu sluice there is a more important leak under the tunnel, and water comes up between the stones even when the sluice gates are closed. This displacement of the stones I attribute to the roots of trees which grow on the bund close to the sluice. I do not think that any trees should be allowed to grow on bunds within 30 yards of any masonry work. In this case, too, I think there can be no risk from water flowing through the sluice into the tunnel. It would reduce the pressure of the water and counteract the pressure *from below*. The work on the channel has been unaccountably delayed. When I went to see it in December all I could see was a few feet of shallow channel such as a gang of 50 coolies might have cut in a week. This was at the lower end of the channel, and the land required for the first mile has not even been acquired. The salary paid to Mr. Buttery must have been more than the value of the work done. Owing to the delay in constructing the channel I have been unable to sell any more lands at Kanthalai. The crops grown at Tampalakam irrigated by Kanthalai tank have been enormous, estimated at 131,736 bushels. There are now 637 acres at Kanthalai and 2,249 acres at Tampalakam irrigated by Kanthalai tank.

Allai Tank also filled to overflowing, and with its twin tank *Peruveli* was successful in irrigating a vast area of paddy land, from which large crops were raised. But here again there has been long delay in the matter of the construction of a supply channel, which is urgently required to bring down water from the Verugal river during the up-country rains of May, June, and July, when the river is usually in flood. The delay at present is due solely to a question of the *method* of repayment of cost. The terms which the villagers suggest are, in my opinion, *more favourable to Government* than those suggested by the Director of Irrigation, as under those terms the cost would more quickly be repaid, but they are unwilling to pay a rate *in perpetuity* of Re. 1·50, which would more than repay the cost of repair and maintenance. They offer instead Rs. 2·22 for ten years, followed by a rate of 50 cents in perpetuity, and this, I consider, should be accepted. If the work is successful,

there can be no doubt that it would lead at once to a very considerable extension of paddy cultivation. I have had to refuse to sell any more land under Allai tank *as irrigable*, as the water supply is insufficient.

Andankulam and Periyakulam also filled to overflowing and gave sufficient water for the fields cultivated, but the channels of Andankulam are unsatisfactory, and neither tank is worked to its full capacity.

Illakantai shows an increased area under cultivation, as a considerable extent of land has recently been sold. It is, however, a poor tank, and was not worth the original cost of construction.

Many tanks in the district for which I have asked for funds are larger than Andankulam, Periyakulam, and Illakantai, and much better worth the cost of restoration.

Minor Works.

There are several tanks capable of irrigating Crown land in the neighbourhood of populous villages which I am anxious to see restored, but, though I have appealed time after time for more than six years, I have never been able to secure a hearing. The villagers are willing to buy the land and to repay the cost of the work, which would not be great.

PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

I fear that the proposal for a railway from Trincomalee to Kurunegala must now be considered as indefinitely postponed, only to be revived when the deliberations of the Commission now sitting in Madras for the consideration of the question of uniting Ceylon with India by rail for military purposes are made known. At the same time the question must be kept in view when other suggestions regarding transport facilities are made.

I have already referred to the commencement of the North Coast road, which will make traffic possible at all times of the year.

I have had to postpone cases in court, as there was no possibility of parties or witnesses travelling between Pulmoddai and Trincomalee, and for weeks together the Medical Officer was unable to communicate with the apothecary at Tiriyai.

The scheme which I referred to in my report for 1901 for shutting out the salt water from the area in the south-east corner of the Tampalakam pattu is well worthy of examination. There are large tracts of paddy land which might be made irrigable, and which are now ruined by the inroads of salt water, which might easily be dammed out.

Aid to the small remnant of Kandyan Sinhalese in the way of restoration of tanks is a great want. The population is steadily dying out, as shown by the Census returns. They have fine tanks and excellent paddy lands, but without assistance they cannot restore their tanks sufficiently quickly to get the full benefit of irrigation. A very small sum is required, and would be of incalculable benefit.

Failing a railway, communication by sea should be encouraged, and with this object in view I consider that the port dues collected in Trincomalee Harbour should be reduced to a minimum. We have no expensive harbour works to pay for, and I cannot see why ships frequenting Trincomalee should contribute towards the cost of the Colombo Harbour. If the weekly coasting steamer of the British India Steam Navigation Company could be induced to call at Trincomalee on its way from Madras to Colombo and *vice versâ*, we should have communication with the southern ports of India, and passengers could reach Colombo by sea in 1½ day, without the detention at Island ports, which makes the Island steamer voyage so lengthy and tedious.

In view of the failure of the Batticaloa motor car service it seems hopeless to think of motor cars between Trincomalee and Matale until further improvements have been invented in the machines; but with light rails laid on the roads and the introduction of gasoline cars as used in Canada and the United States, the journey between Trincomalee and Matale might be made in comfort in about eight hours.

HEALTH OF CATTLE.

There was a short but sharp outbreak of anthrax among the cattle of the Kaddukkulam pattu east and west, introduced by cattle of the North-Central Province. Prompt measures were taken to stamp out the disease, and in less than two months the district was reported free of infection. I annex a statement of the number of cattle attacked, with results:—

Statement of Cattle infected with Anthrax in Kaddukkulam East and West of the Trincomalee District during 1902.

Division.	Number Infected.	Number of Deaths.	Number of Recoveries.
Kaddukkulam East	101	69 ...	32
Kaddukkulam West	60	38 ...	22
Total ...	161	107	54

It will be seen that two-thirds of the animals attacked died, and one-third recovered. This is a better result than is usually shown in cases of anthrax. There were no cases of rinderpest or hoof-and-mouth diseases.

The cattle registers show 7,936 buffaloes and 10,706 neat cattle, an increase of 66 buffaloes and 802 neat cattle when compared with the figures for 1901.

FOOD SUPPLY.

The Trincomalee District is able not only to support itself in the way of locally-grown food stuffs, but to export paddy as well as dried fish to other districts. It is, however, still compelled to import the products of the cocoanut. Salt produced in this district has been exported to Badulla, Batticaloa, Galle, Beruwala, and Bentota, as well as to the inland villages in Matale and Anuradhapura Districts. Rice is imported for the consumption of the town population to the amount of 26,829 cwt.

from beyond the seas and 1,027 cwt. coastwise. This is equivalent to 47,355 bushels. On the other hand, the district has exported coastwise 15,903 cwt. of paddy and 689½ cwt. of rice.

The weather was most favourable for paddy cultivation, and the crop now being harvested is probably the largest ever grown in the Trincomalee District. The decline of the tobacco industry has led to a vast increase of paddy cultivation, and very high wages are paid at harvest time to secure sufficient labourers to reap the crops. The actual outturn is given as 457,987 bushels from 12,280 acres of land, or 37 bushels per acre. Of this amount 131,736 bushels were the produce of 2,663 acres situated at Kanthalai and Tampalakam and irrigated by Kanthalai tank, showing a return of 49 bushels per acre. That this return is not excessive is shown by the following actual measurements made this year :—

Name of Field.	Village.	Acres.	Bushels.
Samanturaivayal ...	... Tamblegam ...	1 ...	61
Pichchaivelivayal ...	... do. ...	1 ...	67½
Suriyanpallam ...	... Kanthalai ...	1 ...	53
Perattuvelivayal ...	... do. ...	1 ...	46
	Total ...	4	227½

Average per acre, 56⅞.

In the Koddiyar pattu the average yield is given at 34½ bushels per acre, partly irrigable and partly munmari, the average having been brought down owing to the ravages of the paddy bug in some of the fields. The yield is shown as varying from 6¾ bushels at Peruveli, where a great part was abandoned, to 52 bushels at Kiranveli irrigated by Anaitivu tank. In the Kaddukkulam pattu the only crop entered as *very good*, showing a yield of 45 bushels and upwards per acre, is that of Tiriyai, with a yield of 25,110 bushels. The poor Sinhalese villages of Kaddukkulam pattu west, as usual, come in at the tail of the list, but I do not believe that the crops were so bad as reported.

The prices of rice and paddy have gone back to their normal level, viz., Rs. 4·37 and Re. 1·25 per bushel respectively, and the prices of other food stuffs are annexed :—

Average Prices of Provisions, Arrack, and Tobacco.

	Rs. c.		Rs. c.
Wheaten flour, per lb. ...	0 12	Salt, per lb.	0 2
Wheaten bread, per lb. ...	0 12½	Tobacco, manufactured, per lb....	3 60
Butter, fresh, per lb. ...	1 25	Tobacco, raw, per lb. ...	0 35
Butter, salt, per lb. ...	1 25	Rice, per bushel ...	4 37½
Cheese, per lb.... ...	1 25	Paddy, per bushel ...	1 25
Coffee, per lb.	1 0	Peas, per bushel ...	3 75
Tea, per lb.	1 0	Arrack, per gallon ...	6 50
Sugar, per lb.	0 15		

As regards cocoanuts, the district is still dependent on imports coastwise, 1,459 cwt. of the nuts having been imported, 844 cwt. of copperah, 9,251 cwt. of cocoanut oil, and 18 cwt. of poonac. I hope that in a few years the tables will be turned, and that the Trincomalee District will be able to export cocoanut produce instead of importing it. The returns furnished by the headmen show that, while there are only 96,450 bearing trees in the district, there are 104,100 plants under eight years old, some of which are just coming into bearing.

Of dried fish, the district exported coastwise in 1902 as much as 8,568½ cwt., in addition to the quantity transported by land. The value of this quantity is entered as Rs. 72,899·50.

Dried meat (venison) amounted only to 21½ cwt., representing less than twenty animals killed for the sake of meat for export, from which the Game Protection Society may take heart, though of course a larger number was slain for home consumption.

Of fine grain, there is practically none grown in the district, as chena permits are granted only to Veddahs. A considerable quantity of fine grain is imported from the North-Central Province, while the Customs returns show 952 cwt. of "other grain" imported from abroad (principally gram) and 228 cwt. imported coastwise.

It may seem strange that plantains grown in Jaffna can compete with those locally grown, but no less than 1,000 cwt. were imported coastwise.

There is a plentiful supply of fresh fish caught in the sea and lagoons, and game adds to the food supply as well as the sport of the district.

SANITATION AND HEALTH OF THE PEOPLE.

Every care is still being taken to keep out the plague and other epidemics from the town of Trincomalee and the villages. Up to 1891 not a single decade passed without an outbreak of cholera in Trincomalee, and our cemeteries show the ravages caused by cholera in the garrison as well as among the native population. But since 1891 Trincomalee has been quite free from cholera. There is a permanent infectious diseases hospital at the end of Orr's Hill at a safe distance from the town but easily accessible both by land and by water, and in the same grounds a temporary hospital, which can be burnt down after use, was erected for plague patients in case of an outbreak. Sites for plague hospitals have also been cleared near the most populous villages, and materials for the erection of sheds can be collected at short notice.

Great care has been taken in opening up drains in the town, which for years have been choked by silt, and in spite of the heavy rains between 6th October and 31st December, during which period no less than 52·12 inches of rain were registered, the town was never flooded as it was during the years 1896 and 1897, when I first came to the district.

The decrease in tobacco cultivation within the town limits is also beneficial to the health of the people, and the number of deaths has gone down from 424 in 1901 to 373 in 1902.

There have been no epidemics of any kind during the year. The annexed list shows the number and locality of hospitals and dispensaries, with the number of patients treated. A new dispensary was opened at Tiriyai, 32 miles north of Trincomalee, in place of one at Nilaveli (9 miles from Trincomalee). It was only opened in November, 1902, but has already been much patronized. I was in hopes

that the apothecary would be able to itinerate to Madawachchiya for the benefit of the Sinhalese villagers of Kaddukkulam pattu west, but arrangements for this have not yet been completed :—

			No. of Inmates.
Trincomalee Town ...	1	Government Civil Hospital	331
Do. ...	1	Infectious Diseases Hospital ...	—
Do. ...	1	Outdoor Dispensary	5,699
Muttur	1	Government Outdoor Dispensary ...	2,214
Toppur	1	Do. ...	770
Tiriyai*	1	Do. ...	549
Nilaveli (closed on 31st December, 1902) ...	1	Do ...	496
Tampalakam ...	1	Do. ...	1,322
Kiniyai	1	Do. ...	783

* This dispensary has only been opened a short time in place of one closed at Nilaveli.

VITAL STATISTICS.

The very full report of the Superintendent of Census makes comment on the Vital Statistics unnecessary, and I will only observe that the decrease in the town population, as shown by the Census and the Vital Statistics of 1901, seems to have been checked. In 1901 the deaths registered were in excess of the births by 32, the figures having been 392 births and 424 deaths. In 1902 the figures were 412 births and 373 deaths, giving an increase of population (independent of migration) of 39. The town population is, however, very migratory, and fewer Tamils come from Jaffna for tobacco cultivation than in former years, and the numbers on the division officers' rolls, 3,326 in 1902 against 3,374 in 1901, seem to indicate that the town population is still on the decrease owing to migration.

Outside the town there is a steady increase, and that a rapid one, as shown by the Census, the births numbering 678, against 569 deaths. During the past two years the Sinhalese villages have shown an excess of births over deaths, so, unless the villagers are migrating into the North-Central Province, I hope the depopulation of that division is now at an end.

VILLAGE TRIBUNAL.

I annex a statement of work done in the Village Tribunal during the year. The President continues to give satisfaction, and his decisions are generally good. Appeals were taken in 22 cases, and in only one was the judgment set aside. One appeal was taken to the Governor and Executive Council, resulting in the decision of the Assistant Agent being affirmed :—

Return showing the Number of Criminal and Civil Cases instituted, decided, and appealed under the Village Communities' Ordinance for the Year 1902.

CRIME.

This district is usually very free from crime, but during the last few months it has seemed to me that there has been more crime than usual. Two cases of homicide were reported. The first was an unfortunate affair, in which a Corporal in the Royal Artillery was charged with kicking a native and rupturing his spleen (already much enlarged), but the evidence was so contradictory, pointing, if anything, to an accident (a fall in trying to get over a fence), that the accused was acquitted and discharged. The second appears to have been a cold-blooded murder by shooting, the motive being obscure, but the case is still *sub judice*. A case of bigamy was also discovered, but the natives place so little value on registration that they regard this as a very trivial offence. One case of robbery is also committed for trial before the Supreme Court.

In the District Court 5 cases with 7 persons accused were tried, resulting in 4 acquittals and 1 conviction. The acquittals were all cases of grievous hurt, two with dangerous weapons; but in all the cases the evidence was unreliable, and in most of them the injured persons were the offenders. The one conviction was a case of robbery. Other cases, however, of grievous hurt towards the close of the year resulted in convictions early in 1903.

In the Police Court 182 persons were brought up in 167 cases charged with cognizable offences. Of these, 75 were convicted, 92 acquitted or discharged, 2 committed for trial before the Supreme Court, and 13 for trial before the District Court.

Of the knife cases, one accused was sentenced to six months' imprisonment (affirmed in appeal); one was a trivial case, resulting from a drunken brawl, and the accused was fined Rs. 20; a third case, also trifling, was compromised, and the injured man declared the wound was accidentally inflicted; the fourth case was found to be false. One man admitted that he branded his victim with a red hot nail, and was sentenced to two months' rigorous imprisonment.

All the cases of cattle stealing were doubtful cases or civil disputes, and there were no convictions. In petty cases 213 persons were fined, 13 were imprisoned, and 1 bound over to keep the peace. Two juveniles were sentenced to whipping.

HEADMEN AND CRIME.

The headmen have done good work in the prevention and detection of crime. In every case where a crime has been committed the headmen and rural police have at once proceeded to the spot, arrested the accused, and brought up the necessary witnesses, so that a case could be heard at once before the witnesses could be tampered with. As usual, the Sinhalese villages have been entirely free from crime.

REGULAR POLICE.

The Police Magistrate informs me that he is not satisfied with the work of the regular police. In one murder case they certainly failed signally, and one constable has been dismissed for neglect of duty, if not actual complicity, in that case. From what I have seen of them departmentally I think they have done their best according to their lights in other cases, and undoubtedly they have prevented crime by nipping in the bud street quarrels, which might have become more serious but for their intervention.

NEW AREAS OF CULTIVATION.

There has been a very considerable extension of paddy cultivation throughout the district, especially in the Koddiyar pattu. There is now practically one unbroken tract of paddy field extending all the way from Mutur to the Peruveli tank, some cultivated by rain water and some irrigated by Allai and Peruveli tanks. On the east side of the Kiliveddi road there is also a considerable extension of cultivation on the irrigated lands, and a demand for more lands near the upper reaches of Allai tank. As soon as the Allai supply channel is complete the extension will be more rapid still, and the greater part of the northern half of Koddiyar pattu will be one vast tract of paddy land. The southern half is a hopeless waste, with the exception of the fields about Wappiya and Ichchilampattai.

A further extent of land at Tampalakam irrigated by Kanthalai tank has been brought under cultivation, and the cultivated area at Tampalakam now amounts to 2,663 acres.

In the Kaddukkulam pattu east there have been great extensions about Pulmoddai and Tiriyai, and the surveyors cannot keep pace with the demand for land. I have now outstanding 101 applications for 394 acres in Kaddukkulam pattu east, for which survey fees have been deposited.

Cocoanut cultivation does not extend so rapidly, as the quick returns and the easy terms of purchase of paddy land are a great attraction. I cannot understand why paddy cultivators, who get a return within one year, should be given such a great advantage over cocoanut planters, who get no return for seven or eight years, and who have a far greater outlay, as the lands must be *kept* weeded as well as cleaned and planted.

The Wanniahs' returns show 13,420 cocoanuts planted in 1902, and the number of young plants (under eight years) now exceeds the number of bearing trees.

Return of Lands granted and sold in the Trincomalee District during the Year 1902.

TOBACCO.

Tobacco cultivation is "in the doldrums;" each year the area cultivated becomes less, and this year the cultivators are so disheartened that they have sown an inferior kind of tobacco for native cigars, as they can find no market for the fine light leaf which used to be characteristic of Trincomalee tobacco, and which was much used for covers for cigars. The export of tobacco to Jaffna has dwindled from 1,401 cwt. in 1900 to 840½ cwt. in 1901 and 518½ cwt. in 1902. It is a great pity, for the Trincomalee tobacco is of very good quality, and it only required scientific curing to make it suitable for the European market.

CHENA CULTIVATION.

Practically nil, as permits are granted only to the Veddahs of Koddiyar pattu. There has, however, been a slight recrudescence in 1902 of illicit chena cultivation in the Tampalakam district, which has been met by fines.

SALE OF LAND BY VILLAGERS.

Nothing worthy of note, and no Crown lands absorbed under cover of private transfers or Fiscal's sales.

WORK OTHER THAN ROUTINE.

The planting of indiarubber is engaging my attention. I had inquiries from a Colombo firm regarding Crown lands in this district suitable for rubber. In spite of the droughts from which the district suffers, I am sure that rubber might be cultivated profitably throughout the district, and I should like to see experimental clearings made on Government account.

The improvement of the district south of Kiniyai by blocking out the salt water and restoring one or two fairly large tanks has also engaged my attention. If a share of the irrigation vote was granted annually to a District Local Board, the scientific officers merely advising as to *cost* and then carrying out the works decided on by the Board, we might get some progress; but when the Provincial Irrigation Boards existed the District Agencies had no voice thereon, and consequently never shared in the votes. We want a District *Local* Board with a *local* fund, the Board paying to Government interest and sinking fund on loans, and taking into the fund the receipts from irrigation works.

GENERAL.

I was taken seriously ill early in the year, and was compelled to take three months' leave to recruit my health at Nuwara Eliya. During my absence Mr. Carbery acted as Assistant Agent for three weeks, and Mr. Vaughan was appointed to act for the remaining period.

The high office of Naval Commander-in-Chief of the East Indian Station was surrendered in 1902 by Rear-Admiral Day Bosanquet, who was succeeded by Rear-Admiral (now Sir Charles) Drury.

Major Van Straubenzee, R.E., still commands the troops.

The 26th Madras Infantry has been replaced by the Queen's Own Royal West Kent Regiment, and there have been other changes in the garrison.

The new topographical map of the district was issued during the year, and is of the greatest possible use in the administration of the district, the old maps being both inaccurate and unreliable.

The rainfall, which in 1901 amounted only to 56·55 inches, rose in 1902 to 76·73, which is considerably above the average of thirty-five years, but below the average of 1896 to 1898.

The salt collection was the largest on record, viz., 49,479 cwt., and might have been doubled if there had been sufficient storage accommodation.

Thanks to the kind assistance of Major Van Straubenzee, R.E., I am able to bring to light a few hitherto unpublished Dutch monuments, of which I annex copies and translations, for which I am indebted to the Hon. Mr. J. P. Lewis and Mr. F. H. De Vos.

C. M. LUSHINGTON,
Assistant Government Agent.

Trincomalee, February 27, 1903.

NORTH-WESTERN PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, NORTH-WESTERN PROVINCE, FOR 1902.

Area of Province	3,000 square miles.
1902 Population	353,626

REVENUE.

FOR 1902 the provincial revenue amounted to Rs. 1,642,817, as against Rs. 1,592,505 for 1901, the previous highest on record. In 1896 the revenue of the Province amounted to Rs. 1,159,767 only. There has thus been an increase of nearly Rs. 500,000 in the last seven years. The revenue for 1891 nominally exceeded Rs. 2,000,000, but as this included a sum of Rs. 900,000 on account of the pearl fishery, which might more properly have been included in the returns for the Northern Province, last year's figures are unsurpassed. The receipts under the various heads of revenue were as follows:—

Detailed Statement of Revenue collected in the North-Western Province during the Years 1901 and 1902.

Heads of Revenue.	1901.	1902.	Increase.	Decrease.	Remarks.

Total ...	2,108 52	1,585 61	—	522 91	
10.—SALE OF GOVERNMENT PROPERTY.					
Timber	27,780 12	34,145 69	6,365 57	—	More sales this year.
Crops on Crown Lands ...	1,612 95	1,105 51	—	507 44	
Sale of Sand	1 50	1 0	—	0 50	
Sundries	561 1	130 95	—	430 6	
Total ...	29,955 58	35,383 15	5,427 57	—	
11.—LAND SALES.					
Crown Lands sold ...	158,562 53	143,798 61	—	14,763 92	Few lands sold this year.
Premia on Leases ...	8,382 77	971 50	—	7,411 27	Few leases settled.
Total ...	166,945 30	144,770 11	—	22,175 19	
Grand Total ...	1,592,510 20	1,642,817 61	50,307 31	—	Nett income.

There was a large increase under the head of Salt, but, over and above this source of revenue, Licenses, Toll Rents, Judicial and Postage Stamps, and Sale of Timber all bring in substantial additions to the revenue.

The progress in regard to post and telegraph stamps in the last two years has been remarkable, and is an unfailing indication of an increase in business. The figures are—

	Rs. c.
1900	3,436 45
1901	5,647 60
1902	9,161 17

The decrease in Revenue Stamps is due to stamp fees on account of cart licenses being recovered for six months only. As regards other decreases, Fines and Forfeitures show a falling off in every court and department. As pointed out last year, there is no reason to regret the reduction under this head. Severe fines in ordinary cases may lead to the ruin of the offender and to the swelling of the ranks of the criminal classes. The only other item in which there is a marked decrease is under Land Sales and the connected head of Survey Fees. This was not due to want of energy in pushing sales, for a larger number of lots was sold than in the previous year. The area was, however, smaller. The number of lots sold in the last three years was as follows :—

1900	324
1901	493
1902	509

A comparative statement showing the extent of land alienated by the Crown during the last three years is annexed :—

Return of Lands sold and granted during the Three Years 1900 to 1902.

Year.	Sales.				Half-Improved Value.				Certificates of Quiet Possession.		
	No. of Lots.	Extent.	Amount.	Average Price per Acre.	No. of Lots.	Extent.	Amount.	Average Price per Acre.	No. of Lots.	Extent.	Fees recovered.

The annexed returns give the prices realized by the sale of arrack and toll rents. The arrack rents show a slight increase in the amount realized, which is proportionate to the increase in population. There has been a steady increase in the toll rents of the Province, which are now 50 per cent. higher than they were in 1896, when they realized Rs. 24,725, as against Rs. 37,060 last year. The rise is due to increased traffic in all parts of the Province :—

Statement showing the Amounts realized by the Sale of Arrack Rents of the North-Western Province from 1897 to 1902.

Description of Rent.	July 1, 1897, to June 30, 1898.	July 1, 1898, to Dec. 31, 1900.	January 1 to Dec. 31, 1901.	January 1 to Dec. 31, 1902.	Increase in 1902 over 1901.

* Sold with Maguru-oya bridge, Puttalam road. † July 1 to December 31. ‡ May to December.

EXPENDITURE.

The expenditure for the last two years has been as follows :—

	1901. Rs. c.	1902. Rs. c.
Personal Emoluments	26,895 0	26,961 59*
Pensions	7,403 0	9,252 16†
Other Charges	11,572 0	13,850 40‡
Total ...	45,870 0	50,064 15

* Increase is due to payment of increments.
† Increase is due to additional pensions.
‡ Increase is due to increased expenditure under various sub-heads.

I.—FOOD SUPPLY OF THE PEOPLE.

There has been no deficiency in the food supply of the people. The crops generally have been good, and the marked increase in cocoanut cultivation in the southern part of the Seven Korales and the extension of paddy cultivation in the Wanni have raised the bulk of the population from their former poverty-stricken condition, when they were chiefly dependent on chena cultivation for their subsistence.

The price of paddy and other food stuffs shows no material alteration from 1901, when also climatic conditions were favourable and crops were plentiful. The rainfall for the year was much above the average, and towards the close was excessive.

The maritime divisions of the Province, Chilaw and Puttalam, are prosperous, and, except in the Demala hatpattu of the Puttalam District, where the conditions are similar to those prevailing in the Wanni, there is but little poverty.

The extension of the Northern Railway through the centre of the Province brought considerable sums of money to the villagers, who undertook jungle clearing and earthwork, and practically no able-bodied man in the neighbourhood of the railway line need have suffered want.

II.—IRRIGATION.

The work of restoring village tanks in the Seven Korales was steadily continued throughout the year. Out of 558 working tanks in the Wanni, only 11 remain to be completed. In the Dewamedi hatpattu 15 out of 254 have still to be constructed. In the Demala hatpattu of the Puttalam District out of 109 all but 15 have been finished. There remain two to be completed in the Weudawili hatpattu, but in this division there are only a dozen village tanks and in Dambadeni hatpattu none. These divisions are well supplied with rain, and do not suffer from drought. The two divisions in which work has still to be vigorously prosecuted are the Hiriyala hatpattu, in which 58 out of 150 tanks have been finished, and Katugampola, in which no village tanks have yet been completed, though a considerable amount of work has been done on them. Fifty-eight tanks were provided with cement pipe sluices during the year, and the bund of Meddeketiya tank was improved at a cost of Rs. 2,020. An Irrigation Office attached to the Kurunegala Kachcheri was completed at a cost of Rs. 1,912.

The survey of the ancient Pandawewa—a fine storage tank—was taken in hand, and is nearly completed. The contour survey was carried 4½ miles along the Kolamune-oya, which feeds this tank, and an area of 2,055 acres of irrigable land was embraced by it. The extent of irrigable land thus shown would justify the restoration of this important work.

The work of the Irrigation Department in the Province in connection with such works as the Deduru-oya is not dealt with in this report, as it comes immediately under the Director of Irrigation, who discusses it in his annual report. Excellent progress has, however, been made by Messrs. Emerson and Berwick, the Irrigation Officers stationed in this Province, in the works entrusted to their charge.

III.—LEGISLATION.

The suggestion made in last year's report regarding a small stamp duty in Gansabhawa cases has been given effect to by the Legislature. I would repeat the proposal that the Firearms Ordinance should be introduced into the Kurunegala District. One of the worst murders in the course of the year was that of the conductor on an estate who was shot when in the verandah of his house, and the perpetrator of the crime has not been discovered.

IV.—WORKS MOST REQUIRED IN THE PROVINCE.

Good water supplies for Kurunegala and Puttalam are the most urgent requirements of the Province. For Kurunegala an excellent scheme has been prepared by Mr. R. W. Smith, and will, it is hoped, be carried out at no distant date. The question of water for Puttalam is no less pressing, but is a more difficult one to determine, as hitherto an untainted source of supply has not been discovered.

Financial reasons have hitherto prevented the building of markets in Kurunegala, which are greatly needed. Both Chilaw and Puttalam have them, whilst the principal town in the Province still lacks them.

The rapid increase in the work of the post and telegraphs in Kurunegala, which has nearly trebled since 1900, justifies the building of a new post office, especially as there is an excellent site available in the centre of the town. The present building is unsuitable, and a town of the size and importance of Kurunegala deserves a respectable office for its continually expanding business.

In the Administration Report for last year a light railway from Colombo to Chilaw and Puttalam was advocated, and reasons were adduced for the belief that it would pay. It is gratifying to find that His Excellency the Governor has appointed a Commission to inquire into the subject, and it may confidently be predicted that their report will be favourable to its being undertaken as soon as the lines now under construction are completed.

In the town of Chilaw the works most required are a new hospital and an iron bridge over the river to replace the existing wooden structure. The hospital need not be a palatial one. It is not so much the size as the position of the existing building that is faulty, and an excellent and healthy site can be found near the sea.

In the Puttalam District one of the main obstacles in the way of increasing the outturn of salt has been due to difficulties of transport. There is plenty of land suitable for the manufacture of salt, but the area under cultivation cannot be extended unless the crops can be rapidly removed. A light tramway has been advocated, and as the country is level no engineering difficulties would be encountered.

V.—PLANS FOR THE IMPROVEMENT OF THE PROVINCE.

1. Now that the village tank system is nearing completion, improvement must be looked for in the direction of large storage tanks, such as Pandawewa in Dewamedi hatpattu and Galgomuwa in the Wanni. Village tanks store the ordinary rainfall, but in times of drought they are soon emptied, and what is then wanted are reservoirs of great capacity which will enable the villagers to tide over deficiency of rainfall in a bad season. For instance, under the Deduru-oya works there has been no failure of harvest since the construction of the storage tank Batalagodawewa and the channels thereunder some ten years ago, though prior to their completion cultivation was most precarious.

2. A programme of construction of feeder roads to the railway has been mapped out, and the first, from Wariyapola to Ganewatta station and on to Hiripitiya, is now being carried out. When completed a great step will have been taken in the development of the Province.

3. Much progress has been made in the establishment of dispensaries in rural districts. The original scheme initiated by the late Mr. Fisher has been practically carried out, but no doubt it will require extension with the expanding needs of the district.

4. Under the head of Public Works schemes for the improvement of the water supply of Kurunegala and Puttalam have been referred to. In the district generally good water is of the utmost importance, and no general improvement in the health of the people can be expected if this want is not supplied. This requirement can best be met in rural districts by digging wells, and the headmen should be instructed to see that they are periodically cleaned.

5. The extension of garden cultivation with a view to increasing the production of vegetables is most desirable. The schools have been made the means of spreading information with regard to this subject, and of practically demonstrating the feasibility of adding to the food supply of the people. Much has, however, to be accomplished in this direction. As a rule, the ordinary village schoolmaster has but little knowledge of the subject, and is apt to be easily discouraged if his efforts are not at once successful. It has been suggested that the teachers should receive instruction from a practical

gardener, who should spend a month or so at each school where the conditions were favourable, and would by actual work, assisted by the teacher and pupils, give the experiment a fair start. At present there are periodical visits by the Superintendent of School Gardens, but it is not possible for that officer to devote time to practical working, or to do more than advise after a cursory inspection of what has been done or left undone.

The school plot at Weuda is a model of what may be effected in the way of "la petite culture" by a teacher who has knowledge and the energy to apply it, and if in the course of a year a dozen such centres could be established in different parts of the district by means of the employment of such an officer as I have suggested, they would be object lessons to the villagers in the neighbourhood, and would have far more effect than the most earnest exhortations to headmen can accomplish.

6. A potential source of wealth to the inhabitants of the Seven Korales are their cattle. They do not, however, avail themselves of the means to their hand to improve the breed, with the inevitable result that there is steady deterioration. A stud bull was procured and sent on to the Wanni, but the experiment was not successful. It is to the chief headmen that we must look to initiate proper stud farms, if progress in this direction is to be hoped for. It is certainly extraordinary that milk can only be with difficulty obtained in districts swarming with cattle, and it is unfortunate that so useful an article of diet is looked upon rather as a medicine than as a valuable food.

VI.—SANITARY CONDITION OF THE PEOPLE.

At the beginning of the year there were a large number of cases of malarial fever in the Wanni and Hiriyala hatpattus, but on the whole there was less sickness than usual. There was no serious epidemic in any division of the district, and apart from fever the health of the people was good. The question of combating the malarial mosquito should perhaps have come under the head of Plans for the Improvement of the Province. Certainly nothing could tend more to its welfare than successful attempts to reduce the numbers of this pest. Information has been widely circulated in the vernacular relative to the malaria-conveying mosquito, and as to the precautions which should be adopted to ward off its attacks.

It is of course impossible in a district where paddy is so extensively grown to avoid large expanses of stagnant water, but in the immediate neighbourhood of houses holes can be filled in, and the favourite breeding places of the larvæ can be cleared out.

In regard to the prevention of plague, sites for camps have been selected, and temporary buildings could be readily put up. As no communication is allowed between India and the seabord of the Province, the disease could only be introduced *viâ* Colombo, and it is therefore scarcely possible that it should break out in this Province without warning.

VII.—CASES OF MURDER AND OF THE USE OF THE KNIFE.

The annexed statement gives the number for the last three years of murders and cases of grievous hurt, with the area and population of the six divisions of the Kurunegala District in which the offences occurred. It will be seen that the figures are unfavourable as compared with 1901, but are about the same as compared with 1900 :—

Comparative Statement of Crimes of Violence committed in the several Hatpattus during 1900, 1901, and 1902.

Hatpattu.	Area (Square Miles).	Population.	1900.		1901.		1902.	
			Homicide.	Grievous Hurt.	Homicide.	Grievous Hurt.	Homicide.	Grievous Hurt.
Weudawili Hatpattu ...	177	50,417	3	43	6	32	6	41
Dambadeni Hatpattu ...	164½	41,606	9	23	2	22	6	30
Dewamedi Hatpattu ...	186¾	32,079	1	4	1	4	4	12
Katugampola Hatpattu	358⅛	53,322	7	20	3	19	2	18
Hiriyala Hatpattu ...	387½	29,967	3	22	2	10	2	11
Wanni Hatpattu ...	569½	37,127	3	5	1	3	1	6
			26	117	15	90	21	118

The following is a list of cases of homicide, with the details of each offence :—

Weudawili Hatpattu.

1. *Meewaddana, 31st December, 1901.*—The deceased Rana Henaya of Meewaddana was found dead in a field. Death was caused by gunshot wounds. One Saraneris was charged, but on instructions from the Attorney-General was discharged. The case was probably one of accident, but the person who fired the gun was afraid to admit it.

2. *9th February, 1902.*—The deceased Punchi Appuhami came to the accused Ukkurala's house and attempted to assault him. The accused thereupon took a katty and killed Punchappu. On instructions from the Attorney-General the accused was discharged, as he was held to have acted in self-defence.

3. *Torayaya, 14th February, 1902.*—The accused Don Carolis of Torayaya had a dispute with Godage *ex*-Mudaliyar, and it was alleged dashed his infant child to the ground and killed it. He was tried before the Supreme Court, but was acquitted.

4. *Getuwana, 21st February, 1902.*—The accused Govindasamy and deceased Soranam were living together as husband and wife. Owing to a quarrel deceased left and was on her way to Hatton. Accused pursued and killed her. The weapon used was a katty. Accused was sentenced to death.

5. *17th March, 1902.*—The deceased Ranhamy and accused Mudalihami had an altercation in the deceased's garden. The accused struck the deceased with a club on his left side and killed him. On instructions from the Attorney-General accused was tried summarily, and was fined Rs. 50 for causing hurt under section 314 of the Criminal Procedure Code.

6. *6th September, 1902.*—A woman named Ukku of Nakalagama was alleged to have taken her child and left it to die in a jungle. There was no evidence to prove the allegation, nor that the child came to its end by violence. On instructions from the Attorney-General the accused was discharged.

Dambadeni Hatpattu.

7. *2nd April, 1902.*—The deceased Kudaya's house was entered by a thief. Kudaya attempted to arrest the man, who thereupon struck him with a club on the head, from the effects of which he died. A man called Puncha was arrested on the evidence of the deceased's son, but he was discharged by the Police Magistrate, the evidence being untrustworthy.

8. *13th April, 1902.*—The deceased Rankira was sleeping on the "pilla" of Lensua's house. An unknown assailant stabbed him with a knife and killed him. A man named Ranhami was charged with the murder, but he was discharged under instructions from the Attorney-General.

9. *22nd June, 1902.*—The accused Ukkuwa went to steal cocoanuts in the garden of Kirige Marthelis. The deceased attempted to arrest the thief, and shot him in the leg. Accused then stabbed and killed the deceased. He was tried before the Supreme Court and sentenced to ten years' rigorous imprisonment.

10. *12th October, 1902.*—The deceased Karanis Appu was a watcher on a cocoanut estate called Newfoundland. On the 11th October, 1902, he received his rice advance and wages amounting to Rs. 25 or Rs. 30. The following morning he was found strangled to death, and his hut, which was in a lonely spot, ransacked. No trace could be found of the perpetrators of the murder.

11. *14th October, 1902.*—The deceased Miko Nona was suspected by the accused Podisinno, her husband, of misconduct, and her mother was supposed to have connived at her relations with a tavern-keeper. The accused tied up his wife and flogged her until she confessed. He then stabbed her to death. He next shot the tavern-keeper and the deceased's mother, wounding them seriously but not fatally. Accused was tried before the Supreme Court and sentenced to be hanged.

12. *18th October, 1902.*—A woman named Dingiri was found dead near a pond at Godagamwela. Upon the complaint of one Hapuwa four accused were charged with murder. On instructions from the Attorney-General the accused were discharged, and the two witnesses for the prosecution are to be tried for perjury.

Dewamedi Hatpattu.

13. *7th May, 1902.*—The deceased Don Kitan Perera, Superintendent of Kolamuna estate, was killed by having his throat cut. He had previously been shot. Two men, Gunadara and Sarnelis, and a woman named Happi were charged with the murder, but the evidence against them was insufficient. A cooly on the estate, one Pablis, absconded at the time of the murder, and has not been found up to the present time.

14. *6th June, 1902.*—The deceased Katirinahamy was the sister-in-law of accused. Accused wanted to take her as his mistress but she refused, and in the quarrel which resulted accused stabbed the deceased with a knife and killed her. Accused was tried before the Supreme Court and sentenced to be hanged.

15. *10th June, 1902.*—The deceased Kiriya and the accused Ukkuwa had a quarrel at a spot where the latter was building a house. There had been previous ill-feeling between the parties owing to land disputes. The accused struck deceased with a crowbar and killed him. Accused was tried before the Supreme Court and was sentenced to death.

16. *14th November, 1902.*—The deceased Appuhami and accused Ukkurala had an altercation with regard to a paddy field. This resulted in a fight, in which accused struck deceased two blows with a mamoty on the head and killed him. Accused was tried before the Supreme Court and sentenced to seven years' rigorous imprisonment.

Katugampola Hatpattu.

17. *2nd January, 1902.*—The deceased Solla Paramanadan was a Tamil trader. He came to Kuliyapitiya to recover some money due to him. On his return with Rs. 80 he was robbed and stabbed to death. Three men—(1) Kiribanda, (2) Bandirala, and (3) Bandirala—were tried in the Supreme Court and were sentenced to be hanged. The second accused was pardoned by His Excellency the Governor, and the sentence on the first and third accused was commuted to twenty years' rigorous imprisonment. There was reason to believe that the second accused had been falsely implicated by the Korala of the district, who was dismissed with ignominy from his post.

18. *27th July, 1902.*—The deceased Hetuhamy, who was the worse for liquor, was driving a cart at night on the high road singing objectionable songs. Some passer-by had an altercation with him and dealt him a blow on the head, from the result of which he died in hospital. His assailant was not discovered.

Hiriyala Hatpattu.

19. *22nd January, 1902.*—The deceased Kaduruvail was a watcher on Yatawatta estate in the Matale District. The accused Arasa took the deceased's gun and shot him. The accused was tried before the Supreme Court and was acquitted, as the accused's story that it was an accident was believed by the jury.

20. *27th May, 1902.*—The deceased Kalu Banda and accused Subaya were jointly cultivating a field and chena. They had an altercation about the cultivation. The accused stabbed the deceased with a knife and killed him. Accused was tried before the Supreme Court and sentenced to be hanged.

Wanni Hatpattu.

21. *25th December, 1902.*—The deceased Nilmanis de Silva was assaulted by several men, and one Biya struck him with a stick. The man died by rupture of the spleen. Twelve persons were brought before the Police Magistrate; eleven of them were discharged on instructions from the Attorney-General, and Biya was sentenced to one month's rigorous imprisonment for causing hurt.

Reference to the details of the above cases will show that less than half were actually murders, and in two instances the Attorney-General directed that the accused should be tried summarily for merely causing hurt. There were, however, two very bad cases of murder for the sake of robbery (fortunately a rare offence in this country), in one of which a conviction was obtained, but no trace of the offenders has yet been found in the other.

In regard to crime generally the figures show no improvement, but the percentage of offences punished was higher than in 1901.

The Weudawili hatpattu retains its bad pre-eminence in the matter of crime, whilst the Wanni continues to keep its good record. The rural districts of the Wanni, Dewamedi, and

Katugampola hatpattus always compare favourably with the Weudawili and Dambadeni divisions, which border the railway, and where there are large bazaars and a considerable influx of undesirable visitors from the low-country.

As pointed out in my Administration Report for last year, the number of arrack taverns in a division cannot be shown to have any perceptible influence on the crime of the district, and the figures of the present year bear out this view. In the list of causes of murder and homicide land disputes, jealousy, and revenge come first. None of the cases of homicide that occurred last year can be directly traced to the influence of drink, though in one instance, where jealousy was the immediate cause, the man was known to be of intemperate habits.

VIII.—WHETHER THE HEADMEN HAVE VIGOROUSLY CO-OPERATED IN THE PROSECUTION AND DETECTION OF CRIME.

The conduct of the headmen has, on the whole, been satisfactory, though there have been instances in which it was necessary to dismiss them for gross neglect or connivance at crime. In so large a body of men it is inevitable that there should be some black sheep, but to represent them generally as utterly depraved, whilst the ordinary villager is an exemplary character, is an absurd travesty of the actual facts. The village headman usually has the faults and virtues of his fellow villagers. It is the object and interest of the Government Agent and of the chief revenue headmen alike to select the best material possible. As a rule, the faults of a headman are want of energy and a disposition to side with his own friends. Indiscriminate dismissal usually has a bad effect, and frequently results in the appointment of a still less satisfactory successor.

The following are the names of headmen who have earned rewards for conspicuous activity in detecting and arresting offenders :—

Names of Headmen rewarded on Police Magistrate's Recommendation.

No.	Name of Headman.	Service.	Amount. Rs.
1 ...	Assana Lebbe, Peace Officer of Hadiruwalana	For arresting accused and abducted girl, P. C. case No. 1,118	10
2 ...	Ismail Lebbe, Peace Officer of Torayaya ...	For assistance rendered to Police Magistrate in the investigation of a murder on the spot	20
3 ...	D. D. Siriwardene, Korala of Alawwa ...	For arresting accused in "Hue and Cry" No. 1,821 of February 12, 1901 ...	25
4 ...	Kapuruhami Dissanayaka of Bamunakota palata	For promptness in arresting accused in case No. 822	10

IX.—CONDUCT OF REGULAR AND RURAL POLICE.

The only places at which the regular police are stationed in the Province are Kurunegala and Puttalam. They have done their work satisfactorily, and have kept order in the town. Near Kurunegala they put a stop to a well-known gambling hell, which had been maintained for a long time. Inspector Dias succeeded Inspector Jansz in charge of the police, and showed ability in detection of crime. The sergeant in charge is an excellent officer and good disciplinarian. The rural police force consists of a small number of peace officers, whose duties are to maintain order in large bazaars. They are for the most part unpaid.

One of the most important parts of the Government Agent's duties is in connection with the police work of the Province. In the rural districts where the Kandyan predominates there is but little crime; but in the divisions of Dambadeni and Weudawili hatpattus, where the low-country men form a large number of the population, and where the local headman has consequently but little influence, matters are far less satisfactory. Certain of the chiefs have proposed that strangers should require a kind of passport, but this does not seem possible at the present time, and might lead to much hardship in the case of those who were engaged in trade and other legitimate business.

X.—CATTLE STEALING.

The returns for last year were less favourable than in 1901, and the figures for 1900 were slightly exceeded. They are as follows :—

1900	147
1901	117
1902	156

The cases were vigorously prosecuted, and the number of convictions, which was 18 in 1900 and 24 in 1901, rose to 41 last year.

There has been, however, no return to the systematic trade in stolen cattle, which at one time prevailed in this Province. The system of communal branding has proved effectual in checking this formerly lucrative business, as it can at once be seen from what part of the country the animals have been brought.

The form which theft now most frequently takes is to drive cattle on to planted land, and then profess to have seized them for trespass. With the little care which owners exhibit in regard to their animals straying it is very difficult to establish a charge of theft in such a case. A conviction was, however, secured in a very clear case, where the owners of a small cocoanut plantation had systematically driven the villagers' cattle on to their estate. The judgment and sentence were affirmed in appeal, with beneficial results to the whole neighbourhood.

XI.—DISEASE AMONG CATTLE.

There were no cases of murrain during the year under review. It is now fairly established that this disease is always introduced by cattle imported from India and is not endemic. With effective quarantine measures in Colombo, where the cattle are landed, it can be easily checked at the outset.

XII.—NEW AREAS OF CULTIVATION.

Cocoanut is still the one product that continues to be more widely planted each year. In the Wanni hatpattu the Ratemahatmaya (the Hon. Mr. Hulugalle) reports that the area under paddy is extending. There is no perceptible increase in other products.

XIII.—WASTE LANDS ORDINANCE.

Under this Ordinance preliminary steps were taken in connection with a large block of land at Uyangalla. The surveyed extent is some 304 acres. The plan has been approved by the Surveyor-General, and sketches and a certified copy of it received. It is only proposed to proclaim an extent of 274 acres, which is all forest and chena, under the Ordinance.

XIV.—CHENA CULTIVATION.

In the Wanni hatpattu, where chena cultivation principally was practised, the restoration of irrigation works has gradually reduced the production of dry grain. The Hon. Mr. Hulugalle reports that there has been a noticeable decline in this cultivation wherever there has been water, and this is a very gratifying result of the irrigation policy of Government. Where there is no water chena cultivation is an unavoidable necessity, for the people would otherwise starve, but it is admittedly the most wasteful and extravagant form which cultivation can take, as the soil is entirely exhausted for many years.

XV.—SALES OF LAND BY VILLAGERS.

The remarks made in last year's Administration Report are applicable this year also. There is but little alienation of ancestral holdings, or of houses, fields, and gardens.

Chenas to which the vendors had but shadowy title have been sold to low-country capitalists, but these claims have uniformly been resisted, though reasonable compromises have been admitted. In one case which came before the District Court the defendant in the action brought by the Crown agreed to pay Rs. 70 an acre for the land, which he had purchased for a nominal sum from villagers.

XVI.—VILLAGE TRIBUNALS.

In the Seven Korales there are twelve Gansabhawa courts, two in each of the hatpattus. They have worked well, and have proved very useful. The assessors are not always persons of marked intelligence, but the Presidents are not compelled to accept their opinion, and, from what I have seen when sitting in the tribunals at the hearing of cases, they exercise a sound discretion in sometimes disregarding the judgment of the jury.

The attached statement shows the large amount of work done by three tribunals. The Dewamedi and Katugampola divisions show a considerable number of criminal cases pending, but these are for the most part tank cases where time has been allowed to defaulters to complete their tanks, and in the meantime the cases remain pending. In Hiriyala hatpattu the number of pending cases, both civil and criminal, has been largely reduced. In the Wanni hatpattu there is the greatest amount of work, and the arrears are consequently the largest :—

XVII.—Working of the Thoroughfares Ordinance.

The collections continue to show a considerable increase. The ease with which this tax is paid is one of the most certain signs of prosperity amongst the labouring classes. The figures for the Kurunegala District for the last three years are as follows:—

	Discharged their Liability.
1900	56,030
1901	58,143
1902	61,198

At the end of the year 520 persons only were unaccounted for.

XVIII.—Work other than mere Routine.

Additional land had to be acquired for the Northern Railway up to the boundary of the Province. No difficulty was experienced in regard to the price to be paid to claimants.

The establishment of a game sanctuary in the Puttalam District on the borders of the Northern and North-Central Provinces was determined on, and the writer, in company with the Assistant Government Agent of Puttalam, visited the extensive tract which it was proposed to reserve, and inquired into the claims that were put forward to forest and other rights. By an adjustment of the boundaries it was found practicable to exclude all inhabited villages from the proposed sanctuary, which includes a portion of the North-Central Province, and is sufficiently extensive for the purpose of game protection. It is hoped that it will prove as successful as a similar game sanctuary established in the Hambantota District.

XIX.—Miscellaneous Events of Interest.

The Coronation of Their Majesties King Edward and Queen Alexandra was celebrated through the district with great rejoicings. Feeding the poor was one of the most marked features of the celebration in all parts of the Seven Korales. In Kurunegala memorial trees, kindly supplied by the Acting Director of the Botanical Gardens, were planted in the grounds of the Maligawa and in front of the Town Hall. A perahera of elephants was arranged by the chiefs, and the torchlight procession through the town of Kurunegala, which was brilliantly illuminated, was a most picturesque sight.

A very successful kraal was held in February near the banks of the Mi-oya in the Wanni hatpattu, some 40 miles north of Kurunegala. No less than 102 elephants were driven into the kraal, this being much the largest number on record in historic times. Between forty and fifty were noosed, which is also a record. It was not found possible to capture all the animals, and the remainder broke through the stockade and escaped. The Hon. Mr. Hulugalle, the Ratemahatmaya of the division, was indefatigable in his efforts to make the kraal a success, and was ably supported by the other chiefs of the Seven Korales. His Excellency the Governor was present at the kraal, and subsequently made a tour of the Province, visiting Chilaw, Puttalam, and Kalpitiya, where he embarked for the Northern Province after staying nearly three weeks in the district.

The Northern Railway Extension was vigorously pushed on, and earthwork was in progress up to the boundary of the Province, the Kala-oya, a distance of 50 miles from Kurunegala and 18 from Anuradhapura. In December the rails were laid and ballast trains ran for more than 40 miles north of Kurunegala. At the time of His Excellency's visit early in the year he was only able to travel 17 miles by train and trolly. Even more rapid progress might have been recorded had not the bridge foundations over the Mi-oya given considerable trouble.

The plumbago industry has revived in the course of the last year, and the railway returns are favourable. The figures for the last three years are as follows:—

From Kurunegala to Colombo.

	Tons.
1900	3,642
1901	3,076
1902	4,234

an increase of nearly 1,200 tons, as compared with last year.

Changes among Officials.

Mr. Baumgartner was succeeded by Mr. Seneviratne as District Judge in April, and resumed duties again in October. There was also a change of Police Magistrates—Mr. Conroy succeeded Mr. Hood. In November the writer was succeeded by Mr. S. M. Burrows.

April 19, 1903. H. L. CRAWFORD.

REPORT ON THE PUTTALAM DISTRICT FOR 1902.

I.—REVENUE.

THE revenue amounted to Rs. 932,822, a nett increase of Rs. 40,822 over 1901. The increase was principally under the head Salt; it merely means that the demand is increasing. There is a fall in Land Sales and Leases; the price per acre never rose above Rs. 50; thus, although the extent sold exceeded by about 440 acres the area disposed of in 1901, the total sum realized was less by some Rs. 1,500.

Detailed Statement of Revenue collected in the Puttalam District, North-Western Province, during the Years 1901 and 1902.

Heads of Revenue.	1901.	1902.	Increase.	Decrease.	Remarks.
1.—CUSTOMS.	Rs. c.	Rs. c.	Rs. c.	Rs. c.	
Imports.					
Cotton Manufacture ...	63 25	—	—	63 25	A large revenue was derived last year by the sale of the salved goods of a wrecked schooner.
Other Goods	16 49	57 44	40 95	—	
Total ...	79 74	57 44	40 95	63 25

V.—LEGISLATION REQUIRED.

Nil.

VI.—WORKS MOST REQUIRED.

The following notes may prove useful :—

(1) A railway.

(2) Drainage for the town of Puttalam.

(3) Re-connection of the Jubilee cisterns with the main in the town of Puttalam.

(4) The old-fashioned brick culverts on Public Works Department roads in the town of Puttalam should be replaced by culverts on the new model.

(5) A more liberal outlay on the Public Works Department roads in the district. Gravel does not stand the rains, hence the Akkaraipattu road and the Coast road north of Puttalam become almost impassable during the rainy season.

(6) Jaffna road. The flood water of the Mi-oya should be dealt with. The causeway across it at the spot called Vilukku-aru is useless in this respect. For about a mile south of the causeway the flood sweeps over the road, and communication is thus cut off or rendered difficult.

(7) Anuradhapura road. The flood water of the Nanneriya-oya and other torrents connected with it also require to be dealt with. Here, too, the water floods the road on either side of the bridge at the 6½ milestone, and renders travelling difficult.

(8) Restoration of Tabbowa tank.

(9) A dispensary at Madurankuli and Etalai.

(10) A school at Kadayamottai and Etalai.

(11) Improvement of the causeway at Kadayamottai.

(12) A causeway at Sembattai to Akkarai pattu.

(13) Quarters should be provided for the following at present :—Senior Storekeeper, Second Storekeeper, Third Clerk of the Kachcheri, Clerk to the Assistant Provincial Registrar.

(14) A new resthouse is needed in Puttalam.

(15) The old one should be converted into quarters for the Senior Salt Storekeeper.

(16) Strengthening the bund of Nedunkulam so as to prevent the risk of an inundation.

(17) A culvert is required on the Public Works Department road just south of Vettikulam and the Mohammedan cemetery in Puttalam Gravets.

(18) Wells in Demala hatpattu and Pomparippu pattu.

VII.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

Most of these will be found under the last head. Among other "plans" may be mentioned—

(1) The encouragement of paddy cultivation in Demala hatpattu, Puttalam pattu, and Pomparippu pattu by steadily improving the tanks. Claims to lands under these tanks must be settled in order to determine the extent of land owned by each proprietor, and his contribution in labour or money towards the cost of restoration and upkeep.

(2) The improvement of minor and village roads, which are at present in a very bad state.

(3) The establishment of division stations on the lines laid down by Mr. Ellis in his Administration Report for the Western Province. This system will compel the chief headmen to move about their districts.

(4) The establishment of village forests, each to be worked in rotation on the block system.

VIII.—CRIME.

No case of murder or of attempted murder was reported during the year.

Four knife cases were reported. One of these occurred in July at Sammattiyavadi ; the injuries inflicted were of a serious nature. The victim was a woman ; the culprit, a Mohammedan, escaped to India, where he is still in hiding. Two knife cases were compounded with the leave of the Attorney-General : in one the parties were all Mohammedans, and the injury was trifling ; in the other the parties were Tamils, and were husband and wife ; the wound was not serious. In the fourth reported case the Magistrate found that the injury was caused by a brass tray.

Cattle Stealing.—Seven cases were reported during the year. In three cases the Magistrate found that no offence had been committed ; in three cases the Magistrate found that the evidence was insufficient to convict the accused ; and in the remaining case the offender was unknown. Of the last four cases two occurred in Puttalam pattu, one in Demala hatpattu, and one in Kalpitiya pattu.

Robbery.—Eight cases were reported, of which four were found by the Magistrate to be designedly false ; in one no offence had been committed ; of the remaining three, two were committed for trial before the District Court, one resulted in a conviction, and the other in an acquittal. The eighth case was committed before the Supreme Court, and the jury returned a verdict of not guilty.

House-breaking.—Five cases were reported. In one the Magistrate found that no offence had been committed ; two he found to be false ; one case he disposed of by consent, and convicted the accused ; the fifth case was committed before the District Court. In this last case a mosque at Paludivasal was broken into and property stated to be worth Rs. 1,200 was removed. Suspicion fixed upon some Sinhalese carpenters, and a mass of false evidence was adduced to "help" the case, with the usual result.

The A B C D return of cognizable offences for the year is subjoined :—

Summary of Cognizable Offences disposed of by the Police Court of Puttalam during the Year 1902.

N.B.—A. Cases of a civil nature or cases in which the accusation has been made under a misapprehension of law or fact come under this head; also cases in which it has not been established that an offence has been committed. In the latter case this letter is not used unless the facts connected with the commission of the alleged offence have been thoroughly investigated.
B. The case appears to have been designedly false; no offence committed.
C. Offence not within the jurisdiction of the court.
D. Committed to District Court.
E. Committed to Supreme Court.
F. True.—*a* Accused dead or insane.
b Accused absconded and cannot be arrested.
c Compounded under section 355, as amended by Ordinances Nos. 5 of 1886 and 22 of 1890.
d Evidence insufficient to convict any one.
e Offender unknown.
f Convicted, Police Court.
c = Cases.

IX.—CO-OPERATION OF HEADMEN.

The following headmen have received rewards during the year for special good work as noted against their names :—

	Rs. c.	
1. J. H. de Rosairo, Udaiyar	50 0	... Cholera duty
2. M. Verapatheran, Police Vidane ...	25 0	... do.
3. Banda, Gan-arachchi	20 0	... Arresting accused in P. C. case No. 7,724
4. W. R. H. Wijeyesinghe, Udaiyar ...	30 0	... Smallpox duty
5. P. Sadakka Tamby, Police Vidane ...	20 0	... Good services during the pilgrimage at St. Anna's
6. M. Majudu Mohmado, Police Vidane	7 50	... do.
7. Madarsa, Udaiyar	15 0	... Cholera and smallpox duty

X.—Regular and Rural Police.

The police duties of the headmen in this district are very light. No cases of neglect were brought to my notice, except in the case of the police headman of Kadayanmoddai, who neglected his vaccination duties and was dismissed from office. I am of opinion that a paid headman is required in Akkarai pattu south. The honorary rank is not held in sufficient estimation for good candidates to come forward. The regular police at Puttalam, a sergeant and twelve men, have little or no crime to deal with, and as the Assistant Agent has no time to supervise them it may be doubted whether a high standard of efficiency is maintained in the detachment.

XI.—Disease among Cattle.

No disease whatever has occurred among cattle during the year.

XII.—Waste Lands Ordinance.

The following return shows the cases in which the Waste Lands Ordinances were put in motion :—

1.	Number of notices issued under section 1 of Ordinance Nos. 1 of 1897, 1 of 1899, and 5 of 1900	2
2.	Number of notices abandoned	—
3.	Number of notices in which lands have been declared the property of the Crown in which no claimant appeared	—
4.	Number of notices in which lands have been declared the property of the Crown in which claimants appeared and withdrew their claim	—
5.	Number of notices in respect of which owing to failure to arrive at a settlement reference was made to court	—
6.	Number of notices in respect of which a settlement was arrived at with claimant	—
7.	Number of orders gazetted :—	
	(*a*) Cases in which agreement was entered into	1
	(*b*) Cases in which land was declared the property of the Crown ...	1
8.	Number of orders waiting to be gazetted :—	
	(*a*) Cases in which agreement was entered into	—
	(*b*) Cases in which land was declared the property of the Crown ...	—
9.	Number of agreements effected after reference to court	—

The following claims, in which notices have been issued, are awaiting settlement :—

(1) Uhampitiya, Munasinha's claim.
(2) Kalmunaikadu.
(3) Potukulama.
(4) Puliyankulama.
(5) Uhampitiya, B. Pieris.
(6) Punawitiya.
(7) Kurukatiyawa.

XIII.—Chena Cultivation.

The following statement shows the number of chena permits issued during the year, as compared with 1901 :—

	No. of Permits.	Extent. A. R. P.
1901	19 ...	38 2 0
1902	Nil ...	Nil

The following comparative statement shows the extent of Crown land cultivated during the year on payment of a tythe to Government of one-ninth of the crop on paddy and one-fourth on fine grain :—

	1901.		1902.	
	Paddy. B. P. S.	Fine Grain. B. P. S.	Paddy. B. P. S.	Fine Grain. B. P. S.
Demala Hatpattu ...	225 3 2	7 3 6	109 1 2	3 1 0
Puttalam Pattu ...	7 2 4	11 0 2	—	49 2 1
Kalpitiya ...	—	—	—	—
	233 1 6	19 0 0	109 1 2	52 3 1

The following comparative statement gives the amount of fines inflicted for illicit chena cultivation :—

	1901.		1902.	
	No. of Persons.	Amount. Rs. c.	No. of Persons.	Amount. Rs. c.
Demala Hatpattu ...	57	298 50	—	—
Puttalam Pattu	14	42 0	15	46 50
Kalpitiya	8	10 0	—	—
	89	350 50	15	46 50

XIV.—WHETHER THERE HAVE BEEN FREQUENT SALES OF LAND BY VILLAGERS, AND WHETHER IN ANY CASES THE LANDS SOLD INCLUDED HOUSES OR FIELDS; WHETHER THERE HAS BEEN REASON TO BELIEVE THAT LANDS HAVE BEEN SOLD TO WHICH THE VENDORS HAD INSUFFICIENT TITLE.

From the reports furnished by the chief headmen I gather that sales of land by villagers have not been of frequent occurrence. No case of the sale of household property has been reported, but some fields in the Demala hatpattu were sold owing to the poverty of the proprietor. A few lands in Kalpitiya pattu have also been sold by villagers. In the Demala hatpattu some lands were sold to which the vendor had insufficient title. They were dealt with under the Waste Lands Ordinance.

XV.—IRRIGATION.

The restoration of village tanks in Demala hatpattu seems to have been somewhat languidly proceeded with in 1902. I find from the Administration Report of my predecessor that no fewer than seventy-two tanks were completed in 1901, while eighteen more were nearly completed. Of these eighteen, the following are reported to have been completed in 1902 :—

1. Sangattikulama
2. Kokichchankulam
3. Detana
4. Neliwewa
5. Paligama
6. Andarawewa
7. Konkadawala

There remain out of the eighteen—

1. Tattewa
2. Unaliya
3. Radapaliyagama
4. Kumbukkadawala
5. Ihalagama
6. Meddewa
7. Talagassewa
8. Nawagattegama
9. Kudawala
10. Aturupoloyagama
11. Hamillegollewa

Some earthwork was done on the above, but they were not completed. Of the tanks which should have been completed by the end of 1901, but on which little work was done, Ramankulama and Galapitawewa were completed in 1902. There remain—

12. Pahala Puliyankulama
13. Moragahawewa

Some earthwork was done on the following tanks, but they were not completed :—

14. Siyambalagashena
15. Kachchimaduwa, Peruwila pattu
16. Kachchimaduwa, Kirimetiya pattu
17. Wadakkarewa
18. Medagama
19. Mawatagama
20. Nikawewa
21. Murakwatawana
22. Pahala Puliyankulama
23. Siyambalewa
24. Gedarawewa
25. Bulupitigama
26. Bogahawewa
27. Walingura
28. Mahadodanettana
29. Pallama

There remain to be gradually completed—

30. Pahala Siyambalewa
31. Pahala Kuruketiyawa

Maha Uswewa was restored at Government expense many years ago, and the irrigable area is stated to be 1,098A. 1R. 32P., of which 390 acres are in cultivation. Steps should be taken to sell more land under this tank. Puttalam pattu and Pomparippu pattu were brought under the operation of the Irrigation Ordinance towards the close of the year. A programme of works which it is proposed to undertake has been drawn up, vel-vidanes have been appointed, and rules framed and forwarded for publication.

XVI.—WEATHER.

	1901. Inches.	1902. Inches.		1901. Inches.	1902. Inches.
January ...	6·24	4·90	August ...	—	·23
February ...	2·96	1·39	September ...	·95	1·50
March ...	2·20	4·06	October ...	4·75	11·60
April ...	9·65	5·30	November ...	14·30	13·38
May ...	3·35	3·32	December ...	2·64	7·05
June ...	1·35	1·30			
July ...	·85	·64	Total ...	49·24	54·67

1902 was a wet year. The salt harvest was only moderately good.

XVII.—FOOD SUPPLY.

A slight temporary rise in the price of rice was reported in Puttalam town during the last month of the year, and was due to the blocking in the canal between Colombo and Marawila Elsewhere there is nothing of interest to record, except in the Demala hatpattu, where food was

a little scarce towards the close of the year owing to the tanks having been emptied for restoration in 1901. This rendered a maha harvest impossible in many villages, and the yala crops were poor. Prices of food stuffs at Anamaduwa, Talgaswewa, and Andigama were—

Dry fish	...	...	5 cents to 15 cents each
Cocoanuts	...	...	4 „ 6 „
Cocoanut oil	...	...	30 „ 37 cents per bottle
Onions	...	...	6 „ 10 „ lb.

These prices were within the means of the people. The rest of their food is home-grown.

XVIII.—VITAL STATISTICS.

Statement showing the Number of Births, Deaths, and Marriages among the different Communities for the Years 1901 and 1902.

	1901.	1902.

Deaths	1,015 ...	1,166
Marriages :—		
Kandyan	65 ...	34
Mohammedan	95 ...	119
General	116 ...	89
Divorces, Kandyan	10 ...	4

XIX.—SANITARY CONDITION OF THE PEOPLE.

Puttalam Local Board Limits.

Population, 5,115 ; Area, 8⅝ square miles.

The scavenging was not well done, nor was there a thorough and vigilant control of scavenging operations by the Local Board Inspector.

The principal requirement of the town as regards sanitation is to fill up and drain the hollows, which become stagnant and unwholesome ponds during the last quarter of each year ; in January the process of evaporation commences, and the unwholesome beds of these ponds become gradually exposed. Owners of lands near dwellings within Local Board limits on which such hollows exist have been noticed to fill them up, and if they fail to comply the Board will do the work at their expense.

The plains surrounding the town, which, although situated within the assessed area, are removed from the centres of population, are annually flooded during the same season ; to deal with them adequately would be very costly, and I am not able to make any recommendation on this head.

The filling up of Kanganykulam, a low-lying tract of land bordering the Nedunkulam channel, and situated in the triangle between Pole's road on the east and the Kurunegala road on the south-west, was proceeded with early in the year. As soon as the rains began it became apparent that the fillings of sand were being washed away by the spill water from Nedunkulam. It has been decided to build up the banks of the channel before attempting to fill upt he land on either side of it.

On the 24th November, 1902, Nedunkulam was discharging 5,400,000 gallons of water every twenty-four hours over the spill ; this volume of water descends into the plains, and rushes at great speed into the lake. At the same time it is stated that part of the flood water of the Deduru-oya in the Chilaw District also finds its way into the Puttalam lake. The result is that when the tide is high the water runs up the town drains, and in Fishers' quarter one or two houses are flooded and the soil is saturated with damp. This locality is not fit for human habitation, and steps are being taken to acquire it.

The system of drainage in the quarter of the town lying between the Jaffna road and the lake on the east and west and 1st and 5th Cross streets on the north and south has been carefully carried out some years ago, and every available fall and depression has been made use of for drains and culverts. The chief want now is built drains and new culverts on the improved model ; till this work is executed the water will continue to stagnate in the broken surfaces of the earth drains and under the narrow culverts.

At the close of the south-west monsoon the people suffered considerable inconvenience in consequence of the drying up of Nedunkulam and the adjacent Ayanarkulam, which are used by the inhabitants of the northern part of the town for drinking and bathing purposes respectively. It must be remembered that this is due to a failure in the means of distributing the water from the town reservoir, not to the exhaustion of the source of supply. The observations of Mr. R. W. Smith, Public Works Department, taken in the month of July, 1896, proved that even during the drought the quaint little reservoir at Chenakudiyirippu is more than capable of supplying local wants, and there would, I believe, be no cause for complaint if the jubilee cisterns (sometimes miscalled "wells") were re-connected with the main. The cost of this work is estimated at Rs. 9,000. It is hoped that the cistern in 3rd Cross street may be re-connected next year.

Kalpitiya.

This town was brought under the operation of the Small Towns Sanitary Ordinance on 1st April, 1902. The revenue collected during the year amounted to Rs. 378·75, and a sum of Rs. 61·87 was expended. On the 31st December, 1902, the arrears of taxes amounted to Rs. 298·28. The town made a somewhat poor beginning because the money came in so slowly ; and it must be admitted that no very great efforts were made to collect it more speedily. In this respect I hope we shall see an improvement next year. Two disused public wells, which had become obstructions in the streets, were removed, and the town was regularly scavenged. Beyond this nothing was done. Next year it is proposed (1) to revise the boundaries of the assessed area, which are at present vague and disputable ; (2) to provide a scavenging cart ; (3) to erect a lamp at the Custom-house ; (4) to fence some of the burial grounds.

Public Health.

In March an outbreak of cholera occurred at Ottapanai in Puttalam pattu ; 7 cases were reported, and 6 proved fatal. As recorded elsewhere, the Udaiyar of Kattakadu and the Police Vidane were rewarded for their services in helping to check the spread of the disease. On the 26th March a fatal case of cholera occurred in Puttalam town, and in June there was another fatal case in Puttalam. Two cases of smallpox occurred in the town in September. The pilgrimages at Talavillu took place without the occurrence of any epidemic disorder.

Parangi continues to be the curse of Demala hatpattu. 2,477 cases were treated at Anamaduwa and 458 at Andigama during the year.

Medical Aid.

The number of patients treated in 1902 was as follows :—

Puttalam Hospital	755
Puttalam Dispensary	3,831
Kalpitiya Dispensary	1,541
Karaitivu Dispensary	457
Anamaduwa Dispensary	10,625
Andigama Dispensary	2,044
Mundel Dispensary	3,327
	22,580

The Medical Officers of Kalpitiya and Mundel treated the following number of patients during the pilgrimages at Talavillu and the prevalence of fever at Kattakadu from 20th August to 31st December, 1902 :—

Talavillu Outdoor Dispensary	233
Talavillu Camp Hospital	9
Kattakadu	426
Total Number treated ...	668

The total number of visits paid by the new and old patients at all the dispensaries was—

Puttalam	3,907
Kalpitiya	1,994
Karaitivu	532
Talavillu (St. Anna's)	242
Mundel	1,972
Anamaduwa	22,706
Andigama	4,449
	35,802

The visits were distributed among the four divisions as follows :—

Puttalam Gravets	3,907
Puttalam Pattu...	1,972
Kalpitiya	2,768
Demala Hatpattu	27,155
	35,802

XX.—NEW AREAS OF CULTIVATION.

400 or 500 acres of cocoanut land were opened up in Puttalam pattu and about 100 acres in the Demala hatpattu.

XXI.—FOREST WORK.

The released area is in charge of the Assistant Agent, with a Forest Ranger under him. There seems to be some misapprehension as to the system which should be pursued in exploiting timber in this area. The guiding principle is to conserve at the most convenient situations selected areas of land for the supply of timber for the purposes of salt manufacture. Village forests are also required in several parts of the district, and when these have been established the rest of the released area should be exhaustively worked and the lands then sold.

The late Mr. Fisher intended that it should be exhaustively worked and the lands then sold. This is the policy which is at present followed.

When, however, village forests are required, they will be worked on the block system. A statement of receipts and expenditure is subjoined :—

Revenue credited during 1902.

Forest Produce removed by Purchasers.	Rs.	c.
Rough timber	276	31
Sawn timber	—	
Shingles	—

XXII.—SALT DEPARTMENT.

Revenue of last ten years :—

	Rs. c.		Rs. c.
1893	650,897 30	1898	732,395 75
1894	596,673 95	1899	719,791 87
1895	628,121 95	1900	726,852 58
1896	633,411 41	1901	746,130 42
1897	709,331 44	1902	805,914 66

The total expenditure was Rs. 99,126.

Total quantity sold for consumption outside the Province 254,363 cwt., for consumption inside the Province 61,085 cwt. On 1st January, 1902, the quantity in store was 148,947 cwt., in kottus 415,778 cwt., total 564,725 cwt., equivalent to twenty-two months' supply. On 31st December, 1902, the quantity in store was 118,494 cwt., in kottus 386,876 cwt., total 505,370 cwt., equivalent to about nineteen months' supply.

The crop of 1902 was estimated at 248,315 cwt., and this quantity is included in the 386,876 cwt. shown as in kottus on 31st December. These figures show the necessity of increasing the yield; this can be effected of course by extending the area under cultivation. There is land available between Palavi and Kombimunai, but there may be a difficulty in providing a reservoir without interfering with the supply of water to the existing salterns.

The eastern and western salterns are also capable of extension. At Palantivu there are some 72 acres of land suitable for salt, and capable of yielding on an average not less than 35,000 cwt. per annum. At the western salterns—between the old Vet-aru on the south, the Tondimun-aru on the north, the service road on the east, and the lake on the west—there are some 440 acres of land, much of which is suitable for salt. Both these tracts are claimed. The claims must be settled before anything can be done, but it is not anticipated that there will be any difficulty.

Within the area comprised by the Jaffna road and the service road there are many pieces of land capable of being used for the purpose of salt manufacture, and it is intended to settle all claims to them during next year. When once this part of the business is settled the annual harvest at Puttalam east and west will be very materially increased. Even without bringing any further area under cultivation, attention to the following points would result in larger annual collections :—

(*a*) The kottus should invariably be empty by 1st July, so that when the harvest begins there may be no delay whatever in housing it. The only way to do this is to vigorously enforce the contracts.

(*b*) Cultivation should commence on a given date, and all channels should be cleared and all dams built by the several manufacturers then and there. The work of absentees should be performed by adjacent licensees, or by outside labour if necessary. In either case the cost should be deducted from the moiety of the absentee.

(*c*) The ebb and flow of water in the Tondimun-aru should be regulated by a dam with sluices. The water of this aru destroys annually a large quantity of salt.

(*d*) Something might be done to reduce the cost of labour and to increase the supply; both have been affected to the prejudice of the manufacturers and of the revenue by the closing of the northern road and of the port of Kalpitiya. I hope to put forward a definite proposal before long, but the question presents many difficulties.

XXIII.—FISH-CURING YARDS.

	Season 1900-1901. Cwt. lb.	Season 1901-1902. Cwt. lb.
Quantity of salt issued from fish-curing store, Udappu	4,977 0 at 65 cents, Rs. 3,235·05	... 4,034 0 at Re. 1·25, Rs. 5,042·50
Quantity of salt issued from fish-curing store, Navatkadu	1,176 0 at 75 cents, Rs. 882	... 906 0 at Re. 1·25, Rs. 1,132·50

XXIV.—ST. ANNA'S FESTIVAL.

Mr. Constantine, who was then in charge of the district, estimated the number of pilgrims on 15th July, 1902, from 45,000 to 50,000. The number of carts was 1,352. No disturbance occurred during the festival, and there was no crime.

XXV.—WORK OTHER THAN ROUTINE.

In the English and native departments of the Kachcheri the routine work may be reduced to the following statement :—

Letters and reference sheets despatched	...	...	4,126
Letters and petitions received...	...	...	4,122
Permits, licenses, &c., granted	...	...	6,708
			14,956

Average per diem, 43.

As the Assistant Agent is also District Judge, Commissioner of Requests, Police Magistrate Deputy Fiscal, Assistant Provincial Registrar, Chairman of the Local Board, Chairman of the District Road Committee, Superintendent of Police, Superintendent of the Prison, and Assistant Collector of Customs, he has not much time for work other than routine. The work of these Departments is of course not shown in the above figures.

Mr. Brodhurst was succeeded by Mr. Constantine in February. I succeeded Mr. Constantine in September.

G. COOKSON,
Assistant Government Agent.

Puttalam, February 25, 1903.

REPORT ON THE CHILAW DISTRICT FOR 1902.

My knowledge of the district is limited to the last 6½ months of the year. My predecessor having already left for England the district had to be studied unaided.

REVENUE.

A statement of revenue of 1901 and 1902 is appended :—

Revenue.	1901.	1902.	Increase.	Decrease.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.
Licenses, Excise, and Internal Revenue not otherwise classified	249,084 48	254,446 98	5,362 50	—
Fees of Court or Office (including Judicial Stamps), Payment for Specific Services, and Reimbursements in Aid ...	27,692 39	30,045 39	2,353 0	—
Post and Telegraph	1,275 67	846 2	—	429 65
Rents of Government Property	1,272 71	732 34	—	540 37
Interest	491 27	1,104 6	612 79	—
Miscellaneous Receipts	310 38	325 66	15 28	—
Sale of Government Property	645 35	653 60	8 25	—
Total, exclusive of Land Sales ...	280,772 25	288,154 5	8,351 82	970 2
Land Sales	49,573 33	38,084 86	—	11,488 47
Total	330,345 58	326,238 91	8,351 82	12,458 49

Under Arrack Rent a sum of Rs. 15,916·74 in deposit in Colombo on account of 1902 could not be credited till January, 1903. This brings the revenue up to Rs. 342,155·65, Rs. 1,610·07 in excess of 1901. Were this sum available for expenditure on the district, we could spell progress in capitals.

Land Sales show a decrease of Rs. 11,488·47, few lands being left for sale in the Pitigal korales central and south.

Of the other items, the increase in Licenses, Excise, &c., under which are included Arrack Rent, Tolls, and Revenue Stamps, shows that the district is still going ahead. The fall under Postage and Telegraph Stamps and Rent is a matter of account, the post offices getting stamps from Colombo, and rent having been paid in advance in 1901. Nainamadama and Toppu tolls in this district are credited to the revenue of the Western Province. Other items call for no comment.

I adopt the headings in the Government Circular :—

I.—FOOD SUPPLY.

Principally rice, cocoanuts, fish, dry grain, vegetables, including a good deal of manioca, fruit, and meat. Insufficient rice for the population is grown ; the greater quantity of that consumed is imported ; there has been no scarcity.

Paddy cultivation is in many localities slovenly ; the villagers do not plough sufficiently deep, and do not weed enough or transplant ; the advantages of remedying these defects are being pointed out to them.

Too little fruit and too few good vegetables are grown ; vegetables grown are of the most insipid. Oranges and pineapples thrive in the central and southern divisions, and efforts are being made to increase the cultivation of desirable products. A good deal of pork is consumed, also beef, and fish is very plentiful in the north-east monsoon.

There is little sustenance in any food obtainable in Chilaw ; the railway is therefore hoped for before long, and consequent better supplies to keep body and soul together in this enervating and malarious part of the country. The price of rice has varied from Rs. 4 to Rs. 5 per bushel.

Population of Chilaw town 4,169 ; births 141 ; deaths 134. Population of the rest of the district 70,167 ; births 2,529 ; deaths 1,369. There has been no epidemic of contagious diseases.

II.—IRRIGATION.

24,000 and odd cubes of earthwork, more than 8,000 in excess of 1901, have been contributed on bunds of village tanks, and the supply of pipe sluices from Kurunegala has been resumed. These were placed in Pinkattiya, Karawita-agara, Midellawatawana, and Kokkawila tanks ; many more, for completed bunds, are expected as the year closes. Work was in abeyance the last quarter of 1902, owing to the abnormal rains. The villagers of Battulu-oya have completed the heavy work of their bund, and it is hoped the sluices and spill will shortly be supplied by Government. As regards the future, an estimate of nearly Rs. 20,000 has been sanctioned for the improvement of Tinipitiwewa at Madampe and the Pikulam and Mugunuwatawana fields ; other works I hope to see completed in 1903 are, besides Buttulu-oya, Karawita masonry sluice, Talgasagara masonry spill, Sandanangama masonry spill and sluice, and the inexpensive Ratambala-oya scheme to increase the water supply of a chain of extensive tanks, with good fields under them, in the northern division. Sinhakuliya tank, which figures in former reports, I have decided to abandon till some arrangement is come to between the upper and lower fieldowners. Restoring the bund would inundate the fields of the former, so that the matter is one for the people themselves to settle.

Another sluice to Munnessaram tank is proposed, which will benefit its neighbour Nallanayagam, too. The work on Tabbowa tank has been resumed, *i.e.*, materials collected, but the shareholders are not satisfied with what the Irrigation Department propose in the way of spill and

sluice, and progress is again in temporary abeyance. Walahapitiya tank is about to be given a 9-inch pipe sluice. These pipe sluices with more attention by the vel-vidanes are working satisfactorily.

The district is fortunate in having an active and intelligent Sub-Inspector, and the small irrigation staff are efficient.

III.—LEGISLATION.

Under new legislation I would like to see—

(1) Provision made for the transportation of selected criminals to the Andamans or any other available over-seas locality. This was, I believe, the practice in former years. It would probably tend to break the heart of the criminal more than any other form of punishment.

(2) A law against infantile smoking. Infinite harm is being done by this habit amongst mere children, the tobacco being of the strongest. Such a law exists in Japan, where it is necessary for the Government to make men of their boys, and I believe in Tasmania. The appearance of these youthful smokers shows their constitutions are being ruined. The practice here and in the Southern Province is widespread, and I know of cases of boy-smokers charged with causing hurt with knives. Drink follows, and there are, I find, lotteries for the small people as well as for grown-ups in Chilaw District. Add the propensity to gambling, and you have evils seriously affecting the well-being of the population. They are having attention here, and a healthy sign is the increasing popularity of drinks of the aërated water companies sold in village boutiques.

(3) A law for the furtherance of cremation, for reasons of public health. Burial is surely a crude survival, and should not the dead be reduced to dust rapidly by mechanical instead of leisurely by natural means?

(4) An Ordinance requiring compulsory registration of every deed affecting land with survey plan attached. This will recommend itself to all except the dishonest ones frequenting the courts.

(5) Add the alternative of rigorous imprisonment to the Cruelty to Animals Ordinance, as in England, to meet bad cases. Three or four such in the up-country Police Courts plead eloquently for this change.

(6) Attempt to commit suicide—a rather prevalent offence—should be punishable with rigorous as well as simple imprisonment. Would-be suicides generally want pulling together by the tonic of hard work.

(7) Vedaralas want to be put under legislative control. Too many people are damaged and crippled by quacks among these so-called native doctors.

(8) Attach licensed plaint drawers to Police Courts, for reasons with which every Magistrate will be in sympathy.

IV.—WORKS MOST REQUIRED.

(1) A new hospital for Chilaw overshadows other wants of the district. The subject has made progress in 1902, the site being finally decided on.

(2) A general cemetery for Chilaw, failing compulsory cremation; all burial grounds are full; the matter is dealt with in my report on the Local Board.

(3) A railway from Colombo. It is believed this would pay handsomely.

(4) Telegraph Offices at Vennappuwa and Madampe, where there are Post Offices, and a dispensary with a resident dispenser at the latter place, a town of considerable size.

(5) A Receiving Office at Nattandiya, a large and flourishing centre.

(6) Replacing the wooden bridge over the lagoon at Chilaw by some other structure. This bridge "eats its head off" in repairs, and is not always safe.

(7) The Kurnegala road by the dhobies' tank at Chilaw is dangerous till it is widened.

(8) An English school for Chilaw; but if English is learnt it should, like Ceylon tea, be pure, for the corrupt English of the country is less useful than the vernacular.

V.—PLANS FOR THE IMPROVEMENT OF THE DISTRICT.

(1) If possible more residences for clerks want to be built on the sandbank, the one comparatively healthy part of Chilaw. A bungalow for the Magistrate on the sandbank is desirable, too.

(2) Bridges over the canal at Lunuwila and Bandirippuwa are desirable, when there are funds, to supersede the present clumsy ferries.

(3) Schools at Mugunuwatawana and Anaivilundawa are amongst my hopes of the next two years. Karukkuliya school came down owing to the rains, and will be rebuilt on a better site, as will also Etiyawala school. A Government school has been built at Udappu this year.

(4) Markets are wanted at Tambarawila, Rajakadaluwa, Nattandiya, Vennappuwa, and Marawila. These should stimulate a further demand for produce.

(5) More wells, like those already constructed by Government, are wanted, notably one at Medagama, where a good school garden is well managed by the present teacher. The District Mudaliyar suggests an industrial and agricultural school at Medagama, and I gladly launch the idea, the locality being suitable.

(6) A lock-up at Chilaw is much required, and is promised for 1903.

VI.—SANITARY CONDITION OF THE PEOPLE.

(1) Branch dispensaries have been established at Udappu, Rajakadaluwa, Dunkannawa, and Vilattawa. Madampe, the principal town after Chilaw, is looked after by the Board of Health, of which the local Assistant Government Agent should be made a member by a simple amendment of the Ordinance. A large estimate for continuing side drains at Madampe has been sanctioned, and arrangements made to re-open the latrine. The sanitation of villages is attended to by the District Mudaliyars and minor headmen, and Assistant Government Agent as inspecting officer. There was one death at Battulu-oya due to choleraic diarrhœa, contributory causes being pork, arrack, and yams from Mundel. A number of wells have been constructed by Government, and it is anticipated more will be built.

(2) *Plague Precautions.*—Sites for hospitals are ready, and everybody is on the alert should there be plague cases here or elsewhere.

VII.—CRIME.

There were six reported murders, accused persons being brought to trial in all. One is pending, and in two convictions were obtained.

Details.

Etiyawala Murder.—The village headman was stabbed to death when arresting gamblers.

Topputota.—Accused shot deceased when stealing cocoanuts, and was rightly acquitted.

Talwila.—A bad case, in which accused killed his father when asleep, after treating him to pot arrack, the motive being gain.

Metikotuwa.—Deceased was stabbed by accused, who was drunk; there ought to have been a conviction for an offence short of murder, but all parties were too drunk to know what happened.

Kattimahana, in Kurunegala District, but the accused was of this district. Accused being drunk wantonly stabbed deceased in an altercation about their hackery and cart passing on a narrow road.

Kirimetiyana.—Deceased was shot by accused, the former's wife being intimate with him. At the trial the woman caused the case to break down.

Thirty-five knife cases were reported, in which 62 persons were brought to trial: 22 convicted; 39 acquitted. Several of the latter were convicted of common hurt. This is about the usual proportion in a low-country Sinhalese district.

Efforts are being made to prevent the Sinhalese carrying open knives unnecessarily. A Magistrate here suggested that knives should be knobbed, which would probably save life; or boys at school, I suggest, might be taught to box, or if they want to fight, they should do so with their fists; possibly they would adhere to the same practice in later life.

VIII.—HEADMEN AND CRIME.

The headmen have co-operated vigorously in the detection of crime, notably the Mudaliyars of Pitigal korales central and south. The Madampe Vidane Arachchi promptly arrested the Kattimahana murderer, who has for a long time been the terror of the locality with an influential backing. The Tulawala Police Headman hunted down and arrested a Negombo District murderer. The Constable Arachchi of Nattandiya and Halpanwala Duraya when put on to the right track did good work in the Talwila murder case. The Madampe Muhandiram has done useful work as Inquirer.

IX.—POLICE.

No regular police in the district. The rural police headmen have discharged their duties satisfactorily. In these days they look for money rewards, which are not always available; the old way of service for the mere honour and glory of it is dying out.

X.—CATTLE STEALING.

Considering how cattle are allowed to roam in scores in lonely places untended, the wonder is there are so few thefts. The Police Court returns show fifteen cases, resulting in one conviction. The evidence in these cases is usually very unreliable.

XI.—CATTLE DISEASE.

The district has fortunately been free from cattle disease.

XII.—NEW AREAS OF CULTIVATION OPENED.

A few hundred acres have been opened during the year, mostly in cocoanuts, the main product of the district. There is plenty of land in Pitigal korale north awaiting development when the railway comes.

XIII.—WASTE LANDS ORDINANCE.

This has proved a most satisfactory measure for the settlement of claims, and has saved to Government much land which would otherwise have been encroached upon as in the past. Large extents have been dealt with in various stages in 1902 under this Ordinance, inquiries furthered being those of the villages Pulichakulam, Bandarahena, Arachchikattuwa, Adippola, Nochchiwatawana Mugunuwatawana, Parappamulla, Vilattawa, and Karawita-agara.

XIV.—CHENA CULTIVATION.

This has decreased owing to discouragement by my predecessors. In Pitigal korale north, where the tracts of fields are not extensive and other means of subsistence few, reasonable chena applications are granted.

XV.—SALES BY VILLAGERS.

If sales of their holdings by villagers to capitalists are meant, there is no such practice here, except occasionally of land recently bought from the Crown. Illicit speculation in Crown land at Adippola, Erunwala, and elsewhere is in check and being dealt with.

Mr. H. C. P. Bell, C.C.S., has, I find, placed on record that Chilaw District holds the record of forged Sannasas, and Mr. G. A. Baumgartner, C.C.S., as Additional District Judge, has recently exposed in the Mugunuwatawana cases the Crown land grabbing system in vogue here. In this connection, too, a speculative and adventurous case against the district headmen and a purchaser from the Crown was heard in the District Court and dismissed. But the simple villager would not have thought of these schemes without the brains of agitators at his back.

XVI.—WORK OF 1902 OTHER THAN MERE ROUTINE.

(1) Heavy work as District Judge, the cases being principally under the Partition of Lands Ordinance. I inspect many lands in dispute, as there is too much artificial litigation and undue getting up of cases in some quarters. A criminal sessions of the District Court is held monthly; the cases sent up have been carefully inquired into by the Magistrates, and nearly all have resulted in convictions.

(2) Work as Chairman of the District Road Committee and Local Board. Separate reports are submitted on these institutions. Minor roads want improving and new ones opening; our existing system seems rather extravagant considering local conditions, for we do no regular work on half the mileage on the list, the rest being left to village labour under the Village Communities' Ordinance. I hope in course of time to spread our work further for the more general benefit of the village contributor; the building of ambalams, for instance, is left to charity, and the Committee limits itself in this direction to resthouses. We receive large sums as toll grants; these are absorbed on main roads, whereas feeder roads should get part of the money.

(3) Work as Deputy Fiscal, Assistant Provincial Registrar, Superintendent of the Prison, the charge of the rural police, and forest matters contribute to keep one's hands full enough.

XVII.—EVENTS OF INTEREST AND MISCELLANEOUS.

(1) Celebration of the Coronation and of His Majesty the King's recovery.

(2) Visit of His Excellency the Governor, in the time of my predecessor.

(3) Mr. De Livera has been succeeded as Police Magistrate by Mr. Allegakoon, for whom Mr. F. A. Wijeyasekare is now acting. Mr. Thornhill has succeeded Mr. Churchill as District Engineer.

(4) The Lunu-oya and Sengal-oya bridges on the Puttalam road have been completed.

(5) Toll rents for 1903 sold, in 1902, at a large advance on 1902 prices, denoting prosperity.

(6) The Village Committees under the District Mudaliyars have worked satisfactorily; they deal with breaches of village communities' rules, including default of earthwork on tanks and other irrigation prosecutions. With the Mudaliyars I have made out lists of useful village works, courts, bridges, and schools to which to devote their balances, and these, assisted by free grants of timber, are to be undertaken in 1903.

(7) The last quarter of 1902 was an unusually wet one. One day early in December over 8 inches of rain fell, causing much damage to roads, and the bunds of several tanks breached, including the cross bund of Tinipitiwewa. The tobacco crop was mostly destroyed by the earlier rains, and paddy suffered. Many houses came down, and free permits were granted for common kinds of timber from Crown land to rebuild, where householders could not help themselves.

(8) The Police Court has been removed from the District Court building to the old quarters of the District Engineer, a satisfactory arrangement.

(9) "Side disease" destroyed much tobacco, and I have arranged to get this disease examined at the Royal Botanical Gardens next season.

(10) A big slip occurred in the canal on Horakele estate in December, causing the waterway to be blocked and traffic suspended for some time.

(11) A Mudukatuwa estate case has come into prominence again. The Supreme Court originally made order that the planters' interest should not be sold, but the sale took place, as no other solution of the difficulty could be found. The planters were not, however, ejected, and are unable to comprehend why they are called upon to quit. I trust satisfactory arrangements can be made for them elsewhere.

(12) The fish-curing yard at Toduwawa has been opened in the north-east monsoon, and the usual business carried on.

(13) A salt boutique was licensed and opened at Udappu during the year, and a liquor license, limited to sale by bottle, granted from 1903 to Rajakadaluwa, a rising planting district.

(14) As the year closes the coach service between Colombo and Puttalam *viâ* Chilaw is improved, but not altogether to the advantage of Chilaw.

(15) There was much activity of the Survey Department in the district in 1902, and the Surveyor-General visited Chilaw in October. With this exception and that of the Government Agent on Buddhist Temporalities Ordinance duty, no other head of Department has visited the district during my term of office. This is an out-of-the-world spot, and we exist rather on the out-of-sight-out-of-mind principle.

(16) In November Mr. S. M. Burrows was appointed to act as Government Agent of the Province, Mr. H. L. Crawford becoming Principal Collector of Customs.

Chilaw Kachcheri,
February 26, 1903.

H. R. FREEMAN,
Assistant Government Agent.

NORTH-CENTRAL PROVINCE.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, NORTH-CENTRAL PROVINCE, FOR 1902.

I.—REVENUE AND EXPENDITURE.

THE total revenue for the year was Rs. 112,963·81, an increase of Rs. 12,048·89 over that of 1901. In my last report it was shown that if the heads "Timber" and "Land Revenue," which no longer swell the provincial revenue as they did in former years, be eliminated from the comparison, the revenue of 1901 was the largest on record. That of 1902 exceeds it by nearly 12 per cent. It exceeds the revenue for 1900 by Rs. 36,917·08, or over 48·5 per cent. There has been a very substantial increase over the revenue of 1900 under almost every head. The chief items of increase over that of 1901 are :—

	Rs.	c.
Arrack	8,670	0
District Court Fines	1,055	0
Police Court Fines	762	62
Survey Fees	606	33
Police Rates	227	53
Rent of Lands	1,342	15
Unclaimed Deposits	1,191	7
Land Sales	5,097	45

The increase in Arrack is an index of the steady flow of immigration into the Province. Practically all the arrack is consumed by Tamil and low-country settlers and by carters passing to and fro ; there is no demand for it among the indigenous population.

The increase in District Court fines is mainly due to one case in which three Tamil overseers of the Public Works Department organized an attack on a set of lines occupied by the Irrigation Engineer's coolies, who had given them offence. They were convicted of riot, and were fined Rs. 250 each. Their coolies, who acted under their orders, were not identified.

The increase in the Police Court fines may be partly due to a change of Magistrate, a lenient one having been replaced by a severer one. But this alone will not account for the very large rise from Rs. 896 in 1901 to Rs. 1,658 in 1902. The fact is that the work of the Police Court has grown enormously, and will continue to grow.

The increase in Police Rates is due to the rising value of property.

The increase in Rent of Lands is due to the raising of the rents charged for lands held on tickets of occupancy in Anuradhapura and in the principal bazaars. Up to this year a uniform rent of Rs. 3 per annum was charged for all such lands, whether in Anuradhapura or in the remotest parts of the Province. As the occupiers of sites in the busier centres could well afford to pay more, the rents in Anuradhapura were raised to Rs. 12 per annum, and in such bazaars as Kekirawa, Maradankadawala, and Habarana to Rs. 6 per annum. The enhanced rates were generally paid without demur. All were collected without serious difficulty after half-hearted protests in a few cases. The justice of the change was in fact almost universally admitted.

The large number of deposits, chiefly on account of Survey Fees, which had not been transferred to revenue, was pointed out by the Auditor-General when he inspected the Kachcheri in March. Steps were accordingly taken to trace the depositors. Refunds were made to those entitled to them; the unclaimed items were brought to account.

The increase in Land Sales speaks for itself. With it goes the increase in Survey Fees. Nearly the whole of the sales have been to villagers ; very few Crown lands have been purchased by strangers. Sales of the latter class may be expected during the next year or two, when lands under Minneriya, Maha Ilupallama, and other works become available.

The chief items of decrease are :—

	Rs.	c.
Paddy	2,018	4
Revenue Stamps	852	16
Forest Department Fines	352	65
Irrigation Recoveries	506	77
Postage Stamps	583	72
Timber	1,058	8

The revenue under the head "Paddy" is chiefly derived from "tavalu," or tank bed cultivation, for which a rent of 50 cents per pela is charged when the land cultivated is open tank bed and Rs. 2 per pela if jungle is cleared. This form of cultivation is only practised extensively when the tanks are low, and when there is not enough water in them to irrigate the fields. It varies inversely, in fact, to the extent to which the more legitimate paddy cultivation on the fields is carried on. During 1902 the tanks having all filled well, field cultivation was proportionately extensive and "tavalu" cultivation restricted. The decrease under this head is therefore an indication of prosperity.

The decrease in Revenue Stamps is partly due to the fact that in 1901 forty-seven licenses to capture elephants yielding Rs. 470 were issued, while none were issued in 1902. There was also a falling off in the demand, but this was probably only temporary. The revenue returns for 1903 show a considerable recovery under this head.

The fall in Forest Deparment Fines means that there has been less unauthorized chena cultivation than in 1901, though there still is more than there ought to be. It is exceedingly difficult to repress it entirely, as at least nine-tenths of the Province are forest and jungle, and the chances of escaping detection, especially in the remoter parts, are sufficiently good to tempt the people to dispense with the permit which the Government requires. Moreover, the profits of chena cultivation are so large that it often pays to run the risk of a fine.

There has, as usual, been some difficulty in making Irrigation recoveries. The people are always ready with some excuse for deferring payment or for not paying at all, and the headmen entrusted with the collection have been too prone to accept such excuses. The deficit under this head is not, however, all due to arrears, which only amounted at the end of the year to Rs. 217, and has since been reduced to Rs. 57·75. Owing to the exemption of several lots under Nuwarawewa until a new distribution gate and culvert under the railway line had been provided, and under the Yoda-ela until certain pipe sluices which had been abolished had been replaced by masonry sluices and pending general improvements, the total amount recoverable was considerably less in 1902 than it had been in 1901. Moreover, the arrears collected in 1902 were Rs. 306 less than those collected in 1901.

The decrease under the head Postage Stamps represents a fall in the sale of such stamps from the Kacheheri. I find that there has been an increase of the sale from the Post Office of Rs. 176. This still leaves a deficit in the total number of stamps sold in the Province of some Rs. 408 compared with 1901. This must be attributed to fluctuations in the volume of correspondence, though it is possible that stocks laid in at the end of 1901, when sales were large, lasted into 1902.

The demand for timber by private parties from the released areas in charge of the Government Agent has been considerably less than in 1901, but sales to Public Departments, which are not shown in the revenue returns, have increased from Rs. 3,256·16 to Rs. 5,713·11.

The Government Agent's expenditure has been Rs. 35,011 or Rs. 1,813 less than in 1901. The chief items of decrease have been "Cholera Charges" Rs. 967·31, "Cart Registration" Rs. 133·05, "Removing Rubbish in Anuradhapura" Rs. 30·35, and "Clearing Latrines" Rs. 630·09. The last three have been paid for by the Local Board.

II.—Food Supply.

Among the villagers rice grown by themselves is the staple food, though, especially in Nuwarakalawiya, it is largely supplemented by chena produce, such as kurahan, Indian corn, amu, mederi, undu, mun, tana, &c. Indeed, kurahan is often preferred to rice as having more sustaining power. Much of the paddy grown, especially by the more well to do among the people, and just after each harvest, is exported, as also is a large quantity of the dry grain. Almost all the paddy grown under the Anuradhapura city tanks is exported, chiefly to Jaffna. Gingelly is largely grown as a second crop on the chenas. The sale and barter of this commodity, and of rice, kurahan, &c., provide the people with their cloths, curry stuffs, dry fish, salt, and other imported articles which they use. Imported rice is used by the Tamil coolies employed by the Public Works, the Irrigation, and the Railway Departments, and by the population of Anuradhapura town, composed chiefly of Moormen, Tamils, and low-country Sinhalese settlers. It is not used by the villagers.

Yams, pumpkins, chilies, and other vegetables are grown on the chenas along with the dry grain crops. The villagers are being gradually induced to cultivate improved varieties in their gardens and also fruits of various kinds. The cultivation of plantains and cocoanuts is also slowly but steadily increasing. Other sources of food supply ready to the hands of the people are game and fish. The latter abound in all the tanks, and are caught at all times, but especially when the tanks are low at the end of the dry season.

Cocoanuts, curry stuffs, onions, dry fish, salt, &c., are imported from Kurunegala, Puttalam, Matale, Jaffna, Trincomalee, and Mannar into Nuwarakalawiya and the Sinhala and part of the Meda pattu of Tamankaduwa. The wants of the rest of the Meda pattuwa and of the whole of Egoda pattuwa of Tamankaduwa in these respects are chiefly supplied from Batticaloa. Palmirah jaggery is imported from Jaffna, and cocoanut and kitul jaggery, which are preferred, from Matale.

With the exceptions recorded in the next paragraph, the food supply has been abundant throughout the year. All the tanks filled during the north-east mousoon of 1901–1902, so that no lack of water stood in the way of cultivating the full extent of the fields anywhere. If less than this was cultivated, it was due either to laziness or to lack of sufficient men; in many villages the people own more land than they can cultivate for one harvest.

Throughout the Egoda pattuwa of Tamankaduwa, except Muttugalla and Tirukonamadu and a part of Mannampitiya, and in the villages of Dastota, Pudur, Onegama, Tambale, Sungavila, Palliyagodella, and a part of Kotawella in the Meda pattuwa, the paddy crops were most unfortunately damaged during the latter part of October, just as they were maturing, by heavy floods, which caused the Mahaweli-ganga to overflow its banks and submerged the fields. The people of the Egoda pattuwa are very poor, and would soon have been reduced to distress by this calamity had not relief been afforded them. Sixteen villages in that pattuwa were therefore allowed to cultivate chenas last season on payment of Re. 1 per acre as rent. In all some 100 acres were allotted, or an average of about 6 acres to each village. The people of the Meda pattuwa are better off, and have some surplus stores of food or money to help them to tide over a bad season. It is hoped that they will be able to cultivate their fields again by the end of February and to secure a crop by June, if they sow quick-growing paddy. If they succeed in this, no serious distress among them need be apprehended; if they fail, they too will probably require some chenas.

There is promise of good and abundant crops during the coming year, not only throughout Nuwarakalawiya, but in Tamankaduwa. The rainfall has been exceptionally heavy, and the tanks are full to overflowing almost without exception. The field cultivation now going on is more extensive, and has generally commenced earlier than has been the case in my previous experience of the Province. In Tamankaduwa, too, Minneriya tank is now full. This splendid reservoir, with its 4,500 acres of water and a head of 32 feet, will afford an inexhaustible supply to many villages.

A comparative statement of prices in 1901 and 1902 is annexed :—

Articles of Food.	1901. Value. Rs. c.	1902. Value. Rs. c.
Rice, per bushel (imported)	4 25 to 5 0	4 50 to 5 25
Rice, per bushel (country grown)	4 0 to 4 25	3 50 to 4 0
Paddy, per bushel	1 50 to 1 75	1 25 to 1 75
Kurahan, per bushel	1 0	1 0 to 1 25
Cow ghee, per measure	2 50	2 0
Buffalo ghee, per measure	1 50	1 50
Chillies, per pound	0 12	0 12
Salt, per measure	0 10	0 10
Cocoanuts, per 100	6 0	4 0 to 6 0
Cocoanut oil, per measure	0 50	0 50
Tobacco, per leaf	0 6	0 6
Honey, per measure	0 62	0 75
Onions, per pound	0 12	0 12
Maldive fish, per pound	0 37	0 37
Kerosine oil, per tin (4 gallons)	4 0 to 4 25	4 0
Paddy in Tamankaduwa	2 0	2 0
Kurahan in Tamankaduwa	1 50	1 50 to 2 0
Indian corn	1 50	1 50

The tendency of the price of imported rice is still to rise as the stranger population increases. Both home-grown rice and paddy have fallen slightly owing to their greater abundance, while kurahan has been produced in correspondingly small quantity and has become slightly dearer. In Tamankaduwa the prices of paddy, rice, and kurahan have been higher than in other parts of the Province.

III.—RAINFALL.

A comparative statement of the rainfall for the last ten years is annexed :—

Month.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.	1902.	Average for last Ten Years.

Total ...	39·85	46·10	59·79	69·54	59·77	67·54	47·91	48·83	47·84	80·71	56·79

It will be seen that the fall during the last three months of this year has been quite abnormal, having totalled 51·09 inches, or more than the average for the whole year of the previous nine years. The rains began with October, and were continuous throughout that month. In November they were not so incessant, but there were some heavy falls. They culminated on 9th December in a deluge of 5·70 inches, which, falling upon ground already thoroughly saturated and when all the tanks and streams were full, produced floods all over the Province.

Whether the floods were the most severe on record is a moot point. Perhaps they were exceeded by those of 1877, 1885, and 1887. Certainly more damage was done in the two latter years. The flood of 1877 is only a tradition ; I can find no record of it beyond the bare rainfall, which was 72·40 for the year and 49·60 for the last three months, both less than this year. In 1885 the iron girder bridge over the Kala-oya was swept away, some 2,000 cubes of earth were washed away from the Kalawewa works, and 168 tanks breached, chiefly in the western half of the Province. In 1887, 24 inches are recorded by Mr. Ievers to have fallen in one week in December, resulting in a "disastrous and unprecedented flood," which breached 180 village tanks.

This year the floods in Anuradhapura did less damage than might have been expected, though the Malwatu-oya rose high above its banks. The roads in and around the town were flooded in many places, and parts of some of them were washed away ; people were bathing under a small cascade formed by the water as it flowed over the Outer Circular road near its junction with the Matale road. There was no loss of life, but several people were rendered temporarily homeless. All, however, found shelter either with friends or in the Dharma Salawa.

Kalawewa rose 4 feet 4 inches above spill level, and the flood in the Kala-oya is said by the Assistant Railway Engineer to have exceeded all previous records. About 1,000 cubes of earthwork were washed away from the railway embankment on the northern side of the river. The iron girder bridge on the Puttalam road must have had a very narrow escape from the fate which actually befell it in 1885, though, when it was rebuilt after being swept away in that year it was placed several feet higher than it had been before. The watcher in charge of the Public Works Department bungalow

near the bridge told me that the water was within 1 foot 6 inches of the planking and rushing furiously through the girders. The whole bridge was "trembling and quivering," as he described it. Luckily no fallen tree came down on the flood, or the bridge could not have escaped destruction.

Nuwarawewa rose 6 feet 6 inches above spill level, and not only submerged the old line of the Matale road, as it always does when full, but went 3 feet over the deviation, which was made to keep the road clear of its waters.

Tissawewa rose 1 foot 4 inches above its spill, and had a depth of 18 feet 3 inches at the sluice.

Basawakulama rose 4 feet above its spill, with a depth of 18 feet 4 inches at the sluice. It nearly reached the road from the Post Office to the Archæological Commissioner's bungalow, and the top of the large rock in the middle of the tank was only just visible.

Slips occurred on Abhayagiriya, Jetawanarama, and Mihintale Dagabas. The first may ultimately prove serious, for it occurred at the north-western corner of the restored square tower, the western wall of which has already fallen. It will not be surprising if the northern wall, which has long been cracked, comes down with the next heavy rainfall. I understand that the Provincial Engineer considers the crack to have become larger.

Maha Kekirawa tank breached, submerging the North road and knocking down the wall of one boutique. A culvert was washed away and traffic was temporarily blocked, but was restored by the Public Works Department officers with commendable promptitude.

As recorded in the chapter on Irrigation, 64 village tanks breached. The village roads everywhere became impassable, and people who had business outside their villages, whether in the Gansabhawas or at the Kachcheri or elsewhere, for the most part had to postpone it.

IV.—IRRIGATION.

A.—*Village Tanks.*

1. *Nuwarakalawiya.*—There are 1,428 village tanks under supervision in Nuwarakalawiya. In 1901 there were 1,419; the remaining 9 have been added during the year. Of these 1,428 tanks, 580 are in Nuwaragam palata, 464 in Hurulu palata, and 384 in Kalagam palata. 825 are completed, or nearly so; 603 are in various stages of restoration. At the beginning of the year these tanks were in charge of one Chief Irrigation Inspector, one Inspector, and four Sub-Inspectors. The Chief Inspector had general charge of the whole district, the Inspector had the Kalawewa Yoda-ela and some 97 tanks to look after, and each of the Sub-Inspectors had the immediate supervision of an average of rather more than 332 tanks. This did not include minor Crown tanks being restored on permits, which are also in charge of the village tank staff, and will be referred to later.

Although a very large quantity of earthwork had been reported to have been done each year, it was found that the number of tanks completely restored did not increase to anything like the extent which might have been expected had the earthwork been properly applied. Many tanks had been under restoration for twenty-eight years or even more, and yet were not complete. Very few tanks, if systematically restored, should require more than ten years for full completion. No doubt this unsatisfactory state of things was due to trying to cover too much ground, and to entrusting each tank officer with a far larger number of tanks than he could look after properly. It was accordingly decided to concentrate the four Sub-Inspectors in one palata, and to make an effort to secure the final completion of all tanks in it which had been under restoration for ten years or upwards and were not yet complete. The Hurulu palata was selected for this purpose, chiefly for two reasons: (1) because there are no railway or large irrigation works going on there, and there is therefore no demand by Public Departments for village labour; and (2) because being more remote, the supervision there had been less effectual than in other palatas and the work of restoration was more behindhand. 285 out of the 464 tanks in the palata came under the class which was specially to be dealt with.

Resolutions were passed by the various Village Committees of the palata that the necessary additional earthwork should be performed, and in accordance therewith orders were published, as required by the village rules, specifying the dates on which work was to commence and the quantities to be performed. The bunds were also levelled and pegged out to the proper heights and slopes. These orders met, for a time, with determined opposition in many of the Sinhalese and in all the Moorish villages of Kalpe, Kunchuttu, and Mahapotana korales. This was due mainly to one agitator, who went from village to village inciting the people not to work, and promising to see them safe from any ill consequences. As it was found that the work did not start at the time ordered, and persuasion having but little effect, prosecutions were entered in the Gansabhawa. Some difficulty was experienced in securing the attendance of the accused, who in many cases disobeyed the summons served on them, but eventually the more prominent offenders were brought up on warrants and fined from Rs. 10 to Rs. 20 each. By this time the reply of Government to a memorial which had been presented against the order calling out labour, that the work must be performed, had been received and published. Then the villagers, particularly the Sinhalese, started work in earnest.

The struggle against the opposition had, however, taken time. It was not until late in July that real work began in the recalcitrant korales, though in the other parts of the palata it had been progressing steadily all along. The work, once started, was pushed on vigorously until the end of September. From the beginning of October heavy rains set in, filled up the tanks, and rendered all further earthwork for the year impossible. Yet, in the two months during which the people really exerted themselves, a very large quantity of work was accomplished, as will presently be shown. Had the season for earthwork been as favourable as in previous years in which the rains did not commence until November, there is no doubt that the object in view would have been nearly, if not quite, achieved. Considering the uphill task which the tank officers had to face and the early rains, their efforts cannot be regarded as wholly unsuccessful.

The work of restoration will be continued during 1903; it is not anticipated that any further formidable opposition will be met with. Many of the tanks are so far advanced towards completion that another year's moderate work will probably suffice, while others on which there was from the first a very large quantity to be done may require a second or even a third year.

It will readily be understood how beneficial this work is to the people. It will not only render their tanks safer from the danger of being breached and fitter to perform with regularity their function of irrigating the fields, but it will relieve the villagers once for all from the now annually recurring liability to perform earthwork and from the constant vexation of being prosecuted if they make

default. Last, but not least, it will strike at the root of the corruption and extortion which prevail so long as there is earthwork to be performed, and so long as a small gratification to the Vel-vidane, Wewa Lekama, or may be to the Sub-Inspector himself, will secure immunity from prosecution for non-performance, or at least such evidence as will mitigate the punishment. I have held many inquiries into cases of this sort, but have never yet succeeded in bringing home his guilt to the offender. Naturally, bribes are given in secret, and there is no acknowledgment. Yet the complainant invariably brings up a lot of witnesses prepared to depose that they were present, who invariably break down hopelessly under examination.

In conclusion of this branch of the subject, I quote a higher authority than my own, that of the late Mr. F. C. Fisher. My action has been largely modelled upon the example set by him. The following is an extract from a report made by him in 1901 on village tanks in the North-Western Province :—

> In the Kurunegala District the whole of the village tank staff was withdrawn from other divisions and concentrated in the Wanni hatpattu, where it was determined that a supreme effort should be made to complete the bunds of the village tanks to standard dimensions. For this purpose it was necessary to empty all the tanks immediately after the harvesting of the maha crop and to prevent the storage of water until sufficient material had been secured from the beds of the tanks for forming the slopes of the bunds. This order was strictly enforced, and the people were practically kept at work during eight months of the year. In many instances the landowners were obliged to do 70 cubes of earthwork per acre to complete their task. The enormous amount of work that had to be exacted only showed how dishonest the earthwork returns of previous years had been, and to what an extent the landowners had been permitted to evade their obligations by bribing the tank officers and headmen. The work of repair had been dragging on for twenty-two years, while there can be little doubt that the tanks might have been completed in half the time had the full amount of earthwork been annually exacted. The initial mistake was in spreading the tank staff over too large a space, rendering efficient supervision impossible and corruption and cheating in every form most difficult of detection. It is hardly possible to overstate the demoralization that ensued upon such a loose system of working; and, so long as it continued, there was no definite prospect of the village tank work ever being completed. No effective punishments were ever dealt out by the Village Tribunal for neglect of earthwork, and any default might be atoned for by securing the friendly certificate of the prosecuting tank officer or headman that the required work had been completed after the institution of the case. The system now adopted is very different and most effective. No prosecution is allowed to be withdrawn, and if the intervention of the Village Tribunal is called for the offender cannot escape punishment for neglecting to commence work at the proper time. If he subsequently commences or completes his task, this is taken as a mitigating circumstance, and he escapes with the minimum penalty of two rupees. A defaulter who persists in neglecting or unduly protracting work meets with heavier punishments each time he is brought up. The people now understand that the bribing of headmen and tank officers can no longer secure immunity from work, and the tank officers know that they must exact the full measure of earthwork to complete the bunds.

The quantity of earthwork performed during the year was 416,284 cubic yards, which at 25 cents a cubic yard represents a money value of Rs. 104,071. The corresponding quantity for 1901, a much more favourable year for earthwork, was 400,296 cubic yards, or 15,988 cubic yards less than in the year under review. Of the total quantity performed in 1902, 255,324 cubic yards were done on the bunds of the 285 tanks in Hurulu palata, which were taken up for special restoration, as described above. In other words, nearly two-thirds of the whole work turned out was contributed by the shareholders of 285 tanks, which represent but one-fifth of the total number of tanks under supervision.

The work in Nuwaragam palata was supervised by the Ratemahatmaya, and in Kalagam palata partly by the Irrigation Inspector, who also had the Kalawewa Yoda-ela in his charge, and partly by Mr. Chelladurai, a new Sub-Inspector, whom the Director of Irrigation sent up in July at my special request. The total quantity of earthwork done under the supervision of these three officers was 147,892 cubic yards.

I greatly regret to have to record that Mr. Chelladurai, who was a most promising officer, died in December from pneumonia.

Owing to the shorthandedness of the village tank staff the progress made in the issue, under the new conditions described in my last report, of permits to restore minor abandoned Crown tanks was not so rapid as I had hoped it might be. Before any permit can issue it is necessary that there should be one report from the Chief Irrigation Inspector as to the nature and capacity of the tank, the acreage which it will benefit, its connection with any other tank or system of tanks, the possibility of its submerging existing fields, and so on; and another report from the Ratemahatmaya as to the nature of the jungle upon the bed of the tank and upon the land under it, the claims (if any) to the land affected, and the names of all those willing and entitled to join in the restoration. It not unfrequently happens that there are two or more sets of rival applicants for the permit, whose conflicting interests either have to be reconciled or adjudicated upon after inquiry by the Government Agent. If the application passes the ordeal of these reports and is approved as a promising undertaking, a survey of the bund and a plan of it have to be made, with longitudinal and cross sections, showing its present condition and the quantity and nature of the work necessary for its restoration, in order to draw up the specification which the conditions require to be embodied in the permit.

It will be obvious that all these preliminaries involve a good deal of hard work in inspection, inquiry, surveying, and plotting, particularly in view of the long distances which have to be covered in this extensive Province. It was not to be expected that the limited tank staff, with their hands full, as they were, with the work of restoration of the village tanks in Hurulu palata, could devote much special attention to this work. After all, important as the restoration of abandoned Crown tanks is, that of the existing village tanks is even more so and must take the first place. As to what has been accomplished in this branch of the work, the Chief Irrigation Inspector reports:—

> Of the 212 permits issued to restore abandoned Crown villages in terms of the old Circular, 63 permits have already been cancelled either for neglect or for inability on the part

of the permit-holders to comply with the demand of a fixed minimum annual work for completing the work within a reasonable period. The restoration of tanks on three other permits has been stopped as interfering with the proposed Kahalla forest reserve. Of the remaining 146 permits, permits for three tanks have been re-issued under the new Government Circular.

Of the still remaining 143 permits in force, designs and specifications of 4 of them have already been submitted for re-issue. The requisite levels have already been taken for designs and specifications of 13 other tanks, and plans and sections are under preparation. Of the still remaining 126 permits, 69 should be cancelled for neglect. Action for the re-issue of the remaining 57 should now be taken, and will receive attention in 1903.

Besides, 51 new applications to restore Crown tanks as per the new Government Circular were received during 1902. Preliminary reports for 20 of these have already been made. Sections for designs and specifications for 4 of them have already been taken, and plans are under preparation. The rest are to receive attention in 1903. The delay in their disposal is due to the special work in Hurulu palata and the want of hands to take up the survey portion of the work.

What I have written is more than enough to show what a very large concern the tank system of this Province is and its enormous importance. So far as the indigenous population is concerned, it is, beyond comparison, their most vital interest. In order to its due development it was imperatively necessary that the irrigation staff should be materially strengthened. Accordingly representations were made by me with that object, and with the result, I am happy to say, that the staff has been nearly doubled. I must express my obligations to the Director of Irrigation for supporting my appeal, and to the Central Irrigation Board for recognizing the necessities of the case and sanctioning the additional appointments. A second Chief Irrigation Inspector has now been appointed, and the staff of Assistant Inspectors and Sub-Inspectors has been raised from five to seven. One of the Sub-Inspectors, Mr. Dabre, has been placed in special charge of the distribution of water under Kalawewa and the Yoda-ela under the title of Irrigation Superintendent, thus setting free one more officer for purely village tank work. The vacancy caused by Mr. Chelladurai's death has already been supplied. That caused by Mr. Dabre's appointment will be filled as soon as the Director of Irrigation has at his disposal an officer who can speak Sinhalese. I thus have, or shortly shall have, at my disposal two Chief Irrigation Inspectors, one Inspector, and six Sub-Inspectors. The Province has been divided into two as nearly as possible equal divisions, called respectively, for want of a better name, the northern and the southern, though north-eastern and south-western would perhaps describe them more accurately.

From the commencement of 1903 each division has been placed in charge of a Chief Irrigation Inspector, each of whom will have three Sub-Inspectors under him. The remaining officer—the Inspector—will be specially detailed for surveys of Crown tanks to be restored on permit. The year 1903 thus starts with much better prospects of progress than any previous year has had. I hope not only to continue the restoration of village tanks in Hurulu palata, but also to take up the same work in Kalagam palata. The Ratemahatmaya and the people of the latter palata are anxious to have their tanks finished off, and there appears to be no likelihood of any serious trouble in getting the work done. Good progress should also be made throughout the Province in the restoration of abandoned Crown tanks.

I should not omit to add that I have received valuable advice and assistance from the Director of Irrigation himself, and that the services of the Irrigation Engineers in the Province, a body of highly qualified men, whose special duty is the investigation and restoration of the larger works which are in charge of the Irrigation Department, have always been available in any matter requiring special professional skill.

There has been one instance—the village tank of Elapatwewa in Matombuwa korale—in which extra work done over and above the normal annual quantity has been rewarded by payment in land under section 14 of Government Circular No. 59 of 5th June, 1901. A provisional grant of 10 acres has been allowed. In another case—Karambewa in Ulagalla korale—a similar grant is under consideration.

The following communications between tanks have been opened up during the year :—

(*a*) Kuda Kekirawa in Kalagam korale with Maha Kekirawa in Maminiya korale.
(*b*) Palugaswewa with Marasin Hammillewa in Kiralowa korale.
(*c*) Andiyagala with Gambirigaswewa in Kiralowa korale.

The number of similar connections which might be made is very large, but it is almost impossible to give this important means of improving water supply the special attention which it deserves until the tank restoration, now being pushed forward, is more advanced. One must restrain one's impatience to see everything made perfect all at once.

A sum of Rs. 1,017 was expended out of the Tank Fine Fund and Rs. 36 out of the Yoda-ela Fine Fund on repairs and improvements. The Chief Irrigation Inspector states that he had made arrangements to spend a much larger amount, but that the early rains prevented it.

The masonry spill of Relapanawa tank in Kalpe korale, which was in a ruined condition, was pulled down and rebuilt under the supervision of Mr. Doxat, Irrigation Engineer. The same officer effected radical repairs to the masonry stop-wall sluice and spill of Muwa Etagama tank in Kadawat korale. The greater part of the old work was filled up and replaced partly by cement concrete and partly by masonry in cement. The construction of a new sluice at Maha Diwulwewa tank in Kadawat korale, to replace the old one which had collapsed, was commenced, but work was interrupted by the rains.

The culvert on the Mannar road at the 49th milepost constructed for the purpose of carrying water across the road to irrigable land on the other side of it and the repairs and improvements to Ipalogama bungalow were completed under the supervision of the Chief Irrigation Inspector. The votes for maintenance of village tank sluices, of Talawa-ela anicut, and of irrigation bungalows were expended. The building of stables and other additions to the irrigation bungalows at Ulukkulama, Kekirawa, and Ipalogama will be undertaken in 1903.

Proposals for repairs to the spill of Kokkabe tank in Mahapotana korale and for the improvement of the sluice of Tirappankadawala in Kalpe korale were submitted, and estimates have been called for.

Proposals for the rebuilding of the spill of Hiriwadunna tank and for repairs to the sluice of Palugaswewa, both in Matombuwa korale, and for a new spill for Kele Hammillewa in Kiralowa korale are under consideration. The questions of improving the spill of Mahamankadawala in Nuwaragam korale and of providing a spill for Ihala Kanhindigama in Uddiyankulama korale are receiving attention. The proposal for rebuilding the sluice of Galmaduwa tank in Eppawala korale, which was breached in 1901, was not approved by the Director of Irrigation, who has decided that a cement pipe sluice will suffice. These are only instances of many others of a similar nature which are constantly coming up for disposal.

The manufacture of cement concrete pipe sluices for village tanks was carried on in the factory at Anuradhapura under the supervision of the Chief Irrigation Inspector. There are in all 257 tanks to be sluiced. He reports that the manufacture will be completed in February. Sets of pipes and junction blocks for 128 out of the 257 tanks were transported on estimate No. 131 of 25th June, which provided for the transport of pipes for 148 tanks. The transport of the pipes for the remaining 20 tanks has been delayed owing to the heavy rains, which rendered cart traffic on village roads impossible. None of the pipe sluices so transported have yet been inserted owing to the same early rains, which filled the tanks. An estimate for the transport of the pipes for the remaining 109 tanks was sanctioned in November, but for the reasons already given no transport could then be effected. The pipe sluices for the whole 257 tanks will be transported and inserted during 1903.

Owing to the very heavy rains, more fully noticed in another section, no less than 64 village tanks breached. The breaches nearly all occurred during the first half of December. On the 9th of that month a fall of 5·70 inches was recorded in Anuradhapura, and was at least as heavy in most other parts of the Province. This, coming after a fall of 23 inches in October and 17 inches in November, when the ground was thoroughly saturated and the tanks were already full, had the effect of overtopping the bunds of many tanks, with a breach as the inevitable result. Forty-eight of the breaches are to be attributed to this cause. In some cases the catastrophe was accelerated by the breach of an upper tank. Thirty-two of these cases were tanks not fully restored; 11 were new tanks. In 10 other cases the villagers, seeing that their bunds must be overtopped, cut gaps at the "wana," or spill ends, to avert more serious damage to the central portions of the bunds. Six cases are attributed to leaks. One of the most serious—that of Maha Kekirawa, a large village tank—was due to this cause, rotten roots having been left buried in the bund. In almost all cases cofferdams have been put up across the breaches, and sufficient water for the coming harvest has been retained.

2. *Tamankaduwa.*—There were 52 village tanks and 6 small Crown tanks under restoration by the villagers during the year. The number of village tanks is the same as in 1901, but that of the Crown tanks is one less, one having been abandoned during the year. All are in a more or less advanced stage of efficiency, but none are yet fully restored. Forty-four of these are sluiced, and 3 of them have two sluices each. These tanks have been in charge of the Revenue Officer during the year, subject to the orders of the Government Agent. Earthwork is performed annually on all of them, and their bunds and spills are kept clear of jungle. The quantity of earthwork done during 1902 was 18,672 cubic yards, or 888 cubic yards more than in 1901. There is a default of 3,816 cubic yards, but the Revenue Officer expects that this will be made good. These tanks were all full at the end of the year. The prospects for next year's harvest are favourable. One tank breached; the water rose in one night and overtopped the bund.

B.—*The Larger Works.*

1. *Kalawewa and the Yoda-ela.*—The repairs and improvements to the Yoda-ela have, it is believed, made steady progress under Mr. Balfour, Irrigation Engineer, in spite of his having been considerably hampered by labour difficulties.

2. *Maha Iluppallama* is nearly completed, and is expected to be quite finished during the second quarter of 1903. Steps are being taken to get the irrigable lands under this tank surveyed for sale. The Ratemahatmaya informs me that there is likely to be a brisk demand for them on the part of the neighbouring villagers.

3. *Nachchaduwa and Maha Galkadawala.*—The surveys of these two storage tanks have been completed, and plans and estimates for their restoration have been framed. The works have been sanctioned by the Central Irrigation Board, but are believed to be under the consideration of Government. It is expected that Nachchaduwa at least will be taken up early in 1903.

4. *Minneriya.*—Mr. Gordon, Irrigation Engineer in charge of the works on this tank, has kindly supplied me with the following full report, dated 30th January, 1903:—

Main Channel.—The incomplete portions of the first 4 miles that were cut in 1901, together with the spillways and distribution gates and the iron girder bridge on the Habarana-Topawewa road across the channel, were finished off and the water allowed to run down to the 4th mile. The remaining 5 miles of the channel were also roughly cut throughout, and this portion is now in the course of being trimmed up and finished off. The masonry works on this section will be started immediately, and should be completed by the end of June; the earthworks will be finished in March.

High Level Sluice.—The sanction for this building was received in June, and preparations were immediately started. The existing crane was set up on the south side, and a new crane, made on the spot, was erected on the northern side of the sluice. The excavation of foundations was commenced on the 14th July, and the masonry on the 13th August. The work progressed vigorously up to 17 feet above sill on 31st December, when after continuous heavy rains it was flooded out on 5th January this year and the work suspended. The water is now subsiding, and work will be resumed in a few days, and will be finished by the end of April or beginning of May.

Spill Waters at 12th and 12¼ Miles.—These works were completed during the year, with the exception of a few finishing touches and the deviation of the roadway, which will be done as soon as the ground has dried sufficiently. The water rose to within 2 feet of the spill level, not high enough to spill owing to both sluices being kept open. These will, however, be closed, except when water is required for the works or cultivation, as soon as the high level sluice rises above spill level (4 feet 6 inches), the present depth of water being 29 feet at the low level sluice. The bungalow for the Minneriya Guardian was built near my

office and completed within the year. Permanent cooly lines are now being erected, one set of two rooms near the Guardian's bungalow, one set of two rooms at the 3rd mile, and another at 6th mile. Two upkeep coolies have been engaged from 1st January to keep the channel and bund in order, and others will be employed when the 3rd and 6th mile lines are ready.

Labour Force.—About 300 men have been steadily employed throughout the year (mostly Batticaloa Moors). When the heavy rains set in these were paid off, but they have now all returned to work. The health of the workmen has been more satisfactory than in 1901, and there was very little sickness among them. Mr. Byrde and I have, however, suffered a good deal with repeated attacks of malarial fever throughout the year, and I had to go on sick leave from 20th October to 5th November.

This splendid reservoir has an area of more than 4,500 acres, and a depth at the low level sluice of 32 feet. The extent of the land which will be irrigable under the main channel is estimated not to be less than 11,000 acres. It is said to be exceptionally fertile. The whole of it is Crown forest. The Conservator of Forests has been requested to have it examined and a report made upon the timber on it. Steps are being taken to have a portion of this land surveyed during 1903 for sale.

In addition to the main channel the Minneriya-oya issues from the tank. At intervals along it temporary dams are annually constructed by the villagers, from which they irrigate some 400 acres or more. If permanent anicuts were constructed at the most commanding spots along the river, several thousand acres of Crown land could be irrigated from them.

5. *Giritale.*—The sluice of this tank is still blocked, but the Director of Irrigation is doing all that can be done to re-open it. As stated in my last report, this is no easy matter, and may involve considerable expenditure, unless one or other of the various more or less experimental methods which are to be tried proves successful.

6. *Survey of Maha Kanadarawa and connected Irrigation Systems.*—Until the end of August Mr. Hilton, Irrigation Engineer, was in charge of this duty, but he resigned owing to ill-health. He has been succeeded by Mr. Doxat, to whom I am indebted for the following interesting notes :—

The main part of the time of the Irrigation Engineer stationed at Mihintale has been occupied during the year by the survey of Maha Kanadarawa tank. This tank is an exceptionally fine one, with a bank 2 miles in length and 55 feet high at the breach. The westerly end of the tank meets the bund of the Waduwewa tank, which in its turn joins the Puwaresankulama tank. The whole system is a continuous one, the bunds forming a crescent in an easterly and then north-easterly direction of no less than 4 miles long. The survey of the bund has been completed, but the contours of the tank, owing to the exceptionally wet weather during November, since October are still in hand. The area of the tank will, I think, be over 5,000 acres. Distinct traces of a Yoda-ela, reputed to lead back to Eruwewa, a large but ruined tank on the Malwatu-oya, have been discovered, and the channel will be traced out as soon as surveyors are at liberty. The survey is to be completed during the first quarter of the coming year.

V.—THE RAILWAY.

By the courtesy of the Chief Assistant Railway Engineer I am enabled to give the following *resumé* of work done on the Northern Railway during 1902 :—

Earthwork, 153,000 cubic yards ; clearing land, 18½ miles. Three bridges and twenty-two culverts have been constructed, and others are in progress.

The station buildings at Talawa and Anuradhapura have been completed, and the foundations of the station building at Madawachchiya have been put in. Three residences at Anuradhapura station have also been nearly completed, and four blocks of cooly lines are half completed. The goods shed and platform at Anuradhapura have also been completed.

Mr. D. A. Ross, Assistant Railway Engineer, Maho, who is in charge of a small section of the Railway in this Province from the Kala-oya on the southern boundary northwards, writes :—

Your men (*i.e.*, the villagers) practically completed 1 mile 20 chains of earthwork north of the Kala-oya during 1902, filling 17,144 cubic yards into banks and excavating 3,377 cubic yards in cuttings, a total of 20,521 cubic yards.....Your men work well and earn as much as Re. 1 a day.

Considering that many of the villagers had to travel long distances to the work, this result is I think very creditable, both to them and to the Ratemahatmaya and headmen who have induced them to work.

VI.—WORKS MOST REQUIRED.

The following, exclusive of irrigation works, are the works most required :—

(1) *Roads.*

The three following are included in this section, because, although the estimates for them have been sanctioned, there seems little prospect of carrying them out within a reasonable period, still less of having them completed, as properly speaking they should be, simultaneously with the railway, unless means are found to strengthen the labour force at the command of the Public Works Department in this Province. Until that is done the first and second of these at least will remain for some time after the railway has been opened in the category under which they are now placed :—

(*a*) *Approach Road to Anuradhapura Railway Station.*—This work was commenced some time ago, but progress has been very slow. I think I am well within the mark when I say that the labour force employed upon it does not reach one-fifth of the strength necessary to complete it in time.

(*b*) *The Kekirawa-Talawa Road.*—This is an important feeder to the railway, 22 miles in length. It is at present only a gravelled road, much of it very low-lying. It quickly becomes almost impassable in wet weather. In its present state it would become quite impassable in a week if it were called upon to carry any considerable amount of traffic such as the railway may be expected to throw upon it. Practically nothing beyond mere upkeep has yet been done to it for want of labour.

(*c*) *Strip Metalling of the Mannar Road from its Junction with the North Road to the Madawachchiya Railway Station.*—This, too, is a gravelled road, and unfit to carry much heavy traffic at any time. In wet weather loaded double-bullock carts would soon cut it up.

The estimates for the following works have not yet been sanctioned, but the works are all of importance :—

(*d*) *The Improvement of the Road from Anuradhapura through Mihintale to Trincomalee.*—When the Northern Railway is opened, and until Trincomalee is connected by rail with some point not yet decided, the mails to and from Trincomalee will, it is presumed, be carred over this road. For this purpose, and to meet the additional traffic which the railway will throw upon it, the road must be improved. The question is, To what extent? I understand that the Director of Public Works is in favour of converting it into a first class metalled road, but I am inclined to deprecate so large an outlay. The future main line of communication between Trincomalee and Colombo may take an altogether different route, in which event a first class road between Anuradhapura and Trincomalee would be a superfluous luxury. It would, I think, be wiser to content ourselves for the present with a more modest style of road, say, one of the class of the North road. So far as local requirements are concerned, this is all that is necessary.

(*e*) *Extension of the Road from Topawewa through Tamankaduwa to the Batticaloa District.*—I have for some time past urged that the survey of this road should be undertaken as a preliminary to its construction when funds are available. The estimated cost of the survey is only Rs. 4,250. This road would be of immense benefit to Tamankaduwa, especially now that the Minneriya works are nearly completed. Some 10,000 acres of Crown land, perhaps more, will shortly become irrigable under that tank; an easy outlet to the Batticaloa District would greatly facilitate the development of this valuable Government property.

(2) *Bridges.*

(*a*) *New Bridges on the Horowapotana-Vavuniya Road.*—The sum necessary to complete the bridges on this road and make it passable at all times of the year has yet to be voted.

(*b*) *The conversion of the Kanugahawewa Bridge on the Central Road into an Iron one.*—The estimate for this is Rs. 9,100. The upkeep of the present wooden bridge costs nearly Rs. 1,500 a year, so that the cost of an iron one would be saved in six or seven years.

(*c*) *Bridges and Culverts on Village Roads.*—The Government last year voted Rs. 3,000 for this purpose, with the object of assisting the villagers who have opened village roads in the building of bridges and culverts, which they cannot build for themselves. The grant has been repeated for 1903, and if it be continued from year to year in nine or ten years all the village roads in the Province should be rendered passable in all weathers. I regret to have to state that during 1902 only Rs. 532·58 out of the vote was expended. The Superintendent of Minor Roads, in whose charge the work was placed, and who I feel sure did his best to show better results, reports as follows :—

> Under the Government vote of Rs. 3,000 only the foundation and a portion of the abutments were built of the bridge at the junction of the Kendewa-Rambewa pinpara with the North road. A deviation road was made, and all timber for platform, &c., of the bridge was purchased. Great difficulty is experienced in obtaining labour owing to the great demand on the Northern Railway. Progress at the building of the bridge was greatly retarded by the continuous heavy rains during the latter part of the year.

(3) *Buildings.*

(*a*) *Police Station and Barracks, Anuradhapura.*—This work is urgently needed. The police are at present housed in an inadequate and unsuitable private building, but the only one available, for which Rs. 40 a month is paid, and from which they are liable to be ejected at any time. Plans and estimates for a proper building have been submitted, and an excellent central site has been set apart for it.

(*b*) (1) *Quarters for the Kachcheri Recordkeeper;* (2) *Quarters for the Court Recordkeeper.*—These officers at present depend on their friends for house room. Quarters should be provided for them, as for all other Government officers. Private houses are not to be obtained for love or money.

(*c*) *Good Floors in all Houses occupied by Government Servants in Anuradhapura.*—Some of the officers' quarters have only mud floors. These become damp in the wet season, always unhealthy enough without this additional source of insalubrity. During November and December the despatch of public business is often seriously impeded by the number of officers either on the sick list or more or less unfit for work. So obvious a means of increasing their efficiency should not be neglected.

(*d*) *Quarters for Jail Officers.*—The present building is in so bad a state of repair as not to be worth any considerable expenditure on its improvement. It would be better, and in the long run cheaper, to build new quarters.

(*e*) *Two Resthouses on the Habarana-Topawewa Road, one at Minneriya, the other at Topawewa.*—As was pointed out in my last report, this road is every year becoming more frequented by visitors to the ruins at Polonnaruwa and by other travellers, for whom there is no accommodation at present. I have good reason to believe that the Irrigation Engineer at Minneriya and the Revenue Officer at Topawewa sometimes feel themselves constrained, at considerable personal inconvenience, to offer hospitality to strangers, who would otherwise fare badly.

(4) *Miscellaneous.*

(*a*) *Water Supply for the Anuradhapura Town.*—This is under consideration. The Director of Public Works has prepared preliminary plans and a rough estimate. It had been arranged that Mr. R. W. Smith should report upon the question, but whether he will do so now or not is not known.

(*b*) *Cement Concrete Drains for Roadside Bazaars.*—These drains have been built along some of the roads in Anuradhapura and in the bazaars of Tirappana, Madatugama, and Madawachchiya. Rs. 2,480 were allowed in 1902 for similar work at Rambewa, but very little was done for want of labour. Habarana, Irambakkulama, Kahatagasdigiliya, Maradankadawala, Nochchiyagama, and Talawa also remain to be done. An extension of the drains along the Puttalam-Trincomalee road in Anuradhapura for about 1,000 feet and a drain for the market street along the Kurunegala road are also very desirable.

(*c*) *Substantial Fences round all Government Buildings in Anuradhapura.*—The present fences are most untidy and quite inefficient. Trespassing cattle overrun the compounds, so that it is next to impossible to keep the premises tidy, while any attempt to make them ornamental is greatly discouraged. Clerks on small salaries cannot be expected to bear the expense of putting up good fences, but were such once provided, they might fairly be made responsible for keeping them and the ground which they would enclose in good order.

VII.—PLANS FOR THE IMPROVEMENT OF THE PROVINCE.

Under this head I repeat my remarks of last year :—

The particular and immediate plans which I have in view for the improvement of the Province are indicated in other sections of this report. The general lines on which it must advance and the results already achieved were outlined in my report for last year and need not be repeated. I cannot, however, refrain from quoting from Mr. Ievers's Administration Report for 1888 :—

> A close, personal, and continuous observation of over three years convinces me that the policy of tank and channel restoration begun by Sir William Gregory and Sir J. F. Dickson, and successfully followed up by the present Government, has gone greatly not only to relieve distress and misery, but to prevent this Province from appearing a blank waste on the map. That it was speedily destined to become, had not these measures been taken before it was too late. It has been said that it would have been less costly to have deported the population to a more healthy district. Those who say so little know the Sinhalese villager, who would die rather than leave his ancestral lands. If owing to our neglect of this Province for fifty years the villager has sunk into disease and misery, the reply of Government can hardly be, "If he will not go, let him die."
>
> Government has now honestly retrieved past neglect by a large expenditure of money, and all that is required is time. A review of what has been accomplished in the past fifteen years shows great progress in improvement, and if the administration proceed on the same lines the future prosperity of the Province is assured.

This prophecy has already in great measure come true, but, as Mr. Ievers foresaw, time is necessary for its perfect fulfilment. The great system of irrigation works with which the Province is intersected is now being systematically examined, and will be as far as possible restored. Side by side with this the railway will bring new settlers, and will create new wants and incentives to the villager to improve his moral and material condition.

Though we, whose service is more than half run out, may not be here to see it, the time will come when this Province will once more take its place among the most flourishing districts of the Island.

VIII.—SANITARY CONDITION OF THE PEOPLE.

The Province has been free from smallpox, cholera, and all other severe epidemics. The health of the people was normal, save during the first quarter of the year, when the death-rate was very high. In my report for 1901 I stated that the heavy rains experienced during the last two months of that year had been prejudicial to the general health. The same cause appears to have continued in operation during the first three months of 1902.

Measles occurred during nine months of the year in Nuwaragam palata and during six months in Hurulu palata, but was nowhere reported to be severe. Kalagam palata and Tamankaduwa were free from it. Dysentery cases, but not in large numbers, were treated at most of the hospitals and dispensaries.

There are two hospitals in the Province, one at Anuradhapura, the other at Mihintale, each with an outdoor dispensary attached to it; ten other main dispensaries, each in charge of an apothecary; and twenty-six other dispensaries, to which the apothecaries in charge of the main dispensaries itinerate. The numbers are the same as in 1901, with the addition of one itinerating dispensary at Mutugalla in the Egoda pattuwa. These dispensaries are freely resorted to by the people. An average of 2,263 visits was paid by patients to each of them during the year, an increase of 209 visits to each, as compared with 1901. This shows their popularity, but it also confirms the conclusion arrived at in paragraph 1 of this section that an unusual amount of sickness prevailed, at least during the first quarter.

The most frequented dispensaries were those at Anuradhapura, Mihintale, Maradankadawala, Kekirawa, and Nochchiyagama. They serve the most populous parts of the Province. The least frequented were those at Ranorewa, Ottappuwa, and Galkulam.

In my last report I stated that I wished to see three more apothecaries allotted to the Province. None of them have been appointed yet, but I hope that the long-desired apothecary for the Egoda pattuwa of Tamankaduwa will not much longer be delayed.

The sanitation of all villages has been steadily kept in view. The constant burning or burial of all rubbish, the whitewashing of houses, and the village rule requiring that a belt at least 30 fathoms wide round each hamlet shall be kept free from jungle, have been enforced. The Ratemahatmayas and the Revenue Officer report that a great deal has been done in filling or draining stagnant hollows and pools near the hamlets. His Excellency the Lieutenant-Governor inspected some of the villages when he visited the Province in September, and was, I believe, favourably impressed with their cleanliness and airiness.

On the subject of water supply there is little to add to what was stated in my report for last year. The people of Tamankaduwa have, as a rule, an excellent supply. They have the river (the Mahaweli-ganga) and the "villus," and the large reservoirs have not been so ruined as in Nuwarakalawiya. In Nuwarakalawiya the water supply is generally good during nine months of the year, but for the last three months of the dry season, before the break of the north-east monsoon, when the village tanks are low or have dried up, it is distinctly bad. A vast improvement has of course been effected, since the days when the late Sir J. F. Dickson first took the Province in hand, by the restoration of so many village tanks, and matters will still further improve with every development of the irrigation system of the Province.

There is a plague camp site at every important centre in the Province. These have all been kept clear of jungle. It has not been found advisable to keep stocks of building and roofing materials always on hand, as they soon rot or get eaten by white ants, with constantly recurring expense of renewal. Were a case of plague to occur at any time, a small shed could be run up in a day, and buildings of the full size within a week.

The inspection of bazaars by the officers of the Civil Medical Department, kindly permitted by the Principal Civil Medical Officer, has continued to work well. Periodical reports of the state of each bazaar are received, and any defects which they disclose are remedied.

The Local Board of Anuradhapura has given much attention to the proper scavenging and sanitation of the town, a very large percentage of its limited funds having been devoted to this object. As its income increases more will be done, for there is still much, especially in the direction of the drainage or filling of stagnant hollows, which cannot be attempted for lack of funds.

The members of the Board were the Government Agent as Chairman; the Provincial Engineer; the Assistant Colonial Surgeon; Mr. S. Sampander, Crown Proctor; Mr. Krisnaratna, Proctor; and Mr. S. M. Kader Meedin. The Crown Proctor is a Hindu, Mr. Krisnaratna a Sinhalese, and Mr. Kader Meedin a Moorman, so that all classes are represented.

A statement of the revenue and expenditure of the Board is annexed :—

REVENUE.	Amount. Rs. c.	EXPENDITURE.	Amount. Rs. c.
Balance on December 31, 1901 ...	3,088 81	Establishment	1,364 0
Taxes	4,240 17	Office contingencies	206 84
Licenses	1,679 50	Revenue service	472 76
Fines	253 87	Police charges	51 0
Rent	3,698 56	Sanitary charges	4,504 39
Sundries	1,130 88	Public works	1,113 0
		Lighting	259 43
		Miscellaneous	2,896 10
		Petty expenses	146 38
		Balance	3,077 89
	14,091 79		14,091 79

Stringent precautions were taken both before and after each pilgrimage. It is calculated that during the July festival at least 15,000 pilgrims were collected in the town at one time, but there was no outbreak of sickness.

The whitewashing of all houses in the town has been strictly insisted upon, and special attention has been paid to the cleanliness of the market, and of the bakeries, and to the keeping open of drains.

IX.—BIRTHS, DEATHS, AND MARRIAGES.

The following table of births, deaths, and marriages shows the totals registered during the last four years, with details regarding births, deaths, and Kandyan marriages for each quarter of 1902 :—

Year.	Births.	Deaths.	General Marriages.	Kandyan Marriages.	Mahommedan Marriages.
1899 ...	2,904	3,608	39	538	4
1900 ...	3,171	2,901	95	796	5
1901 ...	3,797	3,041	76	1,330	2
1902 ...	3,028	3,396	44	554	—

1902.	Births.	Deaths.	Kandyan Marriages.
First Quarter	959	1,236	177
Second Quarter	658	784	148
Third Quarter	759	652	132
Fourth Quarter	652	724	97
	3,028	3,396	554

The births registered during 1902 have been less than those of 1901 by 769, and the deaths have exceeded those of 1901 by 355. The deaths in 1902 have exceeded births by 368. These figures show that the last year has been a more unhealthy one than any year since 1899. This applies, however, mainly to the first quarter of the year, during which 36·4 per cent. of the deaths of the whole year occurred. As was stated in my report for 1901, fever was more than usually severe at the end of that year, owing to the rains then experienced. The same cause continued in operation during the first quarter of this year.

The number of Kandyan unions registered is very much less than in 1901. This is not due to slackness of supervision, for the Ratemahatmayas are systematically reminded of the matter, but to the fact that the arrears have been practically wiped out. In the middle of 1900 there were 1,731 unregistered unions in the Province. At the end of 1902 this number had been reduced to 257. The number of unions formed since June, 1900, and now remaining unregistered cannot be very large. Indeed, the Ratemahatmayas declare that the unregistered unions in their palatas are very few.

There were nine applications for divorce pending at the beginning of the year, and 86 were received during the year. In 41 of these the application came from the husband, in 16 from the wife, and in 29 from both parties jointly. Divorces were granted in 45 cases, 21 applications were dismissed, 6 were withdrawn, and 23 remained pending at the end of the year. The heavy floods during November and December, when all the rivers and streams were overflowing and all the village and minor roads were impassable, prevented many parties from appearing before me, and account for the comparatively large number of pending cases.

X.—THE VILLAGE COMMUNITIES' ORDINANCE, NO. 24 OF 1889, AND THE IRRIGATION ORDINANCE, NO. 23 OF 1889.

The Village Communities' Ordinance, No. 24 of 1889, is in force throughout the Province. There are four Presidents of Village Tribunals, one for each chief headman's division: Nuwaragam palata, Hurulu palata, Kalagam palata, and Tamankaduwa. The President of Nuwaragam palata holds court at Ulukkulama and Rambewa; the President of Hurulu palata at Welimapotana, Ilukwewa, and Yakalla; the President of Kalagam palata at Kalawewa and Kekirawa; and the President of Tamankaduwa at Moragaswewa, Topawewa, and Mannampitiya. All these Village Tribunals, save

Hurulu palata, were inspected by me during the year. I had intended to inspect the Hurulu palata Village Tribunal in November, but was prevented by the rains. On one occasion, when I had arranged to start for Welimapotana, I received a message from the President that he was blocked by a flooded river and could not get there.

I am well satisfied on the whole with the way in which the work is done in these courts, though I observe a tendency on the part of the Presidents to leave too much to their clerks. I have had to find fault, too, on more than one occasion with the President of Nuwaragam palata for being too ready to jump at excuses for striking off cases instead of giving them a patient hearing.

Two statements are annexed, one showing the number of criminal and civil cases instituted and disposed of in each Gansabhawa, the other showing the different classes of offences, the manner of their disposal, and the fines inflicted :—

Return showing the Number of Criminal and Civil Cases instituted, decided, and appealed under the Village Communities' Ordinance in the North-Central Province for the Year 1902.

Average fine per person	1 43	0 86	1 66	0 63	1 14

It will be seen that institutions in these courts during the year amounted to 1,389 civil and 3,433 criminal cases. This is a considerable decrease from last year in civil cases and a slight increase in criminal cases. Inclusive of the previous year's balance, 1,335 civil cases and 2,984 criminal cases were disposed of, leaving a balance of 76 civil cases and 532 criminal cases pending on 31st December, 1902. These comparatively large balances are due to the floods which occurred during the last quarter of the year, especially in December. The business of the courts was much impeded by the inability of the parties to attend for the hearing of their cases. This was particularly the case in Kalagam palata Village Tribunal, in which there are the largest number of cases pending at the end of the year. The December session at Kalawewa was practically a blank one, the Kala-oya being in flood during the whole time and quite impassable.

There were 78 appeals in civil cases and 81 in criminal cases to the Government Agent. The Presidents' judgments were affirmed in 55 civil and 66 criminal cases. The rest were either set aside or the cases were sent back for further hearing; very frequently the latter. There were 10 appeals to the Governor in Executive Council against the Government Agent's decisions. One, a civil case, was reversed. There were no outstanding fines at the end of the year.

About 55 per cent. of the criminal cases instituted were for breach of Gansabhawa or Irrigation rules, chiefly default in performing earthwork on tanks, neglect to clear village roads, to keep hamlets in a sanitary condition, &c. The comparatively large number of cases under head "Breach of Village Communities' Rules" in the Hurulu palata Gansabhawa is accounted for by the prosecutions, referred to in the chapter on "Irrigation," for default of commencing earthwork at the proper time. When the offenders in these cases were fined, they were told that if they made up for lost time and worked hard during the remainder of the year the fines would be remitted.

Comparatively few cases for offences criminal in themselves, as opposed to constructive offences, were instituted: *e.g.*, the total number of petty thefts for the whole Province during the year was only 41. Of these, 7 resulted in acquittal, 32 were amicably settled, and only 2 resulted in conviction. The strong presumption is that nearly all the other 39 charges of theft were not theft at all, but merely cases of disputed ownership of property.

There has been only one change of Presidents during the year, T. B. Relapanawa having been transferred from the Ratemahatmayaship of the Sinhalese division of the Vavuniya District to Kalagam palata, in succession to K. Rajakaruna, retired on attaining the age of sixty years. Mr. Relapanawa has proved himself a painstaking President, and his judgments are always sensible.

The Irrigation Ordinance, No. 23 of 1889, is also in force throughout the Province. All matters connected with paddy cultivation—the times of commencing to plough and sow, the extents to be cultivated, the fencing and watching of the fields, &c.—are regulated by the rules passed under its provisions. Breaches of the rules are generally tried by the Presidents of the Village Tribunals, though the Ratemahatmayas hold deputations from the Government Agent under chapter VI., and occasionally deal with complaints. As was stated in my last report, however, they do not make enough use of their powers. Every irrigation case without exception, whether it results in a conviction or not, and whether an appeal is lodged or not, is referred to the Government Agent for his approval and confirmation of the proceedings.

XI.—EDUCATION.

There are 14 Government vernacular schools in the Province. The following list gives their names, the average numbers on the lists of each, and the average attendances during 1901 and 1902 :—

Name of School.	1901. No. of Boys in the List.	1901. Average for the year.	1902. No. of Boys in the List.	1902. Average for the year.
Nuwaragam Palata.				
Tammannewa ...	125·09	74·50	130·40	76·41
Kendewa ...	203·77	119·71	177·20	98·13
Tammuttegama ...	78·36	61·57	87·18	68·88
Gale Diwulwewa ...	90·09	50 82	117·77	57·26
Maha Diwulwewa ...	111·90	42·61	86·20	41·40
Hurulu Palata.				
Manankattiya ...	80·63	53·09	96·50	55·13
Kebitigollewa ...	151·81	95·88	168·00	105·31
Palugaswewa ...	56·70	27·94	67·27	40·85
Ratmalagahawewa ...	150·90	110·71	150·45	107·11
Kahatagasdigiliya ...	113·11	60·93	106·00	58·37
Kalagam Palata.				
Maradankadawala ...	97·70	49·46	94·63	47·48
Maha Elagomuwa ...	63·12	30·51	86·22	41·64
Unduruwa Hammillewa (Galkiriyagama) ...	82·50	59·24	88·10	61·00
Tamankaduwa District.				
Moragaswewa ...	51·66	35·51	68·09	42·58
	1,457·34	872·48	1,524·01	901·61

The number of boys on the lists has increased during the year from 1,457 to 1,524, or an average for each school of 109, compared with 104 for the previous year; and the average daily attendance has increased from 62·32 in 1901 to 64·40 per school. The percentage the average daily attendance bears to the number of boys on the lists is 59. There has been an all-round improvement from 1900 to 1901 and from 1901 to 1902, but my remarks in previous reports as to the difficulty of maintaining attendance at a satisfactory proportion of the numbers of children of school-going age on the lists still hold good.

Ratmalagahawewa, Kebitigollewa, Kendewa, and Tammannewa still continue to be the best schools in the Province, in the matter both of attendance and of the instruction imparted. Kendewa, however, has yielded to Ratmalagahawewa the position of the largest school. The reason for the falling off in the numbers on the Kendewa lists is that the boys of several villages which used to attend it now go to Ratmalagahawewa as being nearer. Ratmalagahawewa has not increased in proportion because some villages beyond the 4-mile radius were exempted from attendance.

The schools which show the most marked improvement in attendance during the year are :—

Tammuttegama ...	From 61·57 in 1901 to 68·88		Palugaswewa ...	From 27·94 in 1901 to 40·85	
Gale Diwulwewa...	do. 50·82	do. 57·26	Maha Elagomuwa...	do. 30·51	do. 41 64
Kebitigollewa ...	do. 95·88	do. 105·31	Moragaswewa ...	do. 35·51	do. 42·58

A new school was opened during the year at Kapugollewa in Hurulu palata. The school at Unduruwa Hammillewa was transferred to Galkiriyagama.

There are, besides, 7 Church Missionary Society schools, with an average daily attendance at each school of 24 out of 50 on the roll; 5 Roman Catholic schools, with an average of 38 out of 58; and 2 Buddhist schools, with an average of 40 out of 87. Two of the Roman Catholic schools, one of the Church Missionary Society schools, and one of the Buddhist schools are in Anuradhapura. One of these Roman Catholic schools is an English school, the other a girls' vernacular school. The Buddhist school is Anglo-vernacular. There is also a Roman Catholic Orphanage in Anuradhapura with 21 inmates. There are five Sisters in charge. There are 124 pansala schools with 375 boys attending them, and 12 Mahommedan schools with 84 boys.

The following is the Revenue Officer's report on the Tamankaduwa schools :—

> The total number of the schools is 20. There are 6 schools in Egoda pattuwa, 9 in Meda pattuwa, and 5 in Sinhala pattuwa. Out of these, Tamil is taught in 14 schools, Sinhalese in 5, and Tamil and Sinhalese in 1. The total number of scholars is 712, of whom 548 are boys and 164 are girls. In 1901 there were 497 boys and 147 girls. In some of these schools the fourth standard has been reached. The teachers are paid at the rate of 25 cents per head per mensem of the children educated, except the teacher of Topawewa, who is given a monthly salary of Rs. 25, as he has to do a good deal of travelling as inspector of other schools, and this expenditure is met out of Gansabhawa funds and the Government grant of Rs. 1,000. School buildings have been put up by the villagers in all villages in which there are schools. A portion of the Government grant has been spent in procuring a desk and a bench for each of the schools, as the children experienced difficulty in sitting on the ground and writing their copy books. Four new schools that were in contemplation of being established could not have been opened for want of teachers.

Summing up the figures for 1902, the following results are obtained :—1,524 children attend Government schools; 816 children denominational schools; 712 children Gansabhawa schools; 459 children pansala and Mahommedan schools; total 3,511. Of these, 3,238 are boys and 273 are girls, an increase of 34 boys and 70 girls compared with 1901.

The Director of Public Instruction visited the Province in August, when I had a conference with him and Mr. Seneviratna, Inspector of Schools, regarding the scheme of the latter for establishing central training schools. The idea is to make one school out of four or five schools within convenient distances of the centre a sort of training school. An exceptionally efficient teacher would be placed at each central school. It would be his duty to keep himself informed of whatever is going on at each of his dependent schools, and to have the teachers of the latter up at intervals for short periods

of training at the central school. It is hoped to secure by this means not only uniformity of method in teaching, but more scientific and therefore more efficient instruction. So far as I know, this scheme has not yet taken practical shape.

A scheme for school gardens has also been started. Mr. Drieberg has visited several schools in the Province, and has selected those which promise best to make a beginning with. He has asked for larger extents of ground to be attached to the selected schools, a request with which I have been glad to comply.

A school treat was held at Rambewa on 7th October, the first function of the kind held in the Province. The following account of it is by Mr. Plant, to whom and to the Ratemahatmaya and Kachcheri Muhandiram the whole credit of its success is due :—

> A school treat was held at Rambewa on the 7th October. This had been considered the best way of giving the children of the Province an opportunity of celebrating the Coronation of His Majesty King Edward VII. Unfortunately, owing to the straggling character of the North-Central Province, it was impossible to chose any place to which all the schools could conveniently come. Rambewa was finally decided upon as being the most central point of the most populated district—that round Anuradhapura itself. Invitations were sent out some weeks before, and were accepted by the teachers of six schools, namely, Maha Diwulwewa, Kahatagasdigiliya, Tammannewa, Ratmalagahawewa, Kendewa, and Kebitigollewa. The Ratemahatmaya of Nuwaragam palata was instructed to make the necessary arrangements, and when I arrived at Rambewa on Sunday, the 5th, all was in order to receive the 364 boys who were expected. Two long sheds, substantially built and excellently thatched, had been erected along the two sides of the village green. In the centre was a "stand" for European visitors from Anuradhapura. There was an ample "ring" round this "stand" for sports and races.
>
> The children began to arrive under the charge of their teachers on the evening of Monday, and by 4 A.M. on Tuesday morning about 250 were assembled. By 8 A.M. the last of the 364 had arrived, the total number being exactly what had been expected four weeks before. An excellent open air kitchen had been erected by the Ratemahatmaya, and here early tea was made for the children : cakes, plantains, and tea were served out to them, and they evidently enjoyed it all, the provisions being plentiful, and the serving wonderfully expeditious; there was "no waiting."
>
> On the arrival of the Government Agent an inspection was held, and then the schools were led out, one by one, and drawn up before the "stand," where they were put through their drill by their teachers, and then through their recitation. The drill was very pleasing, and all the schools made a good show, but there was no doubt that the best form was shown by Kendewa and Kahatagasdigiliya. The latter were very well together and smart in all they did, and their exercises were very effective. The children seemed to enter into them with great gusto. The Kendewa boys were equally good in their way, but their numbers were greater, and one could understand that they could scarcely be so smart. What was chiefly striking was the vigour and evident appreciation of the children themselves, and the clear signs in all cases of careful teaching.
>
> By this time there were in the "stand," besides the Government Agent and Mrs. Booth, Mr. and Mrs. Robertson, Mr. MacBride, and Mr. Plant, and the recitation was heard. Each school recited the Coronation ode sent by the Director of Public Instruction. The number of singers varied, however. In Ratmalagahawewa "choir" there were 30 boys, who sang heartily and knew their piece well, and no doubt their "harmonies" and execution were very good, though an English ear can scarcely judge fairly of Sinhalese music. Kebitigollewa had a choir of 25, but they were not very well together, though they knew the ode well. Kahatagahadigiliya had only a choir of 4. But in all cases the singing went well, was the choir large or small, and all the singers knew their piece and seemed to enjoy singing it. The teachers had evidently taken great pains.
>
> The morning finished with a display of "stick exercise" by some boys of Kebitigollewa. This exercise they did very well, and, indeed, they were practising it often at odd moments. The children had a mighty Homeric breakfast at 11 A.M. A curry with four dishes, besides rice, was no doubt as great a delicacy as they could have desired, and a very good and substantial curry had been prepared, including two goats. It was an interesting sight to see the children, neat and tidy, sitting on their mats along the sides of their sheds, with plantain leaves spread in front of them, waiting for their meal. This also was speedily served and speedily eaten, though the children found they could ask for more without being denied.
>
> The afternoon was devoted to sports; unfortunately it began to rain as soon as the "400 yards championship" had been decided. However, the heats of all other events were decided in the commodious sheds, which afforded a course quite 80 yards long, and then, the rain ceasing, the finals came off, and the greasy pole was climbed. The sports included a "400 yards championship" event, a sack race, a Victoria Cross race, and a three-legged race. The system adopted was that of weeding out the champion of each school in heats, and letting the six champions struggle together in the final.
>
> The sports were hugely enjoyed, and then followed the giving of prizes in money and the distribution of Coronation medals by Mrs. Booth. There was one girl among the 364 children, and she received a "gold" medal! The medals were evidently greatly prized, and were handed over by the boys for safety to their relatives, of whom many had come, or to their "Arachchi." Then the children had tea and cake, and preparations were made for their dinner. They were served at 8, and had a great feed, after which, thoroughly tired out, they all slept on their mats watched by their relatives. The Government Agent, going round at 9.30 with the Ratemahatmaya, found all asleep, and all provided with dry mats and clean straw, and generally very comfortable. They set off for their villages, cheerful and healthy-looking, early the next day.
>
> There is no doubt that the whole affair went with a swing, and that the children fully appreciated every bit of it. Even the rain could not spoil their enjoyment. This might with advantage be an annual affair, the centre being changed yearly, so that the whole Province might be worked through in a few years.

XII.—CRIME.

The number of serious charges of which the Police Court of Anuradhapura took cognizance during the year 1902 is divided as follows :—

Offences against Property.	Cases.	Persons.
Cattle theft ...	10	25
Criminal breach of trust ...	14	17
Theft, section 367 ...	10	17
Theft, section 369 ...	36	38
Theft, prædial products ...	2	6
Robbery, section 380 ...	13	25
Mischief by fire	5	1
House-breaking by night ...	5	3
	95	132

Offences against the Person.	Cases.	Persons.
Hurt, section 314 ...	45	87
Hurt, section 315 ...	13	18
Grievous hurt, section 316 ...	5	12
Unlawful assembly, section 146 ...	1	50
Riot, section 144 ...	1	4
Rape, section 364 ...	1	1
Murder, section 296 ...	5	4
	71	176

Of these 166 cases, 27 were lettered "A," no offence committed; and 10 were lettered "B," charge designedly false. The latter consisted mostly of charges of theft, theft from dwelling-houses, and robbery.

Of the 129 remaining true cases, 21 were marked "Fe" as the offenders were unknown. These were almost all cases of theft from dwelling-houses, but they also include the cases of mischief by fire. In 10 other cases the accused absconded, and in 26 others the accused were discharged as the evidence was insufficient. Twenty-one cases were compounded, and in the remaining 51 cases the accused were found guilty or committed to a superior court. There were 45 cases of simple hurt under section 314, among which the 21 compounded cases are included. This leaves 27 cases other than simple hurt in which the accused were either convicted or committed to a superior court. Two cases were committed to the Supreme Court, both of which resulted in convictions. Eight cases were committed to the District Court, in 4 of which the accused were convicted; in the other 4 they were acquitted. The percentage of convictions in the 129 true cases is 36·4. If the 45 hurt cases are excluded, the percentage is only 27·3.

Of the 25 true cases under section 369, convictions were obtained in the Police Court in 2 cases. Two were committed to the District Court, and resulted in convictions. In 9 cases there was not sufficient evidence. In 12 cases the offenders were reported unknown.

An analysis of the 108 true cases in which definite persons were charged shows that in 31 cases with 54 persons the accused were Sinhalese villagers, in 10 cases with 60 persons the accused were Moors; in 34 cases with 42 persons they were low-country Sinhalese, and in 33 cases with 59 persons they were Tamil settlers.

Of the 31 cases in which Sinhalese villagers were charged, 15 were simple hurt, 2 were theft under section 367, 5 were theft from houses under section 369, 2 were cattle theft under section 368, 3 were hurt with knife, 1 robbery under section 380, 1 criminal breach of trust under section 389, 1 murder, 1 rape. Of these, 5 cases were compounded, and 17 cases resulted in conviction. In the remaining 9 cases the accused were discharged for want of evidence.

The distribution of the 129 true cases among the chief headmen's divisions is as follows :—.

	Cases.
Anuradhapura Town	54
Nuwaragam Palata (excluding Anuradhapura)	48
Hurulu Palata	16
Kalagam Palata	11
Tamankaduwa	Nil
Nuwaragam Palata.	
Anurahapura Town	54
Nuwaragam Korale	13
Kanadara Korale	8
Wilachchiya Korale	8
Eppawala Korale	7
Kadawat Korale	7
Kende Korale	5
Hurulu Palata.	
Matombuwa Korale	8
Kalpe Korale	3
Uddiyankulama Korale	3
Ulagalla Korale	2
Kunchuttu Korale	Nil
Mahapotana Korale	Nil
Kalagam Palata.	
Kalagam Korale	6
Kiralowa Korale	2
Maminiya Korale	2
Unduruwa Korale	1
Negampaha Korale	Nil

The Kunchuttu and Mahapotana korales of Hurulu palata, the Negampaha korale of Kalagam palata, and the whole of Tamankaduwa have been entirely free from serious crime. It will be seen that Anuradhapura town, with its population of nearly 3,700, is responsible for 41·8 per cent. of the crime committed in the Province, with a population of nearly 80,000. The population of Anuradhapura town consists almost entirely of outsiders from other parts of Ceylon.

Murder Cases.

There were five charges of murder during the year. In two cases the accused were convicted of culpable homicide not amounting to murder, and were sentenced in each case to ten years' rigorous imprisonment. In two cases the accused were discharged upon the instructions of the Attorney-General. One case, which occurred on Christmas Eve, is still undetected.

Of the two cases which resulted in conviction, one was the result of an altercation between two Tamil coolies, one of whom had a gun and the other a hatchet. The wife of the latter snatched at the

hatchet. At this moment the man with the gun fired it off, or the gun went off, and the woman was killed. In the other case two Sinhalese villagers had a quarrel about cattle trespass, and the accused in a moment of passion struck the deceased heavily with a stick and killed him.

Of the two cases in which the accused were discharged, one was regarded as an accident. A young man went out at night with his gun to shoot wild pig, and a friend followed him. The latter, apparently for a joke, put his arms round his friend and both fell. The gun dropped and went off, killing the man who had played the joke. The other case was held to be justifiable homicide. Deceased was breaking into the house of the accused at midnight, when the latter cut him above the knee with a katty and he bled to death. There is very little doubt that had medical assistance been at hand his life would have been saved.

The undetected case is one apparently of deliberate murder combined with highway robbery. Deceased, a Moorman from Puttalam, was passing at midnight along a lonely part of the Anuradhapura-Puttalam road, with some money in his waist, when he was assaulted and robbed. He was taken to the hospital, but died almost immediately, without having recovered speech.

Knife Cases.

There were thirteen knife cases during the year: one was committed to the District Court and resulted in acquittal; one was allowed by the Attorney-General to be compounded; in seven cases the accused were convicted and two cases were found to be false; in two cases no offence appeared to have been committed.

Cattle Theft.

There were ten complaints of cattle theft in the year; in two cases the accused were convicted, in four cases they were acquitted for want of evidence; in one case the charge was found to be false, and three cases were dismissed as no offence was committed.

Co-operation of the Headmen in the Detection of Crime.

The headmen have done their duty in this respect to the best of their ability. The amount of crime they have to deal with is fortunately very small.

Police.

The regular police force consisted of one sergeant and thirteen constables. Three of the latter are primarily employed on the duty of escorting treasure for the Railway when payments have to be made along the line.

All complaints of offences committed in the town are invariably made to the police. In non-cognizable cases the parties are referred to court. In cognizable cases the police, as a rule, produce the accused, but I should be glad to see a reduction in the number of cases in which the accused manage to escape. The police are hardly to be blamed in all these cases, as in many of them the offences have been committed by newly arrived strangers, with whom the police have not had time to make themselves acquainted. The identification system was satisfactorily carried out.

There was one criminal at large on license who failed to report himself, but he was arrested. He was warned by the court and discharged. His period of supervision expired in March. There were no criminals under supervision by order of the court. There were 22 habituals in the Province, whose movements were duly watched by the police and headmen. Five of them were in jail during the year.

There were no cases in which orders prohibiting the carrying of knives were made, and no applications for license to carry knives were received.

The police force behaved well on the whole, but one constable was dismissed for gross misconduct.

XIII.—CATTLE.

There was no murrain in the Province during the year, but early in October anthrax broke out in Kunchuttu korale in the north-eastern part of the Province near the Trincomalee boundary and continued on to November. 121 cases occurred in the North-Central Province, of which 106 died before the Stock Inspector reached the spot. Of the fifteen cases which he treated, eight recovered. The disease also spread into the Trincomalee District, but does not appear to have gone very far. The Stock Inspector visited some of the villages there, and reports that twenty-eight cases occurred, all of which proved fatal. The origin of the outbreak could not be traced. The most characteristic symptom of the disease is abdominal swelling; its progress is very rapid. All animals, including man, are, it is said, liable to be affected. Jackals, sambur, and other wild animals were found dead in the jungles. Possibly the disease originated with them and spread to the cattle. The villages in which the disease occurred were proclaimed "infected areas" under Ordinance No. 9 of 1891, but this was rather straining the law, as anthrax is not included in the definition of "disease" in section 1 of the Ordinance. The definition has since been extended by Proclamation in the *Gazette* so as to include it.

In November there was an outbreak of disease in Unduruwa korale, in which thirteen animals were affected and seven died. Its cause was attributed by the Stock Inspector to the presence of worms in the air passages, a disease to which cattle are subject when feeding on wet marshy ground. Hoof-and-mouth disease appeared from time to time in Nuwaragam and Kalagam palatas and in September at Topawewa. It was nowhere very serious. No deaths occurred. At the end of the year the Province was reported to be free from disease of any kind.

In pursuance of the object of improving the breed of cattle by castration of inferior bulls, referred to in my report for 1901, the Colonial Veterinary Surgeon visited Anuradhapura this year and castrated some thirty bulls. Owners freely brought their cattle forward; indeed, they were quite alive to the advantages of the operation, and jumped at the chance of getting it properly performed, and for nothing. The operation, which I witnessed, appears to be perfectly safe, if done without bungling, and to inflict but little pain. All the cases dealt with by the Colonial Veterinary Surgeon were successful. I should hesitate to entrust such operations on a large scale to the present Stock Inspector until he has had more practice, but I think that if he had a little more training and were supplied with instruments, he might safely undertake it. I see no reason why any intelligent villager with a turn for surgery should not quickly learn as well. If so, we might in course of time have a body of village practitioners. All the instruments required are a sharp knife, a specially

constructed clamp, and a searing iron; these could be constructed locally. Those qualifying themselves might be given certificates of competency and be authorized to charge a small fee.

The Blue Book returns show a very large decrease in the number of the cattle in the Province. Probably the numbers given for 1901 were overstated; but there can be no doubt that the numbers have fallen, especially in Tamankaduwa. Importation by the North road having ceased, cattle are no longer taken to that district for grazing and breeding to the same extent as in former years. Moreover, the bed of Minneriya tank until this year afforded some 4,000 or more acres of excellent grazing ground much more accessible than any other in the district. Now that Minneriya has filled again, this large extent of pasture is lost. The Revenue Officer estimates that there are now in his district some 15,000 head of cattle less than there were in 1901. The value of the pasture rent of Tamankaduwa fell last year from Rs. 3,250 to Rs. 2,800, and is likely to fall still further.

XIV.—LAND SALES AND AREAS OF CULTIVATION.

The Ratemahatmayas estimate the extent of new land brought under cultivation during the year at 470 acres, but this, in my opinion, is under the mark, considering that 2,396 acres were sold in 1901 and 2,159 acres in 1902. Almost all this land has been irrigable land; there is no demand for garden land.

I annex a comparative statement of Crown lands disposed of during the last two years, an abstract of the quarterly return of land sales during 1901 and 1902, and a statement of lands sold since land sales first began in the Province in 1878 :—

A.—Comparative Statement of Crown Lands disposed of in the North-Central Province during 1901 and 1902.

To whom sold.	1901.				1902.			
	Number of Lots.	Extent sold or settled.	Price realized.	Average Price per Acre realized.	Number of Lots.	Extent sold or settled.	Price realized.	Average Price per Acre realized.
		A. R. P.	Rs. c.	Rs. c.		A. R. P.	Rs. c.	Rs. c.

Third Quarter ...	6	10 2 28	—	—	127	224 3 26	—	—
Fourth Quarter ...	29	35 0 15	—	—	8	77 3 1	—	—
Total settled on certificates of quiet possession ...	40	59 1 4	—	—	150	407 1 8	—	—
Total sold and settled	588	2,456 0 5½	—	—	684	2,567 0 36½	—	—

During 1902 there were 78 sales, against 50 in 1901, and 1,699 lots containing an aggregate extent of 7,068 acres and 14 perches were brought up for sale during the year, against 1,402 lots containing an aggregate extent of 6,556 acres 3 roods 37 perches, brought up during 1901.

Extent of land available for sale during the last quarter of 1902, for which plans were received, was below the extent that was available during the corresponding quarter of 1901, hence the falling off in the extent sold and price realized during 1902.

The increase of revenue under Land Sales in 1902 (*vide* Statement C) is due to the fact that the aggregate extent sold and aggregate price realized during the years 1899, 1900, 1901, and 1902 were more than the aggregate extent sold and price realized during any other four consecutive years.

C.—Statement of Lands sold in the North-Central Province since 1878.

Year.	Number of Lots sold.	Acreage sold.	Amount of Sale in Rupees. Rs. c.	Average Price per Acre sold. Rs. c.	Revenue under Land Sales. Rs. c.

* 12 acres of building lots were sold for Rs. 2,027.
† 6 acres of building lots were sold for Rs. 3,991.
‡ 1,084 acres under Kalawewa were sold in one block to M. Simon de Silva for Rs. 10,840.
§ Land under Nuwarawewa was sold, upset price of that land being Rs. 30 per acre.
‖ During the latter part of 1896 and early part of 1897 upset price of lands was raised to Rs. 20 per acre.
¶ Land under Nuwarawewa was sold at an average price of about Rs. 50 per acre.

N.B.—Out of the extent sold till 1898, 2,815 acres reverted to the Crown for failure to pay instalments, and a sum of Rs. 14,780·16 was forfeited on account of them. Up to date about 3,000 acres have probably reverted to the Crown, so that the total acreage of Crown land purchased and brought under cultivation will be about 20,349 acres in all.

The last of these three statements shows clearly the remarkable increase in the business done during the last two years. All the irrigable land has been purchased under Sir Henry Ward's Minute, which provides for payment in four annual instalments.

I have received three applications for land from Europeans, and inquiries have been made by other capitalists, but as they are all still the subject of correspondence they will more properly come under notice in next year's report. I merely mention them now in order to show that enterprising people are beginning to realize that there is money to be made in this "barren wilderness," as this Province was ignorantly called not so many years ago.

I should mention that Government intends to make experiments with rubber under irrigation, and I hope that other products also may be tried, such perhaps as cacao, Egyptian cotton, &c.

It would be interesting to know accurately the extent of cultivable land in this Province, and the average percentage of it which is annually cultivated. Unfortunately, no regular statistics have been kept. I can only quote the opinions of those former Government Agents who have studied the subject and have left the results of their inquiries on record, supplemented by my own rough calculation of the developments which have taken place since their time.

The late Mr. F. C. Fisher, in the Appendix to his Administration Report for 1886, placed the "extent available for cultivation" in Nuwarakalawiya, exclusive of tavalu cultivation (*i.e.*, cultivation on tank beds), at 32,228 acres, and in the whole Province, including Tamankaduwa, at little short of 40,000 acres. Mr. Ievers, in 1890, considered this estimate rather high, but accepted it. In his Administration Report for 1892, however, he estimated "the total extent of mud land cultivated by irrigation below the tanks" to be 45,103 acres. He based his figures on an assessment which he had carried out through the previous eighteen months. There is thus not a very great difference between the estimates of Mr. Fisher in 1886 and of Mr. Ievers in 1892, allowing for expansion in the six years' interval. It may, I think, be safely assumed that in the latter year the cultivable area was rather more than 45,000 acres.

Since then I can find no similar calculations by any Government Agent, but the land sale returns show that between 1892 and the end of 1902 a total extent of 11,508 acres has been sold by the Crown, practically the whole of it irrigable land, purchased with the object of asweddumizing it. Concurrently, too, with the progress of village tank restoration during the same period a considerable extent of private land, which had been abandoned for want of means to irrigate it, must have been brought back to cultivation. The total extent of paddy land in the Province at the present time cannot therefore be far short of 58,000 to 60,000 acres, allowing for a certain proportion of the more recently purchased lands not having yet been brought under cultivation. The last returns give the total extent of gardens as 5,482 acres.

The full extent of the cultivable paddy land is, however, a very different thing from the extent actually cultivated each year. Mr. Ievers in 1890 reported as follows :—

> In an ordinary year not more than two-thirds of the extent (*i.e.*, of the whole cultivable extent) is cultivated.....The people of this Province own really more land than they can at present cultivate, partly from want of water, partly from laziness, and partly from scarcity of population. Many villages own fields under three or more tanks, and cultivate one every year in rotation. In many villages only half the fields are annually cultivated.

This exactly agrees with my own experience; the excuse "*Minissu*" *madi* ('not enough men') is constantly given for non-cultivation. Mr. Ievers further pointed out that the grain revenue had

fluctuated according to the rainfall from Rs. 44,000 to Rs. 12,000. The average during the nineteen years preceding the abolition of the paddy tax was Rs. 31,780. The average tax Mr. Ievers stated to be about Re. 1·50 an acre. This gives an average annual extent cultivated with paddy up to 1892, excluding temple lands and headmen's lands, which paid no tax, and which I have no means of estimating, of 21,186 acres. The Blue Book returns give 25,063 acres as having been cultivated in 1897 and 25,290 acres in 1901. The returns for 1902 place the total extent cultivated as high as 42,368 acres, or between 2,000 and 4,000 acres more than the normal two-thirds of the whole cultivable extent which is calculated to be sown in an ordinary year. I see no reason to suppose that the figures are exaggerated, the last year having been, not an ordinary year, but an exceptionally favourable one. So far as water supply went, there was but an insignificant extent which might not have been cultivated. It was only laziness and want of men which stood in the way. But after all, until markets for surplus produce are opened out there is very little incentive to the people to raise much more than they need for their own consumption. On the whole, they have done very well. In 1901, on the other hand, when only 25,290 acres were cultivated, the tanks had failed to fill for the third year in succession.

XV.—WORKING OF THE WASTE LANDS ORDINANCES.

The Bogahawewa and Indiwewa claims, in both of which the same set of claimants was interested, were dealt with. In the former I declined to admit the claim to the soil, but offered to set apart an extent of 210 acres as land on which the claimants might be permitted to practise chena cultivation, provided that the balance 136 acres 1 rood 24 perches were left untouched. The claimants declined to agree to these terms, insisting upon being left free to clear chenas over the whole extent. As no agreement could be arrived at, the matter was referred to the District Court, and is still pending. In the Indiwewa case no claim having been preferred, the lands, in extent 416 acres 1 rood 38 perches, were declared to be the property of the Crown. The final notice appeared in the *Gazette* of 30th January, 1903.

The Ambagaswewa and Mayilagaswewa claims were also taken up. A provisional agreement was entered into with the claimants, under which the whole extent, 279 acres 2 roods 30 perches, was to be declared the property of the Crown, but the claimants were to be permitted to practise chena cultivation upon a block of 120 acres. This agreement has not yet received the assent of His Excellency the Governor.

The last claim heard on evidence was the Iramiyankulama claim, which affects a large area, 2,192 acres 3 roods 15 perches in extent. The claimant is a nephew of the late Relapanawa Ratemahatmaya of Nuwaragam palata. The claim is based upon a transfer deed, dated 11th November, 1854, in favour of the deceased Ratemahatmaya. The claim was not admitted, mainly on the grounds that the transferors had no title to sell the land, that the transfer did not cover the lands claimed, and that there had been no possession. There was no question in this case of entering into an agreement with the claimant; his claim was either established or fell to the ground completely. The matter is now pending in the District Court.

By the end of the year notices relating to the following villages:—

	A.	R.	P.
Kuda Wannanmaduwa	187	3	28
Ihalawewa	652	2	28
Hammillewa	239	3	14
Tammanewa	95	2	1
Maha Nelunkulama	108	0	28
Maha Wannanmaduwa	309	3	24
Yahalegama	1,135	1	0

had been submitted to the Waste Lands Ordinance Committee. These have since been approved, and are now in the hands of the Government Printer. Notices for—

	A.	R.	P.
Katakelewa	231	0	28
Kawarakkulama	992	0	22
Ihala Galkulama	650	1	30
Yahalegama	504	0	8
Galwaduwagama	449	0	31
Gnanikulama	831	3	9

are now before the Waste Lands Ordinance Committee. Notices for Tariyankulama, Nelunkanniya, Karuwalagaswewa, Pahala Wembuwa, and Nallamudawa, are being prepared. In addition to the above, preliminary inquiries have been made with respect to thirty-nine other villages claimed upon "talpat" or ola deeds. The opinion of the Archæological Commissioner has been obtained upon the "talpat," and action under the Waste Lands Ordinance will be instituted as soon as the plans are received.

XVI.—SURVEYS.

The block surveys have been continued throughout the year, the average number of surveyors employed upon them having been six. I am unable to state the number of villages or the total area covered, as the information is not yet available.

An average of three surveyors was engaged on special questions and application surveys. At the beginning of December 265 private applications and 30 Crown applications were outstanding—that is, the plans had not been received—but all, save 117 of the former and 16 of the latter, were stated by the Superintendent of Surveys to have been surveyed. That officer then expected that ten private applications and one Crown application would be surveyed by the end of the year. My information does not go later than this.

The disproportion between the outturn of plans, especially those of block surveys, and the amount of field survey work done was referred to in my report for last year. I am aware that the question of enlarging the staff of draughtsmen at the Head Office of the Surveyor-General is a difficult one, and do not wish to press it inconveniently. At the same time there are large and important questions pending in this Province between the Crown and the people relating to claims to lands, the early settlement of which is most desirable. They cannot be disposed of until the survey plans are received.

XVII.—FORESTS.

From the released areas in charge of the Government Agent timber to the value of Rs. 5,713·11 was supplied to Public Departments. Sales of timber, firewood, and other produce to private parties and forest fines realized Rs. 3,763·38. Free grants of timber were made to the value of Rs. 749·55. The expenditure was Rs. 889·92.

One person was fined Rs. 25 in the Police Court for misappropriating timber belonging to the Railway Department.

The Assistant Conservator of Forests for the North-Eastern Circle informs me that Rs. 30,667·14 were realized during the year by sale of ebony, satinwood, &c., from that portion of this Province which belongs to his Circle. None of this was brought to account in the Anuradhapura Kachcheri; it does not therefore appear in the revenue returns of the Province. The stock in hand at the close of the year on account of the Province and its probable value were :—

	Rs.
Ebony, 168 tons 18 cwt., valued at	18,579
Satinwood, 581 cubic feet	1,452
Sample piece	4
	20,035

XVIII.—CHENA CULTIVATION.

Chena cultivation in Nuwarakalawiya was very much less during 1902 than for many years past. The reasons are threefold :—

(1) The water supply being very abundant, the people had their hands full with paddy cultivation.

(2) Permits were refused in all cases in which the applications for them were received later than a specified date. The people had got into the habit of delaying their applications until the last moment and of cultivating before the actual receipt of the permit, professing to think that the mere fact of having applied for a permit justified them in clearing the chena. In order to put a stop to this irregularity, and to enable the Government Agent to judge what was the total extent applied for and to regulate permits accordingly, it was announced early in the year that all applications must be received in the Kachcheri by the end of June, or from six weeks to two months before the commencement of the clearing season. The same rule will be enforced every year in future.

(3) In several cases people who no doubt intended to cultivate chenas, but put it off till late in the season, were prevented by the early rains, which began with the month of October, and stopped any clearing or burning off of jungle after that.

A considerable number of illicit chena clearings were reported from the remoter parts of Hurulu palata and some from Kalagam palata in the early part of the year, most of which were clearings of the previous season. Very few such clearings for the last season have been reported.

In Tamankaduwa, owing to the damage to paddy crops in Egoda pattuwa, referred to in section II., about 100 acres of chena were allowed among sixteen villages, or an average of some 6 acres to each village. Rent at Re. 1 per acre was paid for these. There were no illicit clearings in this part of the Province.

Tavalu cultivation, or cultivation of the tank bed with paddy, was very little practised, the reason being that nearly all the tank beds were submerged.

XIX.—SALES OF LAND BY VILLAGERS.

The following statement shows the sales of private lands which were registered during the year :—

Palata.	Sold by Villager to Villager.	Sold to Low-country Men.	Sold to Tamils.	Total No. of Lots.	Extent in Acres.	Houses and Gardens sold.
Nuwaragam ...	265	9	41	315	425	11
Hurulu ...	112	5	2	119	86	4
Kalagam ...	127	5	1	133	124	6
Tamankaduwa	2	—	1	3	21	—
	506	19	45	570	656	21

The actual number of sales will have been slightly in excess of the above figures. All the lands sold were fields or gardens. There is no reason to suppose that any lands have been sold to which the vendors had insufficient title.

XX.—GAME SANCTUARIES.

The question of game sanctuaries has received considerable attention during the year. It is proposed to constitute two, one in the Wilachchiya korale in the north-west of the Province, adjoining the Puttalam District, the other in Tamankaduwa in the extreme south-east, adjoining the Laggala Pallesiya pattuwa of the Matale District. In both cases it is intended that portions of the adjoining districts shall be added to the sanctuaries.

From 16th to 23rd July the Acting Surveyor-General and Messrs. Templeton and Meaden of his Department accompanied me on a visit to the Wilachchiya korale. Our object was partly to inquire into its suitableness for a sanctuary, and partly to determine the eastern boundary. We found the country to be wild and desolate, mostly jungle and forest of no great size, interspersed with open patches. The character of the jungle improves towards the south. At the time of our visit—the height of the dry season—water was scarce. It will never be plentiful, but there are several small abandoned tanks, some of which could be patched up sufficiently to form water holes for the game. We saw no game, save a few deer, but tracks of elephants were numerous. They are evidently there in large numbers in the wet season, and might be expected to remain all the year round if water were to be had. The whole tract, together with that in the Puttalam District, will probably cover about 180 square miles. We were successful in finding a good boundary, mostly natural features. There is no village

within 2 miles from the nearest point of the sanctuary; even beyond that distance the villages are few and small. In order to protect the sanctuary it will be necessary to constitute it a reserved forest under Ordinance No. 10 of 1885. The notifications for that purpose have already been published. I have been appointed Forest Settlement Officer.

In the latter part of September the Assistant Government Agent, Matale, and I inspected the proposed sanctuary in Tamankaduwa and the Laggala Pallesiya pattuwa of the Matale District. We started on the 21st from Topawewa and came out at Matale, through Pallegama, on the 29th. We came to the conclusion that an area of about 100 square miles, of which about three-fifths lies in Tamankaduwa and two-fifths in the Matale District, is well suited for a game sanctuary. It has clearly defined natural boundaries; it is remote and inaccessible; it is uninhabited and uninhabitable, and such population as there is near its boundaries is exceedingly scanty; and it has the reputation of being well stocked with game. Though dry in the height of the dry season, it is never waterless. The country is studded with numerous rock water holes, all of which contained water even so late in the dry season as our visit, and the Mahaweli-ganga, which would form the greater part of the eastern boundary, not only affords a constant water supply, but replenishes its numerous backwaters whenever there is enough rain up-country to cause it to rise. Some of these backwaters run westwards for 3 or 4 miles. There are several large open "damanas," which must afford excellent grazing ground for deer during the greater part of the year. The sanctuary cannot, however, be established at once, as a survey is necessary before it can be constituted a reserved forest. There is no survey of the portion which belongs to the Matale District, and that of the Tamankaduwa portion is imperfect. It is hoped that the Topographical Survey will be able to deal with it in 1903.

XXI.—WORKING OF THE THOROUGHFARES ORDINANCE.

The total revenue for the year was Rs. 31,628·97, made up as follows:—

	Rs.	c.
In Cash	30,465	0
In Labour	12	0
Miscellaneous Receipts	1,151	97
Total ...	31,628	97

The single and double rate commutation recoveries, excluding miscellaneous receipts, exceeded all previous years by over Rs. 1,000.

The decrease in the statement hereto annexed, compared with that of last year, is due to the taking over of the town by the Local Board:—

Statement showing the Comparative Working of Thoroughfares Ordinances in 1901 and 1902.

	1901.		Per-centage on B.	1902.		Per-centage on B.
1. Population (A)	—	78,985	—	—	75,438*	—
2. Number on lists (B)	—	23,073	—	—	21,418*	—
3. Effective in the District:—						
(a) Paid Re. 1·50	20,924		90·68	19,868*		92·76
(b) Paid Rs. 3	133		·57	221		1·03
(c) Laboured 6 days	27		·11	8		·03
(d) Laboured 12 days	—		—	—		—
		21,084	91·37		20,097	93·83
4. Not effective in the District, but have discharged their liability:—						
(a) Exempted	570		2·47	461		2·15
(b) Paid and laboured elsewhere ...	567		2·45	244		1·13
(c) Committed to jail	—		—	1		—
(d) Fined	11		·04	12		·05
(e) Worked 24 days at labour centres ...	—		—	—		—
(f) Double entries, &c. ...	118		·51	138		·64
(g) Dead	113		·48	135		·63
		1,379	5·97		991	4·62
5. Non-effective:—						
(a) Reported to have left the village ...	606		2·62	323		1·50
(b) Otherwise not arrested ...	4		·01	7		·03
		610	2·63		330	1·54

* The decrease is owing to the town having been taken over by the Local Board.

The number of men remaining unaccounted for at the end of the year out of the 21,418 on the division officers' lists was 7. All of these were temporary residents and new names on the division officers' lists for 1902.

The expenditure on account of establishments, commission to division officers, petty expenses, and purchase of tools was Rs. 7,731·04. The amount expended on principal roads and resthouses was:—

	Rs.	c.
Anuradhapura-Siyambalagamuwa road	2,500	0
Kalaoya-Galgodahena road	2,575	0
Galkulam through Anuradhapura to Rambewa road	978	0
Mirisgonioya-Kituluttu road	1,800	0
Mirisgonioya-Galkulam road	1,125	0
Horowapotana-Vavuniya road	1,500	0
Mirisgoni-oya to Galkandamadu road	500	0
Upkeep of resthouses	1,760	59
Total ...	12,738	59

During the year, in addition to the usual upkeep work for minor roads, certain improvements, such as building of bridges and culverts, raising low places, &c., were made to the following roads :— Madawachchiya-Kebitigollewa road, Madawachchiya-Horowapotana road, and Eastern minor road. The native resthouse was greatly improved by new cement flooring, painting woodwork, and fixing new gates. A boarded ceiling was provided for the whole of the old building of the Anuradhapura resthouse. The new wing had it already. A new bathroom and closet was put up at Kekirawa resthouse.

The following sums were spent for the upkeep and improvement of the existing minor roads, &c.:—

	Rs. c.
Improving Madawachchiya-Kebitigollewa road	259 17
Improving Madawachchiya-Horowapotana road	237 60
Improving the eastern minor road	410 29
Improving the Green Path	90 92
Deviation at 19th mile, Alutoya-Horowapotana road	276 75
Ceiling for Kahatagahadigiliya resthouse	88 70
Gravelling the Green Path	137 75
Additional bathroom and closet for Kekirawa resthouse	35 70
Temporary bridges on Madawachchiya-Horowapotana road ...	132 0
Covering and clearing out the well at Habarana	90 0
Improving the native resthouse	401 56
Upkeep of Anuradhapura-Arippu road	469 10
Upkeep of Andarawewa-Ottapuwa road	130 0
Upkeep of Alankulama-Turuwila road	162 14
Upkeep of Eppawala-Timbiriwewa road	400 0
Upkeep of southern minor road	270 0
Upkeep of Maradankadawala-Kunchikulama road	115 0
Upkeep of the Tonigala road	60 0
Upkeep of the Andiyagala-Madatugama road	160 0
Upkeep of eastern minor road	650 0
Upkeep of Galenbindunuwewa-Sipukulama road	220 0
Upkeep of Alutoya-Horowapotana road	500 0
Upkeep of Horowapotana-Madawachchiya road	460 0
Upkeep of Madawachchiya-Kebitigollewa road	315 43
Upkeep of Provincial Road Committee Head Clerk's quarters ...	75 86
Gates for the Provincial Road Committee Head Clerk's quarters ...	60 86
Ceiling front verandah of Anuradhapura resthouse	281 50
Improving surroundings of the well at Habarana resthouse ...	42 39
Upkeep of quarters of Superintendent of Minor Roads	67 25
Tracing deviations on minor roads	48 0
Improvements to the Anuradhapura resthouse	1,136 94
Total ...	7,784 91

Return of Local Revenue raised and appropriated under the authority of the Provincial Road Committee in the North-Central Province and not accounted for in the General Revenue of the Colony for the Year 1902.

REVENUE.	Amount. Rs. c.	Total. Rs. c.
Balance on January 1, 1902 ...	—	4,051 75
Collected for the year 1902, under the provisions of the Road Ordinances of 1861, 1884, and 1900, viz :—		
Commutation realized in money ...	30,465 0	
Do. in labour ...	12 0	
Miscellaneous receipts ...	1,151 97	
		31,628 97
Resthouses.		
Balance on January 1, 1902 ...	1,005 13	
Collection in 1902 ...	2,812 52

Do. Resthouse Fund ...	1,161 75	
		8,480 39
		39,498 37

XXII.—WORK OTHER THAN ROUTINE.

In my last report it was explained how necessary it is that frequent circuits should be made by the Government Agent of this Province, not only for the purpose of inquiries and inspections of all kinds, but in order to make himself accessible to the people and to keep the headmen up to the mark by frequent admonition and encouragement.

The past year has been no exception in these respects, but, in addition to what may be called the usual circuit routine, several of the circuits made had also special objects, such as the furtherance of the restoration of the village tanks in Hurulu palata referred to under the head "Irrigation," the inspection of parts of the Province proposed to be set apart as game sanctuaries, and the acquisition of lands required by the Railway.

In January a circuit was made in Kanadara and Kadawat korales of Nuwaragam palata and in Kalpe and Kunchuttu korales of Hurulu palata.

In February I travelled through parts of the Wilachchiya and Eppawala korales of Nuwaragam palata and in Kalagam korale of Kalagam palata. Towards the end of the month a visit was paid to the kraal in the North-Western Province, where His Excellency the Governor granted me an interview on various matters of importance.

In March I visited the Matombuwa korale of Hurulu palata, the three pattus of Tamankaduwa, and the southern part of Kalagam palata. From the 20th of this month until the end of April I was on leave in Nuwara Eliya, but all important papers were sent on to me there.

In May some lands for the conservancy of the Vessagiriya ruins near Anuradhapura and a portion of those required for the Northern Railway were acquired. A circuit was made in the Kunchuttu and Mahapotana korales of Hurulu palata, during which a visit was paid to Wahalkada tank. This huge abandoned reservoir must have been one of the largest, if not actually the largest, of all the ancient irrigation works. I will not attempt a detailed description of it, as that has been done by the Archæological Commissioner in his Seventh Progress Report and by Mr. Ridout of the Survey Department (see Administration Report of the Surveyor-General for 1899). It suffices to say that Mr. Ridout indicates that the tank had an area of at least 4,000 acres, and a head of water at the sluice of not less than 50 ft.; while Mr. Bell puts the average of the inner slope of the bund at 95 ft. in height, and the outer slope in one place at 130 ft., with a width at the top of 15 to 20 ft. The tank is not so imposing as Padaviya, partly because it is so much more densely covered with forest that no comprehensive view of it can be had, and partly because so much less of it is artificial. What chiefly strikes one is the skill with which the natural features have been utilized, almost the whole tank being enclosed within natural ridges. I do not suppose there is more than a mile of made bund in all. The restoration of the tank would be easy compared with some works, but it does not at present, and perhaps will not for the next forty or fifty years, come within the range of practical politics, as there is no population near it and no means of communication.

In June the tour through Kunchuttu korale and the Dutturwe tulana of Mahapotana korale was continued. Every inhabited village, and most of the uninhabited ones, in those remote parts of the Province were visited. During the latter half of this month the acquisition of all the lands required for the Northern Railway was completed.

In July I made a circuit through the Ulagalle and Udiyankulama korales of Hurulu palata. The Director of Irrigation joined me for three days and inspected Huruluwewa, Manankattiya, and Eruwewa tanks.

Huruluwewa is a beautiful abandoned storage tank on the Yan-oya. Its restoration would not present any very great difficulties, but it is not worth while at present with so many other large reservoirs near the railway and the main roads which demand prior attention.

Manankattiya ranks now as only one of the largest of the village tanks, but has once been much larger. Its position at the head of the main stream of the Malwatu-oya, lower down on which is situated the first class reservoir Nachchaduwa, which is about to be restored, gives it special importance. Though the villagers use the tank to irrigate a considerable area, its bund and sluice are by no means in perfect order. Upon the instructions of the Director of Irrigation an estimate for its proper restoration, amounting to Rs. 17,700, has been prepared and sanctioned.

Eruwewa is a very considerable abandoned storage tank on the same watershed, just above Nachchaduwa. It is believed that in ancient times, when the irrigation system of the Province was in full working order, it was fed not only by the Malwatu-oya, but also by a Yoda-ela from the Mirisgoni-oya, and that water was passed on from it to the splendid reservoir of Maha Kanadarawa, just north of Mihintale, and thence northwards to Maha Galkadawala. Maha Kanadarawa is now being surveyed, and probably Eruwewa and the Yoda-ela from the south will also be surveyed in connection with it.

From the 16th to the 23rd of this month the Acting Surveyor-General and two officers of his Department accompanied me on the inspection of the proposed Wilachchiya korale game sanctuary referred to in another section of this report. We also took the opportunity of inspecting the large abandoned tanks, Maha Wilachchiya and Kuda Wilachchiya. The former has a long low bund and an extensive bed. It must have been a large but shallow tank. The latter, though called Kuda or "lesser," has a much larger bund, and must have been much deeper. It appears to have had a catchment area of some 50 square miles. There are a fine stone "bisokotuwa," 10 ft. by 10 ft. by about 18 ft. deep, in good preservation and the remains of a massive stone spill. The main breach is 200 to 300 ft. wide. The Ratemahatmaya of Nuwaragam palata is very anxious to have these tanks restored, but there is no population near them.

In August I visited portions of the Udiyankulama and Kalpe korales of Hurulu palata and of Kende korale in Nuwaragam palata. On the 28th I went to Sigiriya to meet His Excellency the Lieutenant-Governor, and accompanied him to Habarana and Minneriya at the end of the month.

From 1st to 14th September I was in attendance on His Excellency the Lieutenant-Governor, who made a tour through the Province. Topawewa, Minneriya, Habarana, Kekirawa, Kalawewa, Tirappana, Anuradhapura, Mihintale, and Madawachchiya were visited. Four days were spent in Anuradhapura, during which His Excellency's time was fully occupied with inspections, addresses, receptions, prize-givings, visits to schools, and functions of all sorts.

During this month the land required for the new approach road to the Anuradhapura railway station was acquired. Work on the road had commenced some time before, as the Provincial Engineer was permitted, by arrangement with the proprietors, to enter upon the land before the formal acquisition took place.

The latter part of the month was taken up with the trip, referred to in another section, in company with the Assistant Government Agent, Matale, for the purpose of inspecting the country proposed for a game sanctuary in the southern part of Tamankaduwa and the part of the Laggala Pallesiya pattu of Matale District which adjoins Tamankaduwa.

During the last three months of the year the rains prevented much travelling, but in the early part of October a visit was made to Rambewa for the school treat described under the head "Education."

In this month and in November and December some important Waste Lands Ordinance inquiries were held.

The Fiscal's Office, which was left in a chaotic state by the late clerk, who was dismissed in February last, has been overhauled during the year, and is being steadily reduced to order. The following statement shows the progress made in this work during the year :—

Clearing of Arrears.	District Court.	Court of Requests.	Village Tribunal.	Total.	Remarks.
Total number of writs unattended	20	530	2,042	2,592	Much of the time was occupied in examining all old writ files, in number about 8,144, to ascertain what steps had been taken under each case, and to arrange them in order.
Number of writs returned to Court and Gansabhawa ...	20	309	1,280	1,609	
Balance on hand ...				983	
Current Work.					
Number of writs received during 1902	10	219	423	652	The balance on hand (84) are returnable at the end of January and February, 1903.
Number of writs returned to Court and Gansabhawa ...	8	173	387	568	
Balance on hand ...				84	
Number of sales fixed during 1902	5	67	64	136	

During the year the record room underwent a thorough overhauling, as a result of which 568 old books and files, which were either useless or contained only such information as was available from other sources, were destroyed with the authority of Government. A large amount of space has thus been made available for the later and all the valuable records. The sorting of those burnt and the re-arrangement of the remainder were done during off hours without interruption of the current work. As a further means of remedying the congestion in the record room, application was made for a set of substantial shelves to reach from floor to ceiling, utilizing a large amount of wall space hitherto lying idle. When this work, for which a sum of Rs. 750 has been provided, is completed, the records will be better accommodated and less exposed to damage from damp or white ants than heretofore.

XXIII.—EVENTS OF IMPORTANCE.

February.—Mr. R. B. Campbell was succeeded by Mr. J. W. Robertson as Superintendent of Surveys.

March.—The Kachcheri was inspected by the Auditor-General.

April.—Mr. F. D. Peries, Kachcheri Mudaliyar, was transferred to Galle District as Mudaliyar of the Gangaboda pattuwa. He had been the Government Agent's "right-hand man" in all native matters, and was greatly missed.

June.—The people of the Province had thrown themselves in the heartiest manner into the preparations for celebrating the Coronation of His Majesty the King, but on the 25th a telegram was received announcing His Majesty's very dangerous illness. All celebrations were postponed, save the feedin g of the poor, which took place on the 26th. About 700 people were fed in Anuradhapura alone.

July.—Fireworks and illumination of the town took place on the 5th to mark the general joy at the convalescence of His Majesty the King.

August.—The 9th was Coronation Day. The morning was opened with a Royal Salute and with services in all the churches and temples. The Proclamation was next publicly read on the esplanade in English, Sinhalese, and Tamil, and the National Anthem was sung. In the afternoon there were sports and an acrobatic performance, and in the evening a procession, a bonfire, and fireworks. The sports went very merrily; the natives turned out in force and thoroughly enjoyed themselves. The fireworks were of local make, and were quite good. The town, specially the esplanade, was gay with flags all day, and was prettily illuminated at night. A spirit of hearty loyalty was very manifest, not only throughout the proceedings, but during the preparations for them. More than Rs. 1,400 was collected, a large sum for so poor a community. At Kekirawa and other outlying centres in the Province the event was marked by sports, fireworks, and other festivities. On the 30th His Excellency the Lieutenant-Governor arrived at Habarana.

September.—The tour of His Excellency the Lieutenant-Governor in the Province was continued until the 14th.

October.—Mr. A. E. Kindersley, Chief Assistant Railway Engineer, took up his headquarters in Anuradhapura. Mr. Burleigh Campbell succeeded Mr. J. W. Robertson as Superintendent of Surveys. Captain A. M. Walker arrived on special duty in connection with the enumeration of timber on the beds of large storage tanks about to be restored and on the irrigable lands below them.

November.—Mr. Russell, Office Assistant, was succeeded by Mr. Dutton.

December.—In the early part of the month there were floods all over the Province. Mr. Plant, Cadet, was succeeded by Mr. Wait. Mr. F. Booth assumed duties as Chief Irrigation Inspector in addition to Mr. Kanagasuriyam, Chief Irrigation Inspector. The Province has been divided between them.

XXIV.—ARCHÆOLOGY.

I am indebted to the Archæological Commissioner for the following interesting note on the work done by his Department during the year :—

Archæological.

The Archæological Survey continued operations in 1902 at Anuradhapura, Sigiriya, and Polonnaruwa. From 1st January Mr. J. Still was appointed to succeed Mr. C. E. Dashwood as Assistant to the Archæological Commissioner. Concurrent field work was thus again rendered practicable at two centres during much of the year.

Anuradhapura.

Ruwanweli Area.—South of the Ruwanweli Dagaba are still to be found a few scattered sites, marked by pillar stumps, which have not yet been excavated. These isolated ruins are dotted about the Residency grounds, the premises of Government clerks, and the open spaces adjoining the Sacred road.

Maha Pali Alms Hall.—One of these detached ruins, an extensive site, roughly pillared, was exploited in the past year, and has fortunately yielded one of the most interesting discoveries hitherto made at Anuradhapura. As excavation spread, the plan of an exceedingly spacious quadrangle, with central courtyard, or shallow tank, was gradually disclosed. This four-square ruin measures 135 ft. more or less, each side. All round ran a range of rooms, or a corridor, once roofed in, and 30 ft., in width. The hypethral courtyard, or tank, some 75 ft. square enclosed within the building, is stone-flagged and at a lower level than the quadrangular rooms. In the west corridor was unearthed a large "stone canoe," perfectly preserved, 44 ft. 6 in. long by 3 ft. 6 in. broad, making the fourth so far found at Anuradhapura. The ruins to the east of Abhayagiriya Dagaba, excavated in 1893, contain a ruin much the same in plan, with a similar *kenda oruwa*, or "kanji boat" (as these strange "stone canoes" are popularly termed), but greatly damaged, situated in a central group of monasteries. These special buildings were doubtless those "Alms Halls" (*dansala*) mentioned not unfrequently in the *Mahawansa*. The spaciousness and general finish of the present ruin laid bare in the resthouse premises seem to justify its probable identification with the "Maha Pali," that chiefest of "Alms Halls" greatly favoured of royalty from the sixth to the tenth century. The excavation of this extensive ruin, deeply buried and tree-covered, occupied the Anuradhapura gang for the better part of 1902.

Mirisawetiya Area.—During the last three months of the year work was resumed in the Mirisawetiya area, and will be pushed to completion in 1903. The ruins around the Mirisawetiya Dagaba are probably, all told, not more than half a hundred in number, and would appear to offer no special difficulty in unearthing. The style is severely simple, and the grouping easily distinguished.

Clearing.—The annual allotment of the vote for clearing ruins and jungle at Anuradhapura was very profitably expended, owing to the drought during the first nine months of last year. Nearly 600 acres were cleared and weeded, and some rooting out done.

Polonnaruwa.

Operations were resumed at Polonnaruwa for the third season in May last. Weeding the area already excavated in 1900 and 1901—mainly the ruins (Audience Hall, &c.) situated within the promontory—occupied a fortnight or three weeks. Subsequently attention was given to continuing excavations around the Siva Dewale, near the 25th milepost on the road from Minneriya. This dewale was exposed last year. Forest trees and scrub jungle are so thick at Polonnaruwa that much felling and clearing was necessary, and proved slow work. By the end of September, however, the entire group of ruins had been excavated and opened out to view from the high road.

This group consists of (*a*) Siva Dewale; (*b*) a Vishnu Dewale; (*c*) a Kovil sacred to the goddess Kali. In plan and architectural details these shrines display little to differentiate the one from the other. All alike have a vestibule and sanctum; the Siva Dewale alone possesses an intermediate room. They were brick-built, with stone pillars to support the roof where required. Stone figures of Vishnu, Kali, and the bull Nandi were found near their respective shrines.

Beside these three fanes, this Hindu temple claimed at least three other buildings: (*d*) a plain, narrow structure crowning the summit of the rock hummock, on the west slope of which occurs the long inscription of King Nissanka Malla; (*e*) a pillared building, oblong, within its own enclosed premises; (*f*) a bold, terraced building, on massive pillars, immediately adjoining the bund of the old Topawewa tank. This building was probably the principal residence of the ecclesiastics—first Buddhist monks, subsequently alien priests, after the conversion of the monastery into an extensive temple devoted to Hinduism. At the foot of the entrance stairs were exhumed two handsomely carved moonstones adorned with *hansas* and other ornamentation.

As in 1901, a large number of Moor villagers from the Marakkala pattuwa of Tamankaduwa were engaged for a week in continuing to free the ancient city of the jungle in which it lies buried. The area dealt with in the past year extends for a width of 200 to 300 yards from the Rankot Vehera as far northwards as the Kiri Vehera.

L. W. BOOTH,
Government Agent

Anuradhapura, February 24, 1903.

PROVINCE OF UVA.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, PROVINCE OF UVA, FOR 1902.

I.—REVENUE AND EXPENDITURE.

THE revenue of the year amounted to Rs. 203,778·41, exceeding that of the previous year by Rs. 38,919·93. A large proportion of this excess, namely, Rs. 19,205, is merely an apparent increase, explained as follows. In 1901 only eleven instalments of the arrack rent were recovered; the remaining twelfth instalment was credited in January, 1902, and all the twelve instalments for 1902 were recovered within the year, so that in 1902 thirteen instalments were credited to revenue, as against eleven instalments in 1901.

2. The next largest increase, namely, an excess of Rs. 7,280·76 under the heads Medical Aid Dues and Sale of Drugs, is also more apparent than real, and is consequent upon a change in the system of accounting. Until March, 1902, it was the practice to credit recoveries on this account in the General Treasury; but after that date the amounts paid in were credited at the Kachcheri instead.

3. The chief real increase is from Land Sales which realized Rs. 12,043·52, in comparison with Rs. 7,171·98 in 1901. Further information as to the details of these sales is contained in paragraph 58 of this report. And in connection with Land Sales the recoveries under the head Survey Fees are similarly much larger, rising from Rs. 2,004·63 in 1901 to Rs. 4,593·59 in 1902. The rise of Rs. 1,162·32 in the amount realized by the sale of revenue stamps is mainly attributable to the same cause.

4. The rest of the increase is chiefly due to a rise in the price paid for the rent of the road tolls, to larger recoveries on irrigation works, and to better sales of judicial stamps and postage stamps.

5. The following statement gives the details of the rise under the specified heads of revenue:—

	Rs.	c.
Arrack	19,205	0
Medical Aid Dues	6,105	33
Sale of Drugs	1,175	43
Land Sales	4,871	54
Survey Fees	2,588	96
Revenue Stamps	1,162	32
Road Tolls	840	0
Recoveries on Irrigation Works	842	11
Judicial Stamps	516	11
Postage Stamps	548	12
Other minor heads of revenue*	1,910	64
	39,765	56
Deduct decrease in 1902 under other heads of revenue†	845	63
Increase ...	38,919	93

Notes.

*Licenses:—	Rs.	c.

6. A detailed statement of the revenue collected during the year under review in comparison with the previous year is contained in Appendix A.

7. The expenditure accounted for in the books of the Badulla Kachcheri was practically the same as in 1901, the total decrease being only Rs. 140·99. A summary of particulars is appended :—

Comparative Statement of Expenditure for 1901 and 1902.

Particulars.	1901.	1902.
Personal Emoluments	17,868 0	17,710 0
Pensions	2,814 82	3,162 0
Other Charges	13,572 36	13,242 19
	34,255 18	34,114 19

Details are given in Appendix B.

8. The Kachcheri accounts disclose no information as to much of the revenue and expenditure which concern the Province. For instance, the receipts of the railway for traffic leaving the five stations in Uva are not indicated ; and similarly, on the other side, the large expenditure on public works is not shown. The Kachcheri account books only deal with the Government Agent's estimates and votes.

II.—FOOD SUPPLY.

9. The crops of the year of fields as well as chenas were neither above nor below the average, and there was no want among the villagers. The quantity of grain produced locally was more than sufficient for the wants of the people (exclusive of immigrant Tamils and residents in the bazaars). The surplus not required for consumption by the growers was in excess of the quantity imported ; in fact, rice was only imported into two of the seven divisions of Uva, namely, Udukinda and to a small extent in Wellawaya. It is estimated that 497,820 bushels of rice and 368,000 bushels of other grain are produced locally.

10. In addition to grain, consisting of rice, kurakkan, and Indian corn, the villagers have a good supply of fruit and vegetables. Jakfruit, breadfruit, and plantains ; beans, such as mun, kollu, and me ; cucumbers, pumpkins, and watermelons ; cassava, sweet potatoes, and other yams—all these liberally supplement the villagers' sources of subsistence. In addition to this nearly every village in Uva, except in Udukinda, has a few cocoanut trees.

11. A certain amount of fruit and vegetables is also grown more for sale than for home consumption. There is a plentiful production of oranges in most parts of the Province and of pineapples, mainly in the divisions of Yatikinda and Wiyaluwa. Market gardening in the country round Wilson's Bungalow is an industry which is steadily expanding, and the growers send away considerable quantities of vegetables of many English varieties.

12. The Tamil immigrant labourers and other residents on estates and the bazaar population subsist mainly on imported rice. These classes live well. The quantity of rice imported for their use is calculated as being about 550,000 bushels.

13. The following table refers only to the food supply of the villagers. It is an estimate for each Korala's division of the proportion of the chief articles of food :—

(i.) Locally-grown and consumed.
(ii.) Imported and consumed.
(iii.) Locally-grown and exported.

Column A shows (i.) and (ii.) in relation to each other, the total consumption being divided into 100 parts ; column B indicates (iii.) the surplus production calculated in proportion to the respective headings of column A ; and column C gives the population of each korale.

Column A has to be read in conjunction with column C, as the volume of the consumption (divided into 100 parts) in each korale varies with the population of the korale. For instance, the quantity of food consumed in No. 21 (Kandukara korale, population 6,208) is twice the quantity consumed in No. 24 (Aralupitiya korale, population 3,036).

Column B shows the surplus production of each article of food only in proportion to the quantity consumed. For instance, in No. 17 (Dambagalla korale) the proportions of the surplus production of kurakkan and of the surplus production of Indian corn are each shown as 10, but the quantities are not the same. The 10 for kurakkan has to be read with the 30 under the same heading in column A, and means that the quantity exported equals one-third of the quantity consumed ; the 10 for Indian corn, when read with the 10 under the same heading in column A, shows that the quantity exported is equal to the quantity consumed.

Korala's Division.	A. Consumed. Locally-grown. Rice.	Kurakkan.	Indian Corn.	Vegetables.	Imported Rice.	Total.	B. Surplus. Rice.	Kurakkan.	Indian Corn.	Vegetables.	C. Population according to Census of 1901.

14. A table is appended specifying the average prices of the chief articles of food :—

Country rice, Rs. 4·37 to Rs. 5·50 per bushel.
Imported rice, Rs. 4·37 to Rs. 6 per bushel.
Paddy, Re. 1·75 to Rs. 2 per bushel.
Kurakkan, Re. 1·50 to Rs. 2 per bushel.
Indian corn, Re. 1 to Re. 1·25 per bushel.
Jakfruit, 5 cents to 12 cents per fruit.
Breadfruit, 2 cents to 6 cents per fruit.
Plantain, 18 cents to 36 cents per bunch.
Mun, Rs. 4 to Rs. 4·75 per bushel.
Kollu, Rs. 2·50 to Rs. 3·75 per bushel.
Me, Rs. 2·50 to Rs. 4 per bushel.
Cucumbers, 3 cents to 6 cents each.
Pumpkins, 3 cents to 9 cents each.
Water melons, 3 cents to 9 cents each.
Cassava, 3 cents to 5 cents per lb.
Sweet potatoes, 2 cents to 5 cents per lb.
Oranges, 12 cents to 36 cents per dozen.
Pineapples, 3 cents to 18 cents each.
Cocoanuts, Rs. 5 to Rs. 8 per 100.
Chillies, 12 cents to 18 cents per lb.
Salt, 12 cents to 15 cents per measure.
Onions, 5 cents to 7 cents per lb.

III.—IRRIGATION.

15. *Alut-ela.*—The chief event of the year, from the point of view of local irrigation, was the restoration of the Alut-ela. This water-course, on which many fields within the limits of the Local Board of Badulla are dependent, was seriously damaged by heavy floods at the close of the year 1896. A considerable sum was spent in repairs the following year, but to no practical effect, and it was not until 1902 that the flow of water in the channel was restored. The repairs, the cost of which amounted to Rs. 4,877·75 (which will be met by a rate in perpetuity of Rs. 2 per acre on 130 acres), were begun in the month of May; and in December the work, which was carried out under the supervision of Mr. O. W. Henman, Irrigation Engineer, was all but completed. The result is that an extent of 130 acres of paddy land, which for six years had been unproductive, is once more under cultivation.

16. *Okkampitiya Yoda-ela.*—The full development of this scheme has still to be effected. The main works were completed in 1892 at a cost to Government of Rs. 188,345·24; and the annual charges for maintenance, which also are borne by Government, amount to Rs. 2,435·93. Up to the present time not more than about 431 acres have been brought under cultivation; but much more land can be taken up, and will be taken up, as soon as the additional subsidiary channels required are provided. During the year under review about 200 acres of new land were made irrigable by the extension of an ela, the work on which was done by the purchasers of the land affected. The largest subsidiary channel has yet to be extended for a distance of about 2 miles, and this work will have to be undertaken at the cost of Government. With this object in view an estimate is now being framed; and when the extension is completed an area of another 200 acres will be irrigable and available for sale. There will be no difficulty in finding purchasers on the special terms authorized by Government. In addition to this the restoration of the Alutwewa tank at the end of the main ela is required, so as to irrigate a large tract of land 508 acres in extent, originally taken up but subsequently abandoned owing to want of water. To provide for this work an estimate is in course of preparation.

17. In order to encourage the Okkampitiya settlers arrangements have been made to give them cement pipe sluices free of cost, to improve their Gansabhawa roads, to supervise the erection and maintenance of a number of cattle sheds, and to establish a visiting dispensary. On the other hand, they have been required—and have consented—to take up all unoccupied (and irrigable) lots; to take up garden lots, so as to render all irrigable land available for cultivation; and to build a school, as well as to provide for its equipment and the salary of a schoolmaster. They should be provided with an outlet for their produce in the shape of a road from Buttala, as suggested in paragraph 32 of this report.

18. *Hambegamuwawewa.*—The area of this tank, which was restored in 1891 at a cost to Government of Rs. 31,887·93, is 251 acres; and the head of water at the high-level sluice is 13 feet. But the extent of land at present capable of cultivation is only about 140 acres, all of it under the high-level sluice. Under the same sluice there is a further extent of about 300 acres surveyed, but not yet

provided with a channel; while under the low-level sluice there are about 120 acres surveyed, to which also a channel has still to be opened. Owing to departmental changes, it was not possible in 1902 to employ the Sub-Inspector of the division in framing the estimates necessary for the undertaking of the required works. The tank is, however, capable of irrigating a much larger tract of country than the 140 acres already referred to, and a considerable extension of the settlement is feasible under favourable conditions, such as the establishment of a dispensary, the improvement of roads, and a resident Ratemahatmaya to control and encourage cultivators. Action is being taken accordingly.

19. *Village Tanks.*—The systematic restoration of village tanks in Lower Uva was continued, and a fair amount of work was done on 32 of these tanks, namely, 16 in Wellassa, 1 in Buttala, 1 in Bintenna, and 14 in Wellawaya. Details are specified in Appendix C, which gives particulars of all village tanks, the restoration of which dates from 1898.

20. *Crown (abandoned) Tanks.*—In Bintenna two of these tanks were selected for restoration under the special conditions authorized by Government, namely, Siyambalakotapelessewewa and Viharegodawewa. On the former 46 villagers agreed to work, the clearing of the bund and spills was completed, and a certain amount of earthwork was done. On the latter 19 villagers agreed to work, the clearing of the bund and spills was completed, and a survey was undertaken of the irrigable lands to be benefited. In the other divisions of Lower Uva the restoration of Crown (abandoned) tanks under these special conditions was not undertaken, since the people were already occupied with the repair of their own tanks, as indicated in the preceding paragraph.

21. *Etimolewewa.*—In the division of Buttala, at Etimole, there are traces of a large irrigation work, which may on further investigation prove to be worth restoring. The approximate area of the tank bed is 2,880 acres, the length of the bund is about 2,500 feet, and the head of water at present spill level when restored will be (say) 21 feet. The catchment area is over 5,000 acres, and the extent of land irrigable is about 9,000 acres. Further details, together with a sketch of the locality, have been furnished to the Director of Irrigation, accompanied by a suggestion that a survey should be undertaken and that the scheme should be investigated with a view to its being made a Government work. Labour is available within reach, and it will be possible to dispose of all land capable of being asweddumized.

22. *Makarakata.*—At Makarakata, in the division of Wellassa, Mr. J. H. Fraser, Irrigation Engineer, is engaged in a survey costing Rs. 2,000, undertaken with the object of investigating a large scheme. It is proposed to form a storage tank there to increase the water supply to the lands in the Eastern Province irrigated by the lower reaches of the Pattipola-aar. The scheme may possibly render irrigable about 1,000 acres in the Province of Uva.

23. *Accounts.*—The total expenditure during the year was Rs. 12,878·60, namely, Rs. 752·58 on works of construction, Rs. 5,952·89 repairs, and Rs. 3,040·72 maintenance, all of which is recoverable. The cost of the staff amounted to Rs. 3,132·41. Details are given in Appendix D. The recoveries during the year amounted to Rs. 2,700·26.

24. A return of irrigation works dating from the year 1856, on which Government money has been spent, is contained in Appendix E.

IV.—LEGISLATION.

(1) *Local.*

25. The following Ordinances were brought into operation within the limits of the Local Board of Badulla, namely, "The Dog Registration Ordinance, 1901," on 1st May, 1902; "The Firearms Ordinance, 1901," on 1st May, 1902; and "The Pawnbrokers' Ordinance, 1893," on 1st June, 1902.

26. Regulations and by-laws for the general cemeteries and burial grounds at Badulla and Bandarawela were made under "The Cemeteries and Burials Ordinance, 1899," and are recited in Appendix F. By-laws were made under "The Dog Registration Ordinance, 1901," and are recited in Appendix F 1.

(2) *General.*

27. "The Vehicles Ordinance, 1901," should be amended so as to empower the proper authority to refuse to issue a license. At present the issue of a license appears to be obligatory, provided that the requirements of section 7 of the Ordinance are satisfied. Section 18, although the margin reads "Power to refuse," only applies to licenses already issued. There may be circumstances, however, in which the refusal of a license would be expedient.

28. The amendment of "The Road Ordinance, 1861," is required so as to empower the Provincial Road Committee to exercise when desired the functions of a District Road Committee. The amendment would be applicable in Provinces which are not subdivided into districts, and would serve to simplify procedure. For instance, the Province of Uva consists of only one district, namely, that of Badulla, but in order to comply with the technical requirements of the Road Ordinance it has been found necessary to create two District Road Committees. These with the Provincial Road Committee make three Committees, the work of which could be done much better by one, that is to say, by the Provincial Road Committee.

29. The abolition of all tolls on roads should be enacted, after due consideration of the question in all its bearings; and for this method of collecting revenue there should be substituted some such provision as a tax on all vehicles. Carts plying for hire, for instance, could easily bear a heavy annual charge, considering that many of them pay Rs. 50 a year or more on account of tolls. Private carts and carriages would be subject to a much lower rate, but all vehicles alike should pay some tax, and the roads should be free to traffic without stoppage at a toll station.

V.—PUBLIC WORKS.

(1) *Works undertaken in 1902.*

30. The following is a list of the chief works, exclusive of maintenance, undertaken during the year under review:—

(1) Extension of the road from Bibile to Medagama on a vote of Rs. 20,000.
(2) Deviation of the bridle road between Spring Valley and Badulla on a vote of Rs. 12,000.
(3) Improvement of the road from Muppane towards Pottuvil on a vote of Rs. 5,000.
(4) Erection of a bridge at Nakkala on a vote of Rs. 3,000.
(5) Erection of a bridge at Leangahawela on a vote (Government moiety) of Rs. 2,330.

(2) *Works provided for in 1902.*

31. Money was voted in 1902 for the execution in 1903 of the following among other works :—

(1) Further extension of the Bibile-Medagama road, Rs. 10,000.
(2) Further improvement of the Muppane-Pottuvil road, Rs. 5,000.
(3) Construction of a branch road from Haputale to Dambatenna (Government moiety, on account), Rs. 15,000.
(4) Improvement of the road between Wellawaya and Tanamalwila, Rs. 6,000.
(5) Improvement of the Passara-Madulsima, Badulla-Bandarawela, and Dikwella-Madulla roads, at a cost of Rs. 6,000, Rs. 2,000, and Rs. 1,000 respectively.

(3) *Works to be undertaken.*

32. Among the Public Works still required are the following :—

(1) Railway extension. The 1897 Commission on Hill Tramways strongly recommended that a survey should be made for a 2 feet 6 inch gauge line from Bandarawela to Badulla and Passara.
(2) Further extension of the Bibile-Medagama road towards Muppane *viâ* Nakkala.
(3) Further improvement of the Muppane-Pottuvil road.
(4) Completion of the road from Bibile to Alutnuwara.
(5) Extension of the road from Taldena towards Alutnuwara.
(6) Construction of a road between Buttala and Okkampitiya.
(7) Construction of a road from Tanamalwila to Hambegamuwa.
(8) Construction of a road to connect Dambagalla with Muppane.
(9) Construction of a road from Muppane to Wedikumbura.
(10) Conversion of the Passara-Muppane bridle road into a cart road.
(11) Concrete drains along the roadsides through the bazaars at (*a*) Haputale, (*b*) Koslanda, (*c*) Passara.
(12) Water supply for Bandarawela.
(13) Water supply for (*a*) Koslanda, (*b*) Passara, (*c*) Lunugala.
(14) Quarters for Office Assistant, Badulla.
(15) Quarters for the Colonial Surgeon and Assistant Colonial Surgeon, Badulla.

33. The works numbered (2) and (3) are being carried on from year to year ; those numbered (4), (5), (6), (7), (8), (9), and (10) are needed for the further development of the Province ; and proposals in respect of those numbered (11), (12), (13), and (14) have been submitted to Government.

VI.—SPECIALLY DESIRABLE MEASURES.

34. The chief needs of the Province are :—

(1) Furtherance of irrigation.
(2) Construction of roads.
(3) Extension of elementary vernacular education.
(4) Increased facilities for medical treatment.

35. The subject of Irrigation is discussed in chapter III. of this report ; the roads required are enumerated in chapter V. ; and the means at present provided for the treatment of sickness are described in chapter VII. The question of education is further referred to in paragraph 57 of this report.

VII.—PUBLIC HEALTH.

36. There were no cases of cholera or smallpox during 1902, and the general health of the people was normal, if not above the average. Means for obtaining treatment for sickness are provided by the establishment of the following hospitals and dispensaries, exclusive of estate dispensaries :—

(*a*) *Hospitals.*

(1) At Haputale,	in the division of	Udukinda.
(2) At Badulla,	do.	Yatikinda.
(3) At Lunugala,	do.	do.
(4) At Medagama.	do.	Wellassa.
(5) At Buttala,	do.	Buttala.
(6) At Alutnuwara,	do.	Bintenna.

(*b*) *Dispensaries.*

(i.) *Fixed Stations.*

(1) At Bandarawela,	in the division of	Udukinda
(2) At Welimada,	do.	do.
(3) At Madulsima,	do.	Yatikinda.
(4) At Passara,	do.	do.
(5) At Pingarawa,	do.	do.
(6) At Taldena,	do.	Wiyaluwa.
(7) At Bibile,	do.	Wellassa.
(8) At Baduluwela,	do.	do.
(9) At Muppane,	do.	Buttala.
(10) At Haldummulla,	do.	Wellawaya.
(11) At Koslanda,	do.	do.
(12) At Tanamalwila,	do.	do.

(ii.) *Itinerating Stations.*

(1) Maspana, visited from Welimada.
(2) Ekiriankumbura, visited from Bibile.
(3) Dambagalla, visited from Baduluwela.
(4) Kanda-udapanguwa, visited from Baduluwela.
(5) Nilgala, visited from Baduluwela.
(6) Wedikumbura, visited from Muppane.
(7) Wellawaya, visited from Buttala Hospital.
(8) Telulla, visited from Tanamalwila.
(9) Hambegamuwa, visited from Tanamalwila.

37. As to plague, the following summary indicates the precautionary measures which have been taken :—

(*a*) In every village throughout the Province a house has been selected for occupation by plague patients in case of necessity.

(*b*) Sites for building are in readiness at—

(1) Haputale, in the division of		Udukinda.	(7) Medagama, in the division of		Wellassa.
(2) Bandarawela,	do.	do.	(8) Muppane,	do.	Buttala.
(3) Dikwella,	do.	Yatikinda.	(9) Alutnuwara,	do.	Bintenna.
(4) Passara,	do.	do.	(10) Wellawaya,	do.	Wellawaya.
(5) Lunugala,	do.	do.	(11) Koslanda,	do.	do.
(6) Bibile,	do.	Wellassa.	(12) Haldummulla,	do.	do.

(*c*) On sites (1) and (2) buildings have been erected and are fit for immediate use, subject to minor repairs, which can be effected within six hours.

(*d*) The remaining ten sites can be cleared of weeds and materials can be collected within six hours.

(*e*) Two iron frame hospitals in good repair are in stock, one at Badulla and one at Bandarawela.

38. The sanitary condition of the people, on the whole, is good. In the villages the chief need is the systematic provision of wells year by year. The sanitation is provided for by the machinery of the Village Communities' Ordinance. The small towns of Haputale, Bandarawela, Passara, and Koslanda are controlled by the Board of Health, with satisfactory results: there is no overcrowding of bazaars; the water supply is fair, except at Bandarawela (a scheme for which is under the consideration of Government); but the drainage generally is defective. At Welimada, Lunugala, and Haldummulla the bazaars are not overcrowded; the water supply is passable, except at Lunugala; but the drainage is deficient. The town of Badulla, which is under the operation of a Local Board, is provided with a good and sufficient supply of water, but requires a drainage scheme. Altogether, though there is room for improvement, the state of affairs generally in respect of public health and sanitation is not unsatisfactory.

VIII.—CRIME.

39. There were two murders in 1902. The first of them was committed during the night of the 18th January, when a gatekeeper of the railway near Bandarawela was killed and robbed by some person or persons unknown. It is almost certain that the murderer did not belong to the neighbourhood, and it is probable that he came from Tinnevelly, of which country the deceased was a native. But in spite of every effort on the part of the police no clue could be obtained, and in the end the crime remained undetected.

40. The second case occurred on the 7th December, when a cold-blooded murder was perpetrated close to Medagama in Wellassa. The Arachchi of Pitadeniya, an exceptionally efficient but very unpopular headman, was shot dead. Six persons were taken into custody, and the judicial inquiry was still proceeding at the close of the year.

41. There were five other cases of homicide. In one of them there was no evidence to prove that the death of the deceased was due to other than natural causes. Two cases went to the Supreme Court, and resulted in acquittals; and in the remaining two the accused persons were discharged under the instructions of the Attorney-General.

42. The number of knife cases reported to court was 40, 13 of which were found to be designedly false. All were brought to trial. The total of these cases during the previous year was considerably higher, namely, 51. Particulars for 1902 are stated below :—

Division.	Population, exclusive of Military and Estates.	No Offence.	Designedly False.	True Cases.			Total.
				Committed to District Court.	Evidence insufficient.	Convicted in Police Court.	
Udukinda	31,763	—	6	—	3	5	14
Yatikinda	28,187	—	2	—	6	—	8
Wiyaluwa	17,019	1	2	—	1	1	5
Wellassa	23,114	—	2	—	1	2	5

Wellawaya	8,558	—	1	—	2	1	4
Total ...	134,886	1	13	1	15	10	40

43. The number of cattle stealing cases reported was 42, as against 36 in the previous year and 65 in 1900. Deducting 10 (5 no offence, 3 designedly false, and 2 pending), 32 cases remain. Of these, 5 only resulted in convictions; but the failure to obtain evidence or to trace the thieves in nearly all the remaining cases is due for the most part to carelessness on the part of the cattle owners themselves. Particulars are contained in the following statement:—

Division.	Population, exclusive of Military and Estates.	No Offence.	Designedly False.	True Cases.			Pending.	Total.
				Accused unknown.	Evidence insufficient.	Convicted in Police Court.		
Udukinda ...	31,763	—	1	5	3	2	—	11
Yatikinda ...	28,187	—	1	1	2	1	1	6

Total ...	134,886	5	3	11	16	5	2	42

44. Serious offences are defined to be murder; homicide; hurt with a knife or dangerous weapon; cattle stealing; grievous hurt; robbery; house-breaking; arson, causing mischief by fire; rape; abduction; riot; unlawful assembly; assault with a weapon other than a knife, if the assault is serious; theft of property exceeding Rs. 20 in value. The first four of these have already been discussed; the number (as reported to court) of the other offences defined to be serious was 157, an analysis of which is contained in the following table:—

Nature of Alleged Offence.

Grievous hurt ...	4
Robbery ...	13
House-breaking ...	29
Mischief by fire ...	17
Rape ...	3
Abduction ...	6
Riot ...	1
Assault with a weapon other than a knife ...	1
Theft of property exceeding Rs. 20 in value ...	51
Other offences ...	32
	157

Recapitulation.

Murders ...	2
Homicides ...	5
Knife cases ...	40
Cattle stealing cases ...	42
	89
Other offences ...	157
	246

45. The number of arachchies' divisions in the Province is 158, and the distribution among them of serious offences as reported is disclosed in the summary which follows (divisions for which six or more offences were reported are specified by name):—

68	Wasams with no offences					2†	Wasams with 7 offences			14
41	do.	1	do.	=	41	1‡	do.	8	do.	= 8
20	do.	2	do.	=	40	2§	do.	12	do.	= 24
12	do.	3	do.	=	36	1‖	do.	28	do.	= 28
3	do.	4	do.	=	12	—				—
5	do.	5	do.	=	25	158				246
3*	do.	6	do.	=	18	—				—

* Rambukpota (near Badulla), Widurupola (near Wilson's Bungalow), and Pitadeniya (near Medagama).
† Udagama and Kanahela (both near Passara).
‡ Kahagolla (near Bandarawela).
§ Kabillewela (Bandarawela) and Haputale.
‖ Badulla.

46. There was no lack of co-operation on the part of the headmen in the detection of crime, though none of them particularly distinguished themselves in this respect. The police, both regular and rural, discharged their duties satisfactorily.

IX.—Cattle Disease.

47. The year was remarkable for a total absence of cattle disease, that is to say, of disease as defined in the Ordinance. There was no murrain or rinderpest, nor were there any cases of foot-and-mouth disease in any part of the Province.

X.—New Areas.

48. But little land was opened during the year. The extent of the new clearings added to tea estates was a negligible quantity, in comparison with the large acreage already in bearing; and the total area of other land newly brought under cultivation was inconsiderable.

XI.—WASTE LANDS ORDINANCES.

49. In the middle of the year Mr. J. G. Fraser, C.C.S., took charge of the work of settlement under the Waste Lands Ordinances, with good results; and there is now a satisfactory prospect of continued settlements on block surveys (as well as of isolated claims) being steadily effected by an expert officer. The number of notices issued was 74, the area affected being 3,808 acres 3 roods 25 perches. The final orders published were five in number, under which an extent of 1,399 acres 1 rood 38 perches was declared Crown. Details are contained in Appendix G.

XII.—CHENA CULTIVATION.

50. There was a slight decrease in chena cultivation, but not a material one. The diminution is attributable to the extent of private chena land available for cultivation being a little larger than it was in 1901, and there followed a proportionate decrease in the area of Crown chenas allowed. The extent actually allowed in 1902 was 955 acres, which does not seem much when compared with the total area of the Province, namely, 2,018,560 acres.

51. The issue of permits for this cultivation is restricted as far as possible, but there are many cases of necessity, especially in the division of Wiyaluwa. A comparative statement of the estimated acreages of Crown chenas allowed is given below:—

Division.	1901. Acres.	1902. Acres.
Udukinda	127	83
Yatikinda	1	½
Wiyaluwa	462	498½
Wellassa	47	27
Buttala	77	—
Bintenna	108	306
Wellawaya	163	40
	985	955

XIII.—SALES BY VILLAGERS.

52. The sales of land by villagers during the year included 971 fields, 711 gardens (with houses in 63 cases), and 253 chenas. These figures are practically normal, and there is no reason to think that they imply, except in a few instances, poverty on the part of the vendors. Figures showing the extent of the property so transferred are not available. There are no grounds for supposing that in any of these cases the title of the vendors was insufficient. No improper sales of land by villagers were reported.

XIV.—GENERAL.

53. *Roads.*—The roads generally were kept in good order. The length of the minor roads in charge of the District Road Committees is 705 miles; and there are, in addition, over 1,500 miles of Gansabhawa paths, which are kept up by the Village Committees. The total length of roads maintained by the Public Works Department is about 374 miles. A comparative return in the prescribed form of the working of the Thoroughfares Ordinance is contained in Appendix H. These roads serve an extent of country comprising 3,154 square miles, which is the area of Uva, equal in size to North Wales.

54. *Communal Works.*—A considerable amount of work was done by the Village Committees in the way of keeping in repair a large number of ambalams and other buildings, wells and water spouts, bridges, and irrigation channels, in addition to the paths referred to in the preceding paragraph. Particulars of these works by divisions are given in Appendix J.

55. *Gansabhawa Courts.*—The total number of Village Tribunal and Village Committee civil and criminal cases decided in 1902 was 3,220 (842 civil and 2,378 criminal), of which 298 (58 civil and 240 criminal) were amicable settlements. At the end of the year the number of pending cases was 8 (all of them criminal), in comparison with 252 (47 civil and 205 criminal) at the close of 1901. The number of appeals to the Government Agent was 33, of which 16 were confirmed and 17 set aside. There were two appeals to the Governor in Executive Council, both of which were confirmed. A detailed return of all cases is contained in Appendix K.

56. *Gansabhawa Funds.*—The receipts of the year ranged from Rs. 1,179·55 in the division of Yatikinda to Rs. 238·65 in the division of Wiyaluwa, and the payments differed similarly. Figures for each division are given in Appendix L.

57. *Schools.*—It being settled policy that schools are not to be provided everywhere at the expense of Government solely, that private schools are to be encouraged, and that the persons benefited by schools are to contribute to the cost, it is imperative that private enterprise should do something in the way of spreading education. Pending a decision on the question of an educational cess, action is being taken in Uva with the object of extending elementary education on the principle of self-help. At present there are only nine Government vernacular schools in the Province; towards the close of the year under review arrangements were made to establish in addition four Gansabhawa vernacular schools, to be conducted on exactly the same lines as Government vernacular schools. The buildings will be erected and maintained by the joint labour of all the inhabitants concerned, while the cost of equipment and salaries will be met by local subscriptions paid through the Village Committees. The places selected are Okkampitiya in the division of Buttala, Koslanda and Wellawaya in the division of Wellawaya, and Kumbalwela in the division of Yatikinda. Besides these Government and proposed Gansabhawa schools there are 27 grant-in-aid schools (exclusive of schools on estates), 24 of which are Mission schools.

58. *Land Sales.*—As recorded in paragraph 3 of this report, there was a considerable advance in the amount realized by the alienation of lands advertised for sale or settlement. The number of sales held during the year was 36, 30 of which, owing to departmental causes, were within the last six months. The extent advertised at these 36 sales aggregated 13,324 acres 1 rood 26 perches in 2,244 lots on 591 plans. Deducting the acreage advertised more than once within the year, the actual area put up for sale or settlement was 9,290 acres 2 roods 33 perches. Excluding fractions, 1,126 acres sold for Rs. 13,016·25 (the difference between this amount and the sum of Rs. 11,637·13 appearing in Appendix A is a matter of account); 3,193 acres were settled or reserved; and 4,969 acres remained for disposal (and most of it was re-advertised, without result). In round numbers, of the 1,126 acres actually sold about half was purchased in connection with estates.

59. *Bandarawela.*—A revision of the town survey was undertaken in order to facilitate the preparation of a scheme of improvement. The town should be planted up systematically, and should be laid out under skilled supervision. Proposals for insuring an ample supply of good water have been submitted to Government.

60. *Work done.*—A statistical map of the Province was prepared and completed; alphabetical lists of 914 villages and numerical lists of 158 arachchies' divisions, with cross references and a map were drawn up; and a double set of registers (1,356 in all) for 678 headmen was begun and finished during the year. The erection of a building for the Badulla Library was undertaken with the funds collected for the 1897 Jubilee Memorial; arrangements were made and money was provided for the construction of a building at Badulla (intended for the use of headmen and others visiting the town), which it is proposed to style the Coronation Lodge; and preparations were made for an Agricultural Show to be held early in 1903.

61. The total distance travelled within the Province by the Government Agent during the year (nearly all of it on horseback) was 2,563 miles.

62. *Weather.*—A return of the monthly rainfall at 27 places in Uva is contained in Appendix M.

63. *Appointments.*—The following changes in offices occurred during the year:—

Mr. R. N. Thaine, C.C.S., District Judge, *vice* Mr. F. Bartlett, C.C.S.
Mr. T. B. Russell, C.C.S., Office Assistant, *vice* Mr. B. J. Dutton, C.C.S.
Mr. Walter C. Price, Provincial Engineer, *vice* Mr. C. A. Lovegrove.
Mr. T. R. Ward, Provincial Engineer, *vice* Mr. Walter C. Price.
Mr. J. A. Moraes, District Engineer, Badulla, *vice* Mr. A. R. Tocke.
Mr. Walter C. Price, District Engineer, Badulla, *vice* Mr. J. A. Moraes.
Mr. J. A. Moraes, District Engineer, Badulla, *vice* Mr. Walter C. Price.

Mr. H. R. D. Marapone, Ratemahatmaya of Wiyaluwa, *vice* Mr. T. B. Giragama, resigned.
Mr. W. R. Bibile, Ratemahatmaya of Buttala, *vice* Mr. T. B. Katugaha, resigned.
Mr. J. M. S. B. Moragahalanda, President, Village Tribunal, *vice* Mr. W. R. Bibile, promoted.
Mr. E. D. Dharmasena, Superintendent of Minor Roads, *vice* Mr. G. W. Vallipuram, resigned.
Mr. P. B. Weerasingha, Irrigation Sub-Inspector, *vice* Mr. E. D. Dharmasena, promoted.
Mr. E. R. Dias, Irrigation Sub-Inspector, *vice* Mr. C. H. Eyhianghert, retired.

64. The sad deaths of Mr. A. R. Tocke, District Engineer, and of Mr. F. G. Hoste and Mr. Norman Rettie among the planting community have to be recorded with regret.

65. At the end of May His Excellency the Lieutenant-Governor visited Haldummulla. The chief other event was the celebration with every expression of loyalty of the Coronation of Their Majesties the King and Queen.

Badulla Kachcheri,
February 28, 1903.

F. H. PRICE,
Government Agent.

APPENDIX A. (Quoted in Paragraph 6.)

Comparative Statement of Revenue collected in the Province of Uva for 1901 and 1902.

APPENDIX F. (Quoted in Paragraph 26.)

REGULATIONS under Sections 18 and 23 of "The Cemeteries and Burials Ordinance, 1899," for the General Cemetery at Badulla.

1. All applications for graves shall be made to the keeper of the cemetery not less than six hours before the time fixed for the burial of the person for whom the grave is wanted.

2. No one shall be allowed to dig a grave except the persons employed or approved by the keeper.

3. The keeper shall intimate the line to be followed by the funeral party on arriving at the cemetery, and if more than one party come at the same time the order in which they are respectively to move to the graves.

4. Should it be necessary for the purpose of preventing the disturbance of one funeral party by another, and not otherwise, the keeper may require that one burial service should be concluded before another is commenced.

5. The keeper shall be entitled to keep order within the cemetery, and his commands in that behalf shall be obeyed.

6. No grave shall be less than 5 feet in depth or at a less distance than 4 feet from another. No grave shall be re-opened within three years, nor vault within six months, from the last interment therein, except upon orders from a competent authority.

7. No dead body shall be buried without the permission of the cemetery-keeper; and such permission shall not be granted until all fees due have been paid.

8. The following fees shall be paid by applicants for graves at the time of application in respect of the general cemetery only:—

	Rs. c.
For the performance of a burial service	5 0

Provided that paupers dying in the Government Civil Hospital and prisoners dying in the jail may be buried free of charge by the hospital contractor or other person employed for the work, under the direction of the cemetery-keeper. And provided further, that on production of a certificate signed by the Chairman of the Local Board that the relatives and friends of any deceased person are not able to pay the fees therein authorized for the digging of a grave, the keeper of the cemetery shall cause a grave to be dug and the corpse to be buried therein free of charge.

9. For building a vault one foot shall be allowed for each side wall, and the space of ground above specified shall on no account be exceeded, nor shall any allowance be made for the construction of steps leading into the vault.

10. The keeper of the cemetery shall send to the Chairman of the Local Board monthly a statement of all moneys received by him.

The following fees are payable to the keeper :—

	Rs. c.
For inspection of plan of the cemetery and the book of reference	0 50
For every entry or memorial of assignment of grant	1 0

BY-LAWS under Section 38 of "The Cemeteries and Burials Ordinance, 1899," for the Burial Grounds at Badulla.

1. It shall be lawful for the Chairman of the Local Board, or any person authorized in writing by him for the purpose, to visit and inspect at any time any burial or cremation ground, and all books or documents relating thereto.

2. No grave shall be less than 5 feet in depth or at a less distance than 4 feet from another.

3. No grave shall be re-opened within three years, nor vault within six months, from the last interment therein, except upon orders from a competent authority.

4. The ashes and remains at the spot where any cremation has taken place shall be buried within three days of the cremation at a depth of not less than 3 feet.

5. A table of fees for burial and cremation shall be submitted by the keeper of every burial and cremation ground for the approval of the Chairman of the Local Board, and only such fees as are approved by the said Chairman shall be charged.

6. No burial or cremation shall take place in a registered burial or cremation ground without the permission of the keeper of the said ground, who will be held responsible for the due observance of these by-laws.

7. Any person applying to have a burial or cremation in a registered burial or cremation ground shall be bound to obey the lawful orders of the keeper of the said ground.

8. Any person entitled to the possession of a burial or cremation ground within the limits of the Local Board of Badulla shall apply in writing to the Chairman of the Local Board to have the same registered as such, stating the name of the keeper of the ground and annexing to his application a figure of survey of the premises certified by the Surveyor-General or a duly licensed surveyor. And the person named as keeper in such application shall subscribe the same in acknowledgment of his acceptance of the office and duties of such keeper.

9. If no keeper be named, or if the keeper so named shall not have signed the application in manner aforesaid, then the person who shall have made the application for the registration of a burial or cremation ground shall be held to be the keeper of the ground, and shall be responsible for any breach of by-laws in respect thereto.

10. In the event of the death, or inability from any cause to fulfil his duties, of the keeper of a burial or cremation ground, application to have the same registered shall be made as provided in by-law 8 aforesaid, and no burial or cremation shall take place in such ground until registration on such application has been effected, except on the special license of the Chairman.

11. It shall be the duty of the keeper of every burial or cremation ground within the limits of the Local Board of Badulla to keep a register of all burials or cremations carried out on the premises of which he is the keeper in the form prescribed by the Chairman, and to cause to be delivered a copy of this register to the Local Board Office not more than twenty-four hours after a burial or cremation shall have taken place therein.

12. It shall be the duty of every keeper of a burial or cremation ground to keep the same clean and in good order to the satisfaction of the Chairman.

13. Every burial or cremation ground shall be enclosed by a substantial wall or fence approved by the Chairman.

14. If the keeper of a registered burial or cremation ground is unable from any cause to perform his duties, or if he cannot be found at the time when his services are required, the Chairman may authorize any fit and proper person to perform any of the duties which by these rules are assigned to keepers of registered burial or cremation grounds.

15. Any person who is aggrieved by any order given by the keeper of a registered burial ground or by any act or omission on his part may complain to the Chairman, and the Chairman shall give such order as may be necessary to secure the proper observance of these rules.

REGULATIONS under Sections 18 and 23 of "The Cemeteries and Burials Ordinance, 1899," for the General Cemetery at Bandarawela.

1. All applications for graves shall be made to the keeper of the cemetery not less than six hours before the time fixed for the burial of a person for whom the grave is wanted.

2. No one shall be allowed to dig a grave except the persons employed or approved by the keeper.

3. The keeper shall intimate the line to be followed by the funeral party on arriving at the cemetery, and if more than one party come at the same time the order in which they are respectively to move to the graves.

4. Should it be necessary for the purpose of preventing the disturbance of one funeral party by another, and not otherwise, the keeper may require that one burial service should be concluded before another is commenced.

5. The keeper shall be entitled to keep order within the cemetery, and his commands in that behalf shall be obeyed.

6. No grave shall be less than 5 feet in depth or at a less distance than 4 feet from another. No grave shall be re-opened within three years, nor vault within six months, from the last interment therein, except upon orders from a competent authority.

7. No dead body shall be buried without the permission of the cemetery-keeper; and such permission shall not be granted until all fees due have been paid.

8. The following fees shall be paid by applicants for graves at the time of application in respect of the general cemetery only :—

	Rs.	c.
For the performance of a burial service	5	0
For digging a full-sized grave	3	0
For digging a grave for a child under 10 years	2	0
For digging a grave for a child under 5 years	1	50
For a tomb 8 ft. square	30	0
For a tomb 6 ft. by 2 ft.	20	0
For a tomb 5 ft. by 3 ft.		
For a tomb 4 ft. square		
For each subsequent burial in such tomb	5	0
For space for a vault 8 ft. by 5 ft.	50	0
For space for a vault 8 ft. by 6 ft.	60	0
For space for a vault 9 ft. by 7 ft.	85	0
For space for a vault 9 ft. by 8 ft.	105	0
For each subsequent burial in such vault	5	0
For the use of a hearse	1	50
For the use of a hearse with pall and tassels	2	75

Provided that on production of a certificate signed by a person especially authorized in that behalf in writing by the Government Agent that the relatives and friends of any deceased person are not able to pay the fees therein authorized for the digging of a grave, the keeper of the cemetery shall cause a grave to be dug and the corpse to be buried therein free of charge.

9. For building a vault one foot shall be allowed for each side wall, and the space of ground above specified shall on no account be exceeded, nor shall any allowance be made for the construction of steps leading into the vault.

10. The keeper of the cemetery shall send to the Government Agent monthly a statement of all moneys recovered by him, together with such recoveries.

11. The following fees are payable to the keeper :—

	Rs.	c.
For inspection of plan of the cemetery and the book of reference ...	0	50
For every entry or memorial of assignment of grant	1	0

BY-LAWS under Section 38 of "The Cemeteries and Burials Ordinance, 1899" for the Burial Grounds at Bandarawela.

1. It shall be lawful for the Government Agent, or any person authorized in writing by him for the purpose, to visit and inspect at any time any burial or cremation ground, and all books or documents relating thereto.

2. No grave shall be less than 5 feet in depth or at a less distance than 4 feet from another.

3. No grave shall be re-opened within three years, nor vault within six months, from the last interment therein, except upon orders from a competent authority.

4. The ashes and remains at the spot where any cremation has taken place shall be buried within three days of the cremation at a depth of not less than 3 feet.

5. A table of fees for burial and cremation shall be submitted by the keeper of every burial and cremation ground for the approval of the Government Agent, and only such fees as are approved by the said Government Agent shall be charged.

6. No burial or cremation shall take place in a registered burial or cremation ground without the permission of the keeper of the said ground, who will be held responsible for the due observance of these by-laws.

7. Any person applying to have a burial or cremation in a registered burial or cremation ground shall be bound to obey the lawful orders of the keeper of the said ground.

8. Any person entitled to the possession of a burial or cremation ground within the limits of the Board of Health town of Bandarawela shall apply in writing to the Government Agent to have the same registered as such, stating the name of the keeper of the ground and annexing to his application a figure of survey of the premises certified by the Surveyor-General or a duly licensed surveyor. And the person named as keeper in such application shall subscribe the same in acknowledgment of his acceptance of the office and duties of such keeper.

9. If no keeper be named, or if the keeper so named shall not have signed the application in manner aforesaid, then the person who shall have made the application for the registration of a burial or cremation ground shall be held to be the keeper of the ground, and shall be responsible for any breach of by-laws in respect thereto.

10. In the event of the death, or inability from any cause to fulfil his duties, of the keeper of a burial or cremation ground, application to have the same registered shall be made as provided in by-law 8 aforesaid, and no burial or cremation shall take place in such ground until registration on such application has been effected, except on the special license of the Government Agent.

11. It shall be the duty of the keeper of every burial or cremation ground within the limits of the Board of Health town of Bandarawela to keep a register of all burials or cremations carried out on the premises of which he is the keeper in the form prescribed by the Government Agent, and to cause to be delivered a copy of this register to the office of the Government Agent not more than twenty-four hours after a burial or cremation shall have taken place therein.

12. It shall be the duty of every keeper of a burial or cremation ground to keep the same clean and in good order to the satisfaction of the Government Agent.

13. Every burial or cremation ground shall be enclosed by a substantial wall or fence approved by the Government Agent.

14. If the keeper of a registered burial or cremation ground is unable from any cause to perform his duties, or, if he cannot be found at the time when his services are required, the Government Agent may authorize any fit and proper person to perform any of the duties which by these rules are assigned to keepers of registered burial or cremation grounds.

15. Any person who is aggrieved by any order given by the keeper of a registered burial ground, or by any act or omission on his part, may complain to the Government Agent, and the Government Agent shall give such orders as may be necessary to secure the proper observance of these rules.

APPENDIX F 1. (Quoted in Paragraph 26.)

BY-LAWS under section 5 of "The Dog Registration Ordinance, 1901."

1. It shall be lawful for the Chairman of the Local Board of Badulla from time to time to require every occupier of house to furnish a return showing the number and description of dogs kept in such house or premises attached thereto, and the names of the persons to whom they belong, and every such occupier shall be bound to furnish such return filled in with correct information within one week after being so required to furnish it.

2. The Chairman of the Local Board may refuse to issue a certificate of registration for any dog which in his opinion is so maimed or diseased as to be unfit to live, or which in his opinion is ill-treated or neglected by its owner or the person in possession of it.

3. It shall be lawful for the Chairman of the Local Board to require the production of any dog for which registration is applied for, and to decline to issue a certificate of registration until it is produced.

4. A fee of one rupee shall be charged for each certificate issued.

5. A collar, with the certificate number stamped on it, will be issued in respect of each dog registered should the person applying for the certificate so require. A charge of 37 cents will be made for each collar issued.

6. Certificates for dogs shall have the following conditions attached thereto :—

The certificate is liable to be cancelled—

(*a*) Should the dog become so maimed or diseased as to be in the opinion of the Chairman unfit to live.

(*b*) Should the Chairman be satisfied that the dog has been ill-treated or continually neglected by its owner.

(*c*) Should the dog be permitted by its owner to associate with dogs belonging to other persons at a time when it is suffering from any infectious disease or contagious disease.

7. The owner of every dog for which a certificate has been refused or cancelled because the conditions attached to the certificate have not been complied with, shall, on being noticed to do so, produce the dog at the Local Board pound at a time to be stated in the notice and deliver it to the pound-keeper, and every such dog may be destroyed or otherwise disposed of as the Chairman shall think fit.

PROVINCE OF SABARAGAMUWA.

REVENUE ADMINISTRATION REPORT OF THE GOVERNMENT AGENT, PROVINCE OF SABARAGAMUWA, FOR 1902.

I.—REVENUE AND EXPENDITURE.

THE usual statement of revenue is attached. The chief differences from figures in 1901 are shown below :—

Arrack Rents.—Rs. 77,575 in 1901, Rs. 53,275 in 1902. The rent fetched less than in 1901, due probably to falling off in the plumbago industry.

Toll Rents.—Rs. 17,136 in 1901, Rs. 11,546 in 1902. I cannot quite explain this; the rent has risen again by Rs. 3,800.

Stamps.—Revenue stamps show an increase of Rs. 655, and judicial stamps an increase of Rs. 278.

Police Court Fines show an increase from Rs. 1,670 to Rs. 3,812, which is, I presume, due to the different views held by the Magistrates of 1901 and 1902 as to crime and its punishment.

Land Sales show an increase of Rs. 4,192 over the figure of 1901, which was Rs. 1,731. This is due chiefly to the extra land clerk employed, and the large number of sales therefore held.

Survey Fees show a corresponding increase of Rs. 908.

Sale of Timber shows an increase of Rs. 3,304, the figure for 1902 being Rs. 17,442.

Medical Aid Dues show an increase of Rs. 2,285. This is merely due to their being credited here instead of in Colombo.

Return of the Revenue received by the Government Agent and the Assistant Government Agent of the Province of Sabaragamawa during the Year 1902.

II.—FOOD SUPPLY OF THE PEOPLE.

I gather the following information from the reports of the chief headmen :—

Kuruwiti Korale.—The quantity of imported rice used is about three-fifths of that consumed. The price was less than usual, *i.e.*, from Rs. 4 to Rs. 5 a bushel.

Nawadun Korale.—The locally-grown rice consumed is estimated at only one-tenth.

Kolonna Korale.—Imported rice is Rs. 5·50 a bushel.

Kukulu Korale.—Three-fourths of the rice used is imported, which is expensive owing to difficulty of transport.

Atakalan Korale.—The inhabitants of the Bintenna were prevented from clearing chenas by the unusual rainfall at the close of the year, and they are likely to be pressed for their usual supply of kurakkan for food.

Meda and Kadawatu Korales.—The Ratemahatmaya says half the people live on imported rice. He thinks that they should be allowed chenas to give them more locally-grown food, and more means to buy the other necessaries of life.

In all korales the people have a plentiful supply of chena produce, as well as jak, breadfruit, plantains, and various kinds of yams. No shortage of food supply is reported anywhere. Work at plumbago and gem pits gives the people a good deal of money. In the Kukulu korale a great deal must be earned by the people in carrying plumbago, which is transported either to Ratnapura or towards Badureliya. Two things point to the people not being badly off, *i.e.*, the high rate of wages, and the apparent ease with which the road tax is collected.

III.—IRRIGATION.

Mr. Henman visited and reported on all the irrigation works, on some of which masonry work is required. On the Kaltota channel a good deal of scour had occurred both near the intake and on the recently built trough. This has been put in order. The cultivators under Uggalkaltota passed a set of rules arranging for systematic cultivation of the various ranges, instead of their old practice of cultivating the whole range at one time, and so running short of water. I have also asked to have the boundaries of the lots defined, as people are now overstepping their boundaries in various places, having nothing to guide them. The work done here is very considerable and encouraging.

I wish I could say the same of the Kolonna korale works, which make but little advance. The people have plenty of chena, and it is a matter of regret that the Ratemahatmaya has hitherto failed to increase the field cultivation to any appreciable extent. Under Hingurawewa the land claim is not yet settled, but I hope to settle this soon.

The land under the Malwatta is fully cultivated, but under the Rakwana-ganga scheme no start has been made. The land has been sold under the first 3 miles, but is not yet cleared. A breach near the intake requires attention.

The system of paying coolies to clear the elas of silt is a difficult one to work. It is hard to get the men to do what they ought. It would be better if such work were handed over to the cultivators under their own rules, but, as they pay a rate, it is perhaps difficult to get them to take over such work now.

I was not satisfied with the work of the Irrigation Sub-Inspector, who is now leaving the district. His report is attached :—

Kadawatu Korale.

Kinchigune Works.—All the masonry distribution gates and spills which were leaky have been repaired, and the planks in anicut and gates tarred.

Meda Korale.

Openake Aqueduct.—The aqueduct has been tarred, and brushwood under it has been weeded.

Mulgama Works.—The masonry spills and distribution gates have been repaired and planks supplied to some of the distribution gates.

Uggalkaltota Works.—The leaky sluices have been repaired and re-pointed, and the leaks in drop wall blocked. Silt removed from bed of channel and the iron trough tarred. The sides of the abutment walls have been filled up with earth and turfed, and benching done to prevent the earth slipping.

By the special estimate sanctioned on 30th January, 1902, earthwork was carried on in the first mile of the channel near the breach, and planks supplied to spills and distribution gates in place of rotten ones.

Concrete has been laid in the scoured foundation at regulator, and the top course of stones washed away at the head works laid in cement. The raising and extending of the wingwalls at iron trough partly completed. As there was unprecedented rain, especially towards the end of the year, in addition to the scarcity of labour, sickness, and want of tools, hand carts, &c., the progress of this work was very much impeded. However, it is hoped that this work will be completed before the close of February.

The masonry spill at Migasgomuwa, which is in the last mile of the channel, was partly rooted out of its foundation during the heavy rains in March, and an estimate to repair it has been framed, but not sanctioned yet.

Irrigation Bungalows: Rajawaka Bungalow.—The tiles in bungalow shifted in leaky places only and walls limewashed. The other repairs are now taken in hand.

Kaltota Bungalow.—The main building and outhouses were thoroughly repaired and completed at the close of the previous year, and paid for by the maintenance estimates for 1901 and 1902. The repairs for 1903 are taken in hand now.

Nawadun Korale.

Batugedara Works.—The estimates framed for the repairs and improvements of the masonry have not been sanctioned as yet, so no work could have been carried on in this channel.

Some of the iron pipe sluices which were in want of shutters were provided with ball shutters by the maintenance estimates.

Owing to heavy rains in September, a portion of the main road situated above the channel slipped into the channel and disturbed the foreign earth put into the bed of channel some years ago, and the small leaks in the bund which were already in existence widened, and the earth in the bed was washed away gradually. This damage was repaired at once by the estimate for urgent minor repairs.

Atakalan Korale.

Malwatta Channel.—The special estimate submitted for the repairs of this channel had not been sanctioned, so the repairs could not have been carried out. The rotten planks of channel have been replaced by new ones.

Rakwana-ganga Scheme.—The filled up breach was washed away again when the river flooded, and further work on this channel was suspended by the Government Agent.

Kolonna Korale.

Kitalabokka Works.—The anicut has been provided with planks in place of rotten ones, and the estimate sanctioned for the repairs of the spill in channel suspended by Government Agent.

Panamure Works.—The distribution gates in the north and south channels, which were considerably damaged, have been put to right, and planks supplied and silt removed from beds of channels.

Walalgoda Works.—The leaky spills and distribution gates have been repaired and put into good order.

Ambagahawela Works.—The anicut has been provided with planks in place of rotten ones.

Hulanda-oya Works.—The leaky distribution gates and spills have been repaired and planks tarred.

Hinguruarawewa.—A bridge in round timber was constructed to the tower sluice.

Hingurawewa.—Earthwork was done to middle bund and outer slope. The bund requires more improvement in filling the depressions.

Two tanks in Tunkame have been supplied with planks to spills.

Irrigation Bungalows: Panamure Bungalow.—As this bungalow was thoroughly repaired during the end of the previous year, no work was carried out in 1902.

Tunkame Bungalow.—The bungalow and outhouses were thoroughly repaired by shifting tiles and replacing the rotten sawn timber of roof in outhouses, and plastering, and limewashing.

JOHN F. RATNAYAKE,
Irrigation Sub-Inspector.

IV.—LEGISLATION.

I have none to suggest. The Kukulu Korale Ratemahatmaya suggests registration of the coolies in the plumbago pits and rules for their sanitation and medical comfort. There were a few accidents in the mines during the year owing to the carelessness of the men employed.

V.—PUBLIC WORKS.

The following are the chief public works carried out:—

Ceiling in the shroff's room in the Kachcheri.
Meteorological shed at Ratnapura.
Powder magazine, Ratnapura.
Rakwana hospital, female ward extended.
Roof of Jailer's quarters re-covered with Calicut tiles.

Roads.

Elleara-Pinnawala road.
New bridges at 89th and 95th miles, Halpe road.
Permanent cooly lines at 38th mile on Colombo road and 88th mile on Rakwana road.
Iron bridges substituted for timber on Rakwana and Halpe roads.

In Progress.

Post and Telegraph Office, Rakwana.
Madampe Pass deviation.
Balangoda-Chetnole grant-in-aid road.
Extension of Madampe-Hambantota road from 100th to 103rd miles.

VI.—WORKS MOST REQUIRED.

From last year's list one only has been fully carried out, *i.e.*, the Elleara-Pinnawala road. This useful road was made by the proprietors of the estates interested; it was aided by a grant of Rs. 10,000 from Government, and will be kept up under Ordinance No. 12 of 1902, Government contributing from 1st January, 1904, two-fifths of the cost of upkeep. Of the others, work is being continued on the Madampe-Hambantota road and the Madampe deviation from 77¾ mile. There still remain the following:—

(1) The Badureliya-Kukulegama road to open up the Kukulu korale. Roads in this broken country would be very expensive, but the korale is apparently rich in plumbago, and either a road running north to the Kalu-ganga or west to Badureliya in the Kalutara District would be for the interests of the people.
(2) Road from Ratnapura through Karawita, the same line as the road last mentioned. This useful road is beyond the funds of the District Road Committee to do properly.
(3) Road from Balangoda to Kaltota, for the sake of the Kaltota irrigation works. The cost of the removal of paddy to its market at Balangoda is now considerable.
(4) Permanent court-house and police station at Balangoda.
(5) Houses at Ratnapura for the Office Assistant, District Engineer, and Police Inspector.
(6) The Kurugammodara-Talawitiya road would be a useful line of country to open up in view of the railway.
(7) Extended hospital accommodation at Rakwana in view of the closing of the Godakawela hospital.

VII.—PLANS FOR IMPROVEMENT OF THE DISTRICT.

I repeat last year's list:—

(1) The speedy settlement of titles to lands. This is an important subject, and causes a deal of trouble.
(2) Improvement of communication throughout the Province. This can only be done by Government assisting the Road Committee and Village Committees.
(3) Extension of railway to Ratnapura.
(4) The development of the mineral wealth of the district.
(5) The development of irrigation in Kolonna korale and Atakalan and Meda korales.
(6) The employment of itinerating schoolmasters for out-of-the-way villages.
(7) Receiving Post Office at Kalawana in Kukulu korale.
(8) The building of permanent schools in place of the temporary ones now in use.

Besides the works enumerated above, there are many lines of communication which should be improved. The number of bridges which should be erected in this district of numerous streams is almost endless. The funds of the Road Committee are inadequate to deal with these wants, though I hope to get in a few bridges this year. Our funds are not enough to pay a first class Superintendent of Minor Roads competent to build important bridges. I thought we might join with Kegalla in getting a first class officer, but the Kegalla Committee think they have enough work for their own man. This is the difficulty with all the poorer Committees.

The extension of the railway to Ratnapura is a boon to which the district is looking forward, and which the survey now in hand is leading us to hope will soon be accomplished.

One improvement in communication has been made at the time of writing; *i.e.*, the recent change in coaching arrangements has made it possible for passengers and mails to Rakwana and Balangoda to leave Colombo in the morning and get to their destination the same evening.

A subject of thought is the failure of the Kolonna korale irrigation works to show that improvement which their originators looked for.

An extension of plumbago mining would help to bring money to the district. Leases have been arranged with Messrs. Tatham and Liesching at Masimbula and Karasingoda respectively, and another with Mr. De Mel at Pannila, which I hope will turn out successfully. I cannot but think that the leases might be more conveniently arranged. Perhaps a fixed charge per acre as rent for Crown land and the collection of an *ad valorem* duty at the Customs would simplify the procedure.

The search for gold by Mr. Dixon, a mining expert, was carried on in several parts of the Province, leading to small finds, but the result of his report has to be awaited.

In the Forest Department the Province is worked with the Western Province. The forests here are quite sufficient for one man to look after, and worth it in a pecuniary point of view. It is only the special knowledge of the Province possessed by Mr. F. Lewis, combined with his energy, which make the present arrangement possible.

In education this Province has always been regarded as backward. I have been trying to stir up the headmen to the importance of the subject, with success in some schools at any rate. I fear that we are not likely in the near future to get many new schools, though there are places where they are required.

VIII.—SANITATION.

The general health of the people was reported to be excellent, and no outbreaks of a serious kind were reported.

In the Nawadun korale the people were pleased that the Hunuwala dispensary was moved to Pelmadulla. The Kuruwiti korale Ratemahatmaya wants a dispensary near Gilimale, and the Nawadun korale Ratemahatmaya one at Doloswala or Nivitigala. The former place is now visited by the Kalawana Medical Officer.

The Adam's Peak pilgrimage is always a matter of care. This year it passed off without any trouble, a special inspector with staff of coolies being appointed to superintend it, with an apothecary attached.

Government has decided on closing the Godakawala hospital for parangi patients in the Atakalan korale, possibly opening a parangi ward at Rakwana. The hospital at Godakawela will be kept up as a dispensary.

I have seen a good many parangi cases in the villages near Weligepola in the Helauda palata of Meda korale, and the people about Uggalkaltota and Diyainna are badly off for medical attendance. They are so remotely situated, however, that it is difficult to see how they are to be helped. It seems to be the fact that in those villages the number of children born is much under the average. This fact is against the irrigation works at the former village. The usual precautions regarding plague were taken.

The following return of patients treated at dispensaries, exclusive of the Estate Branch, is interesting. I have included Avisawella, as it is used partly by people of Kuruwiti korale :—

Name of Dispensary.	New Admission.	No. of Visits.
Ellagawa	1,820 ...	2,430
Parakaduwa	2,970 ...	5,653
Kendangamuwa	2,173 ...	3,338
Tembiliyana	1,484 ...	2,151
Rakwana	2,889 ...	3,425
Mahawalatenna and Molamure	3,786 ...	4,132
Kolonna	2,869 ...	3,375
Embilipitiya	1,771 ...	2,001
Godakawela	6,921 ...	9,187
Pelmadulla	3,946 ...	5,525
Ratnapura	7,491 ...	10,275
Avisawella	8,265 ...	15,003
Kalawana	5,429 ...	6,268
Balangoda	7,318 ...	9,239

IX.—CRIME.

The following is a brief account of the murders in Ratnapura District during 1902 :—

On 9th February, 1902, at Kalukandagamuwa in Meda korale, Helagedara Kirisanduhamy, male, 25 years, Sinhalese, Buddhist, cultivator, beat with a club and killed one Aiappen, male, 50 years, Tamil, trader. Anger, on account of a land dispute, was the motive for the offence. The accused has been committed to take his trial at the ensuing sessions of the Supreme Court at Colombo.

On 26th July, 1902, at Hingalagoda estate in Kukulu korale, Savarian, male, 40 years, Tamil, dhoby, Hindu, stabbed with a knife and killed his wife Savari Amma, 25 years, Tamil, estate cooly. Anger was the motive for the offence. The accused committed suicide with the same knife.

On 23rd August, 1902, at Potupitiya in Kukulu korale, Kalunaide, male, 75 years, Sinhalese, Buddhist, cultivator, shot with a flint gun and killed one Sellappunaide, Sinhalese, male, 35 years, Buddhist. It is alleged that the deceased wanted to forcibly remove the accused's daughter and drew his knife, whereupon the accused shot him. The accused was committed before the Supreme Court, but he died in jail.

On 18th October, 1902, at Madalgama in Atakalan korale, Kodippili Arachchillage Kalu Etana, female, Sinhalese, 40 years, Buddhist, beat with a stick and killed her daughter, Vidanelage Rammalhamy, Sinhalese, 15 years. The girl was carrying on an intrigue against the wish of the mother, who beat and otherwise ill-treated the girl, from the effects of which she died a few days later. The accused has been committed to take her trial at the next sessions of the Supreme Court at Colombo.

X.—HEADMEN AND CRIME.

I think, on the whole, the headmen do their duty, though of course there are cases where they fail. They do not seem to thoroughly understand the use of their Crime Registers, and on circuit I have explained the matter to them. The district is, however, not so bad as it has been in respect of crime, as there are fewer plumbago pit workers than there were some years ago. Mapitigama and Muttettuwegama Mohottalas did good work, the former being complimented more than once by the Magistrate. Gunasekara Ratemahatmaya of Kukulu korale makes himself very useful in his special endeavours to arrest criminals. In one case he caught a man who had been wanted for robbery and

grievous hurt for nine years; he is committed before the Supreme Court. Another man had been in hiding for eight years, on a charge of cattle stealing. He got a sentence of six months' rigorous imprisonment, after being traced by the same Ratemahatmaya to the Kalutara hospital. Two men who committed murders in 1901 in Yatipauwa and Kiriella have defeated our attempts to find them. In one case the Korala was dismissed for not having used his best endeavours in that direction.

The list below gives the cases in which headmen have been rewarded. Besides this, twenty-six were rewarded for closing their road tax accounts without a single defaulter, and fourteen for general work :—

Name of Headmen.	Amount. Rs.	c.	For what Reason.
Serahamy, Gan-arachchi, Kendangamuwa ...	10	0	Arresting Tepanisa, who was sent to jail for four years.
Mohottihamy, Gan-arachchi, Talawitiya ...	20	0	For getting five persons fined Rs. 300 for illicit gemming on Crown lands.
Do. do. ...	10	0	For arresting accused in P. C., Kalutara, case No. 9,910.
Lokumahatmaya, Gan-arachchi, Kuruwita ...	10	0	Getting illicit clearers fined in P. C. case No. 23,177.
Serahamy, Gan-arachchi, Kendangamuwa ...	10	0	For successfully prosecuting criminal cases in Avisawella Courts.
Chandenahamy, Gan-arachchi, Patagama ...	10	0	Quickly arresting accused in D. C. case No. 622.
Mituruhamy, Gan-arachchi, Udakada ...	5	0	Successfully prosecuting P. C. case No. 23,487.
Do. do. ...	5	0	Successfully prosecuting P. C. case No. 23,419.
Do. do. ...	10	0	For arresting accused Kiribantha and Ratranhamy, accused in P. C. case No. 23,394.
Weregama Korala	10	0	For successfully prosecuting P. C. case No. 23,623.
Dingirihamy, Gan-arachchi, Marapona ...	2	50	For prompt action taken in reporting a case of illicit felling and removal of timber.
Appuhamy, Gan-arachchi, Pannila ...	10	0	Successfully prosecuting a case of illicit felling of timber.
Emitiyagoda Korala	10	0	Arresting accused Sultan of Kalutara District.
Punchi Banda, Gan-arachchi, Galagama ...	10	0	Discovering the theft of coffee in D. C., Ratnapura, case No. 617.
Mohottihamy, Gan-arachchi, Hatella ...	12	50	Successfully prosecuting P. C. cases Nos. 23,851, 23,460. and 23,578.
Awusadahamy, Gan-arachchi, Dumbara ...	10	0	Prompt action in P. C. case No. 23,198 (knife case).
Saron Appuhamy, Gan-arachchi, Potupitiya ...	20	0	Promptness and the careful manner in which he held his inquiry *re* murder at Potupitiya.
Punchi Banda, Gan-arachchi, Kukulegama ...	10	0	For reporting removal of timber without permit at Kukulegama.
K. M. Banda, Korala	15	0	For successfully prosecuting P. C. case No. 23,477.
Loku Banda, Korala	25	0	For successfully prosecuting V. C. case No. 703 (gambling at Bulatgama).

XI.—POLICE.

The police have done fairly well. Of course it is difficult in outstations to maintain the same discipline as at headquarters, and to have the same strict inspection. In Balangoda I found some friction between the police and the headmen : nothing open, but an unwillingness to help each other, which I have endeavoured to correct. There was carelessness in the supervision of the butcher, which I believe led to his having killed animals different from those which the doctor had passed. I was only able to get him convicted on a minor charge. The Rakwana Police Sergeant Pakeer did well, and was promoted to Colombo. In Ratnapura Police Sergeant Borham earned the good opinion of the Magistrate. Two of the constables were found to have run away on being resisted and attacked by a man whose house they were to search, and were removed to another station. The detective spirit requires more development. For instance, in a case of burglary at the house of a planter close to Ratnapura there was only one clue, *i.e.*, a piece of newspaper, of which I found a senior police officer not attempting to make any use. Otherwise, I may fairly say, the police have tried to do their duty. Money rewards were given in three cases during the year. Inspector Deutrom was in charge during the year, and was promoted to his first class Inspectorship.

There were no instances in which the Magistrate prohibited the carrying of a knife. A good many forged 10-rupee notes were presented at various times, and four prosecutions were entered. Three ended in discharge ; the fourth in acquittal before the Supreme Court. In one case some one had sent a bad note to a Colombo shopkeeper with an order for cloth. We were warned, but no one called for the cloth at the coach office. It was either done for a joke, or the sender got word of our precautions.

XII.—CATTLE STEALING AND OTHER SERIOUS CRIME.

The following returns are for cattle stealing and other serious crime :—

Cattle Stealing.

XIII.—CROWN CASES.

The return of cases attached shows that a good deal of the Magistrate's work on the criminal side is taken up with Kachcheri prosecutions for gemming, chena clearing, and the like. In all of these there has been an inquiry in the office or by the Ratemahatmaya, and in a great number the people are given the option of a fine. In one case a man caught a wild buffalo. I ordered him to pay only Rs. 3, being the amount of the stamp for a license. He declined to pay and preferred to go to court, where he was fined Rs. 25. Of the number of those noted as acquitted and discharged, a great many were cases where people paid the fine I ordered, and the cases were withdrawn. Several of the cases were for stealing timber for plumbago pits, and I occasionally found difficulty, owing to the declarations not setting out the proper owners of the pits, in bringing the charge home to the proper parties.

[For Table see page J 9.]

As Additional District Judge and Police Magistrate I tried 22 cases, 6 of which were for the use of the knife; they resulted in convictions in 20 cases. There were five appeals, all affirmed. One case was for theft of coffee on Nonpareil estate, in which the Galagama Arachchi made a smart capture. Another was for riot by Tamil coolies on Madabaddara estate. A third for using a false striker made ingeniously of a wood called "kiralla" of a corky nature, and thus compressible.

XIV.—CRIME (*continued*).

The Police Magistrate, Avisawella, sends me the following report. His figures apply chiefly to the Kegalla District, the murder on Elnoor estate being in that district :—

The following tables show a decrease in crimes of violence in 1902 in the portion of the Province of Sabaragamuwa lying within my district :—

Section 315.

	Institutions.	Committed. District Court.	Committed. Supreme Court.	Convicted.	Discharged.
1901	23	3	—	5	15
1902	23	1	—	11	11

Sections 316, 317.

1901	9	5	3	—	1
1902	5	2	—	—	3

Section 296.

1901	3	—	2	—	1
1902	1	—	1	—	—

There was no case of homicide till about the close of the year, and but for illicit sale of arrack even this case would not probably have occurred. The identity of the murdered man is unknown. The head kangany of Elnoor estate at Parakaduwa, suspecting that the deceased had come to crimp coolies, beat him, and had him beaten with slippers. This was on a Sunday, when the coolies receive rice and regularly get drunk. The kangany and his accomplices being very drunk beat without moderation, but probably with no intention of killing. The deceased died from the results of the beating almost immediately. The coolies of the estate appear to have got their supply of arrack from a boutique near the boundary of the estate, where it was illicitly sold.

An important source of crime is land dispute. Both the parties who assert right to possessing do so *bonâ fide*, and the Police Court is powerless to interfere, as assertion of title to one's land and the resistance of the attempt of another to enter it are not wrongful acts. Neither party wishes to institute a civil action, as the burden of proof is on the plaintiff. Chapter XII. of the Indian Procedure Code, which is intended to meet cases of disputes to land likely to cause a breach of the peace, &c., may well be included in our Code also.

At the close of last year there were a series of cases of house-breaking in Dehiowita district, which were probably organized by Colombo thieves, aided by local bad characters, the newly-opened railway facilitating the concealment of the movements of the thieves and the quick removal of the stolen property to Colombo. Upon my suggestion headmen were made to patrol at night time, and bad characters were watched. There was thereupon a diminution of burglary cases to the normal rate.

The large floating population of railway and plumbago coolies are a source of much crime, and special measures should be taken to watch them, especially when the work of the railway to Ratnapura is commenced.

As shown in the table below, cattle thefts appear to have slightly increased in 1902, but more offenders were brought to justice :—

The rules framed under the Cattle Ordinance of 1898, which were given a trial in the Western Province, having proved a success, the Province of Sabaragamuwa might also be proclaimed under the Ordinance. I would suggest an additional rule providing that brand-marks be not altered or defaced without obtaining the written permission of a responsible officer, which permission should be given on a prescribed printed form after personal inspection.

The headmen have, on the whole, done their duty, but I cannot help thinking that suppression of gambling and illicit sale of arrack, two fruitful sources of crime, are left too much in the hands of minor headmen, who I have found do not often find it worth while to put a stop to them, as they are subsidized. Rarely or never has a superior headman instituted a case in my court against gamblers or illicit sellers of arrack.

Inquirers into crime would be more useful if they received training in a training school.

M. S. PINTO,
Police Magistrate.

XV.—CATTLE DISEASE.

At the beginning of the year there were outbreaks at Teppanawa and Kandangoda in Kuruwiti korale. In June a herd of forty, which came from the Rayigam korale, were attacked at Pohorabawa. I had the first five animals attacked shot, but they were all infected and all died. The disease did not spread. The Stock Inspector and the headmen did good work, and the disease was kept within its local limits. The total number attacked with murrain, nearly all buffaloes, was 144, of which 6 only were inoculated and 20 recovered. In February and March there were attacks of foot-and-mouth disease; there were altogether 99 cases, of which only 1 died.

XVI.—NEW AREAS OF CULTIVATION.

The following are reported :—

Kuruwiti Korale.—Sixty acres of paddy land asweddumized.

Kolonna Korale.—Two and a half acres under Hingurewewa.

Kukulu Korale.—About 35 acres of land for cocoanuts and cinnamon.

Atakalan Korale.—About 20 acres of gardens.

This is not much to report. I have seen cocoanuts flourishing in many places, and I wish people could be induced to plant more of them.

The Assistant Conservator of Forests is anxious to try rubber under irrigation. A planter from Kalutara applied for some land under Malwatta, but did not think the results would be more than the average. The plantations leased by Mr. Harrison at Yatipauwa gave good results. Cardamoms and rubber are being planted, I cannot say to what extent. Nagrak estate is being planted in tea.

XVII.—WASTE LANDS ORDINANCE.

A statement of work done is annexed.

[For Statement see page J 11.]

The following important cases were tried in court:—Badahelgoda, Ellegedara, Kitulpe. The last two were claimed on sannas, and gave rise to some interesting and intricate questions. In the Yainna case there was a trial as to the value of the land. In all these judgment was given in favour of the Crown; appeals have been lodged in all but the first. The Kalalella case was amicably settled. In the Yainna case the claimant has since begged to be let off his costs on the ground of his being ruined. His case might be a lesson to those who do not trust to the fairness of the British officers in whose hands are these settlements, but prefer to follow the advice of people who, for various reasons and at no cost to themselves, urge them to fight a poor case in court. These cases took up a good deal of time, and I feel obliged to mention the good work done in connection with them by Mr. F. Lewis, the Assistant Conservator of Forests, and also the Waste Lands Ordinance clerk, Mr. B. L. Abeyratne.

XVIII.—LAND SALES.

The office had the advantage of the assistance of an extra clerk for most of the year, and by his help the estimate of Rs. 5,000 was secured. There were 49 sales held. Lots sold, 83 in number. Amount realized, Rs. 5,386·75. Of this, 24 acres were sold under the Malwatta irrigation work under Sir Henry Ward's Minute to Mr. Ross Wright. An extent of 5 acres and 26 perches was sold to English people, and the balance to natives. Under the Walalgoda irrigation work 16 acres 3 roods 3 perches were sold under Sir Henry Ward's Minute. Beside this, 44 lots, in extent 177 acres 3 roods 16 perches, were settled on certificate of quiet possession, for which payment was made, several of these being in settlement of a long outstanding question of land sold at Balangoda for non-payment of police tax many years ago. 874 lots were also settled on certificate of quiet possession, for which no payment can be expected. Extent, 4,470 acres 2 roods 6 perches. The demand for land during the year was anything but brisk. Several lots were advertised more than once without finding purchasers.

XIX.—INCREASE OR DECREASE OF CHENA CULTIVATION.

The Nawadun korale Ratemahatmaya thinks there has been a decrease in his division, owing to people finding employment on tea estates and elsewhere. In Kolonna korale there was some trouble at Kella, which was settled by the Crown allowing a certain portion of the village to be chenaëd.

In Meda and Atakalan korales the rain interfered with the chenas. On the whole, perhaps, less was cleared this year. Cases of illicit clearing were dealt with as usual, and Crown chenas were not allowed.

XX.—SALES OF LAND BY VILLAGERS.

The chief headmen report very few cases where gardens or fields or houses have been sold, and those only amongst the villagers themselves. The sale of land to outsiders has been small.

There have been five cases in which Crown land was sold by villagers. In all of these steps were taken to inquire into the title, and purchasers were warned that the Crown did not admit their vendors' rights. In some cases the disputed property was no longer claimed. In one case an alleged twelfth share of a considerable extent of forest was sold to the Crown Proctor, who, however, renounces any title to forest. In one case a Crown land was sequestered for sale by the Fiscal. It was, however, claimed in court, and the Crown claim upheld.

XXI.—THOROUGHFARES ORDINANCE.

The upkeep of the minor roads was not as satisfactory as I could wish. I hope a change in the Superintendent of Minor Roads will be to their benefit. A storm in November did considerable damage, washing away the Denegama bridge and one at Bowatta, which had just been erected, besides doing damage to other main roads.

The collection of the tax continues to be satisfactory, as shown in the following statement :—

Comparative Statement of Road Tax Collections for the Years 1900, 1901, and 1902.

XXII.—SCHOOLS.

In May the Director of Public Instruction called attention to several of our schools, threatening that he would have to close them. They were Kalawana and Mahawalatenna girls' schools, Ranwala, Kella, Kolombugama, and Weddagala boys' schools. Special efforts were made to improve the attendance at these. The schools that were closed during the year were Kolonna and Mahawalatenna girls' schools. New schools were started at Hattella, Urawela boys', and Imbulpe girls'. Permanent buildings are in course of construction at Marapona, Pelmadulla, and Rakwana.

I have paid nearly forty visits of inspection to various schools, and the more I see of them the more I feel assured that it is to the personal character of the master that we must look rather than to the assistance of the headmen, though the latter is of importance too. I may instance Weddagala, which was threatened with closure early in the year, but which at my second visit with a new master was flourishing. Also the case of Ilukkumbura. The master had an excellent school here, which he had started and worked at for two years; he recently left for a new school at Hattella, which is crowded to overflowing, while the Ilukkumbura school has dwindled down, and the boys go to the neighbouring schools, or keep away altogether, because the teacher is disliked. At Hattella I actually found boys bringing their provisions from Monday to Friday with them, and staying nearly the whole week at the school.

The return below shows how we have improved in this respect since 1895:—

Year.	Average Number on List.	Average Daily Attendance.
1895	3,093 ...	1,857
1899	2,825 ...	1,613
1900	3,223 ...	2,030
1901	3,914 ...	2,323
1902	4,030 ...	2,423

The annexed return gives more details for 1902, and shows great improvement in the Kolonna and Meda and Kadawatu korales, where I noticed the chief slackness:—

Division.	No. of Schools.	First Six Months of 1902. Average Number on the List.	First Six Months of 1902. Average Daily Attendance.	Second Six Months of 1902. Average Number on the List.	Second Six Months of 1902. Average Daily Attendance.
Kuruwiti Korale	9	822·5	491·18	818·16	525·74

Total	55	4,044·9	2,290·11	4,015·53	2,556·15

XXIII.—FOREST DEPARTMENT.

Information under this head will be found in the Conservator's report. The Assistant Conservator was for a portion of the year seconded for special duty with the gold expert. Besides his ordinary duties he has helped me in various ways in land settlement and otherwise. I may here mention that he estimates the profit made in the Province in 1902 at about Rs. 15,000.

XXIV.—GANSABHAWA AND VILLAGE COMMITTEES.

The usual returns of work are attached:—

Return showing the Number of Criminal and Civil Cases instituted, decided, and appealed under the Village Communities' Ordinance for the Year 1902.

	Kuruwiti Korale Village Tribunal.	Nawadun Korale Village Committee.	Meda and Kadawatu Korales Village Committee.	Kolonna Korale Village Committee.	Kukulu Korale Village Committee.	Atakalan Korale Village Committee.	Total.

XXV.—LOCAL BOARD.

The town was healthy during the year. The chief undertaking of the Board was the taking over and completion of the Hall built in memory of Mr. Wace, who served so long in this district. The Hall had been commenced with insufficient funds, and some Rs. 1,500 was required to complete it. The Board took it over, and the building is now nearly ready. The thanks of the town and district are due to Mr. P. M. Bingham, Provincial Engineer, who designed and carried out the work.

XXVI.—BOARD OF HEALTH.

The towns under the Small Towns Ordinance are Balangoda and Rakwana in Ratnapura, Dehiowita and Yatiyantota in Kegalla District. The income from the usual 4 per cent. assessment is small, and does not suffice for much more than scavenging, which has been carried out. At Balangoda and Rakwana the Board proposed to put up slaughter-houses and to make a survey with a view to building drains. At Dehiowita Government has given a grant for this purpose, and the work is in progress. The members of the Board for the year were Mr. P. M. Bingham and Dr. LaBrooy.

XXVII.—REGISTRATION.

The following statement shows the working of the Registration Department. Of the 75 divorces 62 were allowed on the ground of mutual consent:—

Ratnapura District.

Number of marriages registered	Kandyan marriages	...	...	921
	General marriages	...	...	115
Number of births registered	...	...	...	5,363
Number of deaths registered ...	...	...	...	4,123
Number of divorces granted ...	...	...	...	75

XXVIII.—NATURE OF WORK OTHER THAN MERE ROUTINE.

This being a new district to me I had to make myself acquainted with it, and have moved about it considerably. There have been many interesting questions.

Land Settlement.—I reported to Government about the settlement of Nivitigala, Pebotuwa, and Kella. The first, a village claimed by Iddamalgoda Kumarihami, of which some 800 acres are forest, to which I think the Crown has a just claim. The Pebotuwa settlement is important, in that there are valuable forest trees along the streams; beyond that the land is worthless. The Kella settlement was practically an affirmation of what had been previously arranged.

The block survey party surveyed a good deal of the north of the Kukulu korale and several of the Mahawalatenna Ratemahatmaya's claims, which will come into this year's work.

The waste lands cases, mentioned elsewhere, took up a good deal of time. Several interesting questions arose in connection with plumbago and gemming pits and leases.

Forest settlement surveys and other questions about these settlements arose, especially in connection with Kumburugomuwa, Bambarabotuwa, and Madampe. The Arambehena case for digging plumbago on land held by the Forest Settlement Officer to be Crown was lost on a technical point.

The number of Crown cases in the courts require attention before they are entered. As regards chena clearings, I invite special attention to P. C., Ratnapura, case No. 20,705, in which the Supreme Court Judge held that it was necessary for the man who produced a *wattoru* to prove that it applied to the particular land the case was about. This point was exemplified by a registrar, who was acquitted on the production of a *wattoru*, which he afterwards told me on the spot did not apply to the land at all.

The rest of my report will perhaps show that there is plenty of work here, and that of a varied and interesting character, besides what may be called mere routine.

XXIX.—GENERAL.

The most important event was the opening of the railway as far as Avisawella in September, the rejoicings at which were combined with Coronation festivities at Talduwa.

In May the Lieutenant-Governor visited the Province, travelling from the Horton Plains to Avisawella.

June 2.—Demonstration on the news of peace in South Africa.

July 2.—The biggest flood of the year.

July 9.—The death of Mr. J. C. Molamure while holding the office of Police Magistrate, Gampola. He was a well-known and respected chief of this district.

August 9.—Coronation celebrations at Ratnapura, Balangoda, and Maduwanwala, with illuminations, fireworks, and general demonstration of loyalty.

The collection in the district for the Victoria Memorial Eye Hospital amounted to nearly Rs. 800, for a good deal of which we have to thank the various Kumarihamies.

Changes of Officers.

March 18.—I succeeded Mr. E. M. Byrde as Government Agent.

March 20.—Mr. Stevenson succeeded Mr. Thaine as Office Assistant.

May.—Mr. Vaughan succeeded Mr. Fox at Kegalla.

June.—Mr. Fyers succeeded Mr. Wickwar as Superintendent of Surveys.

Mr. Loftus was District Judge throughout the year, being succeeded at the end by Mr. Schrader.

February 28, 1903.

G. SAXTON,
Government Agent.

REPORT ON THE KEGALLA DISTRICT FOR 1902.

Area, 642 square miles; Population, 188,791.

I.—REVENUE.

THE revenue collected at the Kegalla Kachcheri during 1902 was Rs. 254,982·11, as compared with Rs. 252,100·22 in 1901, showing an increase of Rs. 2,881·89.

2. The following camparative statement shows the revenue credited at the Kachcheri in 1901 and 1902 under each head of service :—

Heads of Revenue.	1901.	1902.	Increase.	Decrease.	Remarks.
Licenses.	Rs. c.	Rs. c.	Rs. c.	Rs. c.	
Arrack, Rum, and Toddy ...	154,943 73	157,268 55	2,324 82	—	Increase due to prompt payment by the arrack renter of Three Kofales
Opium	260 0	330 0	70 0	—	—
Rents exclusive of Lands.					
Road Tolls	4,332 50	5,567 50	1,235 0	—	Rents realized a higher valu e
Bridge Tolls	11,410 0	9,731 0	—	1,679 0	Rents realized less value
Ferry Tolls	890 92	848 80	—	42 12	
Stamps.					
Revenue (various services) ...	21,765 9	20,283 55	—	1,481 54	Less stamp duty recovered on cart and hackery licenses
Fines and Forfeitures.					
District Courts	205 0	160 0	—	45 0	—
Police Courts	1,683 35	2,248 97	565 62	—	Incidental
Government Agents ...	159 37	85 0	—	74 37	—
Other Departments ...	482 75	370 0	—	112 75	—
Fines for Forest Offences ...	433 14	231 75	—	201 39	—
Fees of Court or Office, Payment for Specific Services, &c.					
Judicial Stamps ...	9,355 18	10,895 76	1,540 58	—	Increased value of property the subject of litigation
Survey Fees	2,016 70	1,880 50	—	136 20	—
Hospital Stoppages ...	57 5	55 77	—	1 28	—
Collections at Dispensaries ...	253 76	545 2	291 26	—	—
Medical Aid Dues ...	11,857 68	11,889 30	31 62	—	—
Sale of Drugs	1,134 72	1,017 67	—	117 5	The decrease is owing to opening of dispensaries in estates
School Fees	268 45	228 98	—	39 47	—
School Books and Stationery ...	268 23	372 13	103 90	—	—
Fees for Title Deeds ...	541 44	576 21	34 77	—	—
Sundries	510 37	416 94	—	93 43	—
Maintenance of Prisoners ...	54 12	1 58	—	52 54	—
Rents of Government Property.					
Rent of Lands	210 7	197 28	—	12 79	—
Interest.					
On Arrears of Revenue ...	932 94	914 46	—	18 48	—
Miscellaneous Receipts.					
Sale of Old Stores ...	0 25	6 0	5 75	—	—
Unclaimed Deposits ...	167 77	245 98	78 21	—	—
Sundries	128 63	202 90	74 27	—	—
Sale of Government Property.					
Timber	11,941 25	6,087 13	—	5,854 12	Less sale of timber
Crops on Crown Lands ...	56 40	64 0	7 60	—	—
Sundries	0 82	1 90	1 8	—	—
Land Sales.					
Crown Lands sold ...	13,003 54	19,907 48	6,903 94	—	Larger sale of lands
Premia on Leases ...	2,775 0	2,350 0	—	425 0	—
Total ...	252,100 22	254,982 11	13,268 42	10,386 53	
Deduct Decrease ...	—	—	10,386 53		
Nett Increase ...	—	—	2,881 89		

The only large item of decrease is Rs. 5,854·12 on account of sale of timber. The figures for 1902 are nearly the same as those for 1900. The decrease in proceeds sale of timber is more than counterbalanced by an increase in the revenue from land sales. The demand for land was keen in the Galboda and Kinigoda korales for the extension of plantain cultivation, but the extent available for sale is limited; owing to the condition of the tea and plumbago industries there was not much demand for land in other parts of the district.

II.—EXPENDITURE.

3. The total expenditure of the Assistant Government Agent's, District Judge's, and Prison Departments was Rs. 30,672·41, or 12 per cent. of the revenue credited at the Kachcheri. The percentage was the same as in 1900 and 1901.

III.—FOOD SUPPLY.

4. The food supply of the people is mainly rice; this is supplemented by "fine grain," namely, kurakkan, hill paddy, and amu, grown on chenas, and among the poorer classes by jak and breadfruit.

The year was a prosperous one, and there was no scarcity of food: both the maha and yala harvests were good; the yield is estimated at 700,000 bushels of paddy. Chena crops (fine grain) show a return of 61,600 bushels. The estate and urban population live chiefly on imported rice.

The cultivation of plantains is extending rapidly throughout the district, and furnishes a steadier source of wealth and food supply than occasional chena cultivation of fine grain.

5. The following table shows the prices of the chief articles of food during the year:—

Rice (Indian)	... Rs. 4 to Rs. 5·50 a bushel	Cocoanuts	... Rs. 3 to Rs. 5 per 100
Rice (home-grown)	... Rs. 3 to Rs. 4 a bushel	Breadfruit	... 2 cents to 5 cents each
Salt	... 10 cents a measure	Jakfruit	... 2 to 6 cents each
Bread	... 25 cents a pound	Plantains	... 36 cents to Re. 1 per bunch
Mun	... Rs. 3·50 to Rs. 4·50 a bushel	Beef	... 18 to 20 cents a pound
Kurakkan	... 75 cents to Re. 1 a bushel	Eggs	... 3 to 4 cents each
Amu	... 75 cents a bushel	Chickens	... 37 to 50 cents each
Cassava	... 1½ to 2 cents a pound	Fowls	... 62 to 75 cents each
Yams	... 3 cents a pound	Dry fish	... 37 to 75 cents each

IV.—IRRIGATION.

6. There is only one irrigation work in the district, a small anicut across the Andana-ela. The district is well watered, and the rainfall sufficiently evenly distributed to render Government assistance in irrigation unnecessary.

V.—LEGISLATION.

7. I have no suggestions to offer.

VI.—PUBLIC WORKS.

8. The following is a list of the works I recommend for the favourable consideration of Government:—

(1) A bridge across the Sitawaka-ganga at Algoda.
(2) A bridge or causeway across the Maha-oya at Andiramada.
(3) A new Post Office for Kegalla.
(4) A new resthouse at Yatiyantota.
(5) A Telegraph Office at Dehiowita.
(6) A Receiving Post Office at Pindeniya.
(7) A permanent dispensary at Mawanella.
(8) A dispensary at Undugoda.
(9) A permanent dispensary at Pindeniya.

With regard to (1), a causeway was opened in the first half of this year across the Sitawaka-ganga at Algoda, but proved of little use, as the river was generally too high. The weather was of course abnormally wet, so that the work had hardly a fair trial. The only other causeway of this nature in this district is the one at Arandara on the minor road to Pindeniya. This work was built some years ago by the Head Overseer at a cost of Rs. 4,000; it has required but little repair, and is but rarely impassable. A causeway at Andiramada (work No. 2 in the above list) might be a success, but I do not think that at places like Algoda, where the river, being confined between steep banks, rises rapidly after comparatively slight rain, a causeway would ever be of much utility.

9. The following new works and buildings were undertaken by the Public Works Department:—

(1) A permanent ward at Kegalla hospital.
(2) New quarters for the District Engineer's clerk at Ambanpitiya.
(3) The Polatagama-Ardross road (in progress).
(4) Algoda causeway.
(5) Cement drains at Dehiowita bazaar.

VII.—PLANS FOR IMPROVEMENT.

10. It is most desirable that villages in outlying parts should have improved means of communication with existing trunk roads, so that produce can be exported and supplies obtained more easily. The Village Committees in the district are increasing in wealth, and now spend considerable sums in opening village cart roads. These are not suitable for heavy traffic, but allow of an ordinary bullock cart (provided it is not overladen) being taken along them. The annual extension and improvement of such roads is, together with the building and maintenance of village schools, the most useful work achieved by the Village Committees.

VIII.—PUBLIC HEALTH AND SANITATION.

11. The general health was satisfactory, and there were no epidemics. The birth-rate and death-rate for the last three years were as follows:—

	1900.	1901.	1902.
Birth-rate, per mille	47·3	37·8	42·1
Death-rate, per mille	41·4	27·8	27·4

12. The Local Board provides for the sanitation of Kegalla town, and contributes towards the maintenance of the infectious diseases hospital and quarantine shed in the town. Wells were built at Yatiyantota and Dehiowita from the funds raised by the small towns sanitation tax. In other large villages and bazaars sanitation and scavenging were attended to by the Village Committees. In outlying villages the Plague Committee have decided that the temporary buildings erected for use on the occurrence of any case of plague need not be kept in repair; the sites were, however, kept

cleared, and materials for re-erection are available at a moment's notice. The houses generally throughout the district were whitewashed in accordance with the plague regulations. As already stated, the Public Works Department have taken in hand the construction of cement drains at Dehiowita.

IX.—CRIME.

13. The following statement gives the number of cases of serious crime reported by the headmen :—

Crime.	No. of Cases reported.	No. brought to Trial.	Convictions.	Pending at the end of the Year.
Homicide ...	5	5	2	2
Hurt with knife ...	47	47	14	8
Grievous hurt, section 316	14	14	2	2
Grievous hurt, section 317	9	9	4	1
Highway robbery ...	37	33	10	3
Cattle theft ...	83	66	10	13
Burglary and theft from houses	117	55	15	16
Rape ...	7	7	2	—
Arson ...	8	8	—	—
Abduction and kidnapping	3	1	—	—
Total ...	330	245	59	45

14. *Homicides.*—(1) On the night of the 27th March, 1902, at Dedigama, one Punchirala, a boutique-keeper, aged 54 years, was stabbed by one of three thieves who had entered the boutique, in the boutique-keeper's absence, to commit theft. The first accused was sentenced to death, and was hanged. The second accused is still at large. The third accused was tried before the District Court and acquitted.

(2) On 29th March, at Penihela, two Sinhalese men had an altercation about a pot of toddy. The accused assaulted the deceased with a club, and the injured man died in hospital. The accused was tried before the Supreme Court and sentenced to five years' rigorous imprisonment.

(3) On 14th August, at Akwatta, Ran Etana, a Sinhalese woman, aged 35 years, was kicked by her husband, who suspected her of unfaithfulness, and died from the injuries received. The accused was tried before the District Court on a charge of causing grievous hurt and acquitted for want of evidence.

(4) On 19th November, at Alnoor estate, a Tamil man, name unknown, was found dead on the bank of the river near Alnoor estate, and on investigation it was found that deceased had died from the effects of an assault committed on him by four Tamils. The accused are in custody, and the case is pending.

(5) On 24th December, at Dedigama, a Sinhalese man stabbed his stepdaughter in a fit of insanity. Deceased died in hospital. The case is pending.

15. *Burglary and Theft from Houses.*—Twenty-six more cases were reported than in 1901. The figures for this class of cases are given separately for each korale. The largest number of cases occurred in the Three Korales; and most of these took place in the last quarter of the year in the neighbourhood of Avisawella, Dehiowita, and Yatiyantota. The increase is attributed to the influx of bad characters among the labourers on the Kelani Valley Railway works. On the suggestion of the Police Magistrate, Avisawella, a special inquirer has been appointed temporarily to deal with this class of crime. It is hoped that with the completion of the railway in the course of this year the figures will revert to their normal level :—

Korale.	No. of Cases reported to Court.	No. brought to Trial.	Convictions.	Pending at the end of the Year.
Galboda and Kinigoda Korales ...	20	10	4	1
Paranakuru Korale ...	14	7	1	2
Beligal Korale	25	22	5	4
Three Korales and Lower Bulatgama	58	16	5	5
Total ...	117	55	15	12

X.—CATTLE STEALING.

16. This class of crime is not widely prevalent. The chief headmen are of opinion that the motive in the majority of cases is to pay off some private grudge, and that the thefts are not the work of professional cattle lifters.

XI.—CONDUCT OF THE POLICE.

17. The regular police force at Kegalla consists of the Additional Superintendent of Police, one sergeant, one constable clerk, and five constables. During the year Police Sergeant Bakman was transferred, and succeeded by Police Sergeant Anthonisz. The duties of the force consists chiefly in mounting guard at the Treasury, attending the Police Court, and receiving complaints at the police station. These duties were discharged satisfactorily. The town was quiet; there were only five cases for being drunk and disorderly and one for affray.

18. All the chief headmen have worked well in the investigation of offences and in supervising the work of their subordinates. Nugawela Ratemahatmaya was instrumental in securing the arrest of a man charged with culpable homicide at Penihela, who had fled to the Western Province. Mideniya Ratemahatmaya recaptured a convict who had escaped from Mahara jail. Among the minor headmen, H. M. Menikrala, Korala of Walgam pattu, and Appuhami, Korala of Otara pattu, may be mentioned for energy and intelligence. The minor headmen have on the whole discharged their duties satisfactorily, though instances of neglect of duty in reporting and investigating offences are not unknown. Rs. 212·50 was paid as rewards to the rural police.

XII.—CATTLE DISEASE.

19. The district was practically free from cattle disease throughout the year. There were 17 cases of hoof-and-mouth disease in Beligal korale in the last quarter. The diseased animals were promptly segregated, and all recovered.

XIII.—NEW AREAS OF CULTIVATION.

20. The most noteworthy event was the commencement of rubber plantation, practically a new industry in this district. 4,071 acres are reported to have been opened in rubber. As a rule, it was planted in land already under tea cultivation. Of other products, 860 acres are reported to have been opened in cocoanuts, 540 in plantains, 318 in arecanuts, 285 in tea, 58 in cacao, and 12 in cardamoms. On several estates the manufacture of green tea, instead of black, was introduced.

21. The following statement shows the extent of Crown land sold in the last three years :—

	Extent Sold. A. R. P.	Average Price per Acre. Rs. c.
1900	745 0 0	33 0
1901	476 1 35	27 29
1902	727 2 30	28 13

The best prices were obtained in Kinigoda korale for land for plantain cultivation. The state of the plumbago industry is quiescent.

XIV.—WASTE LANDS ORDINANCES.

22. The following statement shows the progress made in this district since 1898 :—

	Declared Crown. A. R. P.	Allowed as Private. A. R. P.
1898.		
By Assistant Government Agent	969 1 38	126 2 17
By District Judge	6 1 0	—
1899.

By District Judge	110 0 0	—
1901.		
By Assistant Government Agent ...	4,274 2 33	233 1 27
By District Judge	571 2 31	—
1902.		
By Assistant Government Agent ...	3,524 0 24	163 0·15
By District Judge	138 0 30	—
Total ...	14,552 3 4	752 0 36

During the year 1,078 acres 2 roods and 17 perches were surveyed by the special surveyor employed for the work. The cost of working the Ordinances in 1902, including the cost of special surveys made in the year, was Rs. 3,805·65.

XV.—CHENA CULTIVATION.

23. No Crown land is allowed for chena cultivation, as the villagers have sufficient of their own. It is satisfactory to note that chena land, formerly cultivated only at intervals of several years under this wasteful system of cultivation, is being gradually planted with plantains and cocoanuts, which yield a more frequent, continuous, and valuable return than chena crops.

24. The following is a list of forest offences dealt with by the Assistant Government Agent :—

Cases pending at end of 1901		30
New cases of the year :—		
Unauthorized felling or removal		34
Illicit chena		34
Other offences		1
	Total ...	99
Disposed of during the year :—		
Convictions { Cases		51
Convictions { Persons		70
Acquittals { Cases		8
Acquittals { Persons		18
Total { Cases		59
Total { Persons		88
Cases pending at end of 1902		40

XVI.—SALES OF LAND BY VILLAGERS.

25. Sales of lands by villagers have been rare, and in very few cases included houses or fields. A private block of 400 acres of chena land in Lower Bulatgama was sold to some European planters for rubber cultivation.

XVII.—WORK OTHER THAN ROUTINE.

26. *Kelani Valley Railway.*—104 allotments of land, in extent 40 acres 3 roods and 31·75 perches, were acquired for the construction of the last 2 miles of the railway to Yatiyantota, including approach roads to Karawanella and Yatiyantota stations, and sites for warehouses and bungalows at the terminus. The compensation paid amounted to Rs. 23,758·79, or about Rs. 580 an acre, including buildings. The work of acquisition of land for this railway is now practically complete. In every case arrangements were made for the Railway Department to commence work on the land pending formal acquisition.

XVIII.—THOROUGHFARES ORDINANCE.

27. I annex a statement of the working of the Thoroughfares Ordinance :—

	1900.		Per-centage on B.	1901.		Per-centage on B.	1902.		Per-centage on B.

29. The following works were undertaken and are in progress :—

(1) Erecting an additional schoolroom at Molagoda. Estimate Rs. 226·90.
(2) Repairs to and extension of Deliwala school and erecting teacher's quarters. Estimate Rs. 741·86.
(3) Erecting an additional schoolroom at Pinnawala. Estimate Rs. 675·62.
(4) Erecting a school at Ganetenna with kitchen. Estimate Rs. 873·15.
(5) Erecting a circuit bungalow at Pinnawela. Estimate Rs. 959·81.
(6) Extending the Mawanella school. Estimate Rs. 649·74.
(7) Constructing Boyagoda ambalam. Estimate Rs. 50.
(8) Improving Dedigama-Kolombuwa road. Estimate Rs. 1,000.
(9) Opening of Mattamagoda-Pannala road. Estimate Rs. 250.
(10) Kehelwatta circuit bungalow. Estimate Rs. 300.
(11) Bathrooms at Beligala and Dedigama Gansabhawas. Estimate Rs. 250.

30. In addition to the above, 464 miles of Gansabhawa paths were cleared by labour called out under the Ordinance. The following statement shows the return of labour called out or commuted :—

Statement showing the Working of the Village Communities' Ordinance in each Korale of the Kegalla District for 1902 as regards Labour performed or commuted.

XXII.—MISCELLANEOUS.

33. The postponement of the Coronation festivities in June on account of His Majesty's illness caused universal sorrow and disappointment. The festivities were observed, on a less elaborate scale than had been formerly intended, on 9th and 11th August, and passed off with great success.

On 29th and 30th December Major-General Sir Hector Macdonald and staff stayed at Kegalla in the course of a staff march from Polgahawela to Kadugannawa.

Mr. E. T. Noyes was Assistant Government Agent till 29th January, and Mr. H. O. Fox from 13th February to 6th May, Mr. A. Beven acting temporarily in the interval.

February 28, 1903.

C. S. VAUGHAN,
Assistant Government Agent.

Return of the REVENUE received by the several Government Agents and their Assistants during 1902.

REPORTS

ON THE

WORKING OF THE THOROUGHFARES ORDINANCES,

No. 10 of 1861 and No. 31 of 1884.

WESTERN PROVINCE.

THE annexed table is a comparative statement showing the working of the Thoroughfares Ordinances in the Western Province during the years 1900, 1901, and 1902. It will be seen that the usual steady progress in the working of these Ordinances continues to be maintained :—

The minor roads in the Colombo District have suffered greatly during the past year by the prolonged illness of the Superintendent of Minor Roads and the unusual heavy rains.

During the illness of Mr. Daniel, the Superintending Officer, the work was attended to by Mr. Crozier and, on his being disabled by accident, by Mr. Gunaratne, Superintending Officer, Minor Roads, Kalutara. Work necessarily suffered a good deal by three persons having had charge for twelve months.

After thirty-six years' good service Mr. H. L. Daniel, the Superintending Officer, had to relinquish his post owing to continued ill-health, and the District Road Committee was pleased, in consideration of his long and faithful services, to grant him a gratuity of Rs. 5,000. Mr. Daniel has been succeeded by Mr. J. O. Ebert, District Engineer of the Public Works Department, who was strongly recommended to the Committee.

The opening of the Kelani Valley Railway has greatly increased the traffic on the various roads leading up to the railway stations of Padukka and Kosgama. One of the most important of these "feeder" roads is the Mupe-Padukka-Millewa road, for the repair of which an estimate amounting to Rs 3,000 has been submitted and the work taken in hand, Government contributing to the extent of half of the cost.

The Padukka-Bope road, too—another "feeder"—had to be improved, and towards its repair Government has contributed Rs. 1,000, being half the estimated amount.

The resthouses in the Province are maintained in an efficient state. The new resthouse at Henaratgoda will be completed by middle of June next and fully furnished and ready for use.

The receipts of the resthouses at Kaduwela and Hanwella have been appreciably reduced since the opening of the Kelani Valley Railway. Whether both or one of these resthouses should be closed and a resthouse opened at Padukka or elsewhere on the railway line, are questions which will have to be considered in the light of further experience.

The statements of receipts and expenditure of the Provincial Road Committee and of the District Road Committees are annexed, together with the reports of the Chairman of the District Road Committees of Negombo and Kalutara and of the Superintendent of Minor Roads, Colombo.

Provincial Road Committee,
Colombo, April 9, 1903.

C. A. MURRAY,
Chairman.

Annexure.

REPORT ON THE MINOR ROADS IN THE COLOMBO DISTRICT FOR 1902.

THE total expenditure during the year 1902 was Rs. 49,646·96, Rs. 40,235·31 of which has been spent on maintenance as per statement annexed. The total number of miles maintained during the year was 231⅜, of which 144¾ are metalled, 80⅝ are gravelled, and 6 natural surface.

The average cost per mile for metalled roads was Rs. 212, gravelled roads Rs. 114, and natural surface Rs. 37.

I took charge in October, and found most of the roads in an unsatisfactory condition. They had suffered a great deal from floods during the year, and many bridges and culverts were also badly damaged. Most of these culverts and bridges will have to be renewed, as the masonry work in many of them has given way. This will naturally necessitate a larger outlay in 1903 than in the previous year. A large number of these bridges are of wooden platform, varying in spans from 6 to 100 feet, and no less than 1,500 planks were purchased from the Forest Department for their upkeep. The expenditure under this head is, in my opinion, rather heavy, and it would appear desirable, with a view to economy in their future maintenance, to replace most of them with a permanent platform of buckle or corrugated plates with concrete decking. This form of construction will necessitate a greater initial expenditure, but the advantages of such a system are too obvious to need comment.

As regards culverts and small bridges under 10 feet span, I have already recommended to the Chairman, District Road Committee, Colombo, the introduction of cement concrete pipe culverts of 2 feet and 2 feet 6 inches diameter openings, with ends protected by masonry. If one opening is not large enough, two or more rows of pipes may be laid to allow more waterway. These pipe culverts are easy of construction and ought to last for ages, thereby minimizing the cost of maintenance, and a start has been made in this direction.

Since the opening of the Kelani Velley Railway the traffic on most of the feeder roads has been considerably increased, and the cost of their maintenance will consequently rise, for which provision will have to be made hereafter. Government has voted a moiety of the cost of maintenance of two of these roads, and it has also been proposed to hand over a few of these roads to the Public Works Department.

It will be seen from the annexed statement that the sum sanctioned for bridges and culverts and for improvements of roads other than maintenance was Rs. 19,255, and only a sum of Rs. 1,448·37 spent, leaving a balance of Rs. 17,806·63, which I have asked to be re-voted during 1903, as it was not found possible to start the works owing to the protracted illness of my predecessor and also to the submerged state of the roads and country in general.

For want of quarries some difficulty is experienced in procuring metal and gravel from private land, even on payment of compensation. There have been instances where as much as 20 cents have been demanded for each cart load of gravel removed. I anticipate that in a few years the cost of metal and gravel would greatly increase, and it would therefore be well if the District Road Committee could acquire lands suitable for quarries in a few central localities.

Resthouses.

A new resthouse is in course of construction at Henaratgoda at a total cost of Rs. 8,500. A sum of Rs. 1,145 was spent during the year, and it is expected that the building will be completed by the end of June, 1903.

A sum of Rs. 976 was sanctioned for minor repairs to resthouses during the latter part of the year, and as the works could not be put in hand I have asked for the amount to be brought forward for expenditure in 1903.

The following works have also been executed during the year :—

	Rs. c.
Repairs to store of Provincial Road Committee	25 0
Repairs to ferry boats at Diggala and Pugoda	305 0
Repairs to shed at Kachcheri premises	26 75
Cutting a channel at Hanwella ferry	131 25
Village road, Veyangoda to Banduragoda	984 50
Repairs to hand and water carts	346 25
Total ...	1,818 75

The foregoing is a brief report of the state of affairs when I took over charge of the district in October last; owing to the short time I was in charge, I am unable to submit a fuller account.

J. O. EBERT,
Superintendent of Minor Roads.

Colombo, February 2, 1903.

Annexure.

5. Non-effective :—									
(*a*) Reported to have left the village	214		·65	271		·82	329		·99
(*b*) Otherwise, not arrested ...	—		—	—		—	—		—
		214	·65		271	·82		329	·99

In 1902 the revenue from commutation amounted to Rs. 46,551, as against Rs. 46,158 in 1901, an increase of Rs. 393; and the number of men who discharged their liability under the Ordinance was 31,032, as against 30,786 in 1901. Ten men were fined and three men were committed to prison but were subsequently discharged on payment of fine.

The minor roads in the district were kept in good order, notwithstanding heavy rains during the year. In addition to the ordinary upkeep, several temporary culverts were converted into permanent ones. The road from Ewariwatta to Yagodamulla, which was undertaken in 1901, is now almost complete, the work of forming and gravelling the road having been done by contract at a cost of Rs. 1,917·50.

The road from Minuwangoda to Dagonne, for which funds were voted in 1901, was completed in 1902. The further extension of this road to Miriswatta has been deferred for want of funds.

The statement of revenue and expenditure is annexed :—

Statement of Revenue and Expenditure, 1902.

REVENUE.	Amount. Rs. c.	Total. Rs. c.	EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.

BERTRAM HILL,
Chairman.

KALUTARA DISTRICT.

I.—COMMUTATION.

THE collection of the labour or commutation due under the Thoroughfares Ordinance being of the greatest importance, a comparative review of the results in 1902 and in previous years naturally takes first place in dealing with the work of the District Road Committee. The annexed table gives these figures :—

	1900.		Per-centage on B.	1901.		Per-centage on B.	1902.		Per-centage on B.
1. Population (A) ...	—	178,795	—	—	201,455*	—	—	201,455	—
2. Number on lists (B) ...	—	51,874	—	—	52,366	—	—	52,850	—
3. Effective in the district :—									
(a) Paid Re. 1·50 ...	46,351		89·35	46,710		89· 2	46,141		87· 3
(b) Paid Rs. 3 ...	200		·39	306		·58	361		·68
(c) Laboured 6 days ...	—		—	8		·02	1		002
4. Not effective in the district, but have discharged their liability :—		46,551	89·74		47,024	89· 8		46,503	87·99
(a) Exempted ...	1,504		2·90	1,226		2·34	1,900		3·59
(b) Paid and laboured elsewhere ...	3,143		6·06	1,866		3·57	1,757		3·32
(c) Committed to jail ...	8		·01	7		·01	2		·003

5. Non-effective :—		4,962	9·56		4,964	9·52		5,780	10·94
(a) Reported to have left the village ...	326		·63	358		·68	567		1·07
(b) Otherwise, not arrested	35		·07	—		—	—		—
		361	·07		358	·68		567	1·07

* Based on the Census of 1901.

The comparison does not at first sight show as satisfactory results as would seem desirable, and requires some explanation.

The usual natural increase appears (head B) to have come on the lists, and the steadiness of the figures points to any possibly abnormal influx due to plumbago mining in 1899 having moved again from the district. But in spite of this the actual effectives have fallen off 500, instead of increasing above that number over the figures of 1901. The loss is probably explained by the large number of exemptions in the year under report, and by the larger number who have left their villages for employment elsewhere, and who have not been traced to be included in the non-effectives.

Very few fines were imposed, as the defaulters in most cases satisfied me that the default was excusable.

II.—REVENUE AND EXPENDITURE OF THE COMMITTEE.

I give the figures under this head for 1901 as well as 1902 to afford some comparison :—

Receipts.	1901.			1902.		
	In Money.	In Labour.	Total.	In Money.	In Labour.	Total.

Miscellaneous payments ...	1,581 30	—	1,581 30	318 66	—	318 66
			82,538 72			77,532 74
Balance on December 31, 1902 ...	—	—	5,725 63	—	—	5,369 17
			88,264 35			82,901 91

The balance carried over at the end of 1901 is somewhat higher than in 1902. The expenditure on minor roads is almost the same, and would have been increased but for the unfortunate removal of the Superintendent of Minor Roads for three months to Colombo, and by a very abnormal season which greatly interfered with works of construction.

The figures for commutation realized are somewhat lower than in 1901, due to fewer effective recoveries. Miscellaneous receipts show a small increase. This is due to a larger amount of unexpended balances on principal road estimates having been refunded in 1902 than in 1901 and to contributions received from the planting community in aid of minor roads.

I have this year omitted from miscellaneous receipts all Provincial Road Committee funds, amounts received in settlement of advances, and fines on defaulters, which are credited to revenue. Obviously the first and last items are not revenue of the District Road Committee, and the second appears on both sides of the account as advances, and again on the payment side when the charge is ledgered to its proper vote in settlement of the advance as an expenditure on works. The book entries (for so they may be called) in connection with these advances simply swell the account of revenue and expenditure fictitiously.

Toll grant collections are slightly lower, as the rents realized somewhat lower rates.

The amount voted and spent on each minor road is given below :—

Name of Road.	Miles.	Amount voted.	Spent on Upkeep.	Spent on Special Works.	Spent on Bridges.	Total.
		Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.

There is an improvement in the condition of the principal minor roads since I left the district in 1900, due to more metal having been provided over sections with heavy traffic; but it has been necessary to somewhat neglect the drains and clearing off of jungle to find funds for this.

I have recently been over the whole section from Kalutara to Badureliya, and while there is a distinct improvement in parts the hill beyond Bellana is very bad, and the roadway beyond very sandy.

As regards the Moragala-Pelawatta road, attention is required to one or two very rocky portions and to the bridges and culverts. Orders have been issued about taking these up in 1903 and also to try to metal wheel tracks. The road often does not look bad, as a shower of rain smooths down the soft sandy surface, but this does not last long. Whether dry or wet, the nature of the surface makes it, as a rule, a heavy road for traffic.

The small section of 4 miles from Badureliya to Atweltota, which was originally made by the Public Works Department as the commencement of the Kukulu korale road, and which was handed over to the District Road Committee in October, 1901, has given much trouble. The heavy rains for months of last year reduced parts of it to sloughs. A large piece was washed out on one point, and the woodwork on several large bridges began to go. In addition, a sharp phenomenal rainfall on 9th August, beginning about 6 A.M., washed away at about 11 A.M. the large iron bridge at the extreme end of the road. I do not propose to do more than try to keep the first couple of miles passable, but when the bridge planks go the road may be closed. The traffic on it is very small.

The new bridges on the Tebuwana-Anguruwatota road were finished during the year, but the Committee must now take in hand those erected by the estates and now becoming dangerous.

On the other side of the river no work was done on the Indilande road, and the votes have been carried over to 1903.

The earthwork ont he village road from Moragala to Bellanawent on steadily this year. Five culverts were built from the vote of Rs. 500 allowed by the District Road Committee, and two more will be finished from this sum. It was originally proposed to build masonry culverts, but on my suggestion the Superintendent of Minor Roads approved of dry rubble work being sufficient, and this change has enabled the vote to provide two more culverts.

Earthwork was also done on village roads in the Pasdun korale east, Rayigam korale, and totamunes, and votes have been taken to provide some bridges. Two very useful connections will be those from Beruwala to Yatadolawatta on the Kalutara-Matugama road near the 9th milepost and through Warapitiya to Migama. In the Rayigam korale the village road from Rayigama to Anguruwatota *via* Haltota passes through a number of villages which want cart communication.

An application was made to the Committee during the year by the Secretary, Kalutara Planters' Association, to take over the section between the Pantiya-Polgahakanda road and the Public Works Department road at the Neboda hospital. I inspected the road with him, but was unable to recommend the Committee to accede to the request, as the road is purely an estate one.

The Committee Members at the end of the year were Messrs. C. D. Vigors (Chairman), C. F. Emerson (District Engineer), R. W. Harrison, D. de Silva, and C. L. Orr.

C. D. VIGORS,
Chairman.

Kalutara, February 20, 1903.

CENTRAL PROVINCE.

There was a slight decrease in the Kandy District in the percentage of effectives owing to the larger number of persons exempted, viz., 416 over last year. This increase in exemptions is due (1) to ill-health in the divisions of Udunuwara, Yatinuwara, Harispattu, Uda Dumbara, and Pata Hewaheta (there were many instances, especially in Harispattu, of persons who were suffering with jaundice and unfit for labour); (2) in Pata Dumbara and Uda Palata many persons, who were obviously under age, were entered in the householders' lists and exempted ; and (3) to the formation of the Ceylon Planters' Rifle Corps, the number of planters exempted being 114 in 1902, against 27 in 1901. In the Matale and Nuwara Eliya Districts there was an increase of ·22 and ·21 respectively.

In comparing the figures of the Kandy District of 1901 and 1902, it must be remembered that the Local Board, Hatton-Dikoya, came into operation in January, 1902, thus decreasing the number of

men under the District Road Committee, and making the collection of the tax less in proportion. The number of men lost to the District Road Committee is nearly 1,500. Ten persons were imprisoned in 1902 and 22 fined Rs. 10 each, against 25 imprisoned and 38 fined in 1901. Of the 10 imprisoned in 1902, 4 paid the fine of Rs. 10 each after imprisonment.

KANDY DISTRICT.

Work done in 1902.

The annexed reports from Messrs. Wallbeoff and De Motte show in detail the work carried out by them and the permanent improvements effected during 1902.

Two special votes of Rs. 2,000 and Rs. 1,000 were sanctioned for improvement as gravelled cart roads of the Ambatenna-Bokkawela road in Harispattu and the Nanuoya-Daulagalla road in Udunuwara.

Three miles of the Nugatenna-Bintenna road, viz., the 36th, 37th, and 38th miles, were completed and opened to cart traffic in June, leaving 9·37 miles, up to Weragama, yet to be completed.

Planters' Roads.—The following is a list of planters' roads, towards the maintenance of which the sum of Rs. 1,555 was voted, the estates interested also contributing :—

	Rs.	c.
Road branching off near the 23rd milepost, Nugatenna road to Ambalama at foot of Waitalawa estate	20	0
Ancoombura-Alawatugoda road	250	0
Udispattu-Rangalla road	150	0
Moragahagalla bridge to Tunisgalla gap road	100	0
Kandaloya-Rambukpitiya road	100	0
Meenagalla-Nawalapitiya road...	100	0
Vernacular school to Angruwella road	50	0
Vernacular school to Wattagalla factory	50	0
Waitalawa to Urugala road	30	0
Ferndale to Nitre Cave road	300	0
Kobonella to Nitre Cave road	30	0
Nugatenna to Kobonella road	75	0
Road connecting Madulkele, Elkaduwa, and Matale Districts	50	0
Horagalla-Blackstone road	100	0
Coolbawn-Strathellie road	100	0
Cottaganga to Tunisgalla road...	50	0
Total ...	1,555	0

A sum of Rs. 100 was voted as a moiety towards cost of repairs to the Beaumont bridge, Rs. 30 for upkeep of two bridges over the Hulu-ganga river, Rs. 150 for repairs to Pilgrims' road and bridges, Rs. 100 for repairs to the Bogawantalawa-Horton Plains road, Rs. 250 grant in aid towards construction of a wire bridge over the Nilambe-oya, and Rs. 27·82 for repairs to the Galagedara-Bokkawela road.

The following sums were granted for upkeep of the under-mentioned inter-district or travellers' roads in the subdivisions of Ambagamuwa, Dikoya, Maskeliya, Hewaheta, Pussellawa, and Kandy, the apportionments in almost all cases having been made as recommended by the Planters' Associations concerned :—

	Rs.	c.
Kehelgama-Agraoya road	85	0
Watawala-Agrawatta road	75	0
Binoya-Chalmers road	15	0
Abergeldie-Westhall road (Binoya section)	75	0
Do. (Templestowe section)	75	0
Agraoya-Shannon road	30	0
Kotiyagalla-Balangoda road	95	0
Poolbank-Dimbula road	25	0
Annfield gap road	30	0
Norwood-Stockholm road	45	0
Warleigh bridge-Maskeliya	50	0

Kitoolamulla-Galaha road	60	0
Total ...	3,120	0

Owing to the unprecedented heavy rainfall during the latter end of the year much damage was done to several roads and bridges.

Revenue and Expenditure on Account of Resthouses in the Province.

REVENUE.	Rs.	c.	EXPENDITURE.	Rs.	c.
Balance on January 1, 1902 ...	651	87	Maintenance, repairs, and improvements...	7,449	45
Voted in Supply Bill	8,969	75	Equipment	3,266	4
Resthouse collections	6,321	75	Salaries	4,443	92
Miscellaneous receipts	28	16		15,159	41
			Balance on December 31, 1902 ...	812	12
Total ...	15,971	53	Total ...	15,971	53

Resthouses.—Besides the amounts voted for maintenance, &c., of resthouses, as shown in detail in the reports of the Superintendents of Minor Roads, the following sums were also voted for maintenance, repairs, and improvements, the works of which were carried out by the Public Works Department, viz.:—

Dambulla Resthouse.—Rs. 3,600 for certain improvements and alterations.

Hanguranketa Resthouse.—Rs. 182 for certain repairs and for whitewashing and cleaning.

Nalanda Resthouse.—Rs. 145 for certain repairs and for whitewashing and cleaning.

Sigiriya Resthouse.—Rs. 110 for certain repairs and for whitewashing and cleaning.

Talawakele Resthouse.—Rs. 600 for certain repairs and improvements.

Ambalams and Circuit Bungalows.—A sum of Rs. 450 was voted for upkeep of ambalams and bungalows in the Matale District, Rs. 100 for repairs to the roof of the Degaldoruwa ambalam, and Rs. 45·75 for repairs to the roof of the Nildandahinna circuit bungalow.

The new resthouse at Peradeniya, for which a vote of Rs. 15,200 was taken in the Supply Bill of 1900, was completed early in 1902, and was taken over by the Provincial Road Committee and opened to the public on the 10th March. It is the best equipped resthouse in the Province, and the patronage extended to it has so far been very satisfactory.

The other resthouses in the Province are well equipped, and have been well maintained during the year.

J. P. LEWIS,
Chairman.

Kandy, May 23, 1903.

Annexure.

REPORT from Mr. H. J. Wallbeoff, Superintendent of Minor Roads.

I HAVE the honour to report that the following statement shows the amounts spent on upkeep of the roads in my charge during 1902 :—

Name of Road.	Class of Road.	Mileage. M. C.	Amount spent. Rs.	c.
Angunawala to Dawlagalla ...	Cart road ...	2 42½ ...	242	50
Nanu-oya to Dawlagalla ...	do. ...	2 0 ...	200	0

Maha-oya to Ahupine-ela	do.	3 0	48 0
Udahentenna to Appalawatta ford	do.	1 78½	31 20
Geli-oya to Hindagala	Footpath	4 13	33 30
Ginigathena to Laxapana	Bridlepath	2 0	32 0
	Total		3,963 64

Besides the annual upkeep of minor roads the following permanent improvements were effected on the following roads :—

Kadugannawa to Paranapattiya.—A sum of Rs. 25·20 was spent for constructing a retaining wall at the 2nd mile, Rs. 3 for slight repairs to two cover drains on the 1st mile, Rs. 44·80 for renewing planks of Halgolla-oya bridge on the 5th mile, and Rs. 72 for renewing planks of the Alpitikanda bridge on the last quarter mile of the road.

Embilmigama to Alagalla.—A sum of Rs. 113·40 was spent for constructing a wing-wall to the Kuda-oya buckle plate bridge on the 1st mile of the road. A sum of Rs. 517·35 was also spent for constructing four retaining walls,—one at Kuda-oya, one bordering Galange-ela on 2nd mile, and two at Danture on 3rd mile,—for constructing arch drain and opening outlet, bottoming and filling approaches to another arch drain, for removing landslips in parts of the road, and for filling side of road, and strengthening same with kitul piles and planks.

Galagedara to Henabowa.—A sum of Rs. 40·50 was spent for iron side railings, &c., to Dedunupitiya buckle plate bridge on this road.

Gampola to Dolosbage Cart Road.—A sum of Rs. 376·66 was spent for renewing two bridges on the 8th mile, and Rs. 255·75 was spent in constructing a bridge on Somerset estate on the 7th mile.

Nanu-oya to Dawlagala.—A sum of Rs. 153·48 was spent in blasting, breaking, and removing obstructing rocks on the 2nd mile, and Rs. 1,000 was spent in converting 1 mile 30½ chains into a cart road.

Amberuppe Gansabhawa Path.—A sum of Rs. 109·55 was spent for repairs to Madawala bridge on this road and Rs. 8·58 for tarring.

Landslips were removed on the following roads at a cost of Rs. 111·98, viz. :—

	Rs. c.
Gampola to Paranapattiya	75 97
Kadugannawa to Paranapattiya...	14 86
Embilmigama to Paranapattiya	21 15
Total ...	111 98

Certain portions of the following roads were metalled on the upkeep estimates, viz. :—

Gampola to Lantern Hill.	Gampola to Paranapattiya.
Barigama to Halloluwa.	Kadugannawa to Paranapattiya.
Katugastota to Halloluwa.	Embilmigama to Alagalla.

Galagedara Resthouse.—A sum of Rs. 42·11 was spent in putting up a fence round two sides of the resthouse garden and in weeding and cleaning up the resthouse grounds, Rs. 40 was spent for two new inner doors to the resthouse, and Rs. 106·71 for a bathroom and earth closet.

Two notice boards were put up on the roads to the Galagedara and Kadawala resthouses at a cost of Rs. 34·81.

HENRY J. WALLBEOFF,
Superintendent, Minor Roads.

Kandy, February 27, 1903.

REPORT from Mr. G. de Motte, Superintendent of Minor Roads.

I HAVE the honour to forward herewith separate statements of expenditure incurred on the repairs and improvements to the roads and buildings in my divisions.

2. The roads, with their bridges, culverts, and pavements, were well maintained throughout the year, notwithstanding the unusual heavy rains experienced in the latter part of it.

3. Early in the year the roads in the division of Harispattu, with the exception of two, were placed in my charge. They were in a sadly neglected condition, but with the judicious expenditure of the fund voted for their upkeep I have been enabled to put them into tolerably fair order by the end of the year. A sum of Rs. 2,000 was voted for converting the bridle road into a cart road from Ambatenna to Bokkawala ; one mile of it was taken in hand, and the necessary earth cutting, culverts, and retaining walls were completed by the end of the year.

4. Three miles of the Nugatenna-Bintenna cart road in Uda Dumbara were completed and taken over by the middle of the year, and the trace beyond this for a distance of about 9½ miles and up to end of the Province at Weragama was cleared to a width of 12 ft., and defined in order to keep it open till each year sees its gradual completion to the limit of the Province.

5. Besides other minor buildings, such as Gansabhawas, schools, and circuit bungalows, there are five resthouses in my divisions, all of which were well equipped and maintained throughout the

year. New glass window frames with dark green blinds fitted to sashes were provided for the Teldeniya resthouse during the year, and two wooden gates hung on stone pillars were put up at entrances to the resthouse at Madugoda, as also a loose stone wall to keep cattle out of premises.

Statement of Expenditure on Maintenance of Roads in the Year 1902.

Name of Road or Work.	Nature of Work or Road.	Mileage.	Amount spent. Rs. c.	Specification of Work done.
Works, Ordinary: Repairs.				
Arambakkadde to Harankahawa	Cart road	3½	175 0	The general maintenance of roads, bridges, culverts, sign-boards, mileposts, &c., throughout the year. Average cost per mile of cart road Rs. 66 per annum. Average cost per mile of bridle road Rs. 31 per annum.

	Total	133¾	5,270 0	
Works, Extraordinary: Improvements, &c.			Rs. c.	
Talagune bridge	Improvement	—	465 0	Bridge raised above flood level and reconstructed.
Urugala-Rangalla road	Repairs	—	229 0	Five bridges on this road repaired and put in order.
Nugatenna to Bintenna	Improvement	—	940 0	The trace beyond the last mile of cart road, down to end of Province at Weragama opened and defined 12 ft. wide throughout.
Talatu-oya-Hanguranketa road	Repairs	—	100 0	A fallen in culvert and retaining walls rebuilt on 6th mile-post.
Arambakadde to Harankahawa	Improvement	—	200 0	New drainage put in throughout the road.
Ampitiya to Uduwela	Repairs	—	200 0	Rebuilding abutment of bridge and widening same.
Ambatenna to Bokkawala	Improvement	—	1,998 78	Converting one mile of bridle road into cart road 12 ft. wide
	Total		4,032 78	

Statement of Expenditure in the Year 1902 on Resthouses and Buildings.

Name of Work.	Nature of Work.	Amount spent. Rs. c.	Specification of Work.
Works, Ordinary: Repairs to Buildings, &c.			
Wattegama resthouse	Repairs	300 0	White and colour-washing walls, shifting tiles, renewing gutters, painting doors and windows, tarring, &c., of main building, out-houses, and stables.
Weragantota resthouse	do.	369 0	Renewing decayed roofing timbers, valances, gutters, and whitewashing, tarring, repairs to wall cracks, locks, hinges of main building, outhouses, and stables.
Teldeniya resthouse	do.	15 75	Shifting tiles and repairs to leaks, &c.
Wattegama Post Office	do.	177 0	Repairs to leaks, white and colour washing walls and roof timbers, painting doors and windows, renewing valley gutters, rethatching cadjan roof of bathroom, and fitting a smoke outlet to kitchen.
Panwila resthouse	do.	17 0	Repairs to roof leaks and broken boundary fences, &c.
Weragantota ferry boat	do.	20 0	Repairs to platform and hand rails of ferry boat.
	Total	898 75	

Name of Work.	Nature of Work.	Amount Spent. Rs. c.	Specification of Work.
Works, Extraordinary: Improvements to Buildings, &c.			
Teldeniya resthouse	Improvement...	404 0	For providing six glass windows and frames and fitting same with dark green blinds on sashes, and for building a new dry-earth closet for servants complete.
Madugoda resthouse	Improvement...	261 0	For making two wooden gates at entrance hung on stone pillars, as also for a loose stone wall round the boundary.
	Total ...	665 0	

Kandy, February 17, 1903.

G. D. MOTTE,
Superintendent, Minor Roads.

MATALE DISTRICT.

A Summary of the Revenue and Expenditure for the Year 1902.

RECEIPTS.	Rs. c.	EXPENDITURE.	Rs. c.
Commutation realized in money and labour ...	21,748 50	Amount paid in cash and labour on principal roads and resthouses	10,269 0
Miscellaneous receipts	210 45	Amount spent on minor works ...	7,985 66
Refund of advance	1,275 0	Grant to Mr. J. Westland, Gammaduwa road	400 0
Unexpended balance of 1901 ...	4,149 47	Grant to Mr. R. Wilson, Kandanuwara road	300 0
		Salaries of establishment and commission to division officers	3,601 48
		Miscellaneous expenses	238 29
		Balance	4,588 99
	27,383 42		27,383 42

The following is a comparative statement of the working of the Thoroughfares Ordinance during 1901 and 1902 :—

	1901.		Per-centage on B.	1902.		Per-centage on B.
1. Population (A)	—	87,350	—	—	87,350	—
2. Number on lists (B)	—	15,138	—	—	15,460	—
3. Effective in the district :—						
(*a*) Paid Re. 1·50	13,984		92·38	14,313		92·58
(*b*) Paid Rs. 3	76		·50	77		·50
(*c*) Laboured 6 days	41		·27	45		·29
(*d*) Laboured 12 days	1		·01	—		—
		14,102	—		14,435	—
4. Not effective in the district, but discharged their liability :—						
(*a*) Exempted	430		2·84	411		2·66
(*b*) Paid and laboured elsewhere ...	456		3·01	475		3·07
(*c*) Committed to jail	3		·02	1		·01
(*d*) Fined	23		·15	2		·01
(*e*) Double entries	21		·13	14		·09
(*f*) Dead	38		·25	43		·28
		971	—		946	—
5. Non-effective :—						
(*a*) Reported to have left the village ...	65		·44	79		·51
(*b*) Otherwise, not accounted ...	—		—	—		—
		65	—		79	—

Beyond the usual upkeep and repairs of the roads, the following culverts and bridges were built in 1902 :—

Two culverts on Deville road.
Four culverts on Deville road.
One culvert on Wariyapola-Galoya road.
One platform bridge at Udasgiriya.
Four culverts, Yatawatta-Mahawela road.
Three culverts on Maningomuwa road.
One platform bridge on Deville road. Repairs to wire bridge at Marukona and Gonamale-ela.

E. B. ALEXANDER,
Chairman.

District Road Committee's Office,
Matale, February 6, 1903.

NUWARA ELIYA DISTRICT.

A COMPARATIVE statement of the working of the Ordinance during 1901 and 1902 is annexed in the prescribed form :—

	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A)	—	29,787	—	—	29,787	—
2. Number on lists (B)	—	14,373	—	—	14,462	—
3. Effective in the district :—						
(*a*) Paid Re. 1·50	13,047		90·77	13,161		91·0
(*b*) Paid Rs. 3	151		1·05	151		1·4
(*c*) Laboured 6 days	28		·19	26		·18
(*d*) Laboured 12 days	—		—	—		—
4. Not effective in the district, but discharged their liability :—		13,226	92·01		13,338	92·22
(*a*) Exempted	299		2·08	285		1·97
(*b*) Paid and laboured elsewhere ...	321		2·24	384		2·66
(*c*) Committed to jail	1		·01	—		—
(*d*) Fined	3		·03	1		·01
(*e*) Double entries, &c.	373		2·59	320		2·22
(*f*) Dead	14		·09	9		·07
5. Non-effective :—		1,011	7·04		999	6·93
(*a*) Reported to have left the village ...	136		·95	125		·86
(*b*) Otherwise, not arrested ...	—		—	—		—
		136	·95		125	·85

The figures are the best on record. Roughly, 95 per cent. discharged their liabilities, 2 per cent. were exempted, 2 per cent. were accounted for as dead, double entries, &c., and 1 per cent. only could not be found and were not accounted for. No one was imprisoned. One man was fined Rs. 10.

The extension of the time for single rate payment was, as reported last year, a great boon to the villager, who had time to reap his crop and avoid borrowing money to pay his tax at an exorbitant rate of interest. It has been estimated that the villager who borrows Re. 1·50 for the tax does not clear himself of the debt under Rs. 5 to Rs. 6.

The amount spent on minor works was Rs. 9,160·56, distributed as follows :—

	Rs. c.		Rs. c.
Ambankele-Yatimadura road ...	57 50	Blackpool bridge	450 0
Nildandahena-Rupaha road	115 0	Madulla-Kena road	32 50

Ampitigoda bridge	200 0	Palmerston road	25 0
Ramboda-Pusulpitiya road	77 50	Matakele road	152 48
Pussellawa-Madakumbura road ...	107 50	St. George bridge	24 80
Lamasuriyagama-Lower Badulla road ...	37 50	Queenwood gap road	25 90
Hanguranketa-Lower Badulla road ...	47 50	Nanu-oya road	101 44
Horton Plains-Agrapatana road ...	150 0	Fordyce road	170 97

The list includes nearly Rs. 1,000 spent on construction of new bridle roads to Hewaheta, Pundalu-oya, and Uda Pussellawa respectively. Three new bridges were erected at a cost of Rs. 235, five bridges were repaired at a cost of Rs. 918·50, two new ferry boats were supplied costing Rs. 95, and the balance went in the upkeep of 320 miles of bridle road.

Much damage was done to roads by the heavy rains at the end of the year, and the resources of the Committee will be taxed to the utmost this year in restoring the roads to their normal condition.

Nuwara Eliya, April 21, 1903. E. M. DE C. SHORT, Chairman.

NORTHERN PROVINCE.

THE statement given below shows in comparison the results of the operation of the Ordinances during the years 1901 and 1902 in the Jaffna District :—

	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A)	—	300,774	—	—	300,774	—
2. Number on lists (B)	—	72,147	—	—	73,296	—
3. Effectives in the district :—						
(a) Paid Re. 1	63,776		88·40	65,255		89·03
(b) Paid Rs. 2	567		·78	339		·46
(c) Laboured 6 days	162		·22	544		·74
(d) Laboured 12 days	2		—	—		—
		64,507	89·41		66,138	90·23
4. Not effective in the district, but have discharged their liability :—						
(a) Exempted	979		1·36	715		·98
(b) Paid and laboured elsewhere ...	2,371		3·29	3,061		4·18
(c) Committed to jail	4		—	2		—
(d) Fined	102		·14	17		·02
(e) Double entries	311		·40	488		·67
(f) Dead	872		1·20	534		·72
		4,639	6·43		4,817	6·57
5. Non-effective :—						
(a) Reported to have left the village ...	978		1·36	1,572		2·14
(b) Otherwise, not arrested ...	2,023		2·80	769		1·05
		3,001	4·16		2,341	3·19

The Collection of Commutation and calling out of Labour.—The collection of commutation and calling out of labour was carried on as usual.

The annexed statement shows the amount collected under the Thoroughfares Ordinances and the amount expended during the year 1902 :—

Statement of Receipts and Expenditure under the Thoroughfares Ordinances for 1902.

	Balance on December 31, 1901.	Collected in 1902.	Total.	Expended in 1902.	Balance on December 31, 1902.
	Rs. c.	Rs. c.	Rs. c.	Rs. c.	Rs. c.

By Public Works Department	100,538 43
By Provincial Road Committee	30,119 97
Total ...	130,658 40

Resthouses.—A sum of Rs. 4,496·18 was spent on the repairs and improvements of the resthouses and madams in the Province.

Government Grant.—The Government grant of Rs. 600 allowed for 1902 was apportioned to Mannar and Mullaittivu as follows :—

	Rs. c.
Mannar	300 0
Mullaittivu	300 0

R. W. IEVERS,
Chairman.

MANNAR DISTRICT.

WORKING of the Thoroughfares Ordinances continues satisfactory, as the following statement will show :—

	1901.		Per-centage on B.	1902.		Per-centage on B.
1. Population (A)	—	25,062	—	—	24,978	—
2. Number in lists (B)	—	6,417	—	—	6,428	—
3. Effective in the district :—						
(*a*) Paid Re. 1·25	6,183		96·35	6,089		94·73
(*b*) Paid Rs. 2·50	6		·09	8		·12
(*c*) Laboured 6 days... ...	—		—	—		—
(*d*) Laboured 12 days ...	—		—	—		—
		6,189	96·44		6,097	94·85
4. Not effective in the district, but have discharged their liability :—						
(*a*) Exempted	18		·28	27		·42
(*b*) Paid and laboured elsewhere ...	116		1·81	226		3·51
(*c*) Committed to jail ...	—		—	—		—
(*d*) Fined	2		·03	7		·11
(*e*) Worked 24 days in labour centres	—		—	—		—
(*f*) Double entries	14		·22	12		·19
(*g*) Dead	53		·83	45		·70
		203	3·17		317	4·93
5. Non-effective :—						
(*a*) Reported to have left the village	25		·39	14		·22
(*b*) Otherwise, not arrested ...	—		—	—		—
		25	·39		14	·22
		6,417			6,428	

The effective percentage is slightly lower than in 1901, but the number on the lists is higher while the proportion of non-effective is less than in 1901 and is probably the record lowest for the Island.

MINOR ROADS.

The amount at the disposal of the District Road Committee allows of little more than jungle clearing on the minor roads.

An attempt has been made this year to improve two of the worst roads in the district, which suffer severely during the wet season and from the herds of elephants which are continually passing over them, viz., the Iranai Iluppaikulam to Pali-ar and Iranai Iluppaikulam to Palampiddy roads. It is useless to expend large sums on these roads, but it is hoped that a small additional expenditure on portions of them where the rain water needs draining off will be of service.

The Erukkalampiddy causeway and bridge have been thoroughly repaired. The Mannar town roads are in good order, except the South Bar road, which was badly cut up by the heavy rains of October and November and will need additional expenditure this year.

The Public Works Department reports the following works on the principal roads :—

Yakkavai to Pesalai.—Total length worked on 55 miles 2 furlongs.

Coast road to Colombo.—Total length worked on 78 miles. Usual upkeep works.

The Irrigation Department improved the portion of the Mannar-Madawachchi road between the 11th and 18th miles, which had been rendered almost impassable in wet weather owing to the Giant's tank restoration works running parallel with the road, but it still requires metalling.

There is now a good road between Anuradhapura and Mannar, with only one obstacle to either carriage or bicycle—an odai at 4¼ miles from Mannar, which will, I hope, be either filled in or bridged this year.

Resthouses.—The buildings and fences of each resthouse were put in order during the year; glass windows were sanctioned for Mannar resthouse. New resthouses are needed at Marichchukaddi and Chilavetturai.

District Road Committee,
Mannar, April 9, 1903.

E. B. DENHAM,
Chairman.

MULLAITTIVU DISTRICT.

THE following comparative statement shows the working of the Thoroughfares Ordinances in the years 1901 and 1902 :—

	1901.		Per-centage on B.	1902.		Per-centage on B.
1. Population (A)	—	15,160	—	—	15,160	—
2. Number on lists (B)	—	4,172	—	—	4,280	—
3. Effective in the district :—						
(*a*) Paid Re. 1·25	3,902		93·53	3,920		91·59
(*b*) Paid Rs. 2·50	11		·26	34		·79
(*c*) Laboured 6 days ...	8		·19	17		·40
(*d*) Laboured 12 days ...	—		—	—		—
		3,921	93·98		3,971	92·78
4. Not effective in the district, but have discharged their liability :—						
(*a*) Exempted	52		1·25	71		1·66
(*b*) Paid and laboured elsewhere ...	41		·98	69		1·61
(*c*) Committed to jail ...	—		—	—		—
(*d*) Fined	3		·07	5		·12
(*e*) Double entries	61		1·46	85		1·99
(*f*) Dead	38		·91	30		·70
		195	4·67		260	6·08
5. Non-effective :—						
(*a*) Reported to have left the village	32		·77	42		·98
(*b*) Otherwise, not arrested ...	24		·58	7		·16
		56	1·35		49	1·14

The revenue and expenditure of the Committee are shown in the following statement :—

Revenue in 1902.	Rs. c.
Balance on January 1, 1902	1,546 5
Collection in money	4,985 0
Collection in labour	21 25
Government grant in aid of minor works	300 0
Government grant for upkeep of relief work roads	550 0

The market account stands as follows :—

REVENUE.	Rs. c.	EXPENDITURE.	Rs. c.
Balance on January 1, 1902... ...	584 47	Nil	
Collection on account of Mullaittivu market	111 0	Balance carried forward	797 47
Collection on account of Tanniyuttu market	102 0		
Total ...	797 47	Total ...	797 47

The Committee met twice in the year. The following composed the Committee :—Messrs. L. W. C. Schrader ; J. O. Ebert, District Engineer ; P. B. Bulankulama, Ratemahatmaya ; E. R. MacDonnell, Chief Irrigation Inspector ; A. Ariacutty, Kachcheri Mudaliyar.

R. A. G. FESTING,
Chairman.

Mullaittivu, January 17, 1903.

SOUTHERN PROVINCE.

THE following statements show the receipts and expenditure of the Provincial Road Committee:—

Statement of Receipts and Expenditure of the Provincial Road Committee, Southern Province, Galle, for the Year 1902.

RECEIPTS.	Amount. Rs. c.
Balance on January 1, 1902	2,997 72
Resthouse collections	5,378 85
Purchase amount, Beralapanatara resthouse: third instalment ...	150 0
Rent of Uragaha resthouse	270 0
Resthouse funds: contributions from District Committees	15,581 25
Refund by the Government of tolls levied on minor roads	12,629 0
Grant in aid of minor roads	400 0
Government grant for bridges and culverts in Hinidum pattu, Mulatiyana-Urubokka road, and Hambantota District...	3,000 0
Refund by the Government of amount due to Messrs. Whittall & Co. on account of construction of Deniyaya-Hayes road	1,991 54
Contribution from District Road Committees on account of Provincial Road Committee clerk's pay	1,300 0
Miscellaneous receipts	187 38
Value of articles sold, &c.	189 94
Total ...	44,075 68

EXPENDITURE.	Amount. Rs. c.
Salaries of resthouse-keepers, &c.	4,956 75
Equipment of resthouses	2,051 84
Amount expended for upkeep, repair, and improvement of resthouses ...	9,925 45
Supervision of resthouses	720 0
Toll grants: amount remitted to District Committees	12,629 0
Grant in aid of minor roads paid to District Committee, Hambantota ...	400 0
Government grants for bridges and culverts remitted to District Committees	3,000 0
Repayment of advance made by Messrs. Whittall & Co. on account of construction of Deniyaya-Hayes Factory road	1,991 54
Miscellaneous charges	217 9
Salaries of establishment	1,300 0
Advance on account of cutlery and plate from England	1,000 0
Gratuity to late resthouse-keeper, Akuressa...	100 0
	38,291 67
Balance on December 31, 1902	5,784 1
Total ...	44,075 68

Statement showing the Expenditure on Improvement of Resthouses, Southern Province, during 1902.

	Amount. Rs. c.
Kitchen and stables, Hakmana resthouse	1,738 78
Improving the Matara resthouse	458 50
Additional bedroom, Deniyaya resthouse	1,172 9
For locks and bolts, Deniyaya resthouse	149 13
Wooden paling for Matara resthouse	250 0
Dust bin, Matara resthouse	79 0
Additions to Matara resthouse	1,239 87
For furnishing the room newly constructed at Deniyaya resthouse ...	174 26
New cutlery and plate	1,000 0
Equipment of Urugaha resthouse	109 95
Total ...	6,371 58

The resthouses throughout the Province were kept in good order, and considerable improvements were effected to the resthouses at Deniyaya, Hakmana, and Matara. The new porches at Baddegama, Udugama, and Elpitiya have much improved those resthouses. The Tangalla resthouse requires increased accommodation, but the estimate submitted was too large for the work to be undertaken at present.

A resthouse is greatly required at Hikkaduwa, and the Committee passed votes for the acquisition of the required land and for the construction of a resthouse. The land has been surveyed, and will shortly be acquired.

Some new plate and cutlery engraved with the Provincial Road Committee monogram was ordered from England.

The fencing of resthouse compounds and the planting of fruit trees is receiving the attention of the Committee.

New resthouses or circuit bungalows will in course of time be required at Wanduramba and Pitigala.

H. W. BRODHURST,
Chairman.

Galle, March 18, 1903.

GALLE DISTRICT.

THE following comparative table shows the working of the Thoroughfares Ordinance in 1901 and 1902. There is a slight improvement in the figures :—

	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A)	—	187,040	—	—	220,951	—
2. Number on lists (B)	—	49,067	—	—	49,732	—
3. Effective in the district :—						
(*a*) Paid Re. 1·50	43,554		88·76	43,867		88·20
(*b*) Paid Rs. 3	622		1·26	606		1·21
(*c*) Laboured 6 days	94		·19	77		·15
(*d*) Laboured 12 days	1		·02	2		·04
		44,271	90·22		44,552	89·58
4. Not effective in this district, but have discharged their liability :—						
(*a*) Exempted	1,638		3·33	1,888		3·79
(*b*) Paid and laboured elsewhere ...	2,073		4·22	2,275		4·57
(*c*) Committed to jail	45		·09	27		·05
(*d*) Fined	59		·12	27		·05
(*e*) Double entries, &c.	256		·52	278		·55
(*f*) Dead	215		·43	189		·38
		4,286	8·73		4,684	9·41

Deposit account	569 11	Stationery and printed forms ...	587 14
Miscellaneous receipts	76 35	Cost of tools	598 2
Toll grants	7,420 0	Deposits withdrawn	1,170 61
Advance from Imperial funds for the maintenance of Kosgoda-Elpitiya road ...	600 0	Office contingencies and travelling allowance	562 70
Government grant for bridges and culverts in Hinidum pattu	1,000 0	Expenditure from Imperial funds for the maintenance of Kosgoda-Elpitiya road ...	597 0
		Unexpended balance of Imperial funds for the maintenance of Kosgoda-Elpitiya road remitted	3 0
			78,476 95
		Balance on December 31, 1902 ...	5,872 17
Total ...	84,349 12	Total ...	84,349 12

The minor road from Galle to Baddegama carries a large amount of traffic and should be converted into a main road. It meets the main road at Baddegama. It is now eight years since a minor road in this district was taken over by the Public Works Department.

The remote Hinidum pattu still remains unconnected by cart road with the rest of the district. The assistance of Government will be asked for, as the bridges required are too expensive for the District Road Committee to construct.

I annex a statement of expenditure on minor works and the report of the Superintendent of Minor Roads.

H. W. BRODHURST,
Chairman.

	Mileage.
Cart roads	187
Bridle roads	18
Towpath	40

REPORT OF THE SUPERINTENDENT OF MINOR ROADS, GALLE.

THE mileage for the district is as follows :—

187 miles cart road.
18 miles bridle road.
40 miles towpath.
7 ferries.

I have to reiterate that although year by year the district is developing, and consequently vehicles of all sorts increase, still the expenditure stands almost normal. Under these conditions and the higher labour rates and scarcity of materials, the task of keeping the roads in good order is more difficult, especially as the expenditure runs to only Rs. 85 to Rs. 90 per mile per annum. In the last quarter, especially December, floods and sudden abnormal dense falls of rains occurred, overflowing side drains, culverts, and in many instances bridges. Rains of this description play sad havoc with road surfaces; some of the gravelled roads were badly breached, but these were repaired. On the other hand, many miles of surface-washed roadway has had to be left to be top dressed with gravel for this year. Fortunately, nearly half the mileage of cart roads are now track metalled, so that gravelling surface can easily be done. No road was ever rendered impassable during the year. Cross drainage on roads is totally inadequate, but the construction of culverts is very costly, and will have to be carried out gradually. The cart traffic on several minor roads exceeds that of the Public Works Department roads; one road last year carried over 10,000 tons, but is now in good order.

I have to observe that the two contiguous districts of Matara and Kalutara in comparison to this district have a much larger expenditure per mile; the former has 50 per cent. and the latter 120 per cent. in excess. This is accounted for by the Galle District having a *much longer* mileage. Far-off Hambantota has even a higher expenditure. I only mention these facts as a contrast.

Bridges and Culverts.—This is the important item of cross drainage. On a special vote sixty-seven culverts were built of wedge stone in dry rubble masonry at places that have either no cross drains or such as did exist were absolutely useless, these costing something above Rs. 2,000. On the 17th mile of the Wanduramba-Udagama road a 2 ft. by 2 ft. cross drain was displaced by a 20 ft.-span bridge with wedged stone abutments. This is a sample of deficient waterways. With the culvert more water certainly went over the embankment several times a year, carrying away road surface. Ganegoda bridge, a timber bridge 40 ft. span on piles, was entirely rebuilt, and a double culvert on the Kottowa-Imaduwa road was replaced by an 18 ft.-span bridge with one wedged stone abutment. This will relieve the flood water at a bad spot. Another new bridge of 18 ft.-span with wedged stone abutments was built on the Karandeniya-Ambana road, replacing a temporary stick bridge. Foot bridges or "edandas" received special attention in the towpath, on which a large number of cocoanut logs were displaced. The towpath is 40 miles long, and carries a very large amount of water-borne traffic. The total bridging in this district has now reached a very great length, touching close on 4,000 lineal feet, which means a considerable expenditure.

New Works.—Under this head there is only the Hiniduma-Opata road in progress. Ten culverts were built, and one 20-ft. span bridge received its platform on temporary abutments (these are to be built during this year). A very large amount of blasting with dynamite and powder was done, the drilling amounting to 10,000 inches. Many long stretches of embankments were laid with cabook earth. In both these works there is much more to be done, and I regret that Government have failed to grant a moiety towards the building of this road. After completion to Opata, under any circumstances, it would not be advisable to carry on the extensions towards the Morawak korale Public Works Department road: the cost would amount to many thousands of rupees. If the 12 miles to Dehigaspe are built Rs. 30,000 to Rs. 40,000 would be required, and there is not a village on the road. Under the circumstances the Committee are justified in withholding any expenditure in this unprogressing part of the country, and spending more money on the existing important roads.

Resthouses are all in good order, and the entrances of those resthouses—Elpitiya, Imaduwa, Baddegama, and Udugama—that were built have proved to be a great boon to occupants.

JNO. W. ERSKINE,
Superintendent, Minor Roads.

February 25, 1903.

MATARA DISTRICT.

THE usual comparative percentage statement is annexed, showing the working of the Road Ordinance for 1901 and 1902 :—

	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A)	—	188,408	—	—	188,408	—
2. Number on lists (B)	—	41,366	—	—	42,000	—
3. Effective in the district :—						
(*a*) Paid Re. 1·50	33,902		81·95	36,205		86·20
(*b*) Paid Rs. 3	578		1·39	403		·90
(*c*) Laboured 6 days	866		2·09	659		1·56
(*d*) Laboured 12 days	15		·03	25		·05
4. Not effective in the district, but have discharged their liability :—		35,361	85·48		37,292	88·79
(*a*) Exempted	1,878		4·53	1,407		3·35
(*b*) Paid and laboured elsewhere ...	2,022		4·88	1,737		4·13
(*c*) Committed to jail	69		·16	42		·10
(*d*) Fined	219		·52	62		·14
(*e*) Double entries, &c.	248		·59	240		·57
(*f*) Dead	203		·49	162		·38
5. Non-effective :—		4,639	11·21		3,650	8·69
(*a*) Reported to have left the village ...	1,349		3·26	1,047		2·49
(*b*) Otherwise, not arrested ...	17		·04	11		·02
		1,366	3·30		1,058	2·51

The single rate payments for 1902 exceeded those of any previous year.

The following statement shows the number of men who paid and laboured during each of the last ten years:—

	Men.		Men.
1893	28,361	1898	32,025
1894	28,523	1899	34,019
1895	30,330	1900	35,769
1896	30,570	1901	35,361
1897	31,323	1902	37,292

The following statement shows the revenue and expenditure for 1902 :—

	In Money.	In Labour.	Total.
RECEIPTS.	Rs. c.	Rs. c.	Rs. c.

			3,818 47
Upkeep of bridges in the district	—	—	2,068 85
		Total. ...	24,397 72

The roads from Kamburupitiya to Makandura, from Makandura to Mulatiyana, and from Mulatiyana to Urubokka form one line of road 27 miles in length. The first two sections are passable for wheeled traffic.

The last section, Mulatiyana to Urubokka, 18 miles long, is being gradually opened as a cart road. When completed the road will afford a much-needed outlet to many populous villages in Morawak korale, and will meet the minor road from Kotapola to Urubokka.

Government for the second time granted Rs. 1,000 for the construction of culverts and bridges on the Mulatiyana-Urubokka road, and the money was spent in building a bridge and three culverts. It is to be regretted that the grant has not been continued for 1903. I have made a further report as to the necessity for the grant, and am still in hope that it will be allowed.

The improvement of the old road from Akuressa to Dehigaspe and its extension towards Morawaka will be taken up in 1903 and pushed on as far as the somewhat meagre funds at the disposal of the Committee will permit.

District Road Committee's Office,
Matara, February 27, 1903.

J. O'K. MURTY,
Chairman.

HAMBANTOTA DISTRICT.

District Road Committee,
Hambantota, March 31, 1903.

A. C. ALLNUTT,
Chairman.

REPORT ON MINOR ROADS IN THE HAMBANTOTA DISTRICT FOR 1902.

THE minor roads in the Hambantota District were kept in good order for the greater part of the year, but in October began to break up owing to continuous wet weather (from June to December) and increasing heavy traffic. This was more especially the case with the first two miles of the Beliatta-Katuwana road, the traffic on which is much more than it can bear. This portion of the road runs north and south through clayey soil, with gardens of jak and other large fruit trees right up to the roadside (there is no reservation), and when once it gets wet has no chance of getting dry again till the rain ceases altogether, as it only gets the midday sun; the traffic, too, is heaviest on this portion, and in the rainy season gets well-nigh impassable. Although I have done all I can with the funds at my disposal, by putting in foundations of large stones in the wheel tracks in the worst places, it has been of little avail, and must re-occur in every rainy season, unless a special vote is sanctioned to metal that portion of the road, or it is taken over by the Public Works Department. There is no good gravel available in the vicinity.

In October considerable damage was done to the roads, &c., by floods, necessitating my having to ask for a special vote of Rs. 500 for immediate and urgent repairs. This was sanctioned, and the repairs, a list of which I append, were made good.

Beliatta-Katuwana Road.—The road from 11¾ milepost to 12th milepost was entirely washed away. Bridge at 18¾ milepost lifted bodily off its piles and carried down the river.

Walasmulla-Wiraketiya Road.—A large breach made in the bund of Dambagasmullewewa (near 14½ milepost), over which the road passes, a breach in road near 12½ milepost, and two masonry culverts broken.

Miella Road.—Bridge at 2½ milepost entirely washed away with masonry abutments. The other roads all suffered more or less from washaways, but were all put into fair order by the end of the year.

Bridges and Culverts.

Beliatta-Katuwana Road.—Kambarankagashena bridge near 12½ milepost was entirely rebuilt at a cost of Rs. 700, the abutments of rubble masonry, one row of three new piles, and platforms and hand rails being taken from sound timber taken from the bridges which were rebuilt last year.

Getamanna Road.—Mahaliella bridge near 2nd milepost, an old wooden bridge, was replaced with one on double steel rails, with iron hand rails and but wooden platform. This was done entirely on the upkeep vote.

Another bridge, similar to the last, has been fitted (on the upkeep vote) to replace the wooden bridge at Okewela on the Beliatta-Katuwana road, 5th milepost, and will be erected early next year.

The resthouses in the district have been kept in thorough repair during the year.

JAMES F. BRUNTON,
Superintendent, Minor Roads.

EASTERN PROVINCE.

BATTICALOA DISTRICT.

Comparative Statement of the working of the Thoroughfares Ordinances in the Batticaloa District for 1901 and 1902.

		868	2·85		976	3·04

The number of men in the division officers' lists was larger by 1,652 men than in 1901, which is due to the fact that most of the division officers, in order to increase their commission, recovered tax from adjacent divisions and included these in supplementary lists, whilst such names appear in their original rolls as defaulters. In order to put a stop to this irregularity on the part of the division officers during the current year receipt books previously filled up in accordance with their rolls have been issued.

The number of men who discharged their liability under the Ordinance was 857 over the previous year.

A statement of the revenue and expenditure for the year is annexed :—

REVENUE.	Amount. Rs. c.	Total. Rs. c.
Balance on January 1, 1902 ...	—	9,097 60

Balance	—	13,634 3
		63,862 34

The resthouses in the district have been kept in good order during the year. An excellent new resthouse, designed by Mr. H. F. Tomalin, was completed at Kalmunai at a cost of Rs. 12,520, a moiety of which was granted by Government.

Work on the minor roads during the year was restricted owing to the dismissal of the Superintendent of Minor Roads and delay in the appointment of a successor to him. The work done by the new Superintendent, Mr. G. W. Vallipuram, has given satisfaction. A report from him on the minor road work is annexed.

SAM. HAUGHTON,
Chairman.

Provincial Road Committee's Office,
Batticaloa, March 27, 1903.

REPORT OF THE SUPERINTENDENT OF MINOR ROADS.

(1) *Special Works on Government Grants.*

Under instructions from the Chairman the two traces surveyed during 1901—

(1) From Pulugannawa to Unichchai, 7½ miles;
(2) From Samanturai to Amparai, 12 miles—

were examined by me and reported on with estimates for opening them as natural cart roads. The estimates also provided for rough timber pile bridges and the paving of the beds of streams, in accordance with suggestions given by Mr. H. F. Tomalin, Provincial Engineer.

The estimate amounting to Rs. 5,211·75 for the Pulugannawa-Unichchai road was sanctioned by the District Road Committee in July last, and works commenced in August.

All works estimated for were completed before the end of the year, except two out of the three wooden bridges and the paving of the beds of streams, which had to be deferred consequent on high water in the streams, the former have been since completed.

An expenditure of Rs. 3,746·07 (including payments in January, 1903, after the Chairman's inspection) was incurred on this road for works done up to 31st December, 1902, and the balance has been re-voted for stone works during 1903.

This road is already proving to be of much benefit to the native cultivators, and has opened up tavalam traffic between the western shore and the outlying villages of Bintenna on the Batticaloa-Badulla road, besides connecting two important irrigation works.

I would suggest the early gravelling of this road with the culverting of the minor streams.

(2) *Samanturai-Amparai Road.*—An estimate of Rs. 6,790 has been sanctioned for opening this trace as a natural cart road during 1903.

(2) *Special Works on District Road Committee Money.*

Under instructions from the Chairman I submitted estimates for gravelling the lanes in the two most thickly peopled villages in the district, Kattankuddy and Eravur, two Moorish villages with a population of 9,377 and 5,301 respectively.

(*a*) Out of the seven lanes estimated for at Kattankuddy three lanes were sanctioned, viz. :—

Name of Lane.	Distance.	Estimate.	Expenditure in 1902.	Balance re-voted.
	Feet.	Rs. c.	Rs. c.	Rs. c.
Fifth Lane ...	1,925 ...	1,586 75 ...	1,253 50 ...	333 25
Sixth Lane ...	2,275 ...	2,144 35 ...	1,437 75 ...	706 50
Seventh Lane ...	2,200 ...	1,106 0 ...	1,092 0 ...	—

Owing to the very severe wet weather during November and December and the consequent difficulty in procuring the necessary clay, small sections of lanes 5 and 6 were not completed in 1902, and the balances, as shown above, have been re-voted for expenditure during 1903. These lanes have been well formed with a roadway of 12 feet, gravelled on good clay bottom, and provided with a brick surface drain on concrete foundation.

The people, though opposed to these improved thoroughfares at the start, now fully realize and appreciate the convenience of a solid roadway, which has superseded the old sandy tracks, and they have petitioned for more of such roads. A new lane (4th) is to be taken up in 1903.

(*b*) Eravur village road was divided into four sections, and estimates were submitted for each section, the total length being 1 mile and 445 feet, of which the third and fourth sections (about half mile) were opened at an estimated cost of Rs. 1,050. Of this, a distance of 550 feet remained unfinished at the end of the year for want of clay for the bottom work, as the low lands from which this material was dug out were all under flood water from early in November. The unexpended balance of Rs. 251 has been re-voted for expenditure during 1903. The works on this road are of the same nature as at Kattankuddy.

Maintenance of Minor Roads.

The upkeep repairs to minor roads were limited only to urgent cases during the year.

	Rs. c.	Rs. c.

Renewing platform of bridge		60 75

Resthouses.

With my assuming duties as Superintendent of Minor Roads, the upkeep charge of the resthouses in Batticaloa north, nine in number, was transferred from the District Engineer to the Superintendent of Minor Roads. The buildings were kept up in fair order, and the usual upkeep repairs effected at a cost of Rs. 1,527·59. The resthouses in Batticaloa south, six in number, continue to be in charge of the District Engineer, Kalmunai, and the buildings have been kept up at a cost of Rs. 1,392·22.

During December last the second class resthouse at Kalkuda was burnt down.

An estimate for Rs. 1,660 for a new second class resthouse at the Bar was sanctioned in September, but after the laying of the foundations the works had to be stopped in November owing to the rains. The amount has been re-voted, and the works are now almost completed. This is intended to serve the travellers by sea, and hence a long-felt want is supplied.

General Remarks.

I assumed duties as Superintendent of Minor Roads, on the 1st March, 1902.

I have, with the approval of the Chairman, continued in this district also the "job contract" system, which I first introduced to the Province of Uva in 1902, and it was during the year under review availed of to the fullest extent; thus, the whole amount expended during the year in upkeep and for special purposes has been paid to the contractors on vouchers in their names at the Provincial Road Committee Office.

This system, which supersedes the "check-rolls" hitherto in vogue in the district, not only regulates the expenditure within estimates and effects great savings in sums paid as "overseers' salaries," but also prevents much waste, it being physically impossible for the Superintendent to check the names in the various check-rolls regularly when works are in progress in different remote parts of the district.

Owing to the rapid growth of cocoanut industry in the district a considerable increase of traffic has been thrown on minor roads, and applications from people for opening up new roads and erecting bridges have been frequent. In consideration of the increasing traffic it is doubtful if the Committee would be in a position to keep the existing roads in a satisfactory manner in a few years more.

To obviate the above difficulty I would beg to suggest that—

(1) Some of the important roads be given over to Government.
(2) A few others which go through estates, whose proprietors are anxious for good roads, be brought under the Branch Roads Ordinance, which has worked so well in tea districts.
(3) The upkeep of roads be restricted to certain rates per mile.
(4) The balance on one-third collection of money, after the apportionment for urgent upkeep, be spent on improving thoroughly and permanently one or more roads each year, as the funds would permit.

If this system be followed, the roads can be gradually brought to an improved state, and they could be kept up at a comparatively less cost.

Batticaloa, March 24, 1903.

G. W. VALLIPURAM,
Superintendent of Minor Roads.

TRINCOMALEE DISTRICT.

THE annexed statement shows the working of the Thoroughfares Ordinance in 1901, and 1902:—

Particulars.	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A)	—	18,010	—	—	18,010	—
2. Number on lists (B)	—	4,046	—	—	4,246	—
3. Effective in the district :—						
(*a*) Paid Re. 1·50	3,688		91·15	3,745		88·20
(*b*) Paid Rs. 3	26		·64	26		·61
(*c*) Laboured 6 days	161		3·98	194		4·57
(*d*) Laboured 12 days	—		—	—		—
		3,875	95·77		3,965	93·38
4. Not effective in the district, but have discharged their liability :—						
(*a*) Exempted	34		·84	93		2·19
(*b*) Paid and laboured elsewhere ...	53		1·31	82		1·93
(*c*) Committed to jail	—		—	—		—
(*d*) Fined	—		—	—		—
(*e*) Worked 12 days in labour centres ...	—		—	—		—
(*f*) Double entries, &c.	15		·37	31		·73
(*g*) Dead	38		·94	43		1·01
		140	3·46		249	5·86
5. Non-effective :—						
(*a*) Reported to have left the district ...	31		·77	32		·75
(*b*) Otherwise, not arrested ...	—		—	—		—
		31	·77		32	·75

It will be observed that the number on the division officers' rolls was increased from 4,046 to 4,246, and the number of effectives who discharged their liability rose from 3,875 to 3,965.

An unusually large number of persons (93) was exempted, increasing the non-effectives from 140 to 249.

Only 32 remained unaccounted for at the end of the year, and they are reported to have left the district.

The total amount of road tax collected amounted to Rs. 5,671·50 in cash and Rs. 291 in labour. Of this amount, a sum of Rs. 1,711·25 was remitted to the Provincial Road Committee for expenditure on principal roads and Rs. 855·50 was apportioned for resthouses, while a sum of Rs. 2,625·37, which includes the Government grant of Rs. 500, was expended on the minor roads, as per annexed statement:—

Expenditure incurred on Minor Roads, &c., in the Trincomalee District for 1902.

Total ...	—	144 0	1,981 37	500 0	2,625 37

In addition to these works the District Road Committee now undertakes the upkeep of the North Coast road from Nilaveli to Pulmoddai, and the section of natural road in Koddiyar pattu known as the Old Toppur road. For this work it receives from Government a vote of Rs. 1,202, which is at the rate of Rs. 15 per mile, with an allowance for the upkeep of ferries; and a special grant of Rs. 500 was made in 1902 for a commencement of a new road on the trace which I have made, and which has now been finally sanctioned for the North Coast road.

The annual vote of Rs. 4,000 on account of this new trace was entirely devoted to the construction in the Government Factory of two iron ferry boats for the ferries over the Irakkakandi-aru and Salappai-aru. These boats have just been received from Colombo, but are not yet fitted up. In future the road work will be steadily pushed on with an yearly grant of Rs. 4,000 until completion.

With the sum of Rs. 500 allowed in 1902 I acquired the greater portion of the private land required for the road (one proprietor only holding out against the compensation offered) and felled all the jungle, rooting out stumps between the high road near the 11th mile at Nilaveli and the site selected for the ferry near the mouth of the Irakkakandi-aru. One culvert will be required at the junction with the road, and a second about 100 yards from the take-off, where during the rainy weather a small flow of water crosses the trace. No other culverts will be required as far as the river, as the trace passes along a ridge or "hog's back," which is naturally drained.

This section is 156 chains in length, and during 1903 this will be formed into a road and side drains cut, and it is hoped that a small section of half a mile may be gravelled if the survey necessary for acquisition of a small piece of private land is received in time for me to take up the work this year.

Beyond the river the trace has been roughly cleared as far as Kumpurupiddi and a trace opened as far as the Salappai-aru, and I hope in 1903 to clear the jungle of the whole of this section.

Beyond the Salappai-aru, as far as Kuchchaveli, the road is formed, and two-thirds of the section is already gravelled, and I hope to complete that part this year.

That section (as soon as the ferry boat is launched) will avoid one of the most difficult and dangerous portions of the old road, which passes through five fords and a succession of swamps.

I have also examined an extension of the trace right up to Tiriyai, and find that a single ferry over the Kodikaddi-aru will make it possible to avoid all the dangerous (and at times impassable) fords and swamps, which are the feature of that section.

A similar improvement is much required in the Koddiyar pattu, where the old road is being year by year washed away by encroachments of the Erivativu-aru. A bridge over the river near that place will very soon be an *absolute necessity*, and if it is constructed the road may be taken along a strip of high firm ground, which will avoid a very difficult ford as well as a mile and a half of tidal swamp.

Resthouses.—A grant in aid of Rs. 500 per annum is allowed towards the cost of salaries of resthouse-keepers, which amount to Rs. 861 per annum.

Repairs cost a sum of Rs. 736·85, and much is still required in the way of repairs.

A new resthouse was constructed at Kuchchaveli with the materials of the old building, which collapsed in 1901, at a cost of Rs. 765·20—surely the cheapest resthouse ever built in Ceylon. It contains a single bedroom with hall surrounded by half walls in front, bathroom, storeroom, and verandah all round, with a small kitchen outside. As very few travellers frequent this road, the building is sufficiently large to meet present requirements.

The ancient buildings which serve for resthouses at Nilaveli and Muttur are also crumbling away, and it will shortly be necessary to provide new buildings at both places, especially Muttur, which is unhealthy and badly situated on the margin of a mangrove swamp. A charming site on the seashore looking over Koddiyar bay towards Ostenberg and Sober Island has been selected, and as the new section of the Batticaloa road has been carried to the mouth of the river, the resthouse ought to be removed to that neighbourhood.

It is possible that in a few years it may be thought advisable to build a new resthouse near the mouth of the Irakkakandi-aru, on the new road trace 12 miles from Trincomalee, in place of the old resthouse at Nilaveli, which is within 9 miles of Trincomalee. The site suggested is exceedingly pretty, with views over the sea and river, and it would afford a better division of the distance to Kuchchaveli.

An account in the usual form is annexed :—

Resthouse Account of the Chairman, District Road Committee, Trincomalee, on account of the Provincial Road Committee, Eastern Province, for 1902.

REVENUE.	Amount. Rs. c.	EXPENDITURE.	Amount. Rs. c.
Balance on December 31, 1901 ...	220 17	Salaries of resthouse-keepers ...	861 0

		8	·01	—	—	—

The collection of road tax was effected without difficulty or delay. Thirty-seven persons performed labour during the year, against thirty-four in 1901. Five persons were fined and four committed to jail, against sixteen and six respectively in 1901. The actual number who paid their tax shows an increase of 3,067 persons, the figures being—

1901	58,122
1902	61,189

Minor Roads.—Ten roads referred to in last year's report were handed over to the Village Committees; in length 147 miles.

A sum of Rs. 22,480·15 was spent on minor roads in the course of the year for the maintenance and repair of 236 miles of road.

The Talgodapitiya-Yattawatta road, a part of which is maintained by toll grant, is now in a bad state. The toll rent, instead of steadily going up year by year, has decreased, as the plumbago mine owners found means of farming the rent.

As some of the minor roads were given over to the Village Committees and others to planters of the district, it has been found possible to discontinue one Superintendent of Minor Roads, and in future to employ only one officer to look after the roads.

The rains during the year have done considerable damage to most of the roads in the district.

Resthouses.—The resthouses throughout the Province were maintained in excellent order. It is proposed to build a small resthouse at Polpitigama, and to abandon the travellers' bungalow at Neketgedara. It is also proposed to build a resthouse at Dodangaslanda in the centre of the mining district.

Improvements to Kurunegala and Wariyapola resthouses have been sanctioned, viz., the extending of the kitchen, additional dry-earth closets, surface drains round the buildings, and other minor improvements.

It is proposed to remove the Narammala resthouse to another site, as the locality has now become too crowded. A new site has been selected for the purpose. The contractor having failed to do the work of the native ambalam, towards which a sum of Rs. 6,000 was handed over by the late D. C. Attygalle, Mudaliyar, it is now being carried on by the Superintendent of Minor Roads.

I repeat my predecessor's remark as to the necessity of placing tolls on some of our more important minor roads :—

> In last year's report it was pointed out by the late Mr. Fisher that there were but few tolls allowed in this district, though the increasing traffic justifies their imposition. A cart can now go from the extreme south of the district (Katugampola hatpattu) to the extreme north, the Kala-oya, on the main road to Anuradhapura, a distance of over 50 miles, without paying a single toll. Nearly the whole of this mileage is in charge of the Public Works Department, and the few miles of minor road are up to the standard of the principal roads. It is doubtful whether there is any similar stretch of principal road in any other Province without a toll.

At least three of these roads ought to be taken over by the Public Works Department at once, but it is an extraordinarily difficult change to effect, though it is hard to see why it should be so. The traffic on them is so heavy, owing to the opening up of cocoanut estates, that the District Road Committee is no longer competent to deal with them, and yet to leave them in their present state is to interfere with the natural progress of a prosperous district.

Kurunegala, February 16, 1903.

S. M. BURROWS,
Chairman.

PUTTALAM DISTRICT.

Working of the Ordinance.—The results are not so good as last year. It is proposed to hold division days once a month, to withhold part of the commission of division officers who have a considerable percentage unaccounted for on May 1, and to issue all warrants for not more than a month or two months at a time.

Work done during the year.—Two bridges at Kattakadu were repaired at a cost of Rs. 906·90; new piles were driven. These bridges span the waterways at the northern end of the Mundel lake. They are important because of the numerous cocoanut estates which lie to the west of them. The roads on either side are natural tracks, almost impassable during the rains.

No other work of any importance was carried out, the operations being confined to the clearing of jungle.

An estimate for the repair of the Vannativillu resthouse was framed in December. Rs. 827·32 was spent on repairs to resthouses, the principal items being as follows :—

		Rs. c.
Repairs to resthouse, Puttalam		79 1
Do. Madurankuli		110 0
Do. Tonigala		76 50
Do. Kalpitiya		117 31
Do. Etalai		370 0
Do. Vannativillu		74 50
		827 32

The usual tabulated statements are annexed :—

Division Officers.—The system of appointing police headmen is being introduced as vacancies occur ; this is likely to promote efficiency.

Metal and Gravel.—Metal has to be transported long distances, enhancing the cost of maintenance of roads. Gravel is often of indifferent quality, resulting in roads without foundation being badly cut up by heavy traffic, especially in bad weather such as we have had.

Floods.—Much damage has been caused during the last three months of the year by the abnormal rains. The large balance at end of the year is due to the impossibility, owing to the weather, of carrying out work between October and December. The balance will be expended in the first three months of 1903 before commutation comes in.

Bolawatta-Lunuwila Road.—It is intended to track metal a section of this road in 1903, from Messrs. Vavasseur & Co.'s mills to Bandirippuwa, where the traffic is heavy.

Old Toppu Road.—The northern section between the Lunu-oya and Horakele mills was badly damaged by the floods. The section from the mills to Nattandiya has been in excellent condition.

The southern section, from Nattandiya to Dankotuwa, is an improving road, and the whole of it will soon be metalled.

Bandirippuwa and Lunuwila Roads.—These have suffered greatly from the floods, and with heavy traffic, they being bottomless, it has been difficult to keep them in order. It is intended to metal them.

Nattandiya-Dunkannawa Road.—This wants more metal, and will have it in 1903.

Bangadeniya-Mandalana Road.—The estates interested are contributing liberally to the improvement of this road, and it is hoped much progress will be made in 1903. Work was at a standstill the last three months of the year, the road being submerged by tanks and the rains.

Compasspara.—The District Road Committee, aided by Kurunegala District Road Committee, finds funds for one section only, viz., from Villattawa to Pairandawa forest bungalow, which is in fair order in good weather, passing as it does through a tank.

It is hoped in 1903 to bridge the Kirimeti-oya, north of the Madampe-Kuliyapitiya road, and to turn out village labour on the neglected sections of the Compasspara, the southern 12 miles of which should be converted into a Public Works Department road, to feed the canal and the coming Railway.

Natural Tracks.—A considerable mileage of these has been handed back to the District Mudaliyars with instructions to turn out on them any available village labour, otherwise these useful means of communication get no attention at all.

The District Road Committee will continue to supply bridges and culverts on these as funds permit, and this has been done in 1902.

My experience of the affairs of the Committee is limited to the last 6½ months of the year.

H. R. FREEMAN,
Chairman.

Chilaw, January 27, 1903.

NORTH-CENTRAL PROVINCE.

THE total revenue for the year was Rs. 31,628·97, made up as follows :—

	Rs.	c.
In cash	30,465	0
In labour	12	0
Miscellaneous receipts	1,151	97

The single and double rate commutation recoveries, excluding miscellaneous receipts, exceeded all previous years by over Rs. 1,000.

The decrease in the statement hereto annexed, compared with that of last year, is due to the taking over of the town by the Local Board.

The number of men remaining unaccounted for at the end of the year out of the 21,418 on the division officers' lists was 7. All of these were temporary residents, and new names on the division officers' lists for 1902.

The expenditure on account of establishment, commission to division officers, petty expenses, and purchase of tools was Rs. 7,731·04.

The amount expended on principal roads and resthouses was :—

	Rs.	c.
Anuradhapura-Siyambalagama road	2,500	0
Kalaoya-Galgodahena road	2,575	0
Galkulam through Anuradhapura to Rambewa road	978	0
Mirisgonioya-Kituluttu road	1,800	0
Mirisgonioya-Galkulam road	1,125	0
Horowapotana-Vavuniya road	1,500	0
Mirisgonioya-Galkandamadu road	500	0
Upkeep of resthouses	1,760	59
Total ...	12,738	59

During the year, with the usual upkeep work for minor roads, certain improvements, such as building of bridges and culverts, raising low places, &c., were done to the following roads :—Madawachchiya-Kebitigollewa road, Madawachchiya-Horowapotana road, and eastern minor road. The native resthouse was greatly improved by new cement flooring, painting woodwork, and fixing new gates. A boarded ceiling was provided for the whole of the old building of the Anuradhapura resthouse. The new wing had it already. A new bathroom and closet have been put up for Kekirawa resthouse.

The following sums were spent for the upkeep and improvements of the existing minor roads, &c. :—

Particulars.	Amount. Rs.	c.
Improving Madawachchiya-Kebitigollewa road	259	17
Improving Madawachchiya-Horowapotana road	237	60
Improving the Eastern minor road	410	29
Improving the Green Path...	90	92
Deviation at 19th mile, Alutoya-Horowapotana road	276	75
Ceiling for Kahatagasdigiliya resthouse	88	70
Gravelling the Green Path	137	75

Provincial Road Committee's Office,
Anuradhapura, January 27, 1903.

L. W. BOOTH,
Chairman.

11(1)03

PROVINCE OF UVA.

I.—PROCEDURE.

THERE were no arrears at the close of the year under review. The proportion written off on account of exemptions and all other deficiencies was 7·07 per cent.

2. The appended summary of three years exhibits the procedure adopted to recover money or to enforce labour from the men liable. The decrease in the percentage of non-effectives was continued :—

	1900.		Percentage on B.	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A) ...	—	159,201	—	—	188,964	—	—	188,964	—
2. Number on lists (B) ...	—	32,885	—	—	33,696	—	—	32,402	—
3. Effective in the district :—									
(a) Paid Re. 1·50	27,535		83·73	28,933		84·86	28,416		87·69
(b) Paid Rs. 3	413		1·25	648		1·92	380		1·11
(c) Laboured 6 days ...	335		1·02	317		·95	183		·56
(d) Laboured 12 days ...	—		—	—		—	—		—
		28,283	86·00		29,898	88·00		28,979	89·43
4. Not effective in the district, but have discharged their liability :—									
(a) Exempted	1,724		5·24	1,014		3·01	890		2·74
(b) Paid and laboured elsewhere ...	2,003		6·09	1,826		5·43	1,404		4·33
(c) Committed to jail ...	30		·09	9		·03	2		·06
(d) Fined	5		·02	1		·03	—		—
(e) Double entries	33		·19	17		·05	14		·04
(f) Dead	135		·41	265		·79	185		·56
		3,930	11·95		3,132	9·31		2,495	7·07
5. Non-effective :—									
(a) Reported to have left the district	672		2·04	666		2·00	570		1·75
(b) Otherwise, not arrested	—		—	—		—	—		—
		672	2·04		666	2·00		570	1·75

3. The percentage of men who paid commutation at the single rate again rose. A comparative statement for the last ten years of the percentages of receipts of commutation at the single rate is appended :—

Year.	
1893	86·76
1894	86·63
1895	85·77
1896	86·28
1897	86·77
1898	85·95
1899	83·33
1900	83·73
1901	84·86
1902	87·69

4. The amount collected in money as commutation and the value of labour exacted are show in the following comparative statement for each of the last ten years :—

Year.	Amount collected in Money. Rs. c.	Value of Labour exacted. Rs. c.	Total. Rs. c.
1893	43,552 0	339 0	43,891 0
1894	42,696 0	544 50	43,240 50
1895	41,835 0	654 0	42,489 0
1896	42,648 75	553 50	43,202 25
1897	43,503 40	133 50	43,636 90
1898	43,218 0	693 0	43,911 0
1899	42,768 50	637 50	43,406 0
1900	42,541 50	502 50	43,044 0
1901	44,353 50	475 50	44,829 0
1902	43,778 63	274 50	44,053 13

5. On the 1st April 21,243 men out of a total of 30,573 remained for disposal. Of these, 19,394, or 91·76 per cent., were dealt with in the succeeding three months, and at the end of the first half-year only 1,230 of the total number liable remained for disposal. During the second half-year the accounts were finally settled, with the results which have been detailed in the preceding paragraphs.

II.—REVENUE AND EXPENDITURE.

6. The funds administered by the Provincial Committee, Uva, are accounted for in the following comparative statement :—

RECEIPTS.	1901. Rs. c.	1902. Rs. c.	PAYMENTS.	1901. Rs. c.	1902. Rs. c.
Road tax collections of Upper Uva	26,284 50	25,939 13	Principal roads ...	9,691 41	9,741 30
Do. Lower Uva	18,069 0	17,839 50	Value of labour on same ...	96 0	109 50
Value of labour	475 50	274 50	Minor roads, Upper Uva ...	7,062 33	8,742 81
Government grant in aid of minor works	700 0	700 0	Value of labour on same ...	—	19 50
Resthouse collections ...	3,989 76	2,787 47	Minor roads, Lower Uva ...	5,942 50	6,526 74
Miscellaneous	324 16	1,225 96	Value of labour on same ...	379 50	145 50
			Bridges	1,760 59	2,010 50
			Tools purchased for District Road Committees	669 91	699 97
			Upkeep and repairs to resthouses	1,755 93	3,638 54
			Resthouse equipment ...	724 33	2,544 56
			Pay of resthouse-keepers and bungalow-keepers ...	4,735 2	4,329 27
			Provincial Committee establishment—salaries... ...	5,818 92	4,422 24
			Commission to division officers, Upper Uva	2,964 16	2,369 64
			Commission to division officers, Lower Uva	2,070 23	1,812 47
			Office contingencies and transport	839 31	1,368 46
			Miscellaneous payments ...	—	939 98
			Gratuity to retiring officers ...	—	1,149 0
			Advances recoverable ...	1,339 0	660 41
	49,842 90	48,766 56		45,849 14	51,230 39
Balance on January 1 ...	3,148 2	7,141 80	Balance on December 31 ...	7,141 80	4,677 97
Total ...	52,990 94	55,908 36		52,990 94	55,908 36

7. *Receipts.*—Excluding balances, the receipts of 1902 amounted to Rs. 48,766·56, as against Rs. 49,842·92 in 1901, showing a decrease of Rs. 1,076·36. This is due to a diminution in the number of persons liable on the lists (as specified in the summary appended to paragraph 2) and to a falling off in resthouse collections (as shown in the statement of accounts under paragraph 6).

8. Details of this decrease are given in the following statement :—

Heads of Revenue.	1901. Rs. c.	1902. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.
Road tax ...	44,829 0	44,053 13	—	775 87
Resthouse collections ...	3,989 76	2,787 47	—	1,202 29
Miscellaneous* ...	324 16	1,225 96	901 80	—
	49,142 92	48,066 56	901 80	1,978 16
			Deduct Increase ...	901 80
			Nett Decrease ...	1,076 36

* *Note.*

	Rs. c.		Rs. c.
Refund of advances	526 96	Value of timber sold	2 50
Private contributions for repair of Kataragama road	395 0	Amount remitted by Treasury for maintenance of a section of the Koslanda-Poonagala branch road	175 0
Over-payments recovered	16 49	Fines	10 0
Rents	22 50		
Amount recovered for damage done to resthouse furniture and for furniture short delivered by discharged resthouse-keepers	67 51	Total ...	1,225 96

9. *Payments.* — The expenditure, on the other hand, was Rs. 5,381·25 in excess of the expenditure of the previous year. Details of this increase are appended :—

	1901. Rs. c.	1902. Rs. c.	Increase. Rs. c.	Decrease. Rs. c.
Principal roads ...	9,787 41	9,850 80	63 39	—
Minor roads... ...	13,384 33	15,434 55	2,050 22	—
Bridges	1,760 59	2,010 50	249 91	—
Tools	669 91	699 97	30 60	—
Upkeep and repairs to resthouses ...	1,755 93	3,638 54	1,882 61	—
Resthouse equipment ...	724 33	2,544 56	1,820 23	—
Pay of resthouse-keepers and bungalow-keepers ...	4,735 2	4,329 27	—	405 75
Provincial Committee establishment—salaries ...	5,818 92	4,422 24	—	1,396 68
Commission to division officers	5,034 39	4,182 11	—	852 28
Office contingencies and transport	839 31	1,368 46	529 15	—
Miscellaneous payments ...	—	939 98	939 98	—
Gratuity to retiring officers ...	—	1,149 0	1,149 0	—
Advances recoverable ...	1,339 0	660 41	—	678 59
	49,842 92	48,766 56	8,714 55	3,333 30
		Deduct Decrease ...	3,333 30	
		Nett Increase ...	5,381 25	

10. The following are the details of the contribution to principal roads :—

	In Money. Rs. c.	Value of Labour. Rs. c.	Total. Rs. c.
Badulla-Batticaloa road ...	3,496 50	3 0	3,499 50

III.—GENERAL.

13. A spending policy was adopted, and the funds available on the balances brought forward from the preceding year were liberally disbursed, partly in the general improvement of resthouses throughout the Province, and partly in the repair of some of the more neglected roads and bridges. For instance, as shown in the statement appended to paragraph 9, the additional expenditure on resthouses amounted to Rs. 3,702·84, namely, Rs. 1,882·61 on repairs and Rs. 1,820·23 on equipment. Similarly, the votes for minor roads and bridges exceeded those of the previous year by Rs. 2,300·13. Accordingly, the credit balance fell from Rs. 7,141·80 at the end of 1901 to Rs. 4,677·97, of which Rs. 3,250 was voted for the erection of a resthouse at Buttala. The unapportioned balance at the end of the year was therefore Rs. 1,433·16.

14. *Revised List of Minor Roads.*—The old lists of the various minor roads were re-described and merged into one new list corrected to date. The revised list is printed as an appendix to this report.

15. The amendment of the Road Ordinance, 1861, is required so as to empower the Provincial Road Committee to exercise, when desired, the functions of a District Road Committee. The amendment would be applicable in Provinces which are not subdivided into districts, and would serve to simplify procedure. For instance, the Province of Uva consists of only one district, namely, that of Badulla, but in order to comply with the technical requirements of the Road Ordinances it has been found necessary to create two District Road Committees. These, with the Provincial Road Committee, make three Committees, the work of which could be done much better by one ; that is to say, by the Provincial Road Committee.

16. *Staff.*—Mr. G. W. Vallipuram, Superintendent of Minor Roads, resigned his post in the month of January, and was succeeded in the month of May by Mr. E. D. Dharmasena.

17. *Constitution of Committees.*—During the year the following changes occurred among the members of the various Committees :—

Provincial Committee.

Mr. Walter C. Price, Provincial Engineer, *vice* Mr. C. A. Lovegrove.
Mr. T. R. Ward, Provincial Engineer, *vice* Mr. Walter C. Price.
Mr. John Rettie *vice* Mr. V. Vicaresso.

District Committee, Upper Uva.

Mr. J. A. Moraes, District Engineer, *vice* Mr. A. R. Tocke.
Mr. Walter C. Price, District Engineer, *vice* Mr. J. A. Moraes.
Mr. J. A. Moraes, District Engineer, *vice* Mr. Walter C. Price.
Mr. John Rettie *vice* Mr. A. T. Rettie.

District Road Committee, Lower Uva.

Mr. J. A. Moraes, District Engineer, *vice* Mr. A. R. Tocke.
Mr. Walter C. Price, District Engineer, *vice* Mr. J. A. Moraes.
Mr. J. A. Moraes, District Engineer, *vice* Mr. Walter C. Price.

18. At the close of the year the Committees consisted of the following members :—

Provincial Committee.

The Government Agent.
Mr. T. R. Ward, Provincial Engineer.
Mr. A. C. Chamberlin.
Mr. W. S. Taylor.
Mr. J. M. Mason.
Mr. J. H. B. Cockburn.
Mr. J. Rettie.

District Committee, Upper Uva.

The Government Agent.
Mr. J. A. Moraes, District Engineer.
Mr. J. Rettie.
Mr. W. S. Taylor.
Mr. Chas. Taldena, Ratemahatmaya.

District Committee, Lower Uva.

The Government Agent.
Mr. J. A. Moraes, District Engineer.
Mr. Robert Stewart.
Mr. R. E. Blazé.
Mr. Chas. Taldena, Ratemahatmaya.

Provincial Road Committee's Office,
Badulla, May 6, 1903.

F. H. PRICE,
Chairman.

APPENDIX.

Minor Roads in the Province of Uva.

No.	Name of Road.	Approximate Mileage.
1	Haputale to Wilson's Bungalow	18
2	Wilson's Bungalow to Madulla road	20
3	Bandarawela to Welimada	10
4	Welimada to Amherst gap	9
5	Welimada to Boralanda on 1	12
6	Fort McDonald to Hakgala	10
7	Bandarawela to Koslanda	13
8	Bandarawela to Dehiwinna	10
9	Kottagoda on 2 to Rappahannock	4
10	Moretota to Katugaha on 8	5
11	Lunugala to Madulsima cart road	5
12	Yapame to Madulsima cart road	9
13	Lunugala to Tavalampelessa	10
14	Demodara to Gonakele	11
15	Badulla to Spring Valley and Hindugala	14
16	15 to Weyvelheena	5
17	14 to 15	2
18	16 to 15	2
19	Badulla to Ketawala	4
20	Badulla to Angoda	6
21	20 to Passara cart road	1
22	19 to Keenakele	7
23	Kandegedara on 22 to Narangala	2
24	14 to Pingarawa	4
25	Wewekele to Passara cart road	5
26	Naulla to Ella	3
27	Ketawala to Dehiwinna	7
28	Nahavila on 15 to Pingarawa	3
29	Findlater-Telbadde road	2
30	Tavalampelessa to Roebury	10
31	Taldena cart road to Keenakele	5
32	31 to Maliadda	10
33	Madulsima cart road to 30	2
34	Lemastota to Haputale	6
35	Poonagala to Ampitikanda on 7	5
36	Kelburne to Nikapota	4
37	Kalupahana Valley road	3
38	Lemastota to Meeriabedda on 7	6
39	Wellawaya cart road to Oakfield	2
40	Haputale to Dambtenne	6
41	Medagama to Nakkala	12
42	Nakkala to Kumbukkan	5
43	Medagama to Alupota	14
44	Medagama to Nilgala	15
45	Nilgala to Namal-oya	15
46	Bibile to Nilgala	18
47	Lunugala to 43 *via* Cocowatta	10
48	Medagama to Dambagalla	10
49	Dambagalla to Kongahapitiya	23
50	Dambagalla to Obbekota	4
51	Kotabowa on 44 to Baduluwela	10
52	Dambagalla to Baduluwela	12
53	Nilgala to Baduluwela	10
54	Baduluwela to Siyambala Anduwa	20
55	Roebury to Bibile cart road	7
56	Alupota to Kataragama	45
57	Kataragama to Tanamalwila	22
58	Wedikumbura to Muppana cart road	4
59	Kataragama to Elegalla	9

PROVINCE OF SABARAGAMUWA.

RATNAPURA DISTRICT.

THE statement of receipts and expenditure of the Provincial Road Committee of the Province of Sabaragamuwa for the year 1902 is annexed :—

RECEIPTS.	Amount. Rs. c.	Total. Rs. c.
Balance on January 1, 1903	—	952 24
Amount received from Road Committees on account of two-thirds commutation on principal roads and resthouses	39,513 16	
Refund by Government of tolls levied on minor roads ...	5,996 0	
Resthouse collections	4,377 53	
Government grant in aid of minor works	650 0	
Contribution from District Committees on account of Provincial Road Committee establishment	1,098 0	
Miscellaneous receipts	10,677 74	
		62,312 43
Total ...	—	63,264 67
PAYMENTS.		
Amount remitted to Director of Public Works on account of two-thirds commutation for principal roads ...	—	32,439 91
Amount expended on upkeep, repair, and improvements of resthouses	6,013 8	
Toll grant amounts remitted to District Committees ...	5,996 0	
Pay of resthouse-keepers	3,743 50	
Government contribution in aid of minor works remitted to District Committees	650 0	
Salary of Provincial Road Committee establishment ...	1,113 0	
		17,515 58
Miscellaneous charges	—	10,828 90
		60,784 39
Balance	—	2,480 28
Total ...	—	63,264 67

2. The resthouses in the Province were maintained in good order.

3. The receipts and expenditure of the District Road Committee, Ratnapura, are as follows :—

RECEIPTS.	Amount. Rs. c.	Total. Rs. c.
Balance on January 1, 1902...	—	12,253 12
Commutation realized in money	36,194 0	
Do. in labour	46 50	
		36,240 50
Government contribution in aid of minor works ...	450 0	
Toll grant on minor roads	1,150 0	
Miscellaneous receipts	123 52	
		1,723 52
Total ...	—	50,217 14
PAYMENTS.		
Amount expended in money and labour on account of principal roads and resthouses	13,023 66	
Amount expended on minor works, including toll grants and Government contribution in money and labour ...	15,360 5	
Salary of establishment and commission to division officers...	7,137 22	
Miscellaneous charges	1,762 72	
		37,283 65
Balance on December 31, 1902	—	12,933 49
Total ...	—	50,217 14

4. A comparative statement of road tax collections for the years 1900, 1901, and 1902 is annexed :—

	1900.		Percentage on B.	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A) ...	—	96,556	—	—	100,539	—	—	101,214	—
2. Number on lists (B) ...	—	26,755	—	—	27,575	—	—	27,470	—
3. Effective in the district :—									
(a) Paid Re. 1·50 and Re. 1 ...	24,638		92·08	24,910		90·33	25,133		91·49
(b) Paid Rs. 3 and Rs. 2 ...	137		·51	162		·58	99		·36
(c) Laboured 6 days ...	36		·13	53		·19	38		·13
(d) Laboured 12 days ...	1		—	1		—	—		—
4. Not effective in the district, but have discharged their liability:—		24,812	92·73		25,126	91·11		25,270	91·99
(a) Exemptions ...	825		3·08	1,260		—	1,079		3·92
(b) Paid and laboured elsewhere	825		3·08	926		—	729		2·65
(c) Committed to jail ...	12		·04	20		—	15		·05
(d) Fined	17		·06	14		—	11		·04
(e) Double entries ...	13		·04	21		—	20		·07
(f) Dead	65		·24	152		—	93		·33
5. Non-effective :—		1,757	6·56		2,393	8·67		1,947	7·08
(a) Reported to have left the district ...	186		·69	56		·20	253		·92
(b) Otherwise, not arrested ...	—		—	—		—	—		—
		186	·69		56	·20		253	·92

5. The amounts collected in money and labour during the last ten years are shown in the annexed statement :—

Year.	Amount collected in Money. Rs. c.	Value of Labour exacted. Rs. c.	Total. Rs. c.
1893 ...	29,819 0	659 50	30,478 50
1894 ...	29,706 50	941 50	30,648 0
1895 ...	31,470 0	322 50	31,792 50
1896 ...	31,787 50	245 0	32,032 50
1897 ...	32,573 0	135 50	32,708 50
1898 ...	33,609 0	134 0	33,743 0
1899 ...	34,660 50	90 50	34,751 50
1900 ...	35,622 50	48 50	35,671 0
1901 ...	36,093 50	70 50	36,164 0
1902 ...	36,194 0	46 50	36,240 50

6. The annexed statement shows the number of men liable, and how they were accounted for in the last ten years :—

	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.	1902.
Number of men on list ...	23,653	23,875	24,541	24,429	24,785	25,557	26,233	26,755	27,575	27,470
Paid single ...	20,262	20,168	21,430	21,730	22,399	23,054	23,848	24,638	24,910	25,133
Percentage ...	85·66	84·48	87·32	88·95	90·37	90·20	90·99	92·08	90·37	91·49
Paid double ...	296	310	274	223	179	203	173	137	162	99
Percentage ...	1·25	1·30	1·11	·91	·07	·79	·65	·51	·58	·36
Worked 6 days ...	427	660	226	187	96	95	71	36	53	38
Percentage ...	1·80	2·76	·09	·76	·03	·03	·27	·13	·19	·13
Worked 12 days ...	26	3	5	4	1	2	1	1	1	—
Percentage ...	·10	·01	·02	·01	—	—	—	—	—	—
Fined and committed ...	90	108	53	56	34	29	29	29	34	26
Percentage ...	·38	·45	·21	·22	·13	·11	·11	·10	·12	·09
Total deficiencies ...	2,552	2,626	2,553	2,228	2,076	2,174	2,111	1,914	2,415	2,174
Percentage ...	10·52	10·99	10·40	9·12	8·35	8·50	8·50	7·15	8·75	7·91

7. The minor roads were maintained with the amounts available at the disposal of the Committee. In addition to the usual upkeep of minor roads, there were only two important and expensive bridges built, one at Mahakumbura-ela on Ellawala road and the other at Bowatta on Damahana road. The latter bridge collapsed immediately after its completion, partly owing to the unusual heavy rains during the year, and partly to the inefficiency of the Superintendent of Minor Roads, whose services have been dispensed with.

Provincial Road Committee's Office,
Ratnapura, February 27, 1903.

G. SAXTON,
Chairman.

KEGALLA DISTRICT.

THE following statement shows the working of the Thoroughfares Ordinance :—

	1900.		Percentage on B.	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A) ...	—	150,490	—	—	186,255	—	—	186,255	—
2. Number on lists (B) ...	—	37,951	—	—	38,633	—	—	39,422	—
3. Effective in the district :—									
(a) Paid Re. 1·50 ..	34,942		92·07	34,717		89·87	35,546		90·16
(b) Paid Rs. 3 ...	231		·61	385		1·00	371		·94
(c) Laboured 6 days ...	13		·03	24		·06	35		·09
(d) Laboured 12 days ...	—		—	1		·003	3		·01
4. Not effective in the district, but have discharged their liability:—		35,186	92·71		35,127	90·93		35,955	91·20
(a) Exempted ...	1,056		2·78	1,351		3·50	1,280		3·41
(b) Laboured and paid elsewhere	1,089		2·87	1,331		3·44	1,357		3·39
(c) Committed to jail ...	17		·05	14		·04	8		·01
(d) Fined ...	37		·10	40		·10	32		·04
(e) Double and erroneous entries ...	47		·12	13		·03	26		·06
(f) Dead ...	92		·24	150		·39	139		·31
5. Non-effective :—		2,338	6·16		2,899	7·50		2,842	7·22
(a) Reported to have left the district ...	427		1·13	607		1·57	625		1·58
(b) Otherwise, not arrested ...	—		—	—		—	—		—
		427	1·13		607	1·57		625	1·58

The percentage of effectives in 1902 shows a slight increase over that for 1901, though it is less than that for 1900. The increase in the number of effectives is satisfactory.

2. The amounts collected in money and labour during the last ten years are shown in the annexed statement.

Year.	Amount collected in Money. Rs. c.	Value of Labour exacted. Rs. c.	Total. Rs. c.
1893 ...	45,439 50	1,249 50	46,689 0
1894 ...	47,188 50	496 50	47,685 0
1895 ...	48,874 50	592 50	49,467 0
1896 ...	49,345 50	262 50	49,608 0
1897 ...	51,568 50	99 0	51,667 50
1898 ...	52,275 0	126 0	52,401 0
1899 ...	52,851 0	70 50	52,921 50
1900 ...	53,106 0	19 50	53,125 50
1901 ...	53,230 50	39 50	53,270 0
1902 ...	54,432 0	61 50	54,493 50

3. The expenditure on minor roads and works was as follows :—

Name of Road.	Length as Cart Road.	Length as Bridle Path.	Toll Grant.	Private Contributions.	District Road Committee Funds, including Labour.	Total.

Amount spent on the purchase of tools from Government grant ...	—	—	—	—	198 0	
Total ...	—	—	4,818 53	132 70	15,626 17	20,577 40

Some good work was done on the Galapitamada-Ruanwella section (7 miles) of the road from Warakapola to Ruanwella. All the roads suffered from the abnormally wet weather in the last quarter of the year.

The following new works were completed :—

	Rs. c.
Wire bridge at Pelanpitiya, 84 feet span	369 89
Ferry boat at Anguruwella	400 0

A store for the District Road Committee at Kegalla was commenced.

4. The resthouse account is given below :—

Statement showing the Total Receipts and Expenditure on account of Resthouses in the Kegalla District during the Year 1902.

Receipts.	Amount. Rs. c.	Total. Rs. c.	Expenditure.	Amount. Rs. c.	Total. Rs. c.
Balance of 1901	—	1,600 32	Amount spent on equipment ...	599 55	
Amount apportioned for resthouses	3,767 25		Do. repairs ...	1,996 33	
Resthouse collections during 1902	1,949 5		Do. improvements ...	1,043 55	
Amount remitted to Provincial Road Committee on account of lost and broken articles ...	71 96		Pay of resthouse-keepers ...	1,440 0	
			Unexpended amount remitted to Provincial Road Committee ...	453 52	
		5,788 26			5,532 95
			Balance on December 31, 1902 ...	—	1,855 63
Total ...	—	7,388 58	Total ...	—	7,388 58

Circuit bungalows were completed at Talduwa and Mawatagoda, the Village Committee sharing half the cost of the buildings.

A covered way to connect the kitchen with the main building of Ambepussa resthouse was constructed, and a coach-house at Pindeniya commenced.

5. A statement of the revenue and expenditure of the District Road Committee is annexed :—

Statement of Receipts and Expenditure of the District Road Committee, Kegalla, Province of Sabaragamuwa, for the Year 1902.

RECEIPTS.	Amount. Rs. c.	Total. Rs. c.
Balance on December 31, 1901 ...	—	4,016 97
Commutation realized in money...	54,432 0	
Do. in labour ...	61 50	
Resthouse collections ...	1,949 5	
Miscellaneous receipts ...	5,308 53	
Government grant in aid of minor works	200 0	
Toll grant on minor roads ...	4,846 0	
		66,797 8

Do. (Plague) ...	226 13	282 48
Public Works ...	10,128 77	6,271 22
Lighting	1,700 41	1,384 67
Miscellaneous ...	519 51	859 48
Cemeteries	456 0	480 60
Balance on December 31 ...	491 23	2,269 1
Total ...	20,084 0	18,554 56

REVENUE.

Taxes.—The increase under the head "Taxes" is due to the recovery in 1902 of a larger proportion of the current assessment, of the larger arrears left in 1901, and of commutation from a larger number of men.

Licenses.—The decrease under "Licenses" is accounted for by the falling off in the revenue received from opium licenses from Rs. 4,800 in 1901 to Rs. 4,000 in 1902. The alteration of stamp duty on hackery licenses from Rs. 5 to Rs. 2 under the new Ordinance reduced the revenue under this head by over Rs. 1,000.

Fines.—There is a decrease in both Police Court fines and in recoveries on account of cattle seized, which comprise this head of revenue.

Rents.—Though there is a slight decrease under the head "Rents," there has been an increase of Rs. 71·50 in the rent obtained for the use of the Town Hall.

EXPENDITURE.

Establishment.—The decrease is due to the pay of the Inspector being reduced during the last four months of the year.

Office Contingencies.—As satisfactory offers were not obtained for the opium licenses, the sale had to be advertised oftener than usual, involving the increase under this head of service.

Revenue Services.—In 1902 a sum of Rs. 577·23, as against Rs. 95·02 in 1901, had to be paid on account of tin plates. This amount includes Rs. 252·91 paid on account of tin plates for 1903. The plates are more expensive than the old ones.

Public Works.—No new works, excepting an extension of the cement drains at a cost of Rs. 1,981·07, were undertaken during the year, and expenditure under this head is therefore less than last year.

HEALTH.

The general health of the town was good. The town was free from all sorts of epidemics during the year.

MEETINGS.

Meetings of the Board were held monthly, except in one instance, when a quorum was not forthcoming. The vacancy caused by the death of Mr. Charles van Royen, an Unofficial Member, was filled up by the election of Mr. T. de Alwis on the 23rd July, 1902.

THOROUGHFARES ORDINANCES.

The following comparative statement shows the working of the Thoroughfares Ordinances in 1901 and 1902 :—

	1901.		Per-centage on B.	1902.		Per-centage on B.
1. Population (A)	—	11,314	—	—	11,314	—
2. Number in list (B)	—	3,133	—	—	3,285	—
3. Effective in the district :—

Chairman.

NEGOMBO.

A COMPARATIVE statement of the revenue and expenditure of the Board for 1901 and 1902 is annexed :—

REVENUE.	1901. Rs. c.	1902. Rs. c.
Balance on January 1 ...	7,226 27	3,923 61
Taxes	9,994 0	10,592 25
Licenses	12,007 86	8,503 69
Fines	323 50	289 75
Sundries	678 14	855 71
Rents	690 43	687 71
Total ...	30,920 20	24,852 72

EXPENDITURE.	1901. Rs. c.	1902. Rs. c.
Salaries	3,417 36	3,642 38
Office Contingencies ...	598 73	598 16
Revenue Services ...	945 6	1,464 37
Police Charges ...	102 28	94 75
Sanitary Charges ...	5,732 68	5,979 52
Interest and Sinking Fund...	1,026 66	1,006 65
Plague Account ...	130 8	119 24
Public Works ...	12,791 51	7,688 81
Lighting Charges ...	1,960 8	2,038 85
Audit Charges ...	—	236 93
Miscellaneous ...	292 15	117 50
Pensions	—	570 0
Balance on December 31 ...	3,923 61	1,295 56
Total ...	30,920 20	24,852 72

The nett revenue of the Board for the year 1902 amounted to Rs. 20,929, as compared with Rs. 23,693 collected in 1901, showing a decrease of Rs. 2,764, which is mainly due to fewer recoveries under the head of "Licenses." The opium licenses of the Board were sold in October and realized Rs. 4,750, being Rs. 1,650 less than in 1901, due it is said to a combination among the dealers in the drug. Refund of stamp duty on cart licenses also shows a decrease, the amount credited in 1902 being Rs. 1,958 as against Rs. 2,995 in 1901. On the other hand, refunds of duty on liquor licenses realized Rs. 242 more than estimated, owing to the establishment of a hotel. Taxes showed an increase of Rs. 598, which is due to the imposition of a tax on vehicles and animals.

The expenditure in the year 1902 amounted to Rs. 23,557, as against Rs. 26,996 in 1901, showing a decrease of Rs. 3,439. The amount expended on Public Works is less by Rs. 5,102 than in the previous year. Only one new work was undertaken, viz., the extension of drainage of Main street up to the junction of the Udaiyartoppu road. A sum of Rs. 998 was expended on this account.

An ambulance cart, the need of which was greatly felt during the outbreak of cholera, was purchased for Rs. 150.

The 20 miles of roads within the Local Board limits were maintained in fair condition at a cost of Rs. 4,734.

The work of clearing the cement conduits was this year given out on contract, and was performed more satisfactorily and at a smaller cost than before.

A sum of Rs. 1,167 was expended in dealing with an outbreak of cholera at the beginning of the year. Forty cases were reported, 32 of which proved fatal. Besides these, 52 cases of "acute serous diarrhœa" occurred, with 36 deaths. The usual precautionary measures were taken by the Board. ...

The working of the Thoroughfares Ordinance was not so satisfactory, though the amount collected is only Rs. 88·50 less than that recovered in 1901. The number unaccounted for is much larger owing to the appearance of cholera, which scared away a large number of taxpayers, especially from Sea street. The usual statement is annexed :—

		1902.	1901.
1.	One-fifth of inhabitants of town by last Census, exclusive of immigrant Tamil agricultural labourers ...	3,964	3,964
2.	Number of names borne on division officers' returns ...	5,857	5,867
3.	Percentage of 2 to 1	147·75	148
4.	Number of persons exempted from labour ...	103	139
5.	Percentage of 4 to 2	1·75	2·36

BERTRAM HILL,
Chairman.

MINUWANGODA.

ANNEXED is a comparative statement of revenue and expenditure for the years 1901 and 1902 :—

REVENUE.	1901. Rs. c.	1902. Rs. c.	EXPENDITURE.	1901. Rs. c.	1902. Rs. c.
Balance on January 1 ...	1,430 17	1,355 37	Establishment ...	175 0	180 0
Taxes	739 31	590 75	Sanitary Charges ...	720 0	709 0
Licenses	1,867 38	2,180 57	Public Works ...	491 31	400 0
Rents	149 32	288 75	Lighting ...	120 0	115 0
Sundries	82 50	189 38	Office Contingencies ...	39 16	14 77
			Revenue Charges ...	—	16 88
			Miscellaneous ...	1,367 84	785 12
			Balance at the end of year ...	1,355 37	2,384 5
Total ...	4,268 68	4,604 82	Total ...	4,268 68	4,604 82

The revenue for the year amounted to Rs. 3,249·45. There was a balance of Rs. 1,355·37 brought forward from 1901, making a total of Rs. 4,604·82.

The expenditure amounted to Rs. 2,220·77, and a sum of Rs. 2,384·05 remained in hand on 31st December, 1902. Deducting from both years the balance carried forward, the nett revenue of 1902 shows an increase of Rs. 408·94.

Public Works.—The principal works carried out during the year were :—

(1) Three new rooms were added to the present existing meat market.
(2) Four new lamps were erected on the four main roads of the town.
(3) The new road to Mosque lane from the Colombo road was improved.

Public Health.—The health of the town was satisfactory during the year. There was no epidemic disease in any form and no general illness, with the exception of a few cases of chicken-pox, but none of them proved fatal.

Sanitation.—The scavenging of the town has been carried out satisfactorily.

Street Lighting.—Four lamps were added during the year, bringing up the total to seven. The three lamps on the "Havelock" lampstand are not very satisfactory. Messrs. Walker, Sons & Co. have been written to to supply three new lamps for the stand.

Roads.—The town roads were maintained in good order throughout the year.

Scavenging.—The work was done very satisfactorily; the public latrines were well maintained during the year.

General.—During the year nine meetings of the Board were held. At the biennial meeting of electors held on 16th December, 1902, the following gentlemen were re-elected for 1903 and 1904, viz., Messrs. John E. de Silva, S. D. Lianduru, and G. D. Valentine.

Thoroughfares Ordinance.—A comparative statement of the working of the Ordinance is appended :—

	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A)	—	580	—	—	580	—
2. Number on list (B)	—	218	—	—	216	—

	4,000 0

EXPENDITURE.	Amount. Rs. c.
Amount repaid	800 0
Amount payable	3,200 0
	4,000 0

There was a material increase in revenue of Rs. 774·82 over the revenue of the previous year. The expenditure was very small. No works requiring a heavy outlay were undertaken. A handsome balance of Rs. 5,275·96 has resulted. Out of this I propose to repay the balance of the loan from Government Rs. 3,200, and so relieve the Board from the payment of the interest. The finances of the Board are now in a sound enough position to justify the Board applying for a further loan, either for the improvement of the water supply or for the proper drainage of the town.

The celebration of the Coronation of His Majesty King Edward VII., fixed at first for 26th and 27th June, and postponed on account of His Majesty's illness, was loyally observed on 9th August. The Board contributed a sum of Rs. 200 towards feeding the poor, and the total subscriptions from the town and district amounted to Rs. 1,310·71.

His Excellency the Lieutenant-Governor visited Matale on 23rd August. An address was presented by the Board on that occasion bringing to His Excellency's notice the two chief wants of the town, an increased water supply and an improved system of drainage. His Excellency was good enough to promise that Mr. R. W. Smith of the Public Works Department should be instructed to report on the water supply as soon as his report on the Negombo water supply should be completed.

An expensive estimate for the drainage of the town, amounting to Rs. 34,500, has been prepared by the Public Works Department, and has been submitted for consideration. The payment of so large an amount is beyond the resources of the Local Board, unless material assistance is received from Government.

The lighting of the town was done on contract, but was not a success. The lighting will therefore be again done by the Board. Messrs. Delmege, Forsyth & Co., by opening a tank for bulk oil in the station premises, have considerably cheapened the price of oil, and supplied a long-felt want.

The scavenging of the town was satisfactorily performed by the contractor, and his contract has been renewed for a further period of two years.

An additional Horbury latrine was erected close to the market. There are now five of these public latrines in different parts of the town. But there is still a great deal of improvement necessary in the sanitary arrangements of the residing population. I hope next year (1903) to induce some owners to replace their insanitary cesspits by latrines after the Horbury pattern. The Board will undertake the conservancy of such latrines, whilst the owners will have to pay the cost of their construction.

The observance of the by-laws with regard to public cattle galas was enforced, and a great improvement is now noticeable. Covered buildings with properly drained floors have been provided for the cattle, and the cart stands have been paved and drained.

Considerable attention was paid to the burial grounds in and near Matale. The leading members of the various religious bodies in Matale were invited to attend a meeting of the Local Board, and after some discussion by-laws for cemeteries were passed and finally received the sanction of Government. The Church of England burial ground adjoining the general cemetery has been registered, and also the Buddhist burial ground at Nagolla. The Roman Catholics have consented to close their burial ground, which is in the heart of the town, and to bury their dead in the general cemetery. The Hindu and Mohammedan burial grounds have been surveyed, and are now being fenced and put into proper order with a view to their early registration.

By-laws were passed by the Local Board with respect to the registration of dogs and were sanctioned by Government.

A new departure was made in the sale of the market rent. No satisfactory offer was forthcoming for the lease of the whole market. The stalls were accordingly put up to competition separately. The increase of income derived by this method more than compensates the Board for the extra trouble which the recovery of the rents and the supervision of the market will cause.

I have found it cheaper to employ two park coolies regularly than to hire labour irregularly to weed Saxton Park. Next year there will be a regular esplanade cooly. With these three coolies and the two cemetery coolies I have now a very useful force of five coolies, who can be turned on at any time to any work which may be urgently required. This means that urgent work is promptly done, and it often saves hiring extra labour.

E. B. ALEXANDER,
Chairman.

Matale, February 17, 1903.

GAMPOLA.

A COMPARATIVE STATEMENT contrasting of revenue and expenditure for 1901 and 1902 is given below:—

REVENUE.	1901. Rs. c.	1902. Rs. c.	EXPENDITURE.	1901. Rs. c.	1902. Rs. c.
Licenses	4,157 99	4,073 94	Establishment ...	1,315 0	1,440 0
Fines	140 0	90 96	Revenue Charges ...	404 69	480 32
Rents	1,608 9	2,721 20	Office Contingencies ...	197 7	184 72
Taxes	4,678 53	4,174 99	Police Charges ...	1,077 18	1,232 20
Miscellaneous ...	1,072 44	45 95	Sanitary Charges ...	3,106 37	2,569 69
	11,657 5	11,107 4	Public Works ...	4,620 63	3,003 36
Balance on January 1 ...	862 25	1,647 54	Interest on Loans ...	—	868 0
			Miscellaneous ...	150 82	167 54
				10,871 76	9,965 88
			Balance on December 31 ...	1,647 54	2,788 70
Total ...	12,519 30	12,754 58	Total ...	12,519 30	12,754 58

Statement showing the Local Debt of the Board.

RECEIPTS.	Amount. Rs. c.	EXPENDITURE.	Amount. Rs. c.
Amount borrowed for construction of markets	6,200 0	Amount repaid	620 0
		Amount payable	5,580 0
	6,200 0		6,200 0

Revenue.—There is a decrease in the revenue collected during the year under review, as compared with that of the previous year. This is mainly due to the fact of the assessment taxes due for the third and fourth quarters of the year not being recovered and brought to account before the close of the year.

Expenditure.—The total amount expended is Rs. 915·88 less than that of the preceding year. A sum of Rs. 2,788·70 remained as balance at the end of the year.

Taxes.—The taxes imposed during the year were as follows :—

Assessment tax at 4 per cent.	Tax on buggy carts, hackeries, &c., at Re. 1 each.
Commutation tax at Re. 1·50 per head.	Tax on rickshas at 50 cents each.
Tax on carriages at Rs. 4 each.	Tax on horses, ponies, and mules at Re. 1 each.
Tax on double bullock carts at Rs. 2 each.	Tax on bullocks and asses at 50 cents each.
Tax on single bullock carts at Re. 1·50 each.	Tax on dogs at 75 cents each.

Markets.—The meat markets comprising four stalls were opened on 1st January, and were leased out at the rate of Rs. 17·50 each per month.

The vegetable and fish markets were leased out for a term of twelve months for Rs. 700. The restriction of the sale of vegetables, fresh fruits, &c., is not enforced within certain portions of the limits, such as the villages Kahatapitya, Illawatura, and Mahara. Great difficulty was experienced in putting down the sales of vegetables, fresh fruit, &c., in places other than the public markets within the restricted area, owing to different readings of the by-law, but heavy fines imposed in the first few cases and their confirmation by the Supreme Court had a very salutary effect in stopping these sales. A limited number of special licenses was issued to keepers of hopper boutiques for the sale of ripe plantains only in their boutiques.

Public Works.—The only new work undertaken during the year was the alteration into a suitable office for the Board of the small room opposite the police station. The new building consists of three rooms—a hall for holding meetings, an office for the Secretary, and a record-room. The plan was prepared by the District Engineer, Mr. R. A. Powell, and the work cost the Board Rs. 705. The roads and the public buildings in the town were kept in good order.

Lighting.—Eighteen lamps were kept lighted at a cost of Rs. 531·84, the number of new lamps fixed during the year being six.

Cemetery.—The Church of England and the Roman Catholic portions of the new cemetery were sold to the authorities of those churches, thus relieving the Board of their management and upkeep. The total number of burials during the year in the Non-conformist, Buddhist, and Hindu burial grounds in charge of the Board in the new cemetery was 69.

Scavenging.—The work was done satisfactorily under contract, the contractor of the previous year being given the work with an increased remuneration of Rs. 20 per mensem for the extra charge of transporting all street refuse, sweepings, and night soil to the new sewage farm purchased and established by the Board at Botalapitiya, Kahatapitiya, and for the conservancy of the additional public latrine erected during the year beyond the suspension bridge.

The drains that are cemented were flushed daily during the dry weather by utilizing the water from the standpipes, but as the present supply of water is not sufficient for the requirements of the town the Board has made provision for carrying out the regular flushing of drains during 1903 by getting water from the Mahaweli-ganga and Kirapone-oya by means of a water cart.

Public Health.—The health of the town was satisfactory during the year. There was no epidemic disease of any form, and no general illness, with the exception of a few cases of measles and dysentery during the hot months.

Proposed New Water Supply Scheme.—The scheme for increasing the water supply of the town was delayed by the absence on leave of Mr. R. A. Powell, the District Engineer, during the greater part of the year. The plans and estimates have since his return been revised and approved of by the Director of Public Works. The estimate amounts to Rs. 25,000, and it now awaits submission to Government and application for a loan to carry out the work.

Meetings.—During the year 1902 nine ordinary meetings of the Board were held. The Hon. Mr. H. Wace, Chairman of the Board, went on leave on 9th November. Mr. R. A. Powell, District Engineer, was on leave during six months of the year, his seat on the Board being filled by Mr. W. J. Thornhill. Mr. M. H. Marikar, an Unofficial Member elected at the last election, being disqualified by absenting himself from three successive meetings, was succeeded by Mr. E. G. Jonklaas, Proctor, in May.

Thoroughfares Ordinances.—A statement is annexed in the usual form showing the return of collections under the Road Ordinances, Nos. 10 of 1861 and 31 of 1884 :—

		1902.	1901.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	730	730
2.	Number of names borne on division officers' returns	1,390	1,380
3.	Percentage of 2 to 1	190·41	189·04
4.	Number of persons exempted from labour during the year	37	27
5.	Percentage of 4 to 2	2·66	1·97
6.	Number of names borne on division officers' returns less exemptions—2 less 4	1,353	1,353
7.	Percentage of 6 to 1	185·34	185·34
8.	i. Paid commutation	1,083	1,111
	ii. Performed labour	—	—
	iii. Fined	5	9
	iv. Imprisoned	—	2
	v. Total of i., ii., iii., and iv., being number of persons who discharged their liability	1,093	1,122
9.	Percentage of those who discharged their liability to number liable, being of 8 (v.) to 6	80·78	82·91
10.	Percentage of those who discharged their liability to one-fifth of inhabitants, being of 8 (v.) to 1	149·72	153·69
11.	Accounted for as died, paid elsewhere, double entries, and erroneous entries	232	226
12.	Unaccounted for on last day of the year	28	5

Miscellaneous.—The local celebration of the Coronation of His Majesty the King took place on 26th June, the Board contributing Rs. 100 for street decorations and illuminations.

Works required—

(1) A new road from opposite the police station and connecting Hill street at its junction with Mancton street and Martyn's lane;
(2) Filling up of the low ground between the resthouse and the main road in front of the railway station;
(3) Improvement of the water-course that flows into the paddy fields near the railway crossing at Kirapone so as to prevent flooding of neighbouring compounds; and
(4) Extension and improvement of the recreation ground near the Police Court.

Local Board Office,
Gampola, February 28, 1903.

J. P. LEWIS,
Chairman.

NAWALAPITIYA.

A COMPARATIVE statement of revenue and expenditure for 1901 and 1902 is given below:—

REVENUE.	1901. Rs. c.	1902. Rs. c.	EXPENDITURE.	1901. Rs. c.	1902. Rs. c.
Licenses	3,980 38	2,694 38	Establishment ...	1,249 50	1,485 0
Fines	25 50	43 50	Revenue Services ...	284 55	549 40
Rents	2,059 0	2,273 0	Office Contingencies ...	345 14	330 10
Taxes	4,368 95	3,672 46	Police Charges ...	1,014 5	757 74
Miscellaneous	30 90	238 22	Sanitary Charges ...	2,400 34	2,715 98
			Public Works ...	1,404 76	1,619 20
			Miscellaneous ...	6,338 38	2,567 83
	10,464 73	8,921 56		13,036 72	10,025 25
Balance on January 1, 1901 and 1902	3,619 32	1,395 11	Balance on December 31, 1901 and 1902	1,047 33	291 42
Total ...	14,084 5	10,316 67	Total ...	14,084 5	10,316 67

REVENUE.

Licenses.—The decrease under this head is due to the sale of the opium license realizing Rs. 1,300 only instead of the Rs. 2,562·50 of the previous year.

Rents.—The small increase is due to markets rents and cemetery fees.

Miscellaneous.—The increase under this head is made up of a refund of an over-payment of Rs. 27·84 on account of Local Board works, Rs. 30·38 survey fees received on account of cemetery, and Rs. 150 received from the railway on account of share of maintenance of waterworks.

EXPENDITURE.

Police Charges.—Four new street lamps were purchased from Messrs. Walker, Sons & Co. at a cost of Rs. 388·72, and were put up—one in Dolosbage road above the Central Hotel, one at the end of Ambagamuwa road near the culvert, and two in Gampola road opposite the police station and beyond the culvert opposite the railway bungalow.

PUBLIC WORKS.

(1) *New Road.*—The new road to the night soil depôt was metalled during the year at a cost of Rs. 425·50.

(2) *Drains.*—The concrete drains in Ambagamuwa and Gampola streets were repaired at a cost of Rs. 167·40.

(3) *Cemetery.*—Six acres of land of the cemetery were fenced (live fenced) at a cost of Rs. 148·50.

(4) *Market.*—Water service was laid on to the fish and beef market at a cost of Rs. 22·09.

(5) *Drainage.*—Concrete drains were constructed at the end of Gampola road during the year at a cost of Rs. 396·81.

(6) *Slaughter-house.*—This was improved by the construction of a concrete drain and a catch-pit at a cost of Rs. 75.

WORKS REQUIRED.

(1) The acquisition of the low ground between the station premises and the Gampola road and conversion of it into recreation ground.
(2) An office for the Board to be built on land next to Police Court.
(3) Permanent fencing of cemetery.

WATERWORKS.

(1) The standpipes were removed from the side of the road next to the drains to the opposite side, so as not to interfere with the traffic, at a cost of Rs. 95·77.
(2) The supply of water during the year was sufficient, and the water is of excellent quality.

MISCELLANEOUS.

Coronation.—A sum of Rs. 100 was contributed for the local celebration of the Coronation festivities.

HEALTH.

The health of the town was satisfactory throughout the year.

GENERAL.

During the year six meetings of the Board were held. In May, 1902, Mr. D. A. Samuel, a Member of this Board ever since it was established, resigned upon leaving for Colombo; Mr. L. S. Fonseka was elected in his place. Some cadjan buildings in the town were pulled down by the owners by order of the Board, and substantial buildings with tiled roofs substituted, to the great improvement of the town.

The working of the Road Ordinance is shown in the return annexed :—

		1902.	1901.
1.	One-fifth number of inhabitants within Local Board limits by last Census, exclusive of immigrant Tamil agricultural labourers	651	651
2.	Number of names borne on division officers' returns ...	1,259	1,414
3.	Percentage of 2 to 1	193·39	217·20
4.	Number of persons exempted from labour in year ...	25	21
5.	Percentage of 4 to 2	1·98	1·48
6.	Number of names borne on division officers' returns less exemptions—2 less 4	1,234	1,393
7.	Percentage of 6 to 1	189·55	213·97
8.	i. Paid commutation	1,073	1,038
	ii. Performed labour	—	—
	iii. Fined	—	1

13.	Unaccounted for on last day of half-year	61	72

March 12, 1903.

J. P. LEWIS,
Chairman.

HATTON-DIKOYA.

THE following statement shows the revenue and expenditure of this Board for 1902, the first year of its existence :—

REVENUE.	Amount. Rs. c.	EXPENDITURE.	Amount. Rs. c.
Balance on January 1 for Board of Health funds	574 77	Establishment	1,137 25
Licenses	3,038 83	Office Contingencies	319 84
Fines	39 0	Revenue Charges	759 75
Rents	1,119 50	Police Charges	1,560 2
Taxes	4,754 38	Sanitary Charges	4,445 76
Miscellaneous	127 91	Public Works	146 7
		Miscellaneous	179 3
			8,547 72
		Balance on December 31, 1902 ...	1,106 67
Total ...	9,654 39	Total ...	9,654 39

There was considerable difficulty in the election of members owing to there being no landed proprietors in the two towns. The whole of Hatton belongs to a Company, and almost the whole of Dikoya to Mr. Villiers. There are only two Unofficial Members, and a third could neither be elected nor appointed by nomination, owing to want of qualification. The two Unofficial Members are Messrs. T. C. Van Royan and T. L. Villiers. There were eleven meetings held during the year, and a considerable amount of business transacted. A loan of Rs. 6,500 was obtained from Government in May, and the amount is being spent on the construction of drains. Thirteen lamps were erected, eight at Hatton and five at Dikoya. One Horbury latrine was erected by the Board at Hatton, and others were provided by the estate proprietors at the request of the Board.

A market was constructed at Dikoya by the proprietor of the estate, the Board undertaking to pay an annual rent. This relieves the Board of a large outlay. The fencing of the general cemetery was begun, and in the course of 1903 it will be apportioned to the different religious denominations.

A sum of Rs. 100 was spent by the Board in celebrating the Coronation of His Majesty King Edward VII.

The scavenging of the town was satisfactorily performed at Hatton by the Board under the supervision of the Inspector and at Dikoya by a contractor.

The health of the people was satisfactory.

There were 178 cases of hoof-and-mouth disease, but only one death. The locality from which the disease was imported is not known.

It is proposed to erect a market at Hatton next year.

Statement showing the collection of road tax for the year 1902 is annexed. The figures for 1901 are not available, as the Board was not established until the middle of this year :—

Return of Collections under the Road Ordinances Nos. 10 of 1861 and 31 of 1884.

		1902.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	523
2.	Number of names borne on division officers' returns	1,476
3.	Percentage of 2 to 1	282·26
4.	Number of persons exempted from labour in year	23
5.	Percentage of 4 to 2	1·55
6.	Number of names borne on division officers' returns less exemptions—2 less 4	1,453
7.	Percentage of 6 to 1	277·82
8.	i. Paid commutation	1,206
	ii. Performed labour	—
	iii. Fined	4
	iv. Imprisoned	—
	v. Total of i., ii., iii., and iv., being number of persons who discharged their liability	1,110
9.	Percentage of those who discharged their liability to number liable, being 8 (v.) to 6	83·27
10.	Percentage of those who discharged their liability to one-fifth of inhabitants, being 8 (v.) to 1...	231·35
11.	Accounted for as dead, paid elsewhere, double entries, and erroneous entries	57
12.	Unaccounted for on last day of year	186

The rates of taxes levied were as follows :—

Assessment tax	4 per cent.
Commutation tax	Rs. 1·50 per head
Taxes on carriages	4·00 each
Taxes on carts, hackeries, &c.	2·00 ,,
Taxes on jinrickshas...	2·00 ,,
Taxes on horses, ponies, and mules	1·00 ,,
Taxes on bullocks and asses	0·50 ,,
Taxes on dogs	1·00 ,,

March 14, 1903.

J. P. LEWIS,
Chairman.

BOARD OF IMPROVEMENT, NUWARA ELIYA.

THE revenue for the year 1902 was the highest on record, amounting to Rs. 30,592·63 ; a small balance of Rs. 363·84 was brought forward from 1901, making the total amount available for expenditure Rs. 30,956·47. The actual expenditure was Rs. 30,736·06.

The revenue of previous years since the establishment of the Board has been as follows :—

REVENUE.

	Rs. c.		Rs. c.
1897	18,232 60	1900	28,108 47
1898	21,067 40	1901	27,811 0
1899	24,253 99		

The increasing demands of Nuwara Eliya more than keep pace with the growing revenue, and many works which the Board desires to undertake in the interests of the ratepayers have to be held over from year to year for want of funds.

Speaking roughly, the sources of revenue and expenditure are as follows :—

REVENUE.

Taxes.	Rs. c.	Rs. c.
Assessment	10,017 34	
Water-rate	6,198 0	
Commutation	2,541 50	
Vehicles &c.	579 98	
		19,336 82
Licenses	—	5,434 46
Rents	—	3,381 48
Fines	—	559 0
Miscellaneous	—	1,880 87
	Total ...	30,592 63

EXPENDITURE.

	Rs. c.
Public Works	9,644 77
Sanitation	6,971 32
Lighting	1,986 25
Establishment	2,157 85
Interest and sinking fund on loans	7,387 21
Miscellaneous	2,588 66
Total ...	30,736 6

The following loans have been made to the Board :—

			Rs.	c.
1894 } 1896 }	...	Market	20,000	0
1897	...	Waterworks	78,061	13
1898	...	Library	9,000	0
1901	...	Land acquisition	10,000	0
1901	...	Model dwellings	3,000	0
1902	...	Model dwellings	12,000	0
1902	...	Extension of waterworks	1,882	56
		Total ...	133,943	69

Of the above, the sum of Rs. 9,646·68 has been repaid, and the annual charge for interest and sinking fund amounts annually to about Rs. 9,200.

2. *Sanitation.*—The chief works undertaken by the Board under this head were : scavenging, removal of night soil from private houses, upkeep of public latrines and sewage farm.

The health of the town was good, there were no epidemics. The lake was again raised in the dry season, with beneficial results.

The question of the systematic draining of the town had the attention of the Board, and at the request of Government the Director of Public Works was good enough to report on the subject, the conclusion arrived at being that no satisfactory scheme could be undertaken except upon a scale, and at a cost, far beyond present requirements and resources. It is satisfactory to know that the present system is considered by so competent an authority sufficient for our requirements for some time to come.

The great need of Nuwara Eliya from a sanitary point of view is proper hospital accommodation for the isolation of infectious cases (European). As reported last year, effective isolation during the season when all the houses and hotels are full of visitors is impossible, and removal of the patient is imperative.

At present we have no place to which to remove patients, and it is difficult to see how a serious epidemic could under present circumstances be successfully met. A small hospital on the lines of the existing "Baker's Ward" is what is required, and it is hoped that before long Government will see its way to provide one. The question is not a local but a general one, and the Nuwara Eliya ratepayers cannot fairly be charged with the cost.

Public Works.

3. The most important works carried out during the year were :—

(1) Extension of the water main to the Yalta boundary, the furthest point to which it will be necessary to carry it for some time to come.

(2) *Model Dwellings.*—The main block consisting of 25 rooms was completed, and has done much to relieve overcrowding in the town. All the rooms are occupied, and the Board has on an additional loan of Rs. 12,000 started a new block consisting of 24 rooms on a less expensive scale. There is still great want of decent accommodation for the poorer classes in the town.

(3) *The Park.*—Those who remember the unsightly swamp lying between the bazaars and Scandal corner will scarcely now recognize this quarter of Nuwara Eliya. On one side of the road the Golf Club has transformed a wilderness into a green meadow ; on the other side, brick kilns, hovels, and swamps have given place to lawns and pleasure walks.

The five acres handed over to Mr. Nock for experimental purposes have undergone still greater transformation. In soil which a year ago would grow nothing but rank grass, English trees, shrubs, fruits, flowers, vegetables, fodders of all kinds, are responding vigorously to the skill and attention they have received at Mr. Nock's hands. The whole of the upper section of the park is now being handed over for the purpose of developing this useful experiment.

(4) *The Plain.*—The Board has, in the interests of the public, now secured by acquisition all the ground lying between the two roads bounding the plain, and the reclamation of swamp is being steadily proceeded with. It is hoped within a reasonable time to bring the whole of this ground into a sanitary and presentable condition.

(5) *Flood Outlets.*—Something, though not enough, has been done to facilitate the escape of water into the lake in flood time. The river was straightened in two places, and there are many similar bends which require attention. It is a work that requires delicate handling in the interests of the trout fishery. The erosion of the river banks that is now going on will have sooner or later to be dealt with, and the sooner the better.

(6) *The Lake.*—The long-expected dredger is under construction, and will shortly be at work. The scheme in view is to free the shores of the lake of all swamp and to utilize the silt in the formation of ornamental islands. Great improvements in the drainage of the town generally is anticipated.

(7) *Slaughter House.*—A special room for slaughtering has been added to the main building, thereby ensuring a more civilized mode of killing. The old method of slaughtering numbers of animals together in one room was barbarous in the extreme.

4. In minor matters good progress was made : the Hill Club road was widened, the improvements to the new bazaar were advanced, the Kitson light was experimented with, a new forest ride leading out of the Moon Plains road was commenced, and a second cricket ground for the use of town residents was undertaken.

5. Mr. Stanley Colls, District Engineer, left Nuwara Eliya on promotion to Pretoria in March, and was succeeded by Mr. R. W. Crabbe.

The ratepayers are indebted to both gentlemen for much useful advice and assistance during the year.

6. I annex the usual statements of revenue and expenditure and a comparative statement of the working of the Road Ordinance within the Board limits :—

Yearly Progress Return of Collections under the Road Ordinances, Nos. 10 of 1861 and 31 of 1884, for the Year ended December 31, 1902.

		Current Year.	Preceding Year.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	831	831
2.	Number of names borne on division officers' returns	1,603	1,849
3.	Percentage of 2 to 1	192·90	222·50
4.	Number of persons exempted from labour in year	8	15
5.	Percentage of 4 to 2	·50	·81
6.	Number of names borne on division officers' returns less exemptions—2 less 4	1,595	1,834
7.	Percentage of 6 to 1	191·94	220·70

Total ...	24,765 68	24,102 42	Total ...	24,765 68	24,102 42

Meetings.—Six meetings of the Board were held during the year. At the biennial election of Unofficial Members for the years 1902 and 1903 Mr. Keuneman was re-elected, and Messrs. D. Samaraweera and J. S. Weerasinha were elected in place of Messrs, C. H. Ernst and F. Jayatilake. A protest having been entered by Mr. Jayatilaka against the election of these two gentlemen, no meeting of the Board was held until the decision of the Government Agent, Southern Province, had been received overruling the objection. The first meeting for the year was held in April.

Public Works.—The principal works completed or undertaken during the year were as follows :—

(1) The Kotuwegoda market road (which runs parallel to the main road to Tangalla) was metalled at a cost of Rs. 896·40. This was necessary owing to the heavy traffic on the road.

(2) A cement sea bath was constructed near the island at a cost of Rs. 720·60. It was designed and built by the District Engineer.

(3) The iron bridge over the river was lighted by four ornamental lamps.

(4) Three new public bathing kraals were constructed at Kadewidiya, Kotuwegoda, and Karawa on the river to protect bathers from the crocodiles which infest the river.

(5) Plans, levels, and estimates were completed for a town drainage scheme at a cost of Rs. 600.

(6) A sum of Rs. 250 was handed over by the Board to the District Road Committee towards the cost of improving that part of the Piladuwa road which lies within Local Board limits.

(7) The Board voted Rs. 500 in aid of the funds raised by the general public to meet the expenses incurred in celebrating His Majesty's Coronation. This event was celebrated with much enthusiasm and loyalty by all classes of the people.

(8) The Board is about to commence the construction of two bathing pavilions, one at the iron bridge at Kotuwegoda and the other at the river's mouth, Ginigasmulla.

(9) Five more Horbury's patent latrines were obtained from Bombay to be erected at suitable places.

(10) The Nupe-ela, which is one of the flood outlet of Matara, was cleared of the mud and weeds which choked it.

A great part of the Seabeach road from the river's mouth up to the Police Court has been washed away by the sea. The Board has the question of its repair under consideration.

Public Health.—The health of the town continued satisfactory until the end of November, when a case of smallpox was detected at the railway station. The usual precautions were promptly taken, and the patient and her mother were removed to a temporary hospital at Odakkara. The disease was introduced here from Weligama, where it had broken out. The patient recovered, but her mother, who had volunteered to nurse her, unfortunately contracted the disease and died. No other cases occurred, and the thanks of the community are due to the Government Medical Officer, Dr. De Kretser, who spared no efforts to stamp out the disease.

A statement showing the working of the Thoroughfares Ordinance in 1901 and 1902 is annexed :—

Progress Return of Collections under the Road Ordinances Nos. 10 of 1861 and 31 of 1884.

Local Board Office,
Matara, March 3, 1903.

J. O'K. MURTY,
Chairman.

EASTERN PROVINCE.

BATTICALOA.

ANNEXED is a statement of the revenue and expenditure of the Board for 1901 and 1902. There was a slight increase in the value of taxes and rents during 1902; the increase in expenditure under the head Sanitary Charges is due to the fact that the liabilities of the previous year were met during 1902, and the accounts of the latter year were closed up to 31st December without bringing forward any liability into the next year. The expenditure also includes cost of removal of sea weed, repair of latrines, and levelling and burning of rubbish, which charges were, in previous years, paid under the head Miscellaneous:—

Comparative Statement of Revenue and Expenditure for the Years 1901 and 1902.

REVENUE.	1901. Rs. c.	1902. Rs. c.	EXPENDITURE.	1901. Rs. c.	1902. Rs. c.

10.	Percentage of those who discharged their liability to number liable, being of 8 (v.) to 6	88·95	87·68
11.	Accounted for as died, paid elsewhere, double entries, and erroneous entries	268	309
12.	Unaccounted for on last day of the year ...	—	—

Public Health.—The health of the town during the year was satisfactory, there not having been any disease of an epidemic or infectious nature. 254 dogs and 2,296 rats were destroyed during the year.

Road Maintenance.—The 15 miles of road in charge of the Board were kept in fair order. Some of the main roads have been re-gravelled and the rest repaired, and five wooden bridges and three culverts were repaired during the year.

Conservancy.—The conservancy of the public latrines is only carried on with much difficulty and at high wages by means of labour imported from Colombo, and the impossibility of procuring a large supply of this labour prevents the Board from introducing, much less enforcing, the dry-earth system in private premises, instead of the privies and cesspits, which at present constitute a danger to the health of the town.

Water Supply.—There would not, I believe, be any engineering difficulty in supplying the town of Batticaloa with water from the Rugam or Unnichchai irrigation reservoirs, but the initial cost and annual cost of maintenance places such a project entirely beyond the limited means of the Board, already burdened with debt.

Improvements.—With its limited resources the Board can only introduce improvements gradually and on a small scale. The most insanitary quarters of the town are the Fishers' and Moors' quarters, and although estimates amounting to Rs. 1,378 were passed for their improvement during the year, only a small portion of the vote was spent on the work The work in both quarters would have been completed if not for the obstinacy of the landowners in refusing all reasonable compensation, which may lead to the failure of the project unless it is decided to acquire the land compulsorily under the Acquisition of Lands Ordinance.

Local Board Office,
Batticaloa, March 13, 1903.

SAM. HAUGHTON,
Chairman.

TRINCOMALEE.

THE revenue for the year amounted to Rs. 13,017·63, showing a falling off of Rs. 154·96 when compared with the revenue of 1901, the principal falling off being under cart licenses, which realized only Rs. 777, against an estimate of Rs. 1,250. Most of the other items of revenue came very near to the estimates.

I annex a statement of revenue and expenditure :—

REVENUE.	Amount. Rs. c.	Total. Rs. c.
Balance on December 31, 1901 ...	—	539 21
Taxes	6,615 70	
Licenses	2,101 77	
Fines	301 91	
Rents	3,364 16	
Sundries	634 9	
		13,017 63
Total ...		13,556 84

EXPENDITURE.	Amount. Rs. c.	Total. Rs. c.
Establishment	2,472 0	
Office Contingencies ...	137 40	
Revenue Services ...	828 42	
Police Charges	44 97	
Sanitary Charges	4,565 11	
Interest and Sinking Fund on Loans	325 20	
Law Expenses	49 50	
Public Works	2,135 32	
Lighting	1,836 79	
Contribution towards cost of Audit	130 85	
Miscellaneous	335 85	
		12,861 41
Balance on December 31, 1902 ...	—	695 43
Total ...		13,556 84

The expenditure amounted to Rs. 12,861·41, or Rs. 156·22 less than the revenue, and a sum of Rs. 695·43 was carried forward to 1903.

The greater part of the expenditure was laid out on sanitary works, the cost of which amounted to Rs. 4,565·11, besides Rs. 446·68 (under the head of Public Works) expended on drainage.

Lighting (including the cost of new lamps) cost Rs. 1,836·79. Each year an improvement is being made in the lighting of the town. A few improved lamps are purchased each year as funds will permit, and the old lamps are relegated to the less important thoroughfares.

The scavenging of the town is done on contract at a cost of Rs. 3,396·86, and though complaints are made from time to time it is on the whole satisfactory, and a further sum of Rs. 330 is expended on cleaning latrines.

Every precaution has been taken to keep out the plague and other infectious diseases. The Board maintains a permanent infectious diseases hospital as well as a temporary plague camp, and no less than 8,825 rats were destroyed during the year.

Local Debt.—The annexed statement shows the indebtedness of the Board :—

Name of Body.	Debt.	To whom due.	Rate of Interest.	When incurred, and for what cause.	Provision for Payment of Interest and Sinking Fund, and Enactment by which it is made.	Amount of Original Debt.	Amount repaid.	Balance due on December 31, 1902.
	Rs.					Rs.	Rs.	Rs.
Local Board of Health and Improvement, Trincomalee	2,490	The Government of Ceylon	4 per cent.	April 13, 1894, to improve the town drainage and to open new roads in Moors' quarters	General Revenue, under Ordinances Nos. 13 of 1898 and 2 of 1901	3,000	510	2,490
Do.	2,550	do.	do.	April 10, 1895, for improvement to Fishers' quarters	do.	3,000	450	2,550
Total ...	5,040					6,000	960	5,040

The original debt has been reduced by Rs. 960.

Thoroughfares Ordinance.—The Census of 1901 disclosed a very considerable reduction in the population of the town of Trincomalee; it is not surprising therefore to see a falling off in the number of names borne on the division officers' rolls, but the number is still 62·80 per cent. in excess of the figure representing one-fifth of the population.

The total number of effectives who discharged their liability fell from 2,951 to 2,913, but the percentage was a trifle higher than in 1902, and the number remaining unaccounted for at the end of the year was reduced from 169 to 133.

Annexed is a statement in the usual form :—

Quarterly Progress Return of Collections of the Local Board, Trincomalee, under the Road Ordinances Nos. 10 of 1861 and 31 of 1884.

		1901.	1902.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	2,043 ...	2,043
2.	Number of names borne on division officers' returns ...	3,374 ...	3,326
3.	Percentage of 2 to 1	165·15 ...	162·80
4.	Number of persons exempted from labour in year ...	32 ...	37
5.	Percentage of 4 to 2	·95 ...	1·11
6.	Number of names borne on division officers' returns less exemptions—2 less 4	3,342 ...	3,289
7.	Percentage of 6 to 1	163·58 ...	160·99
8.	i. Paid commutation	2,948 ...	2,903
	ii. Performed labour	1 ...	4
	iii. Fined	1 ...	6
	iv. Imprisoned	1 ...	—
	v. Total of i., ii., iii., iv., being number of persons who discharged their liability	2,951 ...	2,913
9.	Percentage of those who discharged their liability to number liable, being of 8 (v.) to 6	88·30 ...	88·57
10.	Percentage of those who discharged their liability to one-fifth of inhabitants, being of 8 (v.) to 1 ...	144·44 ...	142·58
11.	Accounted for as died, paid elsewhere, double entries, and erroneous entries	222 ...	243
12.	Unaccounted for on last day of quarter ...	169 ...	133

Health of the Town.—The general health of the town has been well maintained, and the death-rate continues to show an improvement.

The number of deaths registered were as follows :—

1898	407	1901	386
1899	671	1902	363
1900	398		

There have been no epidemics of any sort.

Members.—The following are the Members of the Board :—Englebert Hugh Vanderstraaten, District Engineer, Public Works Department, and Dr. Samuel Ludovici Anthonisz, Assistant Colonial Surgeon (Official); Mayilvagana Mudaliyar Subramaniam, John Rajah Canagaratna, and Kumaraswamy Udiyar Kandappa (Unofficial).

The proceedings of meetings have always been marked by the greatest harmony and unanimity, showing that the Unofficial Members have the best interests of the people at heart.

C. M. LUSHINGTON,
Chairman.

NORTH-WESTERN PROVINCE.

KURUNEGALA.

ANNEXED is a comparative statement of the revenue and expenditure for the last two years. With the exception of Licenses, all the heads of revenue show an increase. This is due to the passing of the Ordinance No. 9 of 1901, relating to carriages, carts, and coaches. The Board is now only entitled to all sums paid for stamp duty for licenses by the inhabitants of the town, and this change has diminished the Board's income by Rs. 4,700. It was already too small for the wants of perhaps the dirtiest and worst provided town in Ceylon :—

REVENUE.	1901. Rs. c.	1902. Rs. c.
Balance on January 1 ...	1,005 40	3,707 35
Taxes ...	5,920 87	6,377 55

Contribution towards the cost of Audit	198 18	201 32
Refunds	648 35	33 0
	21,541 2	18,415 21
Balances	3,707 35	6,870 43
Total ...	25,248 37	25,285 64

Water Supply.—Mr. R. W. Smith, who was engaged in the question of a water supply for the Kurunegala town, has sent in his report. A survey is now being made with a view to ascertain what extent would be required to ensure the purity of the supply of water and the protection from pollution of the stream whence the water is to be derived.

Recreation Grounds.—The esplanade, which is the only playground in this town, wants a great deal of improvement. The subsoil drains which were built when the esplanade was first formed are now choked. The cost of putting matters to right will be considerable, but is well in hand.

Sanitation.—The scavenging of the town was carried out satisfactorily.

Lighting.—The oil lamps are, as everywhere, unsatisfactory and costly.

Roads.—The town roads were maintained in good order throughout the year.

Public Buildings.—The new powder magazine has been completed. The want of a post office is greatly felt. This is struck out of the Estimates again this year, as is the new house for the District Judge.

Tank.—Some work was done towards the close of the year in clearing out the weed, or rather peat, which threatens before very long to overgrow the whole tank, but the pauper Board can afford very little. An appeal has been made for help from the Irrigation Department, to which the tank really belongs.

Working of Thoroughfares Ordinance.—The usual comparative statement of the working of this Ordinance is appended. There is an increase of 21 in the number of those who discharged their liability. The number unaccounted for is 92, as against 121 at the end of 1901 :—

		1901.	1902.
1.	One-fifth number of inhabitants of Province or District by last Census, exclusive of immigrant Tamil agricultural labourers	1,200	1,200
2.	Number of names borne on division officers' returns ...	1,947	1,978
3.	Percentage of 2 to 1	162·25	164·83
4.	Number of persons exempted from labour in year ...	53	43
5.	Percentage of 4 to 2	2·72	2·17
6.	Number of names borne on division officers' returns less exemptions—2 less 4	1,894	1,935
7.	Percentage of 6 to 1	157·83	161·25
8.	i. Paid commutation	1,711	1,716
	ii. Performed labour	—	—
	iii. Fined	2	14
	iv. Imprisoned	—	4
	v. Total of i., ii., iii., iv., being number of persons who discharged their liability	1,713	1,734
9.	Percentage of those who discharged their liability to number liable, being of 8 (v.) to 6	90·44	89·61
10.	Percentage of those who discharged their liability to one-fifth of inhabitants, being of 8 (v.) to 1	142·57	144·50
11.	Accounted for as died, paid elsewhere, double entries, and erroneous entries	60	109
12.	Unaccounted for on last day of quarter	121*	92*

* Left the town.

S. M. BURROWS,
Chairman.

Kurunegala, February 16, 1903.

PUTTALAM.

A COMPARATIVE statement of the revenue and expenditure of the Board in 1901 and 1902 is annexed :—

REVENUE.	1901. Rs. c.	1902. Rs. c.	EXPENDITURE.	1901. Rs. c.	1902. Rs. c.
Taxes	4,409 93	3,800 62	Establishment ...	2,119 92	2,211 55
Licenses	5,385 19	3,361 63	Office Contingencies ...	271 3	280 80
Fines	108 20	113 0	Revenue Services ...	618 71	425 84
Rents	1,860 5	2,367 58	Police Charges ...	28 74	—
Sundries	1,099 13	1,291 95	Sanitary Charges ...	4,673 11	4,210 94
	12,862 50	10,934 78	Interest and Sinking Fund on Loans	344 57	339 67
			Law Expenses ...	17 55	20 0
			Public Works ...	4,160 78	2,997 75
			Lighting	745 62	872 29
			Contribution towards cost of Audit	109 27	112 55
			Miscellaneous ...	554 64	693 36
				13,643 94	12,164 75
Balance on January 1 ...	4,083 52	3,302 8	Balance on December 31 ...	3,302 8	2,072 11
Total ...	16,946 2	14,236 86	Total ...	16,946 2	14,236 86

The decrease under the head "Licenses" is due to the operation of the Ordinance No. 9 of 1901, section 51.

The loan account stands as follows :—

	Rs.		Rs.
To loan from General Revenue granted on August 5, 1892	7,000	By amount spent on improvements to Water-works in 1892	5,000
		By amount spent on the erection of the Infectious Diseases Hospital in 1892 ...	2,000
Total ...	7,000	Total ...	7,000

Debt Statement.

	Rs.		Rs.
To amount borrowed of Government on August 5, 1892, as shown above ...	7,000	By amount repaid to Government up to end of December, 1902	1,400
		By balance payable	5,600
Total ...	7,000	Total ...	7,000

The opium license for 1903 was sold in December and realized Rs. 1,160.

The health of the town was fairly satisfactory; two cases of smallpox and two of cholera (both the latter proved fatal) were imported into the town.

The scavenging of the town requires far closer and more active supervision.

The market for the sale of beef, mutton, and poultry referred to in the report of my predecessor is not yet complete.

At the meeting held for the election of Unofficial Members to serve on the Board for 1903 and 1904, the two sitting Members, viz., T. M. Seka Markar and A. Muttukumaru, were re-elected, and in place of M. N. M. Mohammado Alley Markar, Naina Lebbe Markar Mohammadu Ibrahim Naina *alias* Rawter Markar was elected.

A comparative statement of the working of the Thoroughfares Ordinance is appended.

	1901.		Percentage on B.	1902.		Percentage on B.
1. Population (A)	—	4,814	—	—	5,035	—
2. Number on list (B)	—	1,317	—	—	1,301	—
3. Effective in the town :—						
(*a*) Paid at single rate	1,160		88·07	1,157		88·93
(*b*) Paid at double rate	10		·75	17		1·30
(*c*) Laboured 6 days	—		—	—		—
		1,170	88·83		1,174	90·23
4. Not effective within Local Board, but have discharged their liability :—

		84	6·37		62	4·76

G. COOKSON,
Chairman.

Local Board Office,
Puttalam, March 6, 1903.

CHILAW.

A COMPARATIVE statement showing the revenue and expenditure of the Local Board for 1901 and 1902 is annexed:—

REVENUE.	1901. Rs. c.	1902. Rs. c.	EXPENDITURE.	1901. Rs. c.	1902. Rs. c.
Taxes ...	3,264 77	3,766 98	Establishment ...	1,775 0	1,537 90
Licenses ...	10,385 64	2,486 67	Office Contingencies ...	314 20	221 66
Fines ...	305 40	99 60	Revenue Services ...	938 61	277 1
Rents ...	889 95	1,037 50	Police Charges ...	35 70	34 29
Sundries ...	1,848 82	2,311 79	Sanitary Charges ...	1,954 82	1,560 24
			Law Expenses ...	10 50	—
			Public Works ...	8,505 80	3,449 7
			Lighting ...	1,925 57	946 25
			Audit ...	118 33	—
			Miscellaneous ...	806 0	854 65
	16,704 58	9,702 54		16,384 53	8,881 7
Balance... ...	1,963 45	2,283 50	Balance... ...	2,283 50	3,104 97
Total ...	18,668 3	11,986 4	Total ...	18,668 3	11,986 4

The drop of revenue under Licenses is due to the fact that these are no longer payable to the Board, but to Government, unless parties are residents within the limits of the Board.

EVENTS OF THE YEAR.

1. The celebration of the Coronation.
2. The visit of His Excellency the Governor.
3. Election of new members of the Board in December.
4. Delmege, Forsyth & Company apply to the Board for ground on the Reclamation to build an oil store. This promises to be a great benefit to the town.
5. The floods of the latter part of the year—over 8 inches of rain on the 10th December, 1902—temporarily drowned the town, which is low-lying, and water does not escape, but has to evaporate. Much damage to culverts and roads was done too.
6. The selection for the library of a store in the District Engineer's old yard. This will be renovated and converted into a suitable building.
7. Revival of cricket.

WATER SUPPLY.

This remains *in statu quo*. There is no way at present of procuring a proper water supply for the town. Meanwhile the wells on the sandbank continue to supply good water.

BURIAL GROUND.

The best available site, by the 1st milepost on the east of the Colombo road, was selected, and as the Board has no funds to acquire land for this purpose, it was hoped part of the Victoria Memorial Fund would be devoted to the acquisition of the land. But a member of the Board defeated the proposal, so that for some years we are likely to go on burying in the full cemeteries in the town.

ROADS.

These have been well maintained by the Inspector. The Public Works Department and public buildings approach roads have towards the end of the year been handed back to the Public Works Department, who command an adequate labour supply, and are better able to keep them in order.

RECLAMATION.

This useful and health-improving work, though it leaves the Board rather heavily in debt, will be finished early in 1903.

SCAVENGING.

This has been effectually carried out though with a reduced vote, and consequently less number of carts.

DRAINAGE.

This has been extended and improved, and the swamp in the middle of the town, due to the construction of the main approach road, is being reclaimed and the necessary culverts constructed.

HEALTH.

Fever, but no epidemic. Births, 141; deaths, 134.

GENERAL.

Several tobacco gala wells were filled up. The new hospital seems likely to be an event of the near future. The bridge over the lagoon connecting the town with the sandbank remains in an unimproved condition, and seems likely to do so for some time.

A lock-up is promised for 1903; this is much needed.

Rainfall of the year, 80·76 inches.

The Board is fortunate in possessing a very efficient Inspector.

My experience of the affairs of the Board is from 15th June, 1902, only.

Thoroughfares Ordinance.—A comparative statement showing the working of the Ordinance is appended:—

	1901.		Per-centage on B.	1902.		Per-centage on B.
1. Population (A)	—	4,348	—	—	4,170	—
2. Number on list (B)	—	1,375	—	—	1,393	—
3. Effective in the town :—						
(*a*) Paid at single rate ...	1,249		90·83	1,155		82·62
(*b*) Paid at double rate ...	15		1·09	42		3·01

Local Board Office,
Chilaw, January 30, 1903.

H. R. FREEMAN,
Chairman.

NORTH-CENTRAL PROVINCE.

ANURADHAPURA.

A STATEMENT of the revenue and expenditure of the Local Board for 1902 is annexed :—

REVENUE.	Amount. Rs. c.	EXPENDITURE.	Amount. Rs. c.
Balance on December 31, 1901 ...	3,088 81	Establishment	1,364 0
Taxes	4,240 17	Office Contingencies	206 84
Licenses	1,679 50	Revenue Services	472 76
Fines	253 87	Police Charges	51 0
Rent	3,698 56	Sanitary Charges	4,504 39
Sundries	1,130 88	Public Works	1,113 0
		Lighting	259 43
		Miscellaneous	2,896 10
		Petty Expenses	146 38
			11,013 90
		Balance ...	3,077 89
Total ...	14,091 79	Total ...	14,091 79

Much attention was devoted during the year to the proper sanitation and scavenging of the town, a very large percentage of the limited funds of the Board having been devoted to this object. As the income of the Board increases more will be done, for there is still much, especially in the direction of the drainage or filling of stagnant hollows, which cannot be attempted for lack of funds.

The town was kept clean, the streets being swept daily. The cleanliness of the public market and the whitewashing of all private shops and dwellings were insisted upon. The Medical Officer, who is also an Official Member of the Board, was unremitting in his inspection of the town and in bringing to notice the existence of any insanitary condition. Special precautions were taken both before and after each pilgrimage.

Steps have been taken during the year to improve, and in some cases to remove, dilapidated and insanitary buildings. No new buildings are permitted to be erected which do not satisfy the requirements of the by-laws.

The public latrines were kept in a satisfactory condition. The dry-earth system has been introduced into all private houses, in many cases superseding old cesspits. Most of the private

houses are served by a gang of coolies under the control of the Board. Those occupiers who do not avail themselves of this convenience are obliged under the Ordinance to make similar arrangements at their own expense.

All sweepings from the streets and other rubbish as well as all night-soil are carted away outside the town to the jungle beyond Mirisawetiya and there buried.

The bakeries have been kept quite clean. Visits to them are made daily by the Local Board Inspector.

The opium shop also has received frequent visits. The license for 1902 realized Rs. 1,200, compared with Rs. 900 for 1901.

The market rents were sold for Rs. 2,820. In 1901 they fetched Rs. 2,515.

The rents of the public galas brought in Rs. 475, as against Rs. 300 in 1901. They would, it is thought, have been purchased at higher rates, but for an idea that the railway might be opened during the year, and would lead to a decrease in cart traffic. A new gala was put up at the 45th milepost on the Puttalam road at a cost of Rs. 224.

During the year five licenses were issued for the storage of explosives and one for the manufacture of fireworks. The stores are well protected.

The roads and bridges in the town were maintained in as good order as funds permitted, but some damage was done to them by the heavy rains during the last quarter of the year. The same cause interfered to some extent with the work of their repair.

A retaining wall to prevent the washing away of the Unnanse Vetichcha Pokuna road was put up at a cost of Rs. 250.

A dog pound was constructed at a cost of Rs. 146.

The lighting of the town is a matter of importance, which must receive early attention. The town has at present only six lamps. A proposal for the erection of eight more lamps during 1903 is now under the consideration of the Board.

The Board held nine meetings during the year. The Official Members were Mr. L. W. Booth, Government Agent; Mr. L. M. Acland, Provincial Engineer; and Mr. S. Hallock, Assistant Colonial Surgeon. The Unofficial Members were Messrs. S. Sampader, Crown Proctor; S. D. Krisnaratna, Proctor; and S. M. Kader Mohideen. The Crown Proctor is a Hindu, Mr. Krisnaratna Sinhalese, and Mr. Kader Mohideen a Moorman. All classes are therefore represented.

A statement of the working of the Thoroughfares Ordinance in the town during 1902 is annexed:—

	1902.	Percentage on B.
1. Population (A)	—	3,672
2. Number on list (B)	—	2,237
3. Effective in the town:—		
(a) Paid at single rate	1,632	72·95
(b) Paid at double rate	21	·93
(c) Laboured 6 days	—	—
4. Not effective within Local Board, but have discharged their liability:—		
(a) Exempted	20	·89
(b) Paid elsewhere	155	6·92
(c) Committed to jail	—	—
(d) Fined	4	·17
(e) Worked 24 days	—	—
(f) Double entries	10	·44
(g) Dead	14	·62
5. Non-effective:—		
(a) Reported to have left the district ...	381	17·03
(b) Otherwise not accounted for	—	—

Local Board Office,
Anuradhapura, March, 1903.

L. W. BOOTH,
Chairman.

PROVINCE OF UVA.

BADULLA.

I.—REVENUE AND EXPENDITURE.

THE revenue of 1902 amounted to Rs. 14,296·64, being Rs. 60·88 less than the revenue of the previous year, namely, Rs. 14,357·52.

2. A comparative statement in detail is appended:—

Receipts, 1901 and 1902.

Heads of Revenue.	Year. 1901.	1902.	1902. Increase.	1902. Decrease.

		Deduct Decrease ...	1,138 75	
		Nett Increase ...	453 14	

4. The balance to the credit of the Local Board on the 1st January, 1902, was Rs. 3,613·92; and at the close of the year it amounted to Rs. 5,061·89. The difference between these two sums, namely, Rs. 1,447·97, is accounted for as follows :—

	Rs. c.
Revenue, 1902	14,296 64
Expenditure, 1902	12,848 67
Total ...	1,447 97

5. The local debt is Rs. 23,885·20, as under :—

	Rs. c.
Total amount borrowed	31,180 0
Amount repaid	7,294 80
Total ...	23,885 20

6. The receipts under Loans during 1902 were nil. The expenditure amounted to Rs. 1,662·70, as follows :—

Interest and sinking fund on—	Rs. c.
Market loan	330 38
Waterworks loans	1,124 32
Drainage loan	208 0
Total ...	1,662 70

7. Particulars of the various loans are given in the appended statement :—

Object of Loan	Date.	Amount of Original Loan.	Interest.	Sinking Fund.	Paid.	Balance.
		Rs. c.	Per cent.	Per cent.	Rs. c.	Rs. c.
For the construction of the public market ...	1890	8,480	3½	2	3,052 80	5,427 20
For waterworks	1894	15,200	3½	2	2,432 0	12,768 0
Do.	1895	4,000	4	2	560 0	3,440 0
Do.	1897	2,500	4	2	250 0	2,250 0
For drainage	1897	1,000	4	20	1,000 0	—
Total ...	—	31,180	—	—	7,294 80	23,885 20

II.—LEGISLATION.

8. During the year the following Ordinances were brought into operation within the limits of the Local Board, namely, "The Dog Registration Ordinance, 1901," and "The Firearms Ordinance, 1901," from the 1st May, and "The Pawnbrokers' Ordinance, 1893," from the 1st June.

9. By-laws made under "The Dog Registration Ordinance, 1901," were published in the month of August, and are recited in Appendix A.

10. Regulations made under "The Cemeteries and Burials Ordinance, 1899," in respect of the general cemetery at Badulla were published in the month of October.

11. By-laws made under "The Cemeteries and Burials Ordinance, 1899," in respect of the burial grounds at Badulla were published in the month of November.

III.—WORKS.

12. A sum of Rs. 3,958·24 was spent on maintenance of roads, repairs and additions to buildings, and other public works. Among the minor improvements effected during the year were the substitution of an iron bridge and a stone culvert for two wooden bridges in Bailey road, the erection of a new dog pound, and the provision of additional public seats.

13. The expenditure on sanitation was Rs. 2,968·52. The scavenging was satisfactorily performed, and a new depôt at a suitable distance from the town was provided for the deposit of rubbish.

14. A vote of Rs. 2,500 was passed for the construction of a new roadway to connect the wash-away in Green lane, but owing to various causes the progress of the work was delayed. It will be undertaken in 1903.

IV.—PUBLIC HEALTH.

15. The year was a healthy one. There was no cholera or smallpox, and the number of cases of chickenpox, whooping cough, and measles was below the average.

16. There were 199 births and 268 deaths registered during the year, against 188 births and 312 deaths in the previous year. The birth-rate was 39 per 1,000, as against 37 per 1,000 in 1901; while the death-rate was 53 per 1,000, in comparison with 72 per 1,000 in the previous year.

17. The following table gives the chief causes of death in 1902:—

Dysentery	49
Debility	33
Pneumonia	30
Diarrhœa	28
Infantile convulsions	19
Malarial cachexia	18
Tubercle of lung	15
Dochmius duodenalis	12
Remittent fever	9
Other diseases	55
	268

18. The relative mortality during the different months is shown below:—

January	22	September	25
February	30	October	26
March	29	November	10
April	19	December	22
May	22		
June	24	Total ...	268
July	24		
August	15		

19. The following table gives the rainfall during the different months, and its relation to cases of malarial diseases and dysentery treated at the hospital and dispensary:—

Month.	Rainfall. Inches.	Malarial Fever. Cases.	Dysentery Cases.
January	7·75	140	35
February	4·18	82	32
March	2·89	120	25
April	6·80	129	28
May	8·66	136	32
June	3·74	121	29
July	·41	104	38
August	4·53	130	23
September	3·21	198	25
October	12·55	176	21
November	15·55	125	13
December	9·48	99	33
Total ...	79·75	15·60	334

20. The population according to the last Census is 5,924, in comparison with 5,023 ten years earlier. The number of occupied houses is 1,126, as against 864 at the time of the previous Census.

V.—GENERAL.

21. *Road Tax.*—The working of the Thoroughfares Ordinance during the year under review in comparison with 1901 is shown in the annexed return.

22. *General Conservancy.*—In order to effect an improvement in the appearance of the town a sum of Rs. 75 (subscribed for privately) was offered in three prizes of Rs. 40, Rs. 20, and Rs. 15 for the best kept premises (excluding all Government grounds) within the limits of the Local Board.

23. *Dogs.*—The action taken under "The Dog Registration Ordinance, 1901," is disclosed in the following comparative statement:—

	1901.	1902.
(1) Number of dogs licensed	96 ...	81
(2) Receipts	Rs. 50 ...	Rs. 76
(3) Number of dogs seized	63 ...	191

It appears therefore that, locally, the results of the introduction of the Ordinance have been as follows:—

(1) A material decrease in the number of dogs kept.
(2) An increase in the revenue from dog licenses, notwithstanding the fact that there are fewer dogs.
(3) A large increase in the number of stray dogs seized.

24. *Plague.*—In the month of February most of the buildings in private occupation were whitewashed and cleaned; and drains, sewer pits, and cesspits were disinfected in accordance with the regulations prescribed under "The Quarantine and Prevention of Diseases Ordinance, 1897." In the month of September the systematic destruction of rats was undertaken, with the result that the number of rats killed in the last four months of the year was 442; a reward of three cents was paid for each, and the expenditure amounted to Rs. 13·26; the dead rats were all of them burned.

25. *Staff.*—Mr. J. C. Jayatilaka, Inspector, resigned his post in the month of November, and the Secretary undertook the work of Inspector in addition to his own duties.

27. *Constitution of Board.*—During the year the following changes occurred among the Official Members:—Mr. Walter C. Price succeeded Mr. C. A. Lovegrove, and Mr. T. R. Ward succeeded Mr. Walter C. Price. The Unofficial Members remained the same as at the biennial election held in December, the sitting Members were re-elected. At the close of the year the Board consisted of the following Members:—The Government Agent; Mr. T. R. Ward, Provincial Engineer; Dr. Felix Oorloff, Colonial Surgeon; Mr. B. L. Potger; Mr. P. Packir Saibo; and Mr. R. P. Murugasoe.

Local Board Office,
Badulla, February 28, 1903.

F. H. PRICE,
Chairman.

Return referred to in Paragraph 21.

		1901.	1902.
1.	One-fifth number of inhabitants of Badulla by last Census, exclusive of immigrant Tamil agricultural labourers ...	1,184 ...	1,184

Statement showing the Local Debt of the Board.

	Rs. c.		Rs. c.
Amount borrowed ...	5,500 0	Amount repaid ...	3,666 68
		Balance payable ...	1,833 32
Total ...	5,500 0	Total ...	5,500 0

1. The revenue collected in 1902 is more than that collected in the previous year. The item Miscellaneous is large, as it includes the charges on the Wace Memorial Hall.

2. The roads, cemetery, esplanade, and Government grounds were kept clean and in good order. The reservoir was emptied and cleaned in the early part of the year. The plague hospital was renewed at a cost of Rs. 230. Rs. 75 was spent by the Board on account of Coronation festivities.

3. Three or four cases of chickenpox broke out in January, and a similar number of cases in March. The health of the town was satisfactory.

4. The rainfall during the year was almost continuous. There was a small flood in July.

5. Some substantial dwelling-houses have been built during the year.

The Committee of the Wace Memorial Hall, finding that the funds collected did not permit of the building being completed, requested the Board to take it over and complete it, which the Board, with the sanction of Government, has undertaken to do. The building would have been finished at the end of December last, if not for the heavy rainfall and the shortness of some timber. It is now almost completed, and will be opened shortly. The Hall is a great improvement to the town. It is to be used as the Library and for public functions.

6. His Excellency the Lieutenant-Governor visited the town on 28th May and left on the 30th.

Local Board Office,
Ratnapura, February 24, 1903.

G. SAXTON,
Chairman.

KEGALLA.

A COMPARATIVE statement of the revenue and expenditure of the Board for 1901 and 1902 is annexed :—

REVENUE.	1901. Rs. c.	1902. Rs. c.	EXPENDITURE.	1901. Rs. c.	1902. Rs. c.
Balance on January 1 ...	1,157 59	1,788 41	Establishment ...	768 0	810 0
Licenses	3,120 55	1,823 25	Contingencies ...	106 89	100 39
Fines	182 0	200 85	Revenue Services ...	202 48	114 12
Taxes	1,112 25	1,376 75	Police Charges ...	34 66	40 50
Rents	107 73	140 65	Law Expenses ...	15 55	23 25
Sundries	281 62	188 40	Sanitary Charges ...	1,072 62	853 79
			Public Works ...	1,221 83	1,530 93
			Lighting	644 90	1,029 88
			Contribution towards cost of Audit	43 0	36 50
			Miscellaneous ...	63 40	193 14
			Balance	1,788 41	785 81
Total ...	5,961 74	5,518 31	Total ...	5,961 74	5,518 31

2. The revenue of the year amounted to Rs. 3,729·90, *i.e.*, Rs. 1,074·25 less than that for 1901. Under the head Licenses there is a decrease of Rs. 1,297·30. This is due to the fact that under the new Vehicles Ordinance the Board receives the stamp duty on carts licensed in the town only when such carts belong to inhabitants of the town.

Under the head Taxes there is an increase of Rs. 264·50, due to the raising of the road tax commutation from Re. 1·50 to Rs. 2.

3. The expenditure amounted to Rs. 4,732·50, as against Rs. 4,173·33 in 1901. The increase under the head Lighting is due to the purchase of five additional lamps.

4. The sale of the opium license for 1903 realized Rs. 750, the same amount as for 1902.

5. The health of the town has been good ; there was no infectious disease of any kind, except a few cases of chickenpox at the beginning of the year. The rainfall was 133·59 inches, as compared with 98·97 inches in 1901.

6. The roads were maintained in fair order during the year, and the scavenging of the town satisfactorily carried out.

7. The Board appointed a caretaker for the infectious diseases hospital, built at the expense of Government in connection with plague precautions. The only admission during the year was one chickenpox patient.

8. Five additional street lamps were fixed, making a total of twenty-two lamps.

9. On 1st June the town was brought under the operation of the Dog Registration Ordinance; the annual registration fee has been fixed at Re. 1. One hundred and five dogs have been registered.

10. The levying of an assessment tax for 1903 at the rate of two and one-half per centum was sanctioned; this is the first time an assessment tax has been imposed in Kegalla. The tax is expected to bring in a revenue of about Rs. 800, which will to some extent make good the loss in revenue from cart licenses.

The percentage of effectives within the Local Board should be capable of improvement.

11. A statement showing the working of the Thoroughfares Ordinances in 1901 and 1902 is annexed:—

	1901.		Per-centage on B.	1902.		Per-centage on B.*
1. Population (A)	—	2,340	—	—	2,340	—
2. Number on list (B)	—	763	—	—	711	—
3. Effective within Local Board:—						
(a) Paid Rs. 2*	619		81·13	566		79·61
(b) Paid Rs. 4*	10		1·31	9		1·26
(c) Laboured 6 days ...	—		—	—		—
(d) Laboured 12 days ...	—		—	1		·14
		629	82·44		576	81·01
4. Non-effective within Local Board, but have discharged their liability:—						
(a) Exempted	19		2·49	22		3·09
(b) Paid and laboured elsewhere ...	41		5·37	40		5·63
(c) Committed to jail ...	—		—	—		—
(d) Fined	1		·13	2		·28
(e) Double entries ...	9		1·18	6		·84
(f) Dead	4		·53	3		·42
		74	9·70		73	10·26
5. Non-effective:—						
(a) Reported to have left the town	60		7·86	62		8·72
(b) Otherwise not accounted for ...	—		—	—		—
		60	7·86		62	8·72

* In 1901 the road tax was Re. 1·50 and Rs. 3.

12. During the year thirteen meetings of the Board were held.

13. The Board contributed Rs. 150 towards the expenses of the Coronation festivities. Rs. 405·75 was raised by private subscription for the same purpose.

14. An election of Unofficial Members to serve on the Board for 1903 and 1904 was held on 8th December, and resulted in the re-election of one of the sitting Members, Mr. F. C. Appellesz, and in the election of Messrs. A. A. Wickramasingha and K. A. Perera in place of Messrs. J. R. Molligoda and E. A. Peries, who retired after a service of seven years.

15. I succeeded Mr. H. O. Fox in May as Chairman of the Board. Dr. T. Ohlmus left the district in February, and his successor Dr. H. C. Seneviratne took his place on the Board.

Local Board Office,
Kegalla, March 3, 1903.

C. S. VAUGHAN,
Chairman.

PART II.—SCIENTIFIC.

PUBLIC WORKS.

REPORT OF THE DIRECTOR OF PUBLIC WORKS FOR 1902.

I HAVE the honour to submit the following report upon the operations of the Public Works Department during the year 1902.

EXPENDITURE.

2. The total expenditure during the year under review was Rs. 4,623,067·36, classified as follows :—

	Rs. c.
Personal Emoluments	439,038 49
Annually Recurrent Works	2,163,393 70
Extraordinary Public Works	1,448,491 77
Chargeable to Loans and other Funds	572,143 40
Total ...	4,623,067 36

3. In Appendix 1 will be found the annually recurrent expenditure charged against votes in the Supply Bill, and in Appendix 1 A that charged against commutation and private contribution funds. In Appendix 2 will be found the expenditure upon Extraordinary Public Works charged against votes in the Supply Bill, and in Appendix 2 A that charged against Road Committee and private contribution funds. In Appendix 3 will be found the total expenditure classified under the several headings of account in each Province, including that charged against loans and other funds.

4. The total expenditure in the several Provinces was as follows :—

Province.	Annually Recurrent. Rs. c.	Extraordinary, including Loan Works. Rs. c.	Total. Rs. c.
Western	534,541 49* ...	852,992 15* ...	1,387,533 64
Central	421,911 8 ...	254,905 80 ...	676,816 88
Northern	136,579 88 ...	94,029 50 ...	230,609 38
Southern	217,820 76 ...	189,625 78 ...	407,446 54
Eastern	148,481 56 ...	152,748 23 ...	301,229 79
North-Western ...	190,292 13 ...	73,871 34 ...	264,163 47
North-Central ...	124,761 90 ...	101,542 78 ...	226,304 68
Uva	194,186 42 ...	147,989 22 ...	342,175 64
Sabaragamuwa ...	194,818 48 ...	152,930 37 ...	347,748 85
Total ...	2,163,393 70	2,020,635 17	4,184,028 87
		Establishment ...	439,038 49
		Total ...	4,623,067 36

* Including expenditure under heading "Miscellaneous," Statement No. 3.

MAINTENANCE OF ROADS.

5. The roads in the Colony are classified under the following descriptions :—Metalled, Track Metalled, Gravelled, and Natural. The total length maintained during the year in each Province was as follows :—

Province.	Metalled. Miles.	Track Metalled. Miles.	Gravelled. Miles.	Natural. Miles.	Total. Miles.
Western ...	303·56	—	59·39	—	362·95
Central ...	539·09	—	65·88	65·25	670·22
Northern ...	310·57	—	87·00	121·00	518·57
Southern ...	282·11	—	38·50	—	320·61
Eastern ...	162·25	—	134·21	54·00	350·46
North-Western ...	183·67	142·68	66·71	30·00	423·06
North-Central ...	100·85	68·75	140·96	—	310·56
Uva ...	248·03	—	26·58	98·00	372·61
Sabaragamuwa ...	190·47	73·65	29·16	25 00	318·28
Total ...	2,320·60	285·08	648·39	393·25	3,647·32

The above statement shows an increase of 6·52 miles of roads in charge of this Department.

6. In Appendix 4 will be found a return giving the name of each road, its length, description, and particulars as to cost of maintenance, average traffic so far as it can be even approximately ascertained, no special means for this purpose being at the disposal of the Department.

7. The average cost per mile of road upkeep in the several Provinces was as follows:—

Province.	Metalled. Rs.	Track Metalled. Rs.	Gravelled. Rs.	Natural. Rs.	General Average. Rs.
Western	786	—	294	—	705
Central	642	—	217	73	545
Northern	283	—	207	53	217
Southern	614	—	197	—	564
Eastern	521	—	257	18	345
North-Western	444	416	246	33	374
North-Central	821	—	181	—	349
Uva	662	—	307	74	482
Sabaragamuwa	637	430	252	87	511

The general average throughout the Colony was:—Metalled, including track metalled, roads Rs. 565 per mile, gravelled roads Rs. 230 per mile, natural roads Rs. 57 per mile.

8. Generally speaking, the roads have been maintained in a satisfactory condition, considering their respective classes and the traffic on them. Owing to the exceptionally prolonged periods of heavy rainfall during the months of October, November, and December, some of the roads, especially the gravel ones, suffered to a considerable extent. Two 4-ton steam rollers have been used on the Colombo-Negombo and Colombo-Avisawella roads with good results.

The work of replacing the old wooden bridges with iron and concrete structures has progressed.

MAINTENANCE OF INLAND NAVIGATION.

9. No exceptional expenditure has been incurred under this heading.

FLOOD OUTLETS.

10. No work of any magnitude has been necessary for the maintenance of the existing outlets.

REPAIRS TO BUILDINGS.

11. The buildings in charge of this Department, classified in accordance with the classification in the Supply Bill, were as follows:—

Province.	Government Buildings exclusive of Police Stations and Hospitals.	Queen's House.	Police Buildings.	Medical Aid Hospitals.	Government Hospitals and Dispensariss.	Total.
Western	93	1	16	1	32	143
Central	97	2	16	23	18	156
Northern	177	1	3	—	19	200
Southern	78	—	15	3	21	117
Eastern	63	—	1	—	17	81
North-Western	54	—	5	—	13	72
North-Central	56	—	—	—	14	70
Uva	35	—	2	5	6	48
Sabaragamuwa	47	—	4	4	12	67
Total	700	4	62	36	152	954

12. The following tabular statement shows the average expenditure per building during the year in each Province:—

Province.	Government Buildings, exclusive of Police Stations and Hospitals.	Queen's House.	Police Buildings.	Medical Aid Hospitals.	Government Hospitals and Dispensaries.
	Rs.	Rs.	Rs.	Rs.	Rs.
Western	296	2,543	304	597	367
Central	126	1,268	152	275	297
Northern	36	198	172	—	112
Southern	123	—	72	74	62
Eastern	95	—	203	—	101
North-Western	84	—	73	—	114
North-Central	145	—	—	—	180
Uva	100	—	116	124	318
Sabaragamuwa	95	—	131	308	125

REPAIRS TO BRIDGES EXCEEDING FIFTY FEET IN LENGTH.

13. The usual repairs have been effected. The wooden bridge at Wellampitiya in the Western Province and the wooden bridges over the Sengal-oya and Lunu-oya in the North-Western Province have been replaced by iron structures.

WORKS UNDERTAKEN DURING 1902.

14. The following are the more important works that have been under construction during the year :—

Western Province.

Technical College, Colombo.
Minor Courts, Hulftsdorp.
Deputy Fiscal's Office, Hulftsdorp.
Erection of jetties, sheds, and quay wall, Customs premises, Colombo.
Erection of electric cranes, Customs premises, Colombo.
Widening of Seashore street, Colombo.
Duplication of water main from Labugama.
Erection of the Jubilee Memorial, Colombo.
Constructing Havelock Park roads.
Improvements to the Pasyala-Attanagala road.
Improvements to the Horawela-Moragala road.
Renewing bridges, Bope road.
Renewal of Wellampitiya bridge.
Renewal of Bentota bridge.
Completion of Dandugama bridge.
Renewal of bridges, Veyangoda-Ruwanwella road.
Strengthening Giriulla bridge.

Central Province.

Peradeniya resthouse.
Police station and barracks, Agrapatana.

Construction of horse bridge at Nakkala.

Province of Sabaragamuwa.

Permanent ward, Kegalla hospital.
Permanent ward, Karawanella hospital.
Post and Telegraph Office, Rakwana.
Construction of Madampe-Hambantota road.
Construction of Madampe pass deviation.
Construction of Balangoda-Chetnole road.
Construction of Ardross-Polatagama road.
Construction of Algoda causeway.
Renewal of Gurugoda-oya bridge platform.
Drainage, Dehiowita bazaars.
Protection works, Ritigaha-oya bridge.
Replacing timber bridges by iron ones, Pelmadulla-Gilgarron, Ratnapura-Halpe, and Kegalla-Polgahawela roads.

15. I will now proceed to briefly enumerate the various works that have been undertaken by the Department during the year in the several Provinces under the headings Annually Recurrent, Extraordinary, and Works chargeable to Loans. A large proportion of the information has been taken from the annual reports furnished by the Provincial Engineers.

WESTERN PROVINCE.

Annually Recurrent Works.

16. *Maintenance of Roads.*—The metalled roads have been generally maintained in a good state of repair. The abnormally wet weather during the last three months of the year seriously affected traffic on some of the low-lying gravel roads, and rendered transport from the quarries very difficult. Increased expenditure on the Kandy and the Colombo-Galle roads will be shortly necessary. This can, I anticipate, be met by a reduction in the expenditure on the Colombo-Avisawella and Veyangoda-Ruwanwella roads. The opening of the railway to Avisawella will necessitate an improvement of the Hanwella-Bope road, which now becomes a railway feeder road. The traffic on the Jaela-Kotadeniyâwa road is yearly increasing, and is now very heavy, and increased provision for its maintenance will be required.

17. *Maintenance of Inland Navigation.*—The Provincial Engineer reports that the canals have been maintained in good order. The towpath of the Colombo-Negombo road has been greatly improved, and its further improvement is in hand.

18. *Flood Outlets.*—The flood outlets have been satisfactorily maintained, and were in use during the latter part of the year.

19. *Repairs to Buildings.*—The permanent buildings are in fair state of repair.

20. *Maintenance of Customs Wharves, Jetties, and Cranes.*—The usual repairs have been effected as required.

21. *Additions and Alterations to Buildings.*—The following are the more important works carried out under this heading during the year :—

Additions to Colombo Museum.
Improvements to School of Agriculture.
Improvements to District Court, Colombo.
Converting portion of Slave Island jail into armoury for Planters' Rifle Corps.
Improvements, District Court, Negombo.
Improvements, Mutwal jail.
Improvements, Koch Memorial Clock Tower.
Improvements, De Soysa's Lying-in hospital.
Improvements, Bacteriological Institute, Colombo.
Improvements, Kew barracks.
Improvements to old police station, Negombo.
Improvements, Neboda hospital.

22. *Repairs to Bridges.*—The bridges have been maintained in a satisfactory condition.

23. *Miscellaneous.*—The following works have been carried out :—

Protection of Beruwala Customs road.
Survey of Bentota river below the Bentota bridge.
Survey of quarries.
Improvement of the approaches to Kotte bridge.
Improvement of the boundary wall of St. Andrew's Church, Colombo.
Improvement of the road to Liveramentu cemetery.
Erection of mortuary at the root of the Breakwater, Colombo.

Public Works Extraordinary.

24. *New Works and Buildings.*—The following works have been completed :—

Cooly lines and overseer's quarters on the Horana-Alutgama road.
Powder magazine at Kalutara.
Fumigatorium, Kochchikada.
Enclosing ground, Colonial Secretary's Office.

The following works are in progress :—

New Minor Courts.	Technical College.
New Fiscal's Office.	Kitchens, Kew barracks.

The erection of Public Works Office, Colombo ; administration block, General Hospital, Colombo ; and magazine-keeper's house, Welikada, were not proceeded with by order of Government.

25. *Additions and Alterations to Buildings.*—The following works have been completed :—

Improvements, Printing Office, Colombo.
Providing and fixing Pasteur filters, General Hospital, Colombo.
Additions to Fort Inspector's quarters.
Additions to Master Attendant's boatshed.
Lines and quarters for the Governor's bodyguard.
Improvements to the Government Stores.
Two additional wards, De Soysa's Lying-in Home.
Temporary wards, Colombo General Hospital.
Permanent roof over treadmill, Welikada jail.
Improvements, Colombo Museum.
Additional works, temporary wards, Colombo General Hospital.

The following works are in hand :—

Drainage, Welikada jail.
Converting Agricultural School into a Training College.
Improvements, Medical College, Colombo.
Fitting electric fans, Council Chamber, Colombo.

26. *Special Repairs to Buildings.*—The following works have been completed :—

Whitewashing and painting General Post Office, Colombo.
Repair of floors, Lady Havelock Hospital.
Repairs to Infectious Diseases Hospital, Kanatta.
Repairs to Kew barracks.
Repairs to General Hospital, Colombo.
Renewing roof, Government Factory.

The laying of wood block floor in the tea warehouse, Customs premises, Colombo, has been commenced.

27. *New Roads.*—The construction of gravelled roads round Havelock Park, Colombo, has been completed.

28. *Additions and Improvements to Roads.*—The following works have been completed :—

Improvement, Horana-Alutgama road.
Improvement, Pasyala-Attanagala road.
Renewing platform of Kotte bridge.
Improvement of Avisawella road between the 11th and the 16th mileposts.
Renewal of bridges on Bope road.
Improvement of the Panadure-Nambapana road.
Improvement of Neboda hospital road.
Improvement of Grandpass-Toppu road.

The following works are in hand :—

Improvement of the Horawella-Moragalla road.
Improvement of the Urugodawatta road.
Improvement of the Minuwangoda-Henaratgoda road.

29. *New Bridges.*—The following works have been completed :—

Wellampitiya bridge. This bridge, which is situated on the 5th mile, Urugodawatta road, is of the lattice girder type, 70 ft. span, width of roadway 14 ft. The abutments are of brick on concrete and pile foundations.

Bentota bridge. The abutments and piers of the old bridge were repaired and underpinned. The new girders are of lattice girder type, two having a span of 141 ft. each and one a span of 124 ft. The width of roadway is 14 ft.

Avisawella road bridges. All the timber bridges on this road have now been replaced by ones of iron and concrete construction.

Dandugama bridge. This work was completed and opened to traffic early in the year.

Biyagama road bridge.

Renewal of bridges, Veyangoda-Ruwanwella road. Four bridges varying from 6 to 12 ft. in span were renewed.

30. *Repair of Bridges.*—The following works are in hand :—

Repair and strengthening of Giriulla bridge.
Rebuilding 20 ft. span bridge on 9th mile, Veyangoda-Ruwanwella road.
Rebuilding 12 ft. span bridge on the Bope road.

31. *Lands and Buildings acquired.*—Quarries have been acquired at Panadure, Tebuwana, and Palatota near Kalutara. A site was acquired for a well at Neboda hospital.

32. *Miscellaneous.*—The following works under this heading have been completed :—

Drainage, Government Factory.
Improvements, Hamilton canal.

Purchase of two 4-ton steam rollers.
Fitting up engine, Government Factory,
Converting three timber bridges into iron ones in the Kalutara District.
Fencing Welikada magazine.
Erecting Queen's statue.
Water supply to camp No. 1, Ragama.

33. *Plague Precautions.*—The erection of a new camp at Ragama, consisting of one segregation shed, four cooly sheds, with necessary outbuildings, has been completed.

CENTRAL PROVINCE.

Annually Recurrent.

34. *Maintenance of Roads.*—The roads have as a whole been maintained in a satisfactory state of repair. Serious landslips have occurred on the Pundaluoya-Tavalantenna, Ramboda-Badulla, and Ambawela roads.

35. *Repairs to Buildings.*—During recent years considerable attention has been given by the Provincial Engineer to efficient repair of buildings, and the resulting improved condition has been maintained.

36. *Additions and Improvements to Buildings.*—The more important works carried out under this heading are :—

Additions to Audience Hall, Kandy.
Additions to Post Office, Peradeniya.
Improvement, Land Office, Kandy.
Improvement, police station, Galagedara.
Additions to District Engineer's house, Matale,
Improvements and additions to police station, Gampola.
Additions to police barracks, Nawalapitiya.
Improvements, Lindula hospital.
Improvements and additions to police station, Norwood.

37. *Repair of Bridges.*—The bridges have been maintained in a satisfactory state of repair.

38. *Miscellaneous.*—The more important works carried out under this heading are :—
Sinking wells, Royal Botanic Gardens.
Building culverts, Katugastota-Madulkele road.
Guard rails and retaining walls, Hunasgiriya-Iriyagastenna road.
Water supply, Public Works bungalow, Pussellawa.
Removing slip, Ramboda-Badulla road.

Public Works Extraordinary.

39. *New Works and Buildings.*—The following works have been completed :—

Peradeniya resthouse. The building comprises two sitting-rooms, four bedrooms, stabling for two horses, and the necessary outbuildings. Cost, 17·4 cents per cubic foot.
Police station and barracks, Agrapatana. The accommodation provided consists of office, two cells, sergeant's quarters, quarters for six constables, and the necessary outbuildings. Cost, 29·9 cents per cubic foot.
Police station, Dimbula. The accommodation provided consists of office, two cells, sergeant's quarters, quarters for eight constables, and the necessary outbuildings. Cost, 29·7 cents per cubic foot.
Witness sheds, Police Court, Hatton.
Hospital, Maturata. The accommodation provided consists of administration block with quarters for dispenser, observation ward, operating room, female ward (sixteen beds), male ward (twenty beds), quarters for Medical Officer, Sisters, native attendants, and the necessary outbuildings. Cost, 27·6 cents per cubic foot.
House of observation, Kandy. The accommodation provided consists of six cells, attendants' quarters, enclosed verandah, and the necessary outbuildings. Cost, 28 cents per cubic foot.
Cooly lines have been erected in the Matale District. Cost, 11·2 cents per cubic foot.
Clerk and Foreman's house, Hakgala. Accommodation provided consists of one sitting-room, three bedrooms, and the necessary outbuildings. Cost, 27 cents per cubic foot.

The erection of circuit bungalows on the Lindula-Nuwara Eliya and Nugatenna-Kobonila roads have not been commenced.

40. *Alterations and Additions to Buildings.*—The following works have been completed :—
Improvements, medical aid hospital, Deltota.
Additional accommodation, Nuwara Eliya Post Office.
Alterations to Provincial Registrar's Office, Kandy.
Alterations to boys' school, Peradeniya.
Improvements to clerk's quarters, Katugastota.
Addition of female diarrhœa ward, Kandy hospital, providing accommodation for twelve patients. Cost, 17·8 cents per cubic foot.
Additions to Office Assistant's quarters, Kandy.
Converting a portion of the Grand Hotel, Kandy, into offices for Public Works Department.
Ceiling to drawing-room, Queen's Cottage, Nuwara Eliya.

The following works are in hand :—
Alterations and additions, police barracks, Matale.
Construction of permanent wards, Matale hospital.
Converting portions of the Grand Hotel, Kandy, into Government offices.

The following works have not been commenced by order of Government :—
Improvements, Kachcheri, Matale.
Dikoya hospital, new ward.
Electric light installation, Old Palace.

41. *Special Repairs to Buildings.*—The following works have been completed :—

Relaying roof gutters, Kandy Kachcheri.
Roof of Herbarium, Royal Botanic Gardens.
Painting Government buildings, Nuwara Eliya.
Re-tiling roofs of police stations and barracks at Gampola and Pussellawa.
Tiling roof of police station, Lindula.
Special repairs to police stations, Norwood and Maskeliya.
Rebuilding outhouses, Assistant Government Agent's house, Nuwara Eliya.

42. *New Roads.*—The construction of the Ulapane riverside branch road has been commenced, the first two miles of which are approaching completion.

43. *Additions and Improvements to Roads.*—The following works have been completed :—

Improving Palapatwela-Galawela road over a length of 1 mile 2,700 lin. ft. from its junction with the North road.
Improvements, Matale-Rattota road.
Improvements, Balakaduwa to junction of Trincomalee-Anuradhapura road.
Improvements, Katugastota-Madulkele road.
Widening of road and bridge near the Kandy Library.
Improvements, Beligamuwa-Mirisgoniioya road.
Improvements, Kadugannawa-Peradeniya road.
Improvements, Lindula-Agra road.

The following works are in progress :—

Improvements, Aladeniya-Iriyagama road.
Improvements, Kadugannawa-Alagalla road.
Norwood-Upcot branch road deviation.

44. *New Bridges.*—The following works have been completed :—

Talawatu-oya bridge. Span 30 ft.; width of roadway 11 ft. 4 in.
Malwatu-oya bridge. Span 50 ft.; width of roadway 12 ft.

The construction of the Ulapane bridge has been commenced.

45. *Repair of Bridges.*—The following works have been completed :—

Rebuilding bridge, 17th mile, Madulkele-Bambaraela road. Two spans of 20 ft.
Renewal of cross girders, Sudu-ganga bridge, 18th mile, Matale-Rattota road.
General repairs to satinwood bridge, Peradeniya.

46. *Miscellaneous.*—The following works have been completed :—

Water supply, Hakgala Garden.
Converting the following timber bridges into iron ones :—Five bridges on the Palapatwela-Galawela road, one bridge on the Ukuwela railway approach road, three bridges in the Nuwara Eliya District.
Metalling the carriage drive to Queen's Cottage, Nuwara Eliya.

The construction of dredger for Nuwara Eliya lake was not proceeded with by order of Government.

NORTHERN PROVINCE.

Annually Recurrent Works.

47. *Maintenance of Roads.*—The Provincial Engineer reports roads have been maintained in fair order, except the section of North road between Pallai and Mankulam in the Pallai district. The District Engineer reports difficulty in obtaining metal and arranging transport, attributing it to the railway extension works now in progress in that district.

48. *Maintenance of Inland Navigation.*—The channels have been maintained in a satisfactory condition.

49. *Minor Flood Outlets.*—The Chundikulam bars were cut during the month of December.

50. *Repairs to Buildings.*—The permanent buildings have been maintained in a satisfactory state of repair.

51. *Additions and Improvements to Buildings.*—The more important works carried out under this heading were :—

Post Office, Vavuniya : addition of ceiling.
District Engineer's quarters, Mannar: minor improvements.
Land Registry Office, Mannar : additional room.
Medical Officer's quarters, Mannar : minor improvements.
Post Office, Jaffna : minor improvements.
Puliyadi-irrakam hospital : erection of wire fencing.

52. *Repairs to Bridges.*—The bridges have been maintained in fair order.

53. *Miscellaneous.*—The following works have been carried out under this heading :—

Bridge at Tellipallai on the Pandateruppu road.
Repair of ferry boat, Mannar.
Construction of culvert near Russell square, Jaffna.
Construction of culvert, Tellipallai-Pandateruppu road.
Tracing road from Pesalai to Talaimannar.

Public Works Extraordinary.

54. *New Works and Buildings.*—The following works have been completed :—

Cooly lines: six rooms on the 23rd mile, Mankulam-Mullaittivu road. Cost, 19 cents per cubic foot.
Overseer's quarters on the 16th mile, Mankulam-Mullaittivu road. Cost, 17 cents per cubic foot.
Cooly lines of three rooms at Pallamadu on the 6th mile, Coast road deviation. Cost, 15 cents per cubic foot.

Open workshop, District Engineer's yard, Jaffna. Cost 8 cents per cubic foot.
Grain sheds, Kankesanturai. Cost 11 cents per cubic foot.

The erection of Post Office and quarters for Postmaster and assistant at Mannar has been proceeded with.

The erection of a dispensary at Chavakachcheri has not been proceeded with by order of Government.

55. *Alterations and Additions to Buildings.*—The following works have been completed :—

Provincial Engineer's quarters, Jaffna : additional room.
Police buildings, Mannar : improved floors, drainage, and outbuildings.

The additions to the Puloli hospital near Point Pedro are being proceeded with.

56. *New Roads.*—Paranthan-Mullaittivu road. A commencement has been made with the construction of this road, and the earthwork on the 1st and part of the 2nd miles has been completed.

Coast road, Mantai-Illupaikadavai road deviation. Most of the work on the 3rd, 4th, 5th, and 6th miles has been completed.

Coast road, northern portion to Puneryn. The earthwork on the 1st mile has been completed, and the metalling is in hand.

57. *Additions and Improvements to Roads.*—Mannar-Pesalai. The 9th and 10th miles of this road have been practically completed.

Vavuniya-Parayanalankulam road. Fair progress has been made with the improvement of this road.

Mullaittivu new trace. Fair progress has been made with the improvement of this road.

Pesalai-Yakawewa road. Metal was procured for the 18th mile of this road.

58. *New Bridges.*—The construction of an iron bridge 8 ft. span on the 5th mile of the Jaffna-Point Pedro road has been completed.

59. *Miscellaneous.*—The following works have been completed :—

Lighting Kayts jetty.
Repair of Jaffna and Mannar forts.

The contruction of a well at Putukudyiruppu, Mullaittivu District, has been proceeded with.

SOUTHERN PROVINCE.

Annually Recurrent Works.

60. *Maintenance of Roads.*—The roads in the Galle District have been maintained in very good order. The roads in the Matara District, especially those from Matara to Hakmana, and portions of the Akuressa-Deniyaya road have suffered owing to the abnormal rainfall. On the whole, the roads in the district, with the exception of the two above-mentioned, have been well maintained.

The Provincial Engineer reports that the roads in the Hambantota District, with the exception of the Wirawila-Kirinde road, have been improved, the laying and consolidating of road metal being facilitated by the abnormal rainfall experienced.

On my inspection of this district in September last the condition of the Tangalla-Hambantota and Hambantota-Tanamalwila roads left much to be desired.

61. *Repairs to Buildings.*—All permanent buildings have been maintained in good order, but extensive repairs will shortly be required to the District Judge's house at Galle.

62. *Additions and Improvements to Buildings.*—The principal works carried out under this heading are :—

Minor alterations to Hambantota jail.
Improvements to cells and addition of an office, Matara jail.
Additions and improvements, Matara Kachcheri.
Additions and improvements, police station, Tangalla.
Improvements, Hambantota hospital.
Minor improvements, Galle hospital.

63. *Repair of Bridges.*—The usual repairs have been effected, and the larger timber bridges, of which several still exist in this Province, have received special attention.

64. *Miscellaneous.*—The principal works carried out under this heading were :—

Erection of meteorological shed, Galle ramparts.
Repair of jetties, Galle.
Extension of road, Hambantota.

Public Works Extraordinary.

65. *New Works and Buildings.*—The following have been completed :—

New court-house, Hambantota. Cost, 14 cents per cubic foot.
Two sets of permanent cooly lines on the Hambantota-Tanamalwila road. Cost, 36 cents per cubic foot.

The erection of a house for Kachcheri clerk at Hambantota will be completed this month.

The erection of a dispensary at Ambalantota was not commenced by order of Government.

The following works are in progress :—

Extension of Hambantota jetty. It was found necessary to take this work out of the hands of the District Engineer and place it in immediate charge of a Head Overseer attached to the Factory. The work has made satisfactory progress, and will shortly be completed.

The erection of mast and seventh order light at Hambantota is nearing completion.

66. *Alterations and Additions to Buildings.*—The following works have been completed :—

Bathing place for Galle police.
Improvements to police barracks, Hambantota.
Enlargement of Hikkaduwa school.

Alterations to Galle hospital are nearing completion.

The improvements to Tangalla hospital were not commenced by order of Government.

67. *Additions and Improvements to Roads.*—The following works have been completed :—
Improvements to road from Matara to Hakmana.
Construction of five new culverts on the Tanamalwila road.
Improvement of the Tangalla road between the 126½ and 129th mileposts, Matara-Akuressa road.

The improvement of the Hambantota-Bundala road is nearing completion.

68. *New Bridges.*—The following works have been completed :—
Renewal of bridge on the 1st mile, Lewaya road, Hambantota District.
Completion of bridge No. 63, 24th mile, Galle-Udugama road.

The following works are in progress :—
Renewal of Mahamodara bridge, which was opened for traffic in November.
Renewal of Gintota bridge. This work consists of 4 spans of 80 ft. girders of lattice type; width of roadway 14 ft. The piers are constructed of concrete cylinders 6 ft. in diameter. The ironwork is nearing completion, the construction of a temporary bridge has been completed, and the sinking of the cylinders is being commenced.
The Polwattamodara bridge, consisting of 8 spans of 34 ft. The platform is constructed of rolled beams carrying curved plates covered with cement concrete. The piers are of rolled steel beams cross-braced, furnished with wrought iron bearing plates resting on a concrete foundation. The ironwork is nearing completion at the Factory, and a commencement will shortly be made with the erection of the piers.

69. *Repair of Bridges.*—The following works have been completed :—
Rebuilding bridge No. 5, 124th mile, Hambantota road.
Rebuilding bridge No. 1, 123rd mile, Hambantota road.

The rebuilding of the Ratta-ela bridge, Akuressa-Viharahena road, has made considerable progress, and is nearing completion.

70. The following works have been completed :—
Protection works, 62nd mile, Bentota-Goiyapana road.
Fencing walls, Tangalla.
Sanitary improvements, Bentota.
The conversion of two timber bridges into iron ones, Bentota-Goiyapana road.

The following works are in progress :—
Constructing causeway and protecting road, 86th mile, Bentota-Goiyapana road.
Converting timber bridges into iron ones, Galle-Akuressa road. It is anticipated this work will be completed during the current year.

71. The following works have been undertaken under heading "Plague Precautions" :—
Converting Trinity House in Galle into disinfecting station.
Repairing road from Main road to Saints' Bay, Galle.
Repairs to southern plague hospital and observation camp, Galle.
Repairs to plague observation camp, Bathfield House, Galle.

72. The following works have been carried out in connection with the Boer Prisoners of War :—
Camp at Urugasmanhandiya: Medical Officer's quarters; additions to Post Office; enclosing two plots of land, each about 6 acres in extent, with barbed wire fencing.
Camp at Hambantota: alteration to the Hambantota jail.

EASTERN PROVINCE.

Annually Recurrent Works.

73. *Maintenance of Roads.*—The Provincial Engineer reports that, with the exception of the 33rd mile of the road from Karaitivu to Sammanturai and Irakkamam, the whole of the roads were maintained in good order. The portion of the Akkaraipattu-Sagamam road requires metalling on stone-pitched foundation, for which an estimate has been sanctioned. The unusual rainfall experienced during the month of November considerably facilitated the consolidation of road metal.

During a heavy flood on the 4th January the Kanganianodai timber bridge on the 32nd mile Batticaloa South Coast road was practically entirely carried away, leaving only the masonry abutments standing. Cart traffic has since been maintained, except during flood time, by means of a ford, and foot traffic has been maintained by means of a ferry. The construction of a permanent bridge has been commenced.

74. *General.*—During the year 7,583 tons of material, consisting mainly of sand, has been dredged from the Batticaloa lake at a cost of 39 cents per ton. The dredger was docked on the 18th October for the purpose of inspection and thorough repair. The channel dredged has been marked by buoys placed about 600 ft. apart. The dry dock recently constructed at Batticaloa was occupied by the "Thistle" from the 2nd May to the 15th July, and by the "Shamrock" from the 9th September to the 2nd October. The Government dredger occupied the dock from the 1st January to the 14th February, and from the 4th to the 25th August and from 27th October to 31st December.

75. *Repairs to Buildings.*—The Government buildings, with the exception of the Muttur dispensary, for which special provision is made in the Supply Bill for 1903, were maintained in a satisfactory state of repair.

76. *Additions to Buildings.*—The following are the more important works carried out under this heading :—
Improvements to the Residency, Batticaloa.
Additions to the Provincial Engineer's house, Batticaloa.
Improvements to Land Registry, Batticaloa.
Temporary warehouse, Kalkuda.
Additions to Trincomalee hospital.
Additions to Jailer's quarters, Batticaloa.

77. *Repair of Bridges.*—The bridges were maintained in a satisfactory state of repair, with the exception of the Urani bridge on the 63rd mile, South Coast road, which is undergoing reconstruction, and the Kanganianodai bridge, which was destroyed by the flood on the 4th January.

78. *Miscellaneous.*—The more important works carried out under this heading were :—

Providing ferry boat, Muttur ferry.	Providing canoe, Kaliodai ferry.
Borings in bed of Kaliodai river.	Providing canoes, Tillaiyar ferry.
Providing ferry boat for Kiniyai ferry.	Survey of road from Pottuvil towards Muppane.
Survey, Trincomalee-Anuradhapura road.	Survey of road, Paddiruppu to Pullumalai.

Public Works Extraordinary.

79. *New Works and Buildings.*—The following works have been completed :—

Overseer's quarters at Pannichchenkeni, 34th mile, Coast road, north of Batticaloa. Cost, 14 cents per cubic foot.

Overseer's quarters, 7th and 26th mile, Trincomalee-Kituluttu road. Cost, 14 cents per cubic foot.

Landing jetty, Trincomalee : 300 ft. in length, 20 ft. in width for a length of 195 ft. and 30 ft. in width for a length of 105 ft. The platform is carried on rolled H piles, 9 in. by 7 in., 15 ft. apart longitudinally and 10 ft. apart transversely; the piles are braced transversely. The piles were driven 9 ft. below the bed of the harbour and provided with bearing plates 2 ft. 6 in. by 2 ft. 6 in. fixed 3 ft. below the bed. The platform is constructed of cross girders 8 in. by 5 in. bolted to the heads of the piles in pairs carrying the longitudinal timber joists, to which is spiked the timber decking, consisting of 9 in. by 3 in. planks spaced ⅜ in. apart. The jetty is provided with horizontal fenders consisting of 9 in. by 3 in. channel iron filled in with timber; vertical timber fenders 8 in. by 4 in. protected by 4 in. by 4 in. angle iron are fixed to the horizontal fenders and spaced 5 ft. apart. The platform for a length of 90 ft. is roofed with corrugated iron laid on iron principals and purlins carried by H iron standards spaced 15 ft. apart. A 1-ton crane has been erected on independent foundations commanding the end and northern side of the jetty. The available depth of water at the end of the jetty is 16 ft. The cost, including foundation for crane, was at the rate of Rs. 6·08 per square foot of platform area.

Resthouse, Kalmunai : accommodation consists of dining-room 20 ft. by 20 ft., hall 17 ft. 4 in. by 4 ft. 3 in., two bedrooms 16 ft. 3 in. by 15 ft., two bedrooms 15 ft. by 13 ft. 9 in., with bathroom and outbuildings, verandahs 10 ft. in width round the building, and also stabling for three horses have been provided. Cost, 12 cents per cubic foot.

The tramway, Kalkuda jetty, gauge 2 ft., weight of rails 18 lb. per lineal yard, has been commenced.

The administration block and wards for paying patients, Batticaloa hospital, were not commenced by order of Government.

80. *Alterations and Additions to Buildings.*—The following works were completed :—

Furniture for record room, Batticaloa Kachcheri.

Additions to the Assistant Government Agent's house, Trincomalee.

Additional office accommodation, Public Works Department, Batticaloa.

81. *Special Repairs to Buildings.*—The special repairs consisting of re-thatching the large salt store at Nilaveli were completed.

82. *New Roads.*—The extension of the South Coast road has been proceeded with. The earthwork and clay foundation for the road were completed to the 68th milepost. 100 ft. of paved approach to the ferry across Arugamkalupuwa, a bridge 50 ft. in span across the Heda-oya, have been completed.

83. *Additions and Improvements to Roads.*—The following works have been completed :—

Causeway, Periamukatuwaram.

South Coast road : additional waterways comprising the construction of seven bridges, each of 4 ft. span, and raising of the road across Tandiadi plain.

Coast road north : additional waterways comprising the construction of two bridges, each of 4 ft. span, and approaches.

Additional waterways, South Coast road, consisting of the construction of two bridges 6 ft. span.

The following works are in progress :—

Causeway, 65th mile, South Coast road.

Coast road from Verugal river to Kiliveddi.

Akkaraipattu-Sagamam road.

Trincomalee to Kituluttu.

The improvement of the Muppane-Pottuvil road was postponed by order of Government.

84. *New Bridges.*—The construction of the Mohideentanda bridge and causeway were completed.

The following works were completed :—

Urani bridge and causeway. The causeway and embanked approaches to the bridge are completed. The foundations of the north abutment and a large proportion of the sheet piling have been completed.

Kanganianodai bridge. The timber bridge of a total length of 160 ft. across the Kanganianodai at the 32nd mile, South Coast road, was completely destroyed by a flood on the 4th January, the water rising 2 ft. 6 in. above the bridge platform. Considerable difficulty has been experienced in maintaining this bridge owing to the height to which the flood waters rise. The project now being carried out comprises the construction of an iron bridge of lattice girder type of a total length of 259 ft. consisting of three spans of 80 ft., with a width of roadway of 14 ft., carried on concrete cylinder piers 7 ft. and 8 ft. in diameter, reduced to 6 ft. in diameter in the upper portion above the river bed.

85. *Repair of Bridges.*—The following works were completed :—

Rebuilding Vammiyadi bridge on the 33¼ mile, South Coast road, 18 ft. span, carrying a roadway 11 ft. 4 in. in width. Cost Rs. 255 per lineal foot.

Rebuilding Panichchayadi bridge, 20 ft. span, width of roadway 11 ft. 4 in. Cost Rs. 203 per lineal foot.

Owing to the destruction of the Kanganianodai bridge, and decision of Government to erect a bridge of more permanent character, no expenditure was incurred in protecting the left abutment.

86. *Miscellaneous.*—The more important works carried out under this heading were :—

The construction of 1,131 ft. of revetment wall to protect the Lake Shore road, Batticaloa.

Converting timber bridges into iron ones on the 17th mile, Trincomalee-Kandy road, 25 ft. span ; on the 93rd mile, Maduruoya-Eravur road, three spans of 30 ft. each ; on the 28th, 31st, 32nd, 33rd, 36th, 38th, and 39th miles ten bridges varying from 5 to 20 ft. span.

The following works are in progress :—

Constructing six galas on the Badulla-Batticaloa road.
Marking channels, Badulla-Batticaloa lake.
Sinking wells, South Coast road.

NORTH-WESTERN PROVINCE.

Annually Recurrent Works.

87. *Maintenance of Roads.*—The Provincial Engineer reports that most of the roads in the Kurunegala and Dandugama districts have suffered considerably owing to the abnormal rainfall and heavy floods experienced during the latter part of the year. In some cases the roads were under water for considerable lengths, the height of the floods reaching from 4 to 5 ft. above the level of the road.

88. *Maintenance of Inland Navigation.*—The inland navigation works have been maintained in good order during the greater part of the year without exceptional expenditure. During a heavy rainfall on the 10th December a landslip occurred in a spoil bank on the eastern side of the canal about 10 miles south of Chilaw.

89. *Repairs to Buildings.*—The buildings have been maintained in good repair, with the exception of the salt store at Kalpitiya, which partly collapsed owing to structural decay, and the Government Agent's quarters at Kurunegala, which require special repairs.

90. *Additions and Improvements to Buildings.*—The more important works carried out under this heading are :—

Improvements, Kurunegala jail.
Improvements to the Shroff's quarters, Puttalam.
Improvements, Medical Officer's quarters, Puttalam.
Additions, Postmaster's quarters, Puttalam.
Improvements, District Engineer's quarters, Dandugama.
Alterations to old District Engineer's quarters, Chilaw.
Improvements, Nikaweratiya hospital.
Improvements and additions, Puttalam jail.

91. *Repairs to Bridges.*—The bridges have been maintained in a satisfactory state of repair.

92. *Miscellaneous.*—The following works have been completed :—

Meteorological shed, Kurunegala.
Survey of road from Andigama to Namadawewa.
Removal of shelves from the old court-house, Puttalam, to the new building.

Extraordinary Public Works.

93. *New Works and Buildings.*—The following works were completed :—

Court-house, Puttalam.
Powder magazine, Kurunegala.
Three sets of cooly lines and quarters of overseer.
Public Works Office and District Engineer's quarters, Chilaw.

The construction of the District Judge's quarters, Kurunegala, and Land Registry Office, Chilaw, were not proceeded with by order of Government.

94. *Alterations and Additions to Buildings.*—The following works were completed :—

Improvements to officers' quarters, Puttalam.
Improvements to police station and quarters, Puttalam.

The addition of three cells to Puttalam jail was proceeded with.

95. *New Roads.*—The construction of the railway feeder road from Vilakatupota to Ganawatta railway station and thence to Hiripitiya was commenced in June, and fair progress has been made.

96. *Additions and Improvements to Roads.*—The improvement of the road from Toppu to Dankotuwa was completed.

The following works were proceeded with and fair progress made :—

Completing the track metalling of the Toppu-Battuluoya road.
Track metalling road from Puttalam to Battulu-oya.
Improvement of the Adipola metal quarry road.

97. *New Bridges.*—The following works were completed :—

Battulu-oya bridge.
Sengal-oya bridge.
Lunu-oya bridge.

98. *Repair of Bridges.*—The following works were completed :—

Palavi embankment and bridge.
Rebuilding bridge on the Padeniya-Siyambalagama road.

Reconstructing the bridge on the 23¼ mile, Kurunegala-Puttalam road, could not be commenced owing to the height of the floods in this district.

99. *Miscellaneous.*—The following works were completed :—

Fence round Marawila court-house compound.
Converting eight timber bridges into iron ones in the Puttalam and Chilaw Districts.

NORTH-CENTRAL PROVINCE.

Annually Recurrent Works.

100. *Maintenance of Roads.*—The roads have generally been maintained in fair order, except portions of the North road in the Mihintale district and the Trincomalee road in the Maradankadawala district.

101. *General.*—The Mirisawetiya and Abhayagiriya Dagabas have been kept free of vegetation, but further settlements have occurred in the Abhayagiriya Dagaba.

102. *Repairs to Buildings.*—The buildings have generally been maintained in a satisfactory state of repair. The roof of the Topawewa dispensary has suffered from the ravages of white ants.

103. *Additions to Buildings.*—The more important works carried out under this heading are :—

Additions to the Kekirawa dispensary.
Additions to the Tamuttugam dispensary.
Additions to the Civil Hospital, Anuradhapura.

104. *Repair of Bridges.*—All bridges have been maintained in a satisfactory state of repair.

105. *Miscellaneous.*—Under this heading the necessary surveys for the preparation of a project for the supply of water to Anuradhapura have been completed.

Public Works Extraordinary.

106. *New Works and Buildings.*—The following works have been completed :—

New court-house, Anuradhapura.
Archæological Commissioner's house, Anuradhapura.
Quarters for Sinhalese clerk, Anuradhapura.
A set of six cooly lines at Alut-oya.

The following works are in progress :—

Medical Officer's quarters, Anuradhapura.
Dispenser's quarters, Anuradhapura.
Nurses' quarters, Anuradhapura.
Cooly lines at Horawapotana.

107. *Alterations and Additions to Buildings.*—The improvements to the Anuradhapura Kachcheri have been completed.

108. *Special Repairs to Buildings.*—The special repairs to the immigrant hospital, Mihintale, have been completed.

109. *New Roads.*—Fair progress has been made with the construction of the railway approach road at Anuradhapura, but great difficulty in obtaining labour is experienced. The extension of the Habarana-Topawewa road is nearly completed.

110. *Additions and Improvements to Roads.*—The improvements to the following roads :—Mirisgonioya-Galkandamadu, Habarana-Topawewa, Anuradhapura-Puttalam, Anuradhapura-Kurunegala, Maradankadawala-Habarana have been in progress, but their completion is delayed owing to the scarcity of labour.

111. *New Bridges.*—The three new bridges on the 28th, 41st, and 43rd miles of Kaluoya-Galgodahena road have been completed.

A bridge 12 ft. span has been completed on the 89th mile, North-Central road.

The construction of a bridge on the 52nd mile, Yakawewa road, is in hand.

The construction of bridges on the Horawapotana-Vavuniya road was delayed by order of Government.

112. *Miscellaneous.*—Timber bridges have been replaced by iron ones on the road to Galkulam through Mihintale to Rambewa, also on the roads from Maradankadawala to Habarana and from Madawachchiya to Yakawewa. The construction of drains at Rambewa is in progress.

PROVINCE OF UVA.

Annually Recurrent Works.

113. *Maintenance of Roads.*—The Provincial Engineer reports that the roads have been maintained in a satisfactory state of repair. The exceptionally heavy and continuous rainfall during the north-east monsoon caused several landslips. A large landslip occurred on the Haputale Pass and another at Passara on the Badulla-Batticaloa road during the month of December.

114. *Repairs to Buildings.*—The permanent buildings have been maintained in a satisfactory state of repair.

115. *Alterations and Additions to Buildings.*—The more important works carried out under this heading were :—

Additions to the prison, Badulla.
Improvement of drainage, Government Agent's residence, Badulla.
Improvement of drainage, Lunugala hospital.
Erection of latrine, Provincial Engineer's Office, Badulla.
Alterations to police station, Badulla.
Construction of dry-earth closet, Bibile dispensary.

116. *Maintenance of Bridges.*—The bridges have been maintained in a satisfactory condition.

117. *Miscellaneous.*—Under this heading the following works have been completed :—

Kiraluneremada irrigation aqueduct.
Improvement of road at 16th mile, Badulla-Bandarawela road, by reducing corner.
Erection of fence, District Engineer's quarters, Badulla.

Public Works Extraordinary.

118. *New Works and Buildings.*—The following works have been completed :—

New court-house, Bandarawela. Cost 23 cents per cubic foot.
Permanent ward, Medagama hospital. Cost 28⅓ cents per cubic foot.
Cooly lines, Passara-Namunakuli road : set of six rooms.
Dispensary, Bandarawela, with kitchen and stables. Cost 24½ cents per cubic foot.
Quarters for District Engineer's clerk, Badulla. Cost 26 cents per cubic foot.
Overseer's quarters, 15th mile, Wellawaya-Muppane road.

119. *Alterations and Additions to Buildings.* — The addition of a kitchen and latrine, cementing floors, and providing counters at the Post Office, Badulla, have been completed.

120. *New Roads.*—The Bibile-Medagama road has been extended to within half a mile of Medagama. The site for halting bungalow on the Leangahawela road has been acquired. The Spring Valley-Bibile road is in course of construction.

121. *Additions and Improvements to Roads.*—Improvements have been carried out to the 24th and 25th miles, Muppane-Pottuvil road. The Koslanda-Poonagalla road has been fully metalled for 2 miles. The approach roads to public buildings, Bandarawela, have been widened and gravelled.

122. *New Bridges.*—The horse bridge at Nakkala has been completed. The horse bridge at Leangahawela is in course of construction.

123. *Miscellaneous.*—The following works have been completed :—

Sinking well at Elawela.
Sinking well near Muppane bazaar.
Improving Haputale water supply.
Constructing sidings, Kumbalwella-Passara road.
Converting six wooden bridges into iron ones, Haldummulla-Horton Plains road and one on the Passara-Muppane road.
Boer Prisoners of War Camp at Diyatalawa. The necessary work of maintenance and the minor alterations and additions required from time to time have been carried out.

PROVINCE OF SABARAGAMUWA.

Annually Recurrent Works.

124. *Maintenance of Roads.*—The Provincial Engineer reports that during the first nine months of the year the roads were maintained in good order throughout the Province, but that during the last three months the abnormal rainfall experienced caused some damage to the roads.

125. *Maintenance of Buildings.*—All buildings of a permanent nature have been satisfactorily maintained.

126. *Additions and Improvements to Buildings.*—The following are the more important works carried out under this heading :—

Fencing District Judge's quarters, Kegalla.
Providing and fixing pump, Avisawella hospital.
Improvements, Ratnapura Kachcheri.
Improvements, Balangoda hospital.
Improvements, Provincial Engineer's residence, Ratnapura.
Providing and fixing pump, Karawanella hospital.
Improvements, Avisawella hospital.
Fencing Medical Officer's quarters, Ratnapura.
Improvements, Kolonna hospital.

127. *Repairs to Bridges.*—The bridges have been maintained in a satisfactory state of repair. The Gittahitta, We-oya, and Bibile-oya bridges will shortly require re-planking throughout.

128. *Miscellaneous.*—The following works have been carried out :—

Meteorological shed, Ratnapura.
Survey for drainage of Dehiowita and Yatiyantota bazaars.
Providing materials for building temporary metal breaking shed, Ratnapura jail.
Acquisition of metal quarries : 29½ milepost, Avisawella-Ratnapura road ; 77th milepost, Pelmadulla-Gilgarron road.

Public Works Extraordinary.

129. *New Works and Buildings.*—The following works have been completed :—

New ward, Kegalla hospital, 105 ft. in length, 18 ft. in width, with verandahs 7 ft. wide, and outbuildings. Accommodation, twenty-four beds. Cost, 25 cents per cubic foot.
New ward, Karawanella hospital, 80 ft. in length, 22 ft. in width, with verandahs 10 ft. wide, and outbuildings. Accommodation, twenty beds. Cost, 19 cents per cubic foot.
Powder magazine, Ratnapura, according to type plan. Cost, Re. 1·92 per cubic foot.
Quarters for District Engineer's clerk at Ambanpitiya, consisting of three rooms and outbuildings. Cost 31 cents per cubic foot.
Cooly lines and overseers' quarters : five rooms on the Pelmadulla-Gilgarron road—cost, 16 cents per cubic foot ; six rooms on the Pussellawa-Ratnapura road—cost, 15 cents per cubic foot ; six rooms on road from Ruwanwella to boundary—cost, 20 cents per cubic foot.

The Post and Telegraph Office at Rakwana and the construction of permanent cooly lines on the Pelmadulla-Gilgarron road are nearly completed. The erection of a new Post and Telegraph Office at Kegalla was postponed by order of Government.

130. *Alterations and Additions to Buildings.*—The extension of the female ward, Rakwana hospital, 35 ft. in length, 22 ft. in width, with verandahs 10 ft. wide, and outbuildings, providing for ten additional beds, has been completed at a cost of 12 cents per cubic foot.

The erection of witness sheds and record room, Avisawella Police Court, has made fair progress, and will be completed at an early date.

131. *Special Repairs to Buildings.*—The special repairs to jailer's quarters, Ratnapura, have been completed.

132. *New Roads.*—The circuit bungalow on the Glenalla-Havilland road has been completed.

The work on the Madampe Pass deviation has made fair progress. 1 mile and 5 lines have been completed, and work is well advanced on the second mile.

The construction of the Balangoda-Chetnole road was commenced in November. The earthwork and culverts have been completed on the first half mile section.

The construction of the Ardross-Polatagama road has made satisfactory progress. The whole of the earthwork and rock cutting, with the exception of the double rock cutting on the first mile, which is nearing completion, were completed. Forty culverts have been completed, and the construction of the roadway is proceeding.

The construction of the causeway over the Ritigaha-oya has been proceeded with, but this work and that of a similar nature over the Mi-oya have been much delayed by the floods.

The construction of the Madampe-Hambantota road has proceeded as far as funds available permitted. Three miles have been completed, the road now terminating at the village of Embilipitiya, leaving 10½ miles to be completed to join the existing road at Leangahatota.

133. *Additions and Improvements to Roads.*—The completion of the Algoda causeway has been delayed owing to floods. The additional culverts, viz., two on the Veyangoda road, two on the Avisawella road, three on the Avisawella-Ginigathena road, two on the Glenalla road, and one on the Polatagama road, have been completed.

134. *New Bridges.*—A bridge of lattice girder type, 45 ft. span, 10 ft. roadway, was completed on the 95th mile of the Ratnapura-Halpe road. Cost, Rs. 167 per lineal foot, exclusive of abutments.

135. *Repairs to Bridges.*—The renewal of the platform of the Gurugoda-oya bridge and repairs to the roadway of the Sitawaka and Karawanella bridges have made fair progress, and will be completed at an early date.

136. *Lands and Buildings to be acquired.*—Lands were acquired for metal quarries on the Pussellawa-Ratnapura road, 5th mile; Ratnapura-Halpe road, 71st mile. A site was acquired for the Rakwana Post Office, and the laying out of the same is nearly completed.

137. *Miscellaneous.*—Replacing timber bridges by iron ones :—

A bridge 22 ft. 6 in. span, width of roadway 10 ft., was completed on the Ratnapura-Halpe road. Cost, Rs. 110 per foot run.

A bridge 25 ft. span, width of roadway 14 ft. 10 in., was completed on the Kegalla-Polgahawela road. Cost, Rs. 82 per foot run.

The following works are in progress :—

Drainage of Dehiowita bazaar.

Protection works, Ritigaha-oya bridge.

Replacing timber bridge by iron one and rebuilding abutments on the 74th and 78th miles of the Pelmadulla-Gilgarron road.

Repair of flood damages on the Karawanella-Glenalla road.

WORKS CHARGEABLE TO LOANS AND OTHER FUNDS.

138. *Customs Premises.*—The works in connection with the building of a quay wall in front of the old grain sheds J and K, the erection of electric cranes, and the extension of the export warehouses B, C, and D, and the widening of Seashore street have made satisfactory progress.

139. *Camp for Prisoners of War.*—The maintenance and additions required from time to time have been duly attended to.

140. *Cooly Camp, Ragama.*—The erection of a new camp similar to camp No. 4 has been completed.

141. *Minor Courts, Hulftsdorp.*—The Minor Courts at Hulftsdorp have been practically completed.

142. *New Deputy Fiscal's Office, Hulftsdorp.*—The erection of a new Deputy Fiscal's Office has made satisfactory progress and is nearing completion.

143. *The Duplication of the Labugama Main.*—This work was commenced in August, 1902, and satisfactory progress has been made.

144. *Railway Extension Fund.*—Under this heading roads to the goods station, Jaffna, Chavakachcheri station, and Pallai station have been completed, and the approach road to the passenger station, Jaffna, has been commenced.

145. *Resthouse, Kalmunai.*—The new resthouse, Kalmunai, has been completed.

GOVERNMENT FACTORY.

146. This branch of the Department has been under the immediate control of Mr. E. C. Davies, Factory Engineer.

Particulars of works carried out during the year will be found in the Factory Engineer's report annexed, from which it will be seen that good progress has been made with—

(*a*) The various harbour improvements being carried out by this Department.
(*b*) The new Minor Courts and Fiscal's Office.
(*c*) The construction of the Bentota, Mahamodara, and Gintota bridges on the Galle road.
(*d*) The new Technical College.
(*e*) Widening of Seashore street, Colombo.
(*f*) Construction of Hambantota jetty.

In Appendix 5 will be found the particulars of the several bridges constructed at the Factory during the year; in Appendix 6 a statement of the distribution of Factory expenditure under the several classifications for the years 1901 and 1902; and in Appendix 7 the classification of expenditure on the several classes of work during the years 1898 to 1902, inclusive.

COLOMBO WATERWORKS.

147. *Labugama Waterworks.*—The rainfall registered at Labugama during the year amounted to 211·49 in., rain falling on 239 days. The maximum rainfall during twenty-four hours occurred on the 21st May, when 9·90 in. were registered. The water in the reservoir was 4 in. below overflow level on the 20th May; the sluices were opened, discharging 12,000,000 gallons of water per hour, and the water rose in the reservoir, attaining a maximum height of 3 ft. 9 in. above overflow level. The maximum depth from which water was drawn from the reservoir was 12 ft. below overflow level; the lowest water level reached, with the exception of the period when it was purposely lowered to admit of the duplication of the main pipe, was 3 ft. 4¾ in. on 17th October. The reservoir and works in immediate connection therewith have been satisfactorily maintained.

148. *Main Pipe Line.*—The pipe line has been satisfactorily maintained, a constant flow being obtained throughout the year.

149. *Maligakanda Service Reservoir.*—This reservoir has been maintained in a satisfactory state of repair without any exceptional expenditure.

150. *Distribution Works.*—The distribution works were maintained in a satisfactory state of repair. During the year the 7-in. pipe along Reclamation road was removed and replaced by a 9-in. pipe, connecting with the subsidiary mains in the Fort, at a cost of Rs. 18,561·05. This improvement has been attended with very satisfactory results, enabling water to be supplied to the upper floors of the buildings in the Fort.

Six new standposts or street fountains were fixed and one was removed, the total number in use being 696. 111 new services for domestic supply were constructed, making a total number of 3,182. 49 meters were fixed to services for other than domestic purposes, 38 were removed, making a total of 217 in use.

151. *Consumption of Water.*—In Appendix 8 will be found a tabular statement of the consumption of water during each month in the year. In Appendix 9 will be found a monthly return of water supplied by meter to each ward during the year.

It will be seen that throughout the year the maximum daily consumption each month exceeded the maximum discharging capacity of the main, viz., 25,000,000 gallons per diem, necessitating the water being shut off from 8 P.M. to 4 A.M. during the greater part of the year.

The average consumption of water per head per diem, taking the population at 150,000, was for all purposes at the rate of 16·7 gallons; deducting the metered supplies reduces the rate to 13·0 gallons.

152. *Quantity of Water.*—The results of the monthly analyses will be found in Appendix 10.

153. The following tabular statement showing the consumption of water during the last seven years is of interest:—

Year.	Water supplied by Meter. Gallons.	Total Consumption. Gallons.	Maximum Daily Consumption. Gallons.
1896 ...	38,097,840 ...	762,435,360 ...	2,555,508
1897 ...	51,353,450 ...	780,584,671 ...	2,502,300
1898 ...	82,941,553 ...	805,341,489 ...	2,646,241
1899 ...	105,569,529 ...	877,980,521 ...	2,869,581
1900 ...	129,933,208 ...	981,841,489 ...	3,997,067
1901 ...	162,997,699 ...	1,011,958,277 ...	3,149,578
1902 ...	205,061,720 ...	914,457,500 ...	3,342,228

154. There can be no question but that the introduction of the intermittent system of supply rendered necessary by the insufficient capacity of the main pipe from Labugama to Colombo to deliver the quantity of water necessary for the requirements of the city is far from satisfactory. The duplication of the pipe is now well in hand, and I anticipate before the close of the year a very marked increase in the quantity of water delivered to the city, rendering, I hope, the introduction of the intermittent system of supply unnecessary for many years.

155. *Duplication of Main from Labugama to Colombo.*—Mr. H. T. Creasy, District Engineer, was seconded from the 1st January and placed in immediate charge of this work. The necessary plans have been prepared, and orders placed for the pipes, valves, and fittings required for completing the duplication of the entire length of the 20-in. main from Labugama to Colombo; 2,000 tons of pipes and other castings have been delivered, and about one mile of the duplication has been completed.

The preparation of the necessary plans for the construction of a reservoir at Elie House is in hand, the property has been acquired, and the work will shortly be commenced under the immediate supervision of Mr. H. T. Creasy.

STAFF.

156. Mr. F. W. Johnson left on nine months' leave in May last, and was succeeded in the acting appointment of Assistant Director of Public Works by Mr. C. A. Lovegrove. It is with much regret that I have to record the death of Mr. J. MacDonnell, Provincial Engineer of the Northern Province, on the 10th October, 1902. The sad occurrence has deprived the Department of an efficient and zealous officer, and of one whose sterling personal qualities and genial disposition endeared him to those with whom he came in contact. Mr. A. W. Taffs retired on the 11th May, 1902, after twenty-nine years' service.

The following officers left the Department:—Mr. A. S. Colls in March, Mr. T. S. Edge in August, Mr. J. F. Fitzsimons in November, and Mr. J. O. Ebert in October.

Mr. H. de Silva, Clerk, Head Office, was transferred to the District Engineer's Office, Batticaloa, his place being filled by Mr. T. Rodrigo. Mr. P. L. Misso resigned in May, and Mr. H. A. P. Fernando was appointed in his stead in June. Mr. Graro, Draughtsman, Head Office, exchanged duties with Mr. J. H. Seneviratne, Draughtsman, Provincial Engineer's Office, Badulla.

157. The following officers were on leave during the year :—

Name.	Commencement of Leave.	Period.	Returned to Duty.
Mr. A. E. Mayes	... May 1, 1901	... 11 months and 22 days	... April 22, 1902
„ H. E. H. Hayes	... October 4, 1901	... 5 months and 7 days	... March 10, 1902
„ R. G. Carte	... June 4, 1901	... 17 months and 25 days	... November 29, 1902
„ W. B. Gregson	... June 16, 1901	... 12 months	... June 17, 1902
„ T. S. Edge	... September 10, 1901	... 11 months and 13 days	... August 23, 1902
„ R. A. Powell	... January 19, 1902	... 6 months and 6 days	... July 25, 1902
„ J. MacDonnell	... February 16, 1902	... 6 months and 5 days	... August 21, 1902
„ G. H. M. Hyde	... April 2, 1902	... 3 months and 3 days	... July 5, 1902
„ H. A. Grant	... May 1, 1902	... 9 months and 15 days	... Absent
„ F. W. Johnson	... May 5, 1902	... 11 months and 23 days	... do.
„ L. Creasy	... June 28, 1902	... 3 months and 23 days	... October 21, 1902
„ A. H. Nathanielsz	... January 8, 1901	... 17 months (extended till completion of 3 years' service)	... Absent

158. The following officers were appointed as District Engineers :—

Mr. A. E. Vanderstraaten in March and Mr. J. R. Thuraisingham in November.
Mr. A. H. Obeyesekere was appointed to the Head Overseer grade in April last.
Mr. H. E. de Kretser of the Irrigation Department was appointed District Engineer of this Department in June.
Mr. A. de Livera, District Engineer, who was seconded for service in the Municipality, reverted to his duties in September.

159. The changes that have taken place during the year in the provincial offices are as follows :—

Western Province.—Mr. A. E. Mayes on his return from leave relieved Mr. A. Clementi Smith at Negombo in May. Mr. A. E. Vanderstraaten assumed duties as District Engineer in charge of buildings in place of Mr. A. W. Taffs, who retired in May. Mr. J. G. Drieberg relieved Mr. C. F. Emerson at Kalutara in December. Mr. E. S. de Silva succeeded Mr. J. A. Moraes at Ragama in January, and Mr. A. de Livera was put in charge of camp works, Ragama, on his return from the Municipality in September. Mr. E. G. Eves on his return from leave resumed duties as District Engineer, Colombo, relieving Mr. T. R. Ward, who proceeded to Jaffna as Acting Provincial Engineer, Northern Province, in January. Mr. W. A. Werkmeister, Chief Clerk of the Provincial Engineer's Office, was transferred to the Colonial Secretary's Office, being succeeded by Mr. A. Hubert, Chief Clerk of the Provincial Engineer's Office, Uva, in August. Mr. S. Chelliah, District Engineer's Clerk, Negombo, was transferred to Colombo in August as Clerk to the District Engineer in charge of buildings, being succeeded by Mr. C. M. Chellappah, who was then holding the latter post. Mr. S. Kumaraswamy died in November, and a passed candidate, Mr. C. Tillainathan, assumed duties in Provincial Engineer's Office in December.

160. *Central Province.*—Mr. L. Creasy went on leave in June, his duties being performed by Mr. W. P. Fletcher. Mr. W. B. Gregson, on his return from leave, relieved Mr. W. P. Fletcher as District Engineer, Kandy. On Mr. Creasy's return from leave in October Mr. Fletcher proceeded to Jaffna as Acting Provincial Engineer, Northern Province. Mr. W. C. Price relieved Mr. W. B. Gregson at Kandy as District Engineer in November, the latter proceeding to Mihintale. Mr. W. R. W. Morgan was transferred to Trincomalee, relieved by Mr. R. J. K. MacBride in December. Mr. A. Clementi Smith relieved Mr. F. J. Pigott at Matale in May, the latter proceeding to Galle as Acting Provincial Engineer, Southern Province. Mr. W. C. Price, District Engineer, Dimbula, was transferred to Badulla as Acting Provincial Engineer, Uva, and was relieved by Mr. S. H. Bower in June. On Mr. R. A. Powell's return from leave in July, Mr. W. J. Thornhill, who was acting as District Engineer, Pussellawa, was placed in charge of Ulapane road. Mr. A. S. Colls being appointed to a post in South Africa, Mr. R. W. I. Crabbe relieved him in March. Mr. C. H. E. Muttukistna on being appointed Head Overseer was succeeded by Mr. H. Young as Draughtsman. Mr. A. M. Spaar, Head Overseer, was transferred from Matale to Katugastota district in May. Mr. V. Sinnatamby, District Engineer's Clerk, Pussellawa, retired in November, and was succeeded by Mr. S. Swaminather from the Provincial Engineer's Office, Jaffna, the vacancy being filled by a passed candidate, Mr. C. Tillainathan. Mr. C. Smith, District Engineer, Matale, having met with an accident on the 22nd December, was relieved by Mr. Livera.

161. *Northern Province.*—Mr. J. MacDonnell, Provincial Engineer, went on leave in February, being relieved by Mr. T. R. Ward. He returned in August and resumed duties, and continued in his post till 10th October, when he died. Mr. W. C. Price took charge of the Province temporarily, and was relieved by Mr. W. P. Fletcher in November. Mr. J. O. Ebert, District Engineer, Vavuniya, obtained employment in the Provincial Road Committee, Colombo, and was succeeded by Mr. E. S. de Silva in October.

162. *Southern Province.*—Mr. H. A. Grant went on leave in May, Mr. F. J. Pigott relieving him. Mr. R. B. J. Ondaatjie, Head Overseer, was transferred from Hambantota to Matara District in June, and thence to North-Western Province in July. Mr. R. Wijesekera, Draughtsman, was transferred to Kurunegala, being succeeded by Mr. C. E. Anthony. Mr. M. Ediriweera, Second Clerk, Provincial Engineer's Office, Galle, was transferred to Matara as District Engineer's Clerk, and Mr. D. Perera of that station to the Provincial Engineer's Office.

163. *Eastern Province.*—Mr. W. R. W. Morgan relieved Mr. E. H. Vanderstraaten, District Engineer, Trincomalee, in December, the latter proceeding to Head Office, Colombo. Mr. D. S. Muttiah, Inspector, was transferred from Trincomalee to Batticaloa in February. Mr. P. Seneviratne, Head Overseer, attached to Government Factory, was sent to Kalmunai in September. Mr. J. A. J. Ondaatjie, Second Clerk, Provincial Engineer's Office, was transferred to Mihintale as District Engineer's Clerk. Mr. K. Ponnampalam, District Engineer's Clerk, Trincomalee, was transferred to Kalmunai in January, being succeeded by Mr. S. Swaminather from Batticaloa, arrangements being made locally for the performance of the duties of the latter post during the time Mr. Sithamparapillai, who had been transferred there from Kalmunai, was on leave. On his retirement the post was filled up by Mr. H. de Silva from the Head Office.

164. *North-Western Province.*—Mr. H. E. H. Hayes returned from leave in March, and relieved Mr. R. W. I. Crabbe, who proceeded to Nuwara Eliya as District Engineer. Mr. J. F. Fitzsimons, District Engineer, Kurunegala, resigned in November. Mr. A. F. Churchill proceeded to Kurunegala as District Engineer, and was succeeded at Chilaw by Mr. W. J. Thornhill. Head Overseer R. B. J. Ondaatjie was attached to this Province in July. Mr. Anthony, Draughtsman, Kurunegala, was transferred to Galle, his place being filled up by Mr. R. Wijesekera, Draughtsman of that station.

165. *North-Central Province.*—Mr. W. B. Gregson relieved Mr. R. J. K. MacBride in November as District Engineer, Mihintale. Mr. R. G. Carte relieved Mr. J. G. Drieberg as District Engineer, Anuradhapura, in December. Mr. H. E. de Kretser from the Irrigation Department relieved Mr. Bower at Maradankadawala in June. Mr. J. A. J. Ondaatjie from Batticaloa took up duties as District Engineer's Clerk, Mihintale, in December, *vice* Mr. A. Ponnusamy.

166. *Province of Uva.*—Mr. C. A. Lovegrove, Provincial Engineer, was appointed Acting Assistant Director of Public Works in May, Mr. W. C. Price taking his place as Acting Provincial Engineer till the arrival of Mr. T. R. Ward in September. Mr. J. A. Moraes took up duties as District Engineer, Badulla, on the death of Mr. A. R. Tocke in January. Mr. A. Hubert, Head Clerk, Provincial Engineer's Office, Uva, was transferred to Colombo as Head Clerk of the Provincial Engineer's Office, being succeeded by Mr. V. E. Parys from the District Court, Trincomalee. Mr. Seneviratne, Draughtsman, Provincial Engineer's Office, exchanged duties with Mr. Graro, Draughtsman, Head Office.

167. *Province of Sabaragamuwa.*—Mr. H. E. E. Koch was attached to this Province as Head Overseer in January and stationed in the Avisawella district.

168. *Waterworks.*—Mr. T. C. Harrison, Assistant Inspector, arrived in January. Mr. R. A. Ingram, Sub-Inspector, was on leave in England with the Coronation Contingent from 16th May to 8th September.

GENERAL.

169. *Waterworks.*—With the exception of the city of Colombo, the towns of Kandy, Galle, Nawalapitiya, Badulla, Ratnapura, and Matale, and the Board of Improvement, District of Nuwara Eliya, the towns of the Island are dependent on the water drawn from shallow wells and natural streams in their immediate vicinity for water supply, no system existing for the proper distribution of water within the built areas.

With a view to improving the existing state of affairs and assisting the several local authorities, Mr. R. W. Smith, District Engineer, has been seconded for the purpose of making the necessary surveys and preparing plans and estimates for the efficient supply of water to some of the more important towns. Plans and estimates have been prepared by him for water supplies to the towns of Kurunegala and Negombo, and by the provincial officers for the water supplies of Anuradhapura, Bandarawela, Hatton, and Wattegama.

During a recent inspection of the Jaffna peninsula I obtained sufficient information to sketch out a project for the water supply of Jaffna, and Mr. Smith is under instructions to proceed to that town with a view to making the necessary detail surveys and collecting such further information as is necessary to complete the plans and estimate for that project.

170. The following tabular statement shows the expenditure on Annually Recurrent Works, Extraordinary Public Works, and those chargeable to loans and other funds during the years 1895 to 1902, inclusive :—

Year.	Recurrent. Rs.	Extraordinary. Rs.	Miscellaneous, including Loans. Rs.	Total. Rs.
1895	1,756,001	1,286,889	—	3,042,890
1896	1,823,558	1,219,106	—	3,042,664
1897	1,726,669	1,838,650	—	3,565,319
1898	1,900,307	1,510,143	369,324	3,779,774
1899	2,040,684	1,707,119	1,250,125	4,997,928
1900	2,029,279	1,610,261	1,074,665	4,714,205
1901	2,112,905	1,348,032	666,028	4,126,965
1902	2,163,394	1,448,491	572,143	4,184,028

171. In accordance with instructions received from His Excellency the Governor the construction of several extraordinary public works provided for in the Supply Bill was postponed.

172. Amongst the more important works carried out in the Drawing Office at the Head Office during the year may be mentioned :—

Water supply, Anuradhapura project.
Water supply, Jaffna project.
Design for the Malwatu-oya bridge, Anuradhapura.
Detail drawings for the Colombo Waterworks duplication of the main.
Detail drawings for additional service reservoir, Colombo.
Revision of plans and sections for the construction of roads from Maho to Polpitigama and from Nikaweratiya to Maho.
Preparation of detail drawings for new offices for the Deputy Fiscal at Hulftsdorp, now in course of construction.
Sketch designs for additions to Medical College.
Designs for new Civil Medical Stores.
Working drawings, Technical College, now in course of construction.
Amended design for administration block, Civil General Hospital.
Designs for Jailer's quarters, Hulftsdorp ; calf vaccination sheds ; post office, Kurunegala ; type post office ; type police station ; additional accommodation, Colombo Museum ; bungalow for Curator ; and finishings to Queen's statue, Colombo.

FRANCIS A. COOPER,
M.I.C.E., Fellow of the Sanitary Institute,
Member of the Association of Municipal and County Engineers,
Director of Public Works.

Public Works Department,
Colombo, February 20, 1903.

11(II)03

REPORT OF THE GOVERNMENT FACTORY ENGINEER FOR 1902.

DURING the year 462 orders were received, amounting to Rs. 740,141·08, making with Rs. 382,838·56 brought forward from 1901 a total of Rs. 1,122,979·64. To this amount must be added disbursements on account of camp for South African prisoners of war, Rs. 5,924·35, and transport funds Rs. 1,722·85. The total amount therefore available for expenditure for 1902 was as follows :—

	Rs.	c.
Brought forward from 1901	382,838	56
Factory Orders, 1902	740,141	8
Prisoners of War	5,924	35
Transport Funds	1,722	85
Total ...	1,130,626	84

EXPENDITURE.

The expenditure has been distributed as follows :—

	Rs.	c.
Prisoners of War	5,924	35
Bridges	228,558	49
Buildings	102,223	84
Harbour Improvements	249,770	3
Miscellaneous Departmental	65,099	80
Irrigation	2,089	48
Other Departments	14,835	96
Castings, Railway	24,657	17
Plague Precaution and Cooly Camps	18,502	84
Waterworks	9,364	70
Electrical	18,491	86
Transport Funds	1,722	85
Total ...	741,241	37

And has been paid as follows :—

	Rs.	c.
Daily Labour Check Roll	164,342	31
Fuel	17,482	43
Government Stores	373,358	31
Materials purchased	127,173	43
Piecework	58,884	89
	741,241	37
Carried forward	365,209	16
Paid into Revenue	7,384	24
Unexpended	16,792	7
Total ...	1,130,626	84

CAMPS FOR THE PRISONERS OF WAR.

For providing new cells at Ragama, kitchens and fencing at Urugasmanhandiya, other small works at Diyatalawa, and the supply of water to Ragama, there has been an expenditure this year of Rs. 5,924·35.

BRIDGES.

During the year 180 iron bridges of different spans and width of roadway were made and sent to outstations, and the Bentota, Mahamodara, Wellampitiya, and Bope road bridges, which were made in 1901, were erected, with a total expenditure of Rs. 228,558·49.

Digarolla.—The work of stiffening this bridge by sinking eight cement concrete cylinder piers 5 ft. in diameter to a firm foundation and fitting new cross and diagonal stays was completed during the year.

Bentota.—The erection of the ironwork consisting of three spans, 2 of 140 ft. and 1 of 124 ft. by 14 ft. roadway, commenced in December, 1901, was completed, and the bridge opened for traffic in September.

Mahamodara.—The erection of the ironwork consisting of one span 152 ft. by 14 ft. roadway, made during 1901, was commenced in August, completed in December, and the bridge opened for traffic. This is the largest iron bridge ever made in the Colony.

Gintota.—Three spans of 80 ft. each by 14 ft. roadway were made in the Factory, and at the site of the bridge on the Galle road a temporary bridge 370 ft. long by 12 ft. roadway on wooden piles was erected and approach roads made and opened for traffic on the 23rd December; all the concrete cylinders 6 ft. in diameter for the piers moulded and the old bridge partially dismantled. The new bridge will consist of four spans of 80 ft. by 14 ft. roadway, supported on concrete cylinder piers 6 ft. in diameter in the river, and using the old abutments for the land ends. The work is now well in hand, and which I trust to have completed before the end of June, 1903.

Giriulla.—This bridge consisting of three spans of 110 ft. each by 16 ft. roadway, made in 1878, it was found necessary to strengthen owing to the increased and heavy traffic on the road. The work of increasing the area of iron in the girder was commenced in September, two spans were completed by the end of the year, and the whole work I trust to have completed by the middle of February.

BUILDINGS.

The expenditure under this head has been Rs. 102,223·84 on account of the new Minor Courts, Fiscal's Office, Technical College, and the usual supply of doors and windows for public buildings at outstations.

Minor Courts.—This building, a description of which was given in my last report, was practically completed during the year, and the upper floor temporarily occupied on and since the 13th May, 1902, by the Deputy Fiscal and his staff as offices. A few of the internal fittings of the Police Court and the Court of Requests still remain to be done; but these, together with a general cleansing and painting, will be effected after the Deputy Fiscal has vacated the buildings for his new quarters.

I would mention that the concrete flooring of the whole of this building has been laid in the following manner :—4 in. of concrete composed of 1 part of cement, 3 lime, 4 sand, 10 of 2-in. stones laid on well-rammed ground ; this was covered with smooth finished concrete laid in slabs of about 15 square ft. made of 1 part cement, 2 sand, 5 of ¾-in. stones, the joints between the slabs being made of tar, pitch, and cement.

The expenditure under the different heads was as follows :—

	Rs.	c.
Clearing site ...	54	25
Earthwork ...	247	48
Concrete in floor	2,295	52
Brickwork ...	4,431	45
Plastering ...	3,974	97
Roofing ...	4,325	57
Wood flooring	280	8
Wood ceiling	657	73
Doors and windows	3,558	68
Iron and lead work	1,756	31
Woodwork ...	3,423	39
Gutters and water fittings	2,457	45
Shelving ...	1,170	86
Painting ...	1,113	37
Supervision ...	1,002	13
Contingencies	561	37
Total ...	31,310	61

Fiscal's Offices.—The buildings have been erected along the southern boundary of the premises of the Minor Courts, and the quarters comprise a main two-storied building with a frontage of 60 ft. and a store for sequestered articles, coach-house, stalls, and latrines as outbuildings.

The main building has four rooms on the ground floor. The upper floor is split up into two rooms for the Deputy Fiscal and Shroff respectively, and two other rooms for the staff and clerks. All rooms on both floors are surrounded by a verandah 10 ft. wide.

The cutting of the foundation was commenced in July, and some of the concrete foundations were laid during the latter end of that month. Almost all of the brickwork was completed during August and September. The roof was erected during October and November. All the internal lime plastering, ornaments, and enrichments in cement, as well as all the external plastering in brick red, with the exception of the ground floor, were done during December. The doors and windows have not as yet been hung, neither have the concrete floors as yet been commenced.

The expenditure, Rs. 31,891·30, on this work has been distributed as follows:—

	Rs.	c.
Clearing site ...	96	72
Earth cutting...	591	48
Foundation in cement	1,137	84
Concrete in floor	1,013	17
Brickwork ...	12,400	59
Plastering ...	1,328	89
Roofing ...	4,688	52
Wood flooring	3,721	43
Doors and windows	1,817	88
Ceiling ...	1,907	82
Shelving ...	560	0
Iron and lead work	542	64
Wood fittings...	221	0
Painting ...	644	7
Supervision ...	427	80
Contingencies	791	45
Total ...	31,891	30

Technical College.—Estimated cost Rs. 150,000. The expenditure on this work was principally in cutting off 5 ft. from off the top of the hill in front of the Colombo Terminus Station and in preparing the site generally, and also in cutting and laying the foundations. A portion of the foundation had to be taken down 10 ft. below the new general level before sound foundings could be obtained at the canal end of the building. The cement concrete foundations and the brickwork up to the damp course level have been laid and built during the year.

This work would have been much further ahead could I have obtained a good facing brick in the local market, and so, as no satisfactory bricks were procurable in Colombo, and importation from Calcutta or Southern India was prohibitive owing to heavy freight charges, I was forced in December to manufacture my own facing bricks. I am now turning out about 400 per diem of these bricks, and as I have also arranged for engineer bricks of the same size to be made on the Kelani for internal work and backing, I have every prospect of pushing on this building to completion during 1903.

The expenditure on this work is distributed as follows :—

	Rs.	c.
Clearing site ...	310	38
Cutting down of site	2,034	68
Cutting trenches	791	29
Concrete foundation	4,840	28
Brick foundation	2,968	95
Doors and windows	1,698	54
Temporary sheds	1,002	66
Contingencies...	817	61
Total ...	14,464	39

Alterations to Mooring Boatshed.—Estimated cost Rs. 3,181·30. This work was commenced in December, the old shed being dismantled and new timber, &c., being supplied for a shed 22 ft. span and 68 ft. long. The floor of the shed and boatslip are to be of concrete and stone setts.

Harbour Improvements.—The expenditure, Rs. 249,770·03, was for the following works :—

Extending Kochchikada jetties.
Quay wall.
Master Attendant's jetty.
Iron shed, 80 ft. by 100 ft.
Extending B, C, and D warehouses.
Sliding door and paving archway, B, C, and D warehouses.
Vault and road extension of Commissariat st.
Widening Seashore street.
Wood paving Tea warehouse.
Drainage, Kochchikada warehouse.
Searchers' office.
Erecting electrical cranes.
Trincomalee jetty.
Hambantota jetty.

Extending Kochchikada Jetties.—Estimated cost Rs. 30,870. The work of extending the two iron pile jetties in front of the grain sheds has been completed. New rings and bollards have also been fitted to meet the requirements of the wharfingers.

Quay Wall.—Expenditure Rs. 84,636·46. The construction of the concrete quay wall round the harbour basin within the premises leased to the Ceylon Wharfage Company has made good progress during the year. The concrete wall is carried upon two rows of concrete cylinders 5 ft. diameter and sunk to a depth of 20 ft. below low water mean level. The work already done is as follows :—

North wall, 80 ft. of walling 6 ft. 6 in. high, 45 5-ft. diameter cylinders.
West wall, 150 ft. of walling 6 ft. 6 in. high, 69 5-ft. diameter cylinders.
South-west corner (curved), none, 34 5-ft. diameter cylinders.
South wall, 90 ft. of walling 2 ft. high, 52 5-ft. diameter cylinders.

The aforestated number of concrete cylinders represents a total length of cylinder foundation for 500 ft. of walling.

Four cranes have been at work for most of the year, but owing to the restrictions, or rather out of consideration for the exceptional landing difficulties of the Ceylon Wharfage Company, I was forced to stop all work at the northern end of the wall, as well as to generally delay the building up of the concrete wall upon the cylinder foundations already sunk.

Master Attendant's Jetty.—I have been unable to commence the work of pulling down, rebuilding, and extending this jetty, as I cannot still further reasonably increase the difficulties already being borne by the Ceylon Wharfage Company by taking away water frontage. The expeditious dredging of this basin is therefore most essential, and no time should be lost in bringing this work to an early completion.

Iron Shed, 80 ft. by 100 ft.—Expenditure Rs. 20,654·50. The dimensions of this shed were originally fixed at 80 ft. long by 60 ft. span, and the iron framework for such was made during the early part of the year. Instructions, however, were issued to me to make the shed 80 ft. long and with two spans of 50 ft. The ironwork of the roof principals has therefore been altered and added to, and the framework of this building is now in course of erection. Half of the trenches have already been excavated, and some of the concrete foundations laid. I would mention that I have not been able to make a fair start with this work, as the Wharfage Company object to give up the old building, which has eventually to be pulled down, and which covers a large portion of the area upon which the new shed is to be erected.

Extending B, C, and D Warehouses.—The expenditure on this work was Rs. 34,384·32 during the year, and the work is almost completed, as well as the addition of a door on the western side of the extension. Some little delay was occasioned owing to the suppliers of the jarrah blocks requesting that their blocks for the flooring should be seasoned in Colombo some three or four months before being laid.

Sliding Doors and Paving Archway, B, C, and D Warehouses.—Expenditure Rs. 1,319·86. This work is the paving of 5,000 square feet in two portions of sheds B, C, and D, which were terminated by two open archways, and formerly used for storing fibre with concrete and jarrah blocks, the archways being now closed with two sliding teakwood doors on iron rollers.

Vault and Road Extension of Commissariat Street.—A bullion vault was built inside the premises leased to the Ceylon Wharfage Company, comprising two rooms 25 ft. by 20 ft. and 25 ft. by 10 ft. respectively, and fitted with three doors, one being of plate iron and two of round bars. The roof is segmental, and this, together with the walls, were built in brickwork in cement with a concrete core having iron lattice work in its centre. Foundation and floor are of concrete. A new boundary wall and the clearing of the site still remain to be done.

Widening Seashore Street.—Expenditure Rs. 28,877·50. The building of a concrete retaining wall 5 ft. high surmounted by a parapet wall in brick and cement plastered for the purpose of widening this road to 50 ft., commencing at Kochchikada and extending to the Fish market, has progressed as far as it is possible. At present there are 1,200 feet of walling completed. The filling has been finished, as well as the paving and metalling, the rolling only now remaining to be done. I am unable to proceed any further with the remaining portion of this work until St. John's warehouse has been handed over to me by the Resident Engineer, Colombo Harbour Works.

Wood Paving of Tea Warehouse.—Expenditure Rs. 3,297·06. The work of making good the concrete floor and adapting the old levels, as well as the laying of the jarrah blocks, is being gone on with, and can only be done slowly, so as to interfere with the warehouse accommodation as little as possible.

Drainage of Kochchikada Warehouse.—Expenditure Rs. 1,466·55. This expenditure represents the cost of making open relief drains for carrying off surplus surface road water. The work is almost completed.

Searchers' Office.—Expenditure Rs. 1,467·79. A new building with a frontage of 32 ft., containing two rooms 10 ft. by 10 ft. respectively, was built on the western side of north abutment of the Colombo Passenger Jetty bridge, the work being practically completed.

Electric Cranes.—Expenditure Rs. 11,425·22. The six 2-ton and two 4-ton electric cranes reached me in September, and, acting upon the plans passed by the Harbour Board, I have erected two 2-ton and one 4-ton cranes upon the Prince of Wales's jetty. One of the former is erected complete, and the mains have been laid to the switch station situated in a small building at the southern

abutment of the Passenger Jetty bridge, but I still wait for Messrs. Boustead Brothers to connect up my mains to their supply station, and as soon as this is done the cranes can be handed over to the Principal Collector of Customs. Each of the cranes is fastened to two 5-ft. concrete cylinders by means of holding down bolts fitted through two steel frames which embrace the concrete cylinders.

Trincomalee Jetty.—This work, the ironwork of which was made in 1901, was shipped to Trincomalee, erected, and opened for traffic during the year.

Hambantota Jetty.—This work was taken in hand by me in April. It consists of a T head 50 ft. by 20 ft. on concrete cylinder piles 5 in. diameter sunk to rock foundation, with iron beams, cross girders, &c., and wooden deck. Very little progress could be made before the south-west monsoon, when work had to be stopped; it was re-started on the 15th November, when four cylinder piles had been sunk, fixed on the rock, and filled with concrete. All the iron beams, girders, fenders, &c., made in the Factory and delivered at Hambantota. The work should be out of hand by the middle of April.

MISCELLANEOUS DEPARTMENTAL.

The manufacture of the usual departmental tools and plant, such as hand and water carts, road rollers, repair of pickaxes, &c., accounted for an expenditure of Rs. 65,099·80.

IRRIGATION.

Very little work for this Department was executed during the year, and the total expenditure is only Rs. 2,089·48.

OTHER DEPARTMENTS.

A fair amount of work for the Master Attendant, Principal Civil Medical Officer, Government Agents, Provincial Road Committee, Local Boards, Controller of Government Stores, and Government Printer was executed during the year, accounting for an expenditure of Rs. 14,835·96.

CASTINGS.

Another increase in the output of castings from the foundry is to be recorded this year. The total output represents 4,819 cwt., as against 4,210 cwt. in 1901, of which the Railway Department have been supplied with 2,527 cwt., with an expenditure of Rs. 24,657·17.

WATERWORKS.

Owing to the duplication of the main there has been an increased output of work for this Department during the year; a large number of piers for river crossings, valve, and valve covers have been made, accounting for an expenditure of Rs. 9,364·70.

PLAGUE PRECAUTIONS AND RAGAMA CAMP.

There was an expenditure during the year of Rs. 18,502·84 on Ragama Camp, ss. Serendib, Clayton disinfector, &c.

ELECTRICAL.

All this work was under the immediate supervision of the Superintendent of Works, with an expenditure of Rs. 18,491·86 for the general upkeep of installations in Government buildings and additional installation fitted up in the Queen's House, General Post Office, Audit Office, Master Attendant's boatshed, Government Printing Office, Customs, fans in the Council Chamber, and wires, poles, switchboard room for current to the electrical cranes.

An electrical repairing shop with instruments and tools has been fitted up during the year, so that electrical instruments and machines can be repaired in the Colony.

GENERAL.

The pneumatic tools for bridge work did not arrive in the Colony in time to be erected this year, so no new machinery was added to the Government Factory. An engine removed from the fitting shop was reconstructed and erected in the carpenters' shop, the machines re-arranged, and a temporary roof extended, which will allow of an increased output of work from this Department, which was always so cramped in past years.

The output of work during the year compares very favourably with that of previous years, and shows an increase on permanent and useful works of the Colony, although the expenditure has not been as much as in 1901, for in that year there was an expenditure on the camp for South African prisoners of war amounting to Rs. 96,692·55, which cannot be considered permanent colonial works.

STAFF.

During the year the Mechanical Engineer, Mr. Hyde, has been in immediate charge of all work under construction in Colombo outside the Government Factory. District Engineer Mr. Jayawardene has been in immediate charge of all work in the Government Factory. The Superintendent of Works, Mr. Rylands, has had in his charge all the electrical work of the Department and the general upkeep of Customs cranes. District Engineer Mr. Jonklaas who was promoted to the grade from an Inspector during the year, was in charge of the erecting of the Bentota, Mahamodara, and Gintota bridges.

All the staff, including those of the Clerical Department, have worked well and cheerfully during the past year, and have discharged their duties satisfactorily. It is a pleasure to carry out large and important structures with such a staff of assistants, who so cheerfully second all one's endeavours to push on with the work and give satisfaction to the Government.

Government Factory,
February 1, 1903.

E. C. DAVIES,
Factory Engineer.

APPENDIX.
